WAM®

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*

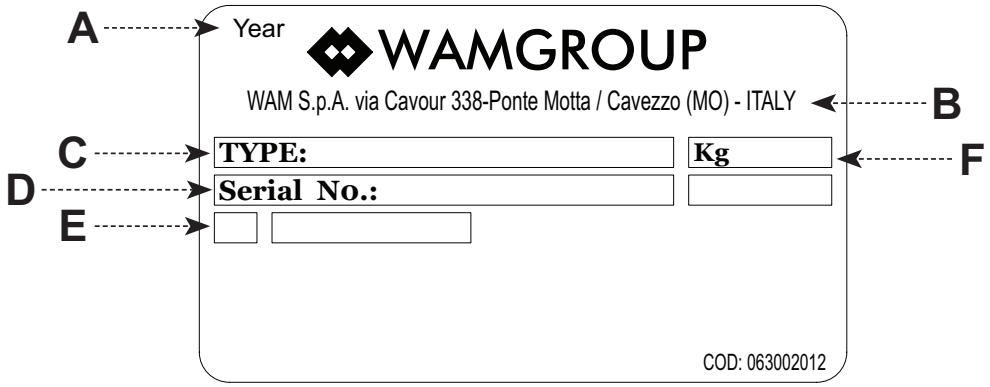
ADRESSE DU REVENDEUR OU DU SERVICE APRES-VENTE LOCAL

INDIRIZZO RIVENDITORE O PUNTO DI ASSISTENZA LOCALE

MACHINE IDENTIFICATION

Refer to order code in acknowledgment of order, in invoice and on packaging to identify equipment or on the label applied on the package or on the plate affixed directly on the machine..

IDENTIFIKATION DER MASCHINE



Zur korrekten Identifikation des Geräts auf den Code Bezug nehmen, der sich in der Auftragsbestätigung, der Rechnung und dem Aufkleber auf der Verpackung oder dem Schild auf der Maschine befindet.

IDENTIFICATION DE LA MACHINE

Pour identifier correctement la machine, vous devez vous référer au code qui se trouve sur la confirmation de commande, sur la facture ou sur l'étiquette apposée sur l'emballage et sur la plaque appliquée directement sur la machine.

IDENTIFICAZIONE DELLA MACCHINA

Per una corretta identificazione della macchina, bisogna fare riferimento al codice che si trova sulla conferma d'ordine, sulla fattura o sulla etichetta posta sull'imballo e sulla targhetta direttamente applicata sulla macchina.

Identification plate of machine
The plate is affixed on machine.
A) Year of manufacture
B) Manufacturer's identification
C) Type of machine
D) Serial No.
E) Progressive number of section
F) Weight of the machine

Schnecken-Typenschild
Auf jedem Schneckenteil befindet sich ein identisches Typenschild.
A) Baujahr
B) Herstelleridentifikation
C) Schneckentyp
D) Serien-Nr.
E) Schneckenteil Nr.
F) Gewicht Schnecke

Plaque vis
Sur chaque tronçon de equipement il y a une plaque identique.
A) Année
B) Identification du constructeur
C) Type de equipement
D) N° de série
E) Tronçon de equipement N°
F) Poids de l'equipement

Targa identificazione della macchina
La targa è applicata sulla macchina o se e composta in più sezioni su ogni sezione.
A) Anno di fabbricazione
B) Identificazione del costruttore
C) Tipo di macchina
D) Numero di serie
E) Numero progressivo della sezione
F) Peso della macchina

SCOPE AND IMPORTANCE OF THE MANUAL

This manual, prepared by the manufacturer, forms an integral part of the FIBC UNLOADER; it must therefore accompany of the FIBC UNLOADER right up to its final scrapping, and must be available ready at hand for consultation by the operators concerned and those in charge of operations at the work site. If the machine changes hands, this manual must be handed over to the new owner, as part of the SBB supply. Before carrying out any operation on or using the SBB, the personnel concerned must have read this manual carefully and completely. If the manual is lost, or in such a condition as to make it illegible, download a new copy from the internet site www.wamgroup.com, and check the date of the last revision. This manual provides warnings and indications concerning the safety regulations for preventing accidents at the work site. However, the operators MUST scrupulously follow the safety regulations meant for them by the existing legislation.
Modifications to the safety regulations made over time must be integrated and implemented.

ZWECK UND BEDEUTUNG DES HANDBUCHS

Dieses vom Hersteller erstellte Handbuch ist integrierender Teil der BIG-BAG Entleerstation.. Daher muss es der BIG-BAG Entleerstation unbedingt folgen, bis dieser zerlegt bzw. verschrottet wird. Es muss zudem einfach zu finden sein, wenn die betroffenen Bediener oder die Baustellenleitung in ihm nachschlagen wollen. Bei einem Besitzerwechsel des SBB muss das Handbuch dem neuen Besitzer als normale Bestückung des SBB ausgehändigt werden. Bevor irgendwelche Arbeiten an oder mit dem Austragboden SBB ausgeführt werden, müssen die betreffenden Personen dieses Handbuch unbedingt mit großer Aufmerksamkeit durchgelesen haben. Falls das Handbuch verloren geht oder unleserlich geworden ist, kann eine neue Kopie von den Internetseiten unter www.wamgroup.com heruntergeladen werden, nachdem man das Datum der letzten Aktualisierung des Handbuchs geprüft hat. Dieses Handbuch liefert Hinweise und Angaben zu den Sicherheits- und Unfallverhütungsbestimmungen am Arbeits-platz. Die Sicherheitsbestimmungen, die laut den geltenden Normen vom Bedienungspersonal zu beachten sind, müssen zu jedem Zeitpunkt beachtet wer-den.
Etwaige Änderungen der Sicherheitsbestimmungen, die im Laufe der Zeit vorgenommen werden, sind immer zu erfassen und umzusetzen.

BUT ET IMPORTANCE DU MANUEL

Le présent Manuel, rédigé par le constructeur, fait partie intégrante de la fourniture du vide BIG-BAG. Il doit absolument suivre le vide BIG-BAGS jusqu'à son démantèlement et être à portée de la main pour une consultation rapide de la part des opérateurs concernés et par la direction des travaux du chantier. En cas de changement de propriété de la machine, le manuel doit être remis au nouveau propriétaire, comme équipement du SBB.
Avant d'effectuer une quelconque opération avec ou sur le SBB, le personnel concerné doit absolument et obligatoirement avoir lu très attentivement le présent manuel. Si le manuel est égaré, abîmé de manière à ne plus être lisible, une copie doit être téléchargée à partir du site internet www.wamgroup.com en vérifiant la date de la dernière mise à jour. Le présent manuel fournit les recommandations et les indications concernant les consignes de sécurité pour la prévention contre les accidents du travail. Dans tous les cas les consignes de sécurité conformément aux normes en vigueur doivent être observée avec la plus grande attention par les différents opérateurs.
Les modifications éventuelle des consignes de sécurité devront être adoptées et mises en oeuvre.

SCOPO ED IMPORTANZA DEL MANUALE

Il presente manuale, redatto dal costruttore, è parte integrante del corredo dello svuota BIG-BAG; come tale deve assolutamente seguire lo svuota BIG-BAG fino al suo smantellamento ed essere facilmente reperibile per una rapida consultazione da parte degli operatori interessati e della direzione lavori del cantiere. In caso di cambio di proprietà della macchina, il manuale deve essere consegnato alla nuova proprietà, quale corredo dello stesso SBB. Prima di eseguire qualsiasi operazione con, o sul SBB, il personale interessato deve assolutamente ed obbligatoriamente aver letto con la massima attenzione il presente manuale. Qualora il manuale venga smarrito, sgualcito e tale da non essere leggibile, si deve scaricare una nuova copia dal sito internet www.wamgroup.com e verificarne la data dell'ultimo aggiornamento. Il presente manuale fornisce avvertenze ed indicazioni relative alle norme di sicurezza per la prevenzione degli infortuni sul lavoro. Vanno comunque, ed in ogni caso, osservate con il massimo scrupolo da parte dei vari operatori le norme di sicurezza poste a loro carico dalle vigenti normative.
Eventuali modifiche delle norme di sicurezza che nel tempo dovessero aver luogo, dovranno essere recepite ed attuate.

The basic features of the machine being unchanged, the manufacturer reserves the right to make modifications to components, parts and accessories, which he considers as suitable for improving the product or for structural or commercial requirements, at any moment, without any obligation to updating this manual immediately.

Auch wenn die wesentlichen Eigenschaften der beschriebenen Geräte unverändert bleiben, behält der Hersteller sich das Recht vor, Änderungen an Organen, Einzelteilen und dem Zubehör vorzunehmen, die er von Fall zu Fall als angemessen betrachtet, um das Produkt zu verbessern, oder wenn die Konstruktion oder der Vertrieb dies verlangen, ohne dazu gezwungen zu sein, diese Veröffentlichung immer sofort auf den neuesten Stand zu bringen.

Sans préjudice des caractéristiques principales des machines décrites, le constructeur se réserve le droit d'apporter les modifications aux organes, pièces et accessoires qu'il retient avantageuses pour l'amélioration du produit ou pour des exigences de fabrication ou commerciale, à tout moment et sans l'obligation de mettre à jour immédiatement cette publication.

Ferme restando le caratteristiche essenziali delle macchine descritte, il costruttore si riserva il diritto di apportare modifiche di organi, dettagli ed accessori, che riterrà convenienti per il miglioramento del prodotto o per esigenze di carattere costruttivo o commerciale, in qualunque momento e senza impegnarsi di aggiornare tempestivamente questa pubblicazione.

The FIBC Dischargers (SBB) are designed and constructed for carrying out their function in compliance with the following limits of use:

Maximum operating temperature:
+40°C in continuous mode

Minimum operating temperature:
-20°C

Height of FIBC:
- Min. 600mm
- Max. 1800mm (model S) and 2000mm (model M)

- Any
(for models T and C)

USE
- The FIBC unloader is NOT designed for operating in potentially explosive atmospheres or with materials that could be hazardous by contact and/or inhalation, or else dangerous from a bacteriological or viral viewpoint.

If the machine has to cater for similar requirements, please contact the manufacturer.

Die Big-Bag-Entleerstationen (SBB) wurden entwickelt und werden hergestellt, um ihre Funktion unter Berücksihtigung folgender Einsatzeinschrämkungen zu erfüllen:

Max. Betriebstemperatur:
+40°C bei Dauerbetrieb

Niedrigste Betriebstemperatur:
-20°C

Höhe der Big-Bags:
- Min. 600 mm
- Max. 1800 mm (Modell S) und 2000 mm (Modell M)

- Jede beliebige
(für Modelle T und C)

GEBRAUCHSANGABEN
- Diese Big-Bag-Entleerstationen sind NICHT zum Einsatz in explosionsgefährdeten Bereichen oder zum Betrieb mit Schütt-gütern bestimmt, die bei Berüh-rung und/oder Einatmen schäd-lich sind oder die unter bakte-riologischen oder virologischen Gesichtspunkten gefährlich sind.

Wenn die Maschinen unter solchen Bedingungen zum Einsatz kommen sollen, ist es vorgeschrieben, Kontakt mit dem Hersteller aufzunehmen.

Les vide BIG BAG (SBB) ont été conçus et projetés pour assurer leur fonction d'utilisation dans le respect des limites d'emploi suivantes :

Température maximum de travail :
+40°C en continu

Température minimum de travail :
-20°C

Hauteur des BIG-BAG:
- Min. 600 mm
- Max. 1800mm (modèle S) et 2000mm (modèle M)

- Quelconque
(pour modèles T et C)

MODES D'EMPLOI
- Le vide BIG-BAG N'A PAS été conçu pour travailler dans des atmosphères explosibles, ni avec des matières nocives au contact ou à l'inhalation, ou encore dangereuses du point de vue bactériologique et viral :

Quand la machine doit être utilisée dans ces conditions, il faut contacter le fabricant.

Gli svuota BIG-BAG (SBB) sono stati studiati e progettati per assolvere alla loro funzione d'uso nel rispetto dei seguenti limiti di impiego:

Temperatura massima di lavoro:
+40°C in continuo

Temperatura minima di lavoro:
-20°C

Altezza dei BIG-BAG:
- Min. 600 mm
- Max. 1800mm (modello S) e 2000mm (modello M)

- Qualsiasi
(per modelli T e C)

INDICAZIONI PER L'USO
- Lo svuota BIG-BAG NON è statoprogettato per operare in atmosfere potenzialmente esplosive o con materiali nocivi al contatto e/o inalazione, oppure pericolosi dal punto di vista batteriologico e virale.

Quando la macchina deve assolvere a queste esigenze è d'obbligo contattare il Costruttore.

The FIBC UNLOADERS ARE NOT designed for operating in potentially explosive atmospheres or with materials that are harmful on contact and/or when inhaled, or hazardous from a bacteriological or viral point of view.
The manufacturer must be informed if the machine is required to satisfy these requirements.
The FIBC UNLOADER must be installed with sufficient clearance around it to allow for normal assembly/disassembly, cleaning and maintenance operations.
It is also forbidden to start up the machine before the plant in which it is installed has been declared as conforming to the provisions of Machine Directive 23/07/1998 (2006/42/CE). In this regard, the installer must make provision for installing suitable personal and public protection devices to avoid damage to objects and harm to persons in the event of breakage.
Before carrying out any operation, make sure the machine is in safety condition.

Die BIG-BAG Entleerstation sind NICHT zum Einsatz in explosionsgefährdeter Umgebung oder mit bei Berührung und/oder beim Einatmen schädlichen oder unter dem bakteriologischen oder virologischen Gesichtspunkt gefährlichen Substanzen ausgelegt.
Wenn die Maschine unter solchen Bedingungen arbeiten muss, ist es unbedingt erforderlich, den Hersteller davon zu unterrichten.
Die BIG-BAG Entleerstation ist so zu installieren dass ringsum ausreichend freier Platz bleibt, um die normalen Ein- und Ausbauarbeiten, die Reinigung und die Wartung auszuführen.
Es ist außerdem verboten, die Maschine in Betrieb zu nehmen, bevor die Anlage, in die sie installiert werden, den Bestimmungen der Maschinen-Richtlinie vom 123.07.1998 (2006/42/EG) konform erklärt worden ist. In diesem Rahmen ist es Pflicht des Anlagenbauers/Installateurs, die persönlichen bzw. der Allgemeinheit dienenden Schutzausrüstungen vorzubereiten und zu installieren, um zu vermeiden dass im Bruchfall Personen- oder Sachschäden entstehen.
Bevor man irgendeinen Eingriff an der Maschine ausführt, ist zu überprüfen, dass diese in einen sicheren Zustand versetzt worden ist.

Les vide BIG-BAG N'ONT pas été conçus pour travailler dans les atmosphères potentiellement explosibles, avec des matériaux nocifs au contact et/ou à l'inhalation ou encore dangereux du point de vue bactériologique et viral.
Quand la machine doit satisfaire ces exigences il est obligatoire d'en informer le constructeur.
Le vide BIG-BAG devra être installé avec un espace circonstant suffisant pour effectuer les opérations ordinaires de montage/démontage, nettoyage et entretien.
Il est interdit, en outre, de mettre en service la machine avant que l'installation dans laquelle il sera monté n'ait été déclarée conformes aux dispositions de la Directive Machines du 23/07/1998 (2006/42/CE).
Dans ce cadre, le technicien installateur devra monter les équipements de protection individuels et collectifs, afin d'éviter les dommages aux choses ou aux personnes en cas de ruptures.
Avant d'effectuer une quelconque intervention sur la machine s'assurer que celle-ci a été placée en condition de sécurité.

Gli svuota BIG-BAG NON sono stati progettati per operare in atmosfere potenzialmente esplosive o con materiali nocivi al contatto e/o all'inalazione oppure pericolosi dal punto di vista batteriologico e virale.
Quando la macchina deve assolvere a queste esigenze è d'obbligo informare il costruttore.
Lo svuota BIG-BAG dovrà essere installato con uno spazio circostante sufficiente per effettuare le normali operazioni di montaggio/smontaggio, pulitura e manutenzione.
È vietato, inoltre, mettere in funzione la macchina prima che l'impianto nel quale venga installato sia stato dichiarato conforme alle disposizioni della Direttiva Macchine 23/07/1998 (2006/42/CE). In quest'ambito è cura dell'impiantista/installatore predisporre ed installare gli idonei dispositivi di protezione individuali e collettivi al fine di evitare danni a cose o persone in caso di rotture.
Prima di effettuare un qualsiasi intervento sulla macchina assicurasi che questa sia messa in sicurezza.

In this manual, from here onwards **"setting the machine in safety conditions"** will indicate the following operations:
- Make sure the machine is disconnected from all electric power supply sources.
- Make sure the machine is completely stopped
- Provide sufficient lighting around the machine operating area (the operators may be provided with electric lamps if necessary).
- Wait for the powder mass inside to settle down completely, and then stop the machine.

In diesem Handbuch verstehen wir unter dem Begriff **„das Gerät in einen sicheren Zustand versetzen"** folgendes:
- Sicherstellen, dass das Geräte von allen elektrischen Versorgungsquellen getrennt ist.
- Sicherstellen, dass die Maschine ganz still steht.
- Dafür sorgen, dass der Bereich rings um das Gerät in angemessener Weise beleuchtet ist (eventuell indem man das Personal mit elektrischen Lampen ausstattet).
- Sicherstellen, dass die Staubmasse innerhalb sich ganz abgelagert hat und sich daher nicht mehr bewegt.

Dans le présent manuel la consigne **"mettre la machine en sécurité"** indique les opérations suivantes :
- S'assurer que la machine est débranchée de toutes les alimentations électriques.
- S'assurer que la machine est complètement arrêtée.
- Eclairer correctement la zone qui entoure la machine (en dotant éventuellement les opérateur de lampes électriques).
- Attendre que la masse de poussière contenue se soit entièrement déposée et donc arrêtée.

In seguito, nel presente manuale, indicheremo con la dicitura **"mettere in sicurezza la macchina"** le seguenti operazioni:
- Accertarsi che la macchina sia scollegata da tutte le alimentazioni elettriche.
- Accertarsi che la macchina sia completamente ferma.
- Provvedere ad illuminare correttamente la zona circostante alla macchina (eventualmente dotando gli operatori di lampade elettriche).
- Attendere che la massa di polvere contenuta all'interno sia completamente depositata e quindi ferma.

Before carrying out any operation on the machine (maintenance or cleaning), the operators must use suitable personal protection equipment:
- antistatic safety footwear (certified)
- antistatic protective clothing (certified)
- helmet
- antistatic, cut-proof gloves
- safety masks

In addition to these, use the safety devices specified in the safety chart of the product handled.

Für jede am Gerät durch-zuführende Arbeit wie Wartung und Reinigung muss das Personal mit den entsprechenden persönlichen Schutzausrüstungen (PSA) ausgestattet sein:
- Antistatische Sicherheitsschuhe (zertifiziert)
- Antistatische Schutzkleidung (zertifiziert)
- Schutzhelme
- Antistatische Schnittschutz-Handschuhe
- Atemschutzmasken.

Außerdem sind die Schutz-maßnahmen, die auf dem Sicherheitsdatenblatt des behandelten Produkts stehen, betroffen.

Pour toute opération à effectuer sur la machine (entretien et nettoyage), les opérateurs devront être munis des équipements de protection individuelle (EPI) :
- Chaussures de sécurité antistatiques (certifiées)
- Vêtements de protection antistatiques (certifiés)
- Casque
- Gants anticoupure antistatiques
- Maques de protection respiratoire

En outre les équipements de protection prévus par la fiche de sécurité du produit traité.

Per qualsiasi operazione da effettuarsi sulla macchina (manutenzioni e pulizia), gli operatori dovranno essere muniti degli appositi dispositivi di protezione individuale (DPI):
- Scarpe antinfortunistiche antistatiche (certificate)
- Indumenti protettivi antistatici (certificati)
- Casco
- Guanti antitaglio antistatici
- Mascherine protettive

Inoltre quei dispositivi di protezione previsti dalla scheda di sicurezza del prodotto trattato.

WARNINGS

The manufacturer shall be relieved of all responsibility concerning the safety of persons and objects and operations if the truck loading and unloading operations, transport, positioning at the worksite, use, repairs, maintenance are not carried out in conformity with the instructions in this manual.

Similarly the manufacturer shall not be responsible iif the FIBC is used:

- improperly;
- by unauthorized and/or unskilled personnel;
- with modifications to the original configuration;
- with spare parts that are not original;
- in a manner non conforming to existing standards and legisla tion;
- non conforming to the recom mendations in this manual or on the warning and hazard notices on the machine.

The user is obliged to carefully check that the work area is clear of obstacles, persons, and machines with potential risk, before carrying out any operation.

Lifting, transport, installation at the worksite, set-up, checking stability and operations, routine and extraordinary maintenance, etc. must be carried out by qualified authorized personnel according to the instructions in this manual and in compliance with the existing safety regulations.

When positioning the FIBC at the work site must be earthed.

- It is forbidden to carry out maintenance, repairs or modifications with the machine in operation.
- For every operation, it is compulsory to disconnect all the electric power supplies to the machine.
- It is forbidden to remove the guards and safeties present on the machine.
- Before startup, make sure all the guards are installed correctly.

HINWEISE

Der Hersteller betrachtet sich jeglicher Haftung hinsichtlich der Sicherheit von Personen, Sachen und Betrieb enthoben, falls das Auf- und Abladen vom Lkw, Transport, Aufstellung auf der Baustelle, Gebrauch, Reparaturen, Wartung etc. nicht gemäß der in diesem Handbuch beschriebenen Hinweise ausgeführt werden.

Gleichermaßen betrachtet der Hersteller sich in keinerlei Weise verantwortlich, falls die BIG-BAG Entleerstation wie folgt benutzt wird:

- bestimmungswidrig;
- durch Personal, das nicht befugt und/oder ausreichend angewiesen ist;
- mit Änderungen im Bezug zur ursprünglichen Konfiguration;
- mit Einbau von Ersatzteilen, die keine Originale sind;
- nicht entsprechend der augenblicklich geltenden Normen und Gesetze;
- nicht entsprechend der Empfehlungen dieses Hand buchs oder der Hinweis- und Warnschilder, die auf der Ma schine angebracht sind.

Der Anwender ist dazu verpflichtet, vor der Ausführung irgendeines Vorgangs sehr aufmerksam zu prüfen, dass der Arbeitsbereich frei von Hindernissen, Personen und Maschinen ist, die eine mögliche Gefahrenquelle darstellen.

Heben, Transport, Installation auf der Baustelle, Inbetriebnahme, Standsicherheits- und Funktion stests, regelmäßige und außeror dentliche Wartung etc. müssen durch qualifiziertes und befugtes Personal vorgenommen werden, das gemäß der Anweisungen, die in diesem Handbuch stehen, und unter Beachtung der geltenden Sicherheitsbestim mungen vorzugehen hat.

Bei der Aufstellung vor Ort muss die Big-Bag-Entleerstation geerdet werden.

- Es ist verboten, die laufende Maschine zu warten, zu reparieren oder zu ändern.
- Vor jedem Eingriff ist es unbedingt erforderlich, alle elektrischen Verbindungen der Maschine abzuklemmen.
- Es ist verboten, die Schutz- und Sicherheitseinrichtungen, die auf der Maschine vorhanden sind, zu entfernen.
- Vor der Inbetriebnahme sicherstellen, dass alle Schutzvorrichtungen korrekt installiert sind.

RECOMMANDATIONS

Le constructeur se considère dégagé de toute responsabilité concernant la sécurité des personnes, des choses et du fonctionnement si les opérations de chargement et de déchargement du camion, transport, positionnement sur chantier, utilisation, réparations, entretiens, etc. n'ont pas été effectuées conformément aux recommandations décrites dans cette notice d'instructions.

De même le constructeur ne pourra être considéré respon sable si le vide BIG-BAG est utilisé:

- de manière impropre;
- par du personnel non autorisé et/ ou pas suffisamment formé;
- avec des modifications par rapport à la configuration originale ;
- avec introduction de pièces détachées non d'origine ;
- de manière non conforme à la réglementation et à la législation en vigueur ;
- de manière non conforme aux recommandations fournies dans la présente notice ou par les plaques signalétiques apposées sur la machine.

L'utilisateur a l'obligation de vérifier avec la plus grande attention, avant d'effectuer une quelconque opération, que la zone de travail est dégagée de tout obstacle, personnes, machines pouvant représenter une source potentielle de danger.

Les opérations de soulèvement, le transport, le montage sur chantier, la mise en service, les vérifications de stabilité et de fonctionnement, les entretiens ordinaires et extraordinaires, etc. doivent être effectuées par du personnel qualifié et autorisé, lequel doit intervenir suivant les indications indiquées dans la présente notice d'instructions et dans le respect des normes de sécurité en vigueur.

Au moment du positionnement sur chantier le vide BIG BAG doit être relié électriquement à la terre.

- Il est interdit d'effectuer des opérations d'entretien, des réparations ou des modifications quand la machine est en marche.
- Avant toute opération il est obligatoire de débrancher toutes les alimentations électriques de la machine.
- Il est interdit d'enlever les protections et les sécurités présentes sur la machine.
- Avant la mise en marche s'assurer que toutes les protections sont montées correctement.

AVVERTENZE

Il costruttore si riterrà sollevato da qualsiasi responsabilità inerente la sicurezza delle persone, delle cose e di funzionamento qualora le operazioni di carico e scarico da autocarro, trasporto, posizionamento in cantiere, utilizzo, riparazioni, manutenzioni, ecc. non siano eseguite conformemente alle avvertenze descritte nel presente manuale.

Analogamente il costruttore non si riterrà in alcun modo responsabile qualora lo svuota BIG-BAG venga utilizzato:

- impropriamente;
- da personale non autorizzato e/o non sufficientemente addestrato;
- con modifiche rispetto alla configurazione originale;
- con inserimento di parti di ricambio non originali;
- non conformemente alla normativa e legislazione attualmente vigente;
- non conformemente a quanto raccomandato nel presente manuale o sulle targhette di avvertenza e pericolo applicata sulla macchina.

Per l'utente è fatto obbligo di verificare con la massima attenzione, prima di eseguire qualsiasi operazione, che la zona di lavoro sia libera da ostacoli, persone, macchine potenziali fonti di pericolo.

Le operazioni di sollevamento, trasporto, installazione in cantiere, la messa in funzione, le verifiche di stabilità e funzionamento, le manutenzioni ordinarie e straordinarie,ecc., devono essere svolte da personale qualificato ed autorizzato, il quale deve operare secondo le indicazioni riportate nel presente manuale e nel rispetto delle vigenti norme di sicurezza.

All'atto del posizionamento in cantiere lo svuota BIG-BAG deve essere collegato elettricamente a terra.

- É vietato manutenzionare, eseguire riparazioni o modifiche con la macchina in funzione.
- Prima di ogni operazione è obbligatorio scollegare tutte le alimentazioni elettriche della macchina.
- É vietato rimuovere le protezioni e le sicurezze presenti sulla macchina.
- Prima dell' avviamento assicurarsi che tutte le protezioni siano correttamente installate.

The FIBC in this catalogue (code SBB) are devices suitable for discharging bags of different shapes and sizes.
They are manufactured from shot-blasted, painted steel; on request, they may be supplied in 304 stainless steel, entirely or only the parts in contact with the product to prevent its contamination.
The numerous models and sizes of SBB available, together with the complete range of accessories make this equipment suitable for use in virtually all applications and industrial sectors and with different types of FIBCs: in fact, the hopper, which can also be supplied alone, is specially designed for optimising the flow of materials.

MACHINE CODE
- SBB

MACHINE TYPE
- FLEXIBLE INTERMEDIATE BULK CONTAINER UNLOADER

USE
- Emptying FIBCs of various sizes containing product in powder or granular form.

ADVANTAGES
- Equipment which can be assembled according to requirements.
- The model with hoist does not require the use of a forklift truck.
- The removable frame makes it possible to empty FIBCs 600 to 1800 mm in height.
- The operator is protected from falling FIBCs by the four posts of the frame.
- The FIBC valve can be accessed through the hatch.
- The pneumatic activators optimises emptying of FIBCs.

Die in diesem Katalog beschriebenen Big-Bag-Entleerstationen (Code SBB) sind Vorrichtungen, die zum Entleeren Big-Bags unterschiedlicher Form und Abmessungen geeignet sind.
Sie bestehen aus sandgestrahltem und lackiertem Stahl. Auf Anfrage sind sie auch entweder komplett oder, zur Verhinderung der Produktverunreinigung, nur in den produktberührenden Teilen aus Edelstahl 1.4301 lieferbar.
Die zahlreichen Modellvarianten der SBB in Bezug auf Abmessungen und das komplette Zubehörsortiment machen diese Geräte für praktisch jeden Einsatz in allen Industriezweigen und für unterschiedliche Big-Bag-Typen einsetzbar: Die Trichter, die auch separat lieferbar sind, sind so konstruiert, dass die Fließfähigkeit des Schüttguts optimiert wird.

MASCHINENCODE
- SBB

MASCHINENTYPE
- BIG-BAG ENTLEERSTATION

BENUTZUNG
- Entleeren von Big-Bags unterschiedlicher Größe mit staub- und granulatförmigen Produkten.

VORTEILE
- Leicht und schnell aufstellbares Gerät.
- Die Version mit Flaschenzug kann ohne Einsatz von Gabelstaplern verwendet wird.
- Der herausziehbare Rahmen ermöglicht das Entleeren von Big-Bags mit Höhen von 600 bis 1800 mm.
- Der Bediener ist gegen den eventuellen Absturz des Big-Bags durch die vier Ständer des Gestells geschützt.
- Die Klappe ermöglicht den Zugriff zum Ventil des Big-Bags.
- Die pneumatische Austraghilfe optimiert die Entleerung des Big-Bags.

Les vide BIG-BAG (code SBB) représentés dans ce catalogue sont des dispositifs qui servent à décharger des sacs de différentes formes et dimensions.
Ils sont réalisés en acier au carbone sablé et peint. Sur demande, ils peuvent être réalisés en acier inox 304, soit entièrement, soit uniquement les parties au contact du produit pour éviter de le contaminer.
Les nombreuses variantes de SBB en termes de modèle et dimensions disponibles, associées à une ample gamme d'accessoires, rendent ces machines utilisables pour n'importe quelle application pratiquement dans tous les secteurs industriels et avec différents types de BIG-BAG : en effet la trémie, qui peut être fournie même séparément, a été conçue spécialement pour optimiser la fluidité des produits.

CODE MACHINE
- SBB

TYPE DE MACHINE
- VIDE-SACS GRANDES DIMENSIONS

UTILISATION
- Vidage de GRANDS SACS de différentes dimensions avec des produits en poudre ou granulaires.

AVANTAGES
- Machine composée suivant les exigences.
- La version avec palan n'exige pas l'utilisation du chariot élévateur.
- Le châssis démontable permet de vide des sacs d'une hauteur de 600 à 1800 mm.
- Les opérateurs sont protégés contre la chute des sacs par quatre montants du châssis.
- Une trappe permet l' accès à la vanne du BIG BAG.
- Les activateurs pneumatiques optimisent le vidage du BIG BAG.

Gli svuota BIG-BAG (codice SBB) rappresentati in questo catalogo sono dispositivi idonei a scaricare sacchi di svariate tipologie per forme e dimensioni.
Sono realizzati in acciaio al carbonio sabbiato e verniciato; su richiesta comunque possono essere realizzati in AISI 304, sia interamente che solo nelle parti a contatto col prodotto per evitare contaminazioni dello stesso.
Le numerose varianti di SBB in termini di modello e dimensioni disponibili, unite ad una completa gamma di accessori, rendono queste macchine utilizzabili per qualsiasi applicazione in tutti i settori industriali e con diverse tipologie di BIG-BAG: infatti la tramoggia, che può essere fornita anche da sola, è stata accuratamente studiata per ottimizzare la scorrevolezza dei materiali.

CODICE MACCHINA
- SBB

TIPO MACCHINA
- SVUOTA BIG-BAG

FUNZIONE D'USO
- Svuotamento di BIG-BAG di varie dimensioni con prodotti in polvere o granulari.

VANTAGGI
- Macchina componibile a seconda delle esigenze.
- La versione con paranco non richiede l' utilizzo del carrello elevatore.
- Il telaio sfilabile permette di svuotare big bag con altezze da 600 a 1800 mm.
- Gli operatori sono protetti dall' eventuale caduta dei big bag dai quattro montanti del telaio.
- Attraverso il portello si accede alla valvola del BIG BAG.
- Gli attivatori pneumatici ottimizzano lo svuotamento del BIG BAG.

MODELS AVAILABLE

MODEL T:
UNLOADING HOPPER
- SBB._.125.T
- SBB._.150.T
Supplied separately, in two sizes, it is carefully designed to optimize the flowability of materials.
It comprises:
- seals made of material suitable for the type of use.
- adjustable weight motovi-brator.
- vent pipe with filter bag.
- finger mesh.
- inspection hatch with seal.
- damper supports.

MODEL C:
HOPPER WITH FEET
- SBB._.125.C
- SBB._.150.C
Thanks to its structure, there is plenty of space for using different systems for loading the FIBCs.
It comprises:
- a unloading hopper.
- supporting frame made of tubular elements having suitable size and thickness to ensure sturdiness and solidity.
- cross with pegs for hooking FIBC harness, lifting hooks and tubular elements for lift truck forks

MODEL S:
HOPPER WITH REMOVABLE FRAME
- SBB._.125.S
- SBB._.150.S
Athough it is identical as regards design and use, the difference lies in the size of the FIBCs which can be accepted.
These comprise:
- a unloading hopper.
- supporting tubular frame having size and thickness suitable to guarantee sturdiness and solidity.
- removable frame which makes it possible to adapt the Unloader for use with FIBCs of different heights.
- cross with pegs for hooking FIBC harness, lifting hooks and tubular elements for lift truck forks

LIEFERBARE MODELLE

MODELL T:
AUSLAUFTRICHTER
- SBB._.125.T
- SBB._.150.T
Wird separat geliefert; in zwei Größen erhältlich; ausgelegt, um optimalen Materialfluß zu gewährleisten.
Besteht aus:
- Dichtung aus dem Einsatz angepaßten Material.
- Vibrationsmotor mit einstellbaren Unwuchtmassen.
- Entlüftungsstutzen mit Filtersack.
- Schutzgitter.
- Inspektionsklappe mit Dichtung.
- Schwingungsdämpfende Träger.

MODELL C:
TRICHTER AUF STANDBEINEN
- SBB._.125.C
- SBB._.150.C
Läßt dank der besonderen Konstruktion viel Platz für Big-Bag-Handlingsyteme.
Besteht aus:
- Auslauftrichter.
- Traggestell aus Rohren mit solchen Abmessungen und Wandstärken, dass eine robuste und solide Bauweise gewährleistet wird.
- Kreuzteil mit Stiften zum Einhaken der Big-Bag-Gurte, Hubhaken und Rohre für die Gabeln des Staplers.

MODELL S:
TRICHTER MIT HERAUSZIEHBAREM GESTELL
- SBB._.125.S
- SBB._.150.S
Im Aufbau und im Einsatz identisch, jedoch geeignet für größere Big-Bags.
Besteht aus:
- Auslauftrichter.
- Rohrtragegestell in robu-ster Bauweise.
- Herausziehbarer Rahmen zur Anpassung des Geräts an verschiedene Big-Bag-Größen.
- Kreuzteil mit Stiften zum Einhaken der Big-Bag-Gurte, Hubhaken und Rohre für die Gabeln des Staplers.

MODELES DISPONIBLES

MODELE T:
TREMIE DE DÉCHARGEMENT
- SBB._.125.T
- SBB._.150.T
Fournie même seule, en deux dimensions, elle a été étudiée spécialement pour optimiser l' écoulement des produits.
Elle est composée de:
- joint en matière appropriée au secteur d' utilisation.
- motovibrateur à masses réglables.
- tube d' évent à manchon filtrant.
- grille de sécurité.
- trappe de visite avec joint.
- supports absorbe vibrations.

MODELE C :
TREMIE AVEC PIEDS
- SBB._.125.C
- SBB._.150.C
Grâce à sa conformation il laisse un espace ample à l'utilisateur des systèmes les plus variés de chargement du BIG BAG.
Composé de:
- trémie de dechargement.
- châssis de soutien réalisé en tubulaire aux dimensions et épaisseurs garantissant la robustesse et la solidité de la structure.
- croisillon à picots d' accrochage des bretelles BIG BAG, crochet de soulèvement et tubulaires pour fourches de chariot élévateur.

MODELE S :
TREMIE AVEC CHASSIS AMOVIBLE
- SBB._.125.S
- SBB._.150.S
Bien qu' étant identiques par composition et utilisation ils se différencient par les dimensions des SACS «BIG BAG» qu'ils peuvent accepter.
Ils sont composés de:
- trémie de dechargement.
- châssis réalisé en tubulaire aux dimensions et épaisseurs garantissant robustesse et solidité.
- châssis démontable pour permettre d' adapter la machine aux différentes hauteurs des BIG BAG.
- croisillon à picots d' accrochage des bretelles BIG BAG, crochet de soulèvement et tubulaires pour fourches de chariot élévateur.

MODELLI DISPONIBILI

MODELLO T:
TRAMOGGIA DI SCARICO
- SBB._.125.T
- SBB._.150.T
Fornita anche da sola, in due dimensioni, è stata accuratamente studiata per ottimizzare la scorrevolezza dei materiali.
E' composta da:
- guarnizione di tenuta in materiale idoneo al settore di impiego.
- motovibratore a masse regolabili.
- tubo sfiato aria con manica filtrante.
- griglia di sicurezza.
- portello di ispezione con relativa guarnizione.
- supporti antivibranti.

MODELLO C:
TRAMOGGIA CON PIEDI
- SBB._.125.C
- SBB._.150.C
Grazie alla sua conformazione lascia ampio spazio all' utilizzo dei più svariati sistemi di carico del BIG BAG.
Composto da:
- tramoggia di scarico.
- telaio di sostegno realizzato in tubolari di dimensioni e spessori tali da garantire robustezza e solidità.
- crociera con pioli di aggancio bretelle BIG BAG, gancio di sollevamento e tubolari per forche carrello elevatore.

MODELLO S:
TRAMOGGIA CON TELAIO SFILABILE
- SBB._.125.S
- SBB._.150.S
Pur essendo identici per composizione e funzione d' uso si differenziano per le dimensioni dei BIG BAG che possono accettare.
Sono composti da:
- tramoggia di scarico.
- telaio di sostegno realizzato in tubolari di dimensioni e spessori tali da garantire robustezza e solidità.
- telaio sfilabile per consentire di adattare la macchina alle diverse altezze dei BIG BAG.
- crociera con pioli di aggancio bretelle BIG BAG, gancio di sollevamento e tubolari per forche carrello elevatore.

MODEL M:
FRAME WITH MONORAIL
- SBB._.125.M

The special feature of this equipment lies in the fact that it does not require the use of a fork lift truck for external loading of FIBCs, as it is designed for use with its own hoist (not supplied) which makes it possible to operate independently during the various phases.
The equipment comprises:
- a unloading hopper.
- a supporting frame made of suitably sized tubular elements thick enough to guarantee the required sturdiness and solidity.
- a monorail for the hoist (hoist excluded)..
- cross with pegs for hooking the FIBC harness, lifting hooks and tubular elements for using a lift truck if necessary for handling FIBCs.

MODELL M:
GESTELL MIT EINSCHIENEN-BAHN
- SBB._.125.M

Die Besonderheit dieses Geräts besteht darin, daß es zum Aufladen des Big-Bags keinen Gabelstapler benötigt, weil das Gerät für die Installation einer eigenen Seilwinde ausgelegt ist (gehört nicht zum Lieferumfang), was in den verschiedenen Arbeitsphasen ein Höchstmaß an Autonomie bedeutet.
Besteht aus:
- Auslauf trichter.
- Rohrtragegestell in robuster Bauweise.
- Monoschiene für Seilwinde (Flaschenzug ausgenommen).
- Kreuzteil mit Stiften zum Einhaken der Big-Bag-Gurte, Haken zum Heben und Rohre für die eventuelle Benutzung eines Gabelstaplers zum Handling der Big-Bags.

MODELE M :
CHASSIS AVEC MONORAIL
- SBB._.125.M

Sa particularité est celle de ne pas exiger l' utilisation d'un chariot élévateur pour le chargement du BIG BAG extérieur car il est prévu pour être équipé d' un treuil (non de fourniture) qui permet une meilleure autonomie dans les différentes phases de travail.
Composé de:
- trémie de dechargement.
- châssis réalisé en tubulaire aux dimensions et épaisseurs garantissant robustesse et solidité.
- monorail pour palan (palan exclu).
- croisillon à picots d'accrochage des bretelles BIG BAG, crochet de soulèvement et tubulaires pour l'utilisation éventuelle d'un chariot élévateur pendant les phases de manutention des BIG BAG.

MODELLO M:
TELAIO CON MONOROTAIA
- SBB._.125.M

La sua particolarità è quella di non richiedere l' uso di un carrello elevatore per il carico BIG BAG esterno in quanto è predisposto per l' installazione di un proprio verricello (non di fornitura) che permette la più completa autonomia nelle varie fasi di lavoro.
Composto da:
- tramoggia si scarico.
- telaio di sostegno realizzato in tubolari di dimensioni e spessori tali da garantire robustezza e solidità.
- monorotaia per paranco (paranco escluso).
- crociera con pioli di aggancio bretelle BIG BAG, gancio di sollevamento e tubolari per l' eventuale utilizzo di un carrello elevatore durante le fasi di movimentazioni dei BIG BAG.

ACCESSORIES

- Hopper seal made of food- grade material.

- Pneumatic activators
  Materials featuring poor flowability do not flow out of the FIBC easily. It is therefore necessary to use pneumatic activators. These devices act directly at the bottom of the FIBC, causing lifting and lowering of the opposite corners to stimulate the flow of material compacted at the bottom.
  The gradual movement of the activators makes the FIBC assume a "V" shape, to eliminate the deadlock points.
For more information, see Technical Catalogue - Maintenance KSC.

- Cutting device
  It is used for cutting FIBCs without valves which cannot be recycled after emptying.
- Hose connector kit available in black or white food- grade rubber.
- Round or square flange for hopper.
- Raised feet for lifting the entire structure.
- Mechanical limit stop for signalling door open status.
- Manual gate valve at outlet.

ZUBEHÖR

- Trichterdichtung aus nahrungsmitteltauglichem Material.

- Pneumatische Austraghilfe
  Materialien, die nur schwach rieselfähig sind und nur schwer aus dem Big-Bag ausgetragen werden können, verlangen den Einsatz pneumatischer Austraghilfen. Diese wirken direkt auf den unteren Teil des Big-Bags und bewegen die gegenüberliegenden Sackkanten auf- und abwärts, damit das im unteren Bereich verdichtete Material abläuft.
  Das ständige Ausfahren der Austraghilfe dient dazu, daß der Big-Bag eine V-förmige Gestalt annimmt, wodurch Toträume beseitigt werden.
Weitere Informationen siehe Technischer Katalog - Einbau und Wartungsanleitung KSC.

- Schneidevorrichtung
  Hat die Funktion, Einwegsäcke ohne Ventil aufzuschneiden.
- Montagesatz für flexible Verbindung, erhältlich in schwarzem oder weißem, nahrungsmittelechtem Kautschuk.
- Rund- oder Vierkantflansche für Trichter.
- Füße zum Höherstellen der kompletten Vorrichtung.
- Mechanischer Endschalter für Meldungen Klappe offen.
- Handschieber am Auslauf.

ACCESSOIRES

- Joint trémie en matière indiquée pour le secteur alimentaire

- Activateurs pneumatiques.
  Les matières peu fluides ne sortent pas facilement des sacs. Il est donc nécessaire d'appliquer des activateurs pneumatiques. Ils agissent directement sur le fond des «big bag» en déterminant un rehaussement ou un abaissement des angles opposés de manière à stimuler la sortie du produit compacte sur le fond.
  Le mouvement progressif des activateurs fait prendre une forme en «V» au big bag de manière à éliminer les points morts.
Pour plus d'informations voir Catolgue Techinique - Utilisation et Entertien KSC.

- Système de coupe.
  Sa fonction est de couper les gros sacs sans valve, qui ne sont pas récupérés après vidange.
- Kit de liaison flexible disponible en caoutchouc noir ou blanc pour secteur alimentaire.
- Brides rondes ou carrées pour la trémie.
- Pieds de rehausse pour le soulèvement de toute la structure.
- Fin de course mécanique pour signaler l'ouverture du portillon.
- Vanne manuelle de décharge-ment.

ACCESSORI

- Guarnizione tramoggia in materiale idoneo al settore alimentare

- Attivatori pneumatici.
  I materiali poco scorrevoli non escono facilmente dai big bag pertanto si rende necessario applicare degli attivatori pneumatici. Questi agiscono direttamente sul fondo dei big bag determinando un innalzamento e un abbassamento degli spigoli opposti in modo da stimolare la fuoriuscita del materiale compattato sul fondo.
  La progressiva escursione degli attivatori fa si che il big bag assume la forma a "V" in modo da eliminare i punti morti.
Per ulteriori informazioni consultare il relativo Catalogo Tecnico - Uso e Manutenzione KSC.

- Sistema di taglio.
  Ha la funzione di tagliare BIG BAG senza valvola, monouso.
- Kit collegamento flessibile disponibile in gomma nera o bianca per settore alimentare.
- Flange tonde o quadre per tramoggia.
- Piedi di rialzo per il sollevamento di tutta la struttura.
- Fine corsa meccanico per segnalazioni apertura portello.
- Serranda manuale allo scarico.

The Manufacturer provides a 12-month warranty on their products. This period starts from the date of the consignment note.
The warranty is not applicable for breakage and/or defects caused by incorrect installation or use, or incorrect maintenance, or modifications not authorized by the Manufacturer.
The warranty does not extend to parts that wear out following normal use and electrical components.
To be more precise, the warrantee lapses if the FIBC:
- has been tampered with or modified,
- has not been used correctly,
- has been used without respecting the limits indicated in this manual and/or has been subjected to excessive mecha nical stress,
- has not been subjected to the necessary maintenance or these operations have been carried out partly and/or incorrectly,
- has been damaged due to carelessness during transport, installation and use,
- has been fitted with spare parts that are not original.

On receiving the product, the user must check these for defects deriving from transport and/or incomplete supply.
Defects, damage or incom pleteness of the supply must be immediately communicated to the Manufacturer in writing and countersigned by the haulage transporter.

Der Hersteller gewährt auf ihre Erzeugnisse eine Garantie von 12 Monaten. Die Garantiezeit beginnt mit dem Datum des Lieferscheins.
Die Garantie ist nicht anwendbar, wenn es sich um Schäden und/oder Defekte handelt, die auf falschem Einbau oder Gebrauch, nicht korrekter Wartung oder Änderungen beruhen, die ohne die Genehmigung des Her-stellers ausgeführt wurden.
Die Garantie deckt keine Teile ab, die infolge des normalen Gebrauchs verschleißen, und auch keine elektrischen Teile.
Vielmehr erlischt die Garantie in jenen Fällen, in denen die Big-Bag-Entleerstation:
- manipuliert oder geändert wurde,
- nicht korrekt verwendet wurde,
- nicht unter der Beachtung der in diesem Handbuch genannten Grenzwerte benutzt wurde und/oder zu starken mechanischen Belastungen ausgesetzt wurde,
- bei Transport, Installation und Gebrauch Schäden wegen Fahrlässigkeit erlitten hat,
- mit Ersatzteilen bestückt wurde, die keine Originalteile sind.

Beim Empfang der Ware hat der Empfänger sicherzustellen, dass die Ware keine durch den Transport verursachten Schäden oder Defekte aufweist, und/oder dass der Lieferumfang vollstän-dig ist.
Etwaige Defekte, Schäden oder Fehlmengen sind mittels schriftlicher und vom Frachtführer gegengezeichneter Mitteilung sofort dem Hersteller zu melden.

Le constructeur reconnaît une période de 12 mois de garantie sur les produits de sa fabrication. La période prend effet à compter de la date indiquée sur le bon de livraison.
La garantie ne s'applique pas à la suite de ruptures et/ou de défauts provoqués par un montage et une utilisation impropre, des entretiens qui ne sont réalisés correctement ou des modifications apportées sans autorisation du constru cteur.
La garantie s'étend aux pièces qui s'usent à la suite d'une utilisation normale et aux parties électriques.
Plus précisément, la garantie est sans effet dans les cas où le vide BIG-BAG :
- a été manipulé ou modifié,
- a été utilisé de manière incor recte,
- a été utilisé sans respecter les limites indiquées dans la présen te notice et/ou qu'il a été soumis à des contraintes mécaniques excessives
- il n'a pas été soumis aux entretiens nécessaires ou que ces opérations ont été effectuées partiellement, de manière incom plète ou incorrecte
- a subit des dommages par négligence pendant le transport, la mise en place et l'utilisation,
- a été réparé avec des pièces qui ne sont pas d'origine.

Dès réception de la marchan dise, le destinataire doit vérifier que celle-ci n'a pas de défauts ou subit de dégâts dus au tran sport et que la fourniture n'est pas incomplète.
Tout défaut, dommage ou four niture incomplète doit immédia tement être signalée au constru cteur par communication écrite et contresignée par le tran sporteur.

Il costruttore riconosce un periodo di 12 mesi di garanzia sui prodotti di propria costruzione. Il periodo decorre dalla data della bolla di consegna.
La garanzia non è applicabile a seguito di rotture e/o difetti causati da errata installazione o utilizzo, oppure da manutenzioni non corrette o modifiche apportate senza autorizzazione del costruttore.
La garanzia non si estende alle parti che si logorano in seguito al normale uso e alle parti elettriche.
A miglior precisazione la garanzia decade nei casi in cui lo svuota BIG-BAG:
- sia stato manomesso o modificato,
- sia stato utilizzato non correttamente,
- sia stato utilizzato non rispettando i limiti indicati nel presente manuale e/o sia stato sottoposto ad eccessive sollecitazioni meccaniche,
- non sia stato sottoposto alle necessarie manutenzioni o queste siano state eseguite solo in parte e/o non correttamente,
- abbia subito danni per incuria durante il trasporto, l'installazione e l'utilizzo,
- siano state inserite parti di ricambio non originali.

Al ricevimento del prodotto, il destinatario deve verificare che lo stesso non presenti difetti o danni derivanti dal trasporto e/o incompletezza della fornitura.
Eventuali difetti, danni o incompletezza vanno immediatamente segnalati al costruttore mediante comunicazione scritta e controfirmata dal vettore.

CHECKING BEFORE SHIPMENT

The machine has been subjected to operating tests at our factory in order to guarantee correct installation. The special checks carried out by the manufacturer are as follows:

- Checking the power voltage of the electric motor vibrator, which must correspond to the value specified at the time of purchase.;
- Checking the serial number;
- Checking to ensure that all rating plates are present;
- Checking to ensure that all bolts and screws are locked properly;
- Checking the dimensions;
- Checking painting;
- Check correct working of the pneumatic actuators without load for about 15 minutes;
- Checking packaging.

KONTROLLEN VON DEM VERSAND

Die Maschine ist im Herstellerwerk einer gründlichen Funktionsprobe unterzogen worden, damit die korrekte Inbetriebnahme garantiert werden kann. Insbesondere wurden die folgenden Kontrollen ausgeführt:

- Kontrolle der Betriebsspannung des elektrischen Unwuchtmotors, die den Werten entsprechen muss, die bei der Bestellung angegeben wurden.
- Kontrolle der Serien-Nummer.
- Kontrolle auf das Vorhandensein aller Schilder.
- Kontrolle aller Schrauben auf festen Sitz.
- Größenkontrolle.
- Lackkontrolle.
- Kontrolle der pneumatischen Austraghilfen im leeren Zustand auf korrekte Funktion auf die Dauer von circa 15 Minuten
- Kontrolle der Verpackung.

CONTROLES AVANT L'EXPEDITION

La machine a subi dans nos établissement un essai de réception réel de fonctionnement, pour garantir une mise en service correcte. Les contrôles effectués par le constructeur sont notamment les suivants:

- Contrôle de la tension de fonctionnement du motovibrateur électrique, qui doit correspondre à la valeur demandée au moment de la commande;
- Contrôle du numéro de matricule;
- Contrôle de la présence de toutes les plaques;
- Contrôle du serrage de toute la visserie;
- Contrôle dimensionnel;
- Contrôle de la peinture;
- Contrôle du fonctionnement correct des actionneurs pneumatiques à vide pendant environ 15 minutes;
- Contrôle de l'emballage.

CONTROLLI PRIMA DELLA SPEDIZIONE

La macchina ha subito, presso i nostri stabilimenti, un reale collaudo funzionale, così da garantire la corretta messa in esercizio. In particolare i controlli compiuti dal costruttore sono i seguenti:

- Controllo della tensione di funzionamento del motovibratore elettrico, che deve corrispondere al valore richiesto al momento dell' acquisto;
- Controllo del numero di matricola;
- Controllo presenza di tutte le targhette;
- Controllo serraggio di tutta la viteria;
- Controllo dimensionale;
- Controllo verniciatura;
- Controllo corretto funzionamento degli attivatori pneumatici a vuoto per 15 minuti circa;
- Controllo imballaggio.

TRANSPORT

When the filter is delivered, make sure that the type and quantity of the materials consigned comply with the information on the order confirmation. Immediately inform the haulage contractor in writing if damage is discovered, using the relative space on the consignment form.
The driver is obliged to accept the complaint and to issue you with a copy. If the filter has been supplied carriage forward, either sent your complaint to us or straight to the haulage contractor. Damages will only be reimbursed if you have notified the matter on receipt of the goods.
Avoid any kind of damage due to the unloading and handling operations; so lift loose parts, if any of the FIBC using the eyebolts provided. DO NOT PUSH OR PULL the components! Always bear in mind you are dealing with mechanical equipment which must be treated with care.

TRANSPORT

Bei Erhalt der Ware sicherstellen, ob Typ und Menge mit den Daten auf der Bestellung übereinstimmen.
Etwaige Transportschäden sind sofort auf dem Schriftwege zu melden, und zwar durch Eintragen auf dem Lieferschein.
Der Fahrer ist verpflichtet, diese Reklamation anzunehmen und Ihnen eine Kopie davon auszuhändigen. Wenn die Lieferung frei Haus erfolgt, senden Sie Ihre Reklamation an uns, andernfalls direkt an den Frachtführer. Die Entschädigung erfolgt nur, wenn der Schaden gleich bei Empfang der Ware gemeldet wird.
Beim Abladen und beim Handling jede Art der Beschädigung vermei-den. Zum Anheben der eventuell zerlegten Teile der Big-Bag-Ent-leerstation die vorhandenen Kran-ösen verwenden. Komponenten weder SCHIEBEN NOCH SCHLEI-FEN! Immer berücksichtigen, dass es sich um mechanische Elemente handelt, die mit Vorsicht zu behandeln sind.

TRANSPORT

Au moment où vous recevez la machine, vérifiez si la typologie et la quantité correspondent bien aux données qui se trouvent sur la confirmation de la commande.
Si vous constatez des dommages, vous devez immédiatement le déclarer en l'écrivant dans l'emplacement réservé à cet effet sur la lettre de voiture.
Le chauffeur est obligé d'accepter votre réclamation et de vous en laisser une copie. Si la fourniture a été livrée franco destination, envoyez-nous votre réclamation, sinon envoyez-la directement au transporteur.
Vous ne pourrez être remboursé des dommages et intérêts que si vous avez déclaré le dommage au moment où vous avez reçu la machine. Evitez tout type de dégât pendant le déchargement et les déplacements ; pour cela soulever les pièces éventuellement séparées du vide BIG-BAG en utilisant les crochets prévus à cet effet. VOUS NE DEVEZ NI PAS POUSSER, NI TRAINER les composants ! Rappelez-vous qu'il s'agit de matériel mécanique qui doit être déplacé avec le plus grand soin.

TRASPORTO

Al ricevimento della merce controllare se la tipologia e la quantità corrispondono con i dati della conferma d'ordine. Eventuali danni devono essere fatti presenti immediatamente per iscritto nell'apposito spazio della lettera di vettura.
L'autista è obbligato ad accettare un tale reclamo e lasciarne una copia a Voi. Se la fornitura è franco destino, inviate il vs. reclamo e noi, altrimenti direttamente allo spedizioniere. Il risarcimento avviene soltanto se avete fatto presente il danno all'atto del ricevimento.
Evitate ogni tipo di danneggiamento durante lo scarico e le movimentazioni; a tale scopo sollevare eventuali pezzi sfusi dello svuota BIG-BAG impiegando i golfari previsti. NON SPINGERE NÈ TRASCINARE i componenti! Tenete conto che si tratta di materiale meccanico che deve essere movimentato con cura.

MACHINE STORAGE OVER EXTENDED PERIODS

Avoid a humid or salty environ-ment. If this is not possible protect the filter using insulating foil.
Prior to installation of the filter, check to ensure that all the electrical and pneumatic components are intact.
To store the machine correctly for a period of inactivity, clean all the parts thoroughly and grease the elastic parts. Store the equipment on a wooden platform, in a place that is protected from inclement weather conditions.

LANGFRISTIGE EINLAGERUNG DER MASCHINE

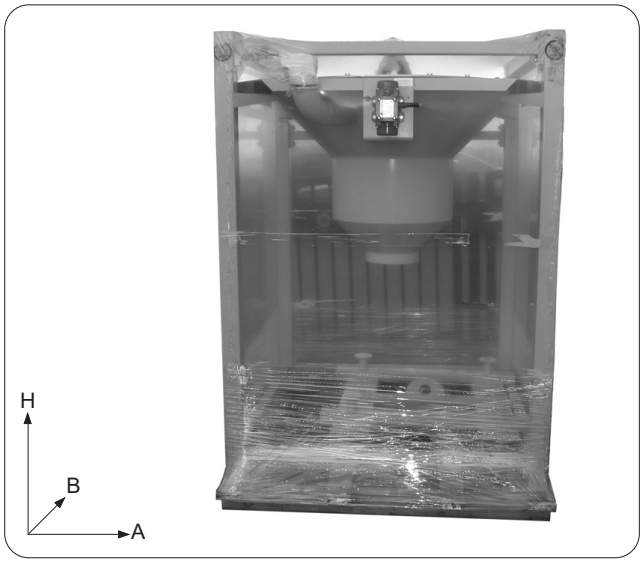
Eine feuchte und salzige Umge-bung sollte vermieden werden. Ist dies nicht möglich, das Gerät durch wärmedämmende Folie schützen.
Vor dem Einbau des Geräts prüfen, ob die elektrischen und pneumatischen Komponenten intakt sind.
Eine korrekt Einlagerung der Maschine bei längerem Nichtgebrauch erfordert eine grundliche Reinigung aller Teile und das Einfetten der elastischen Komponenten; die Ausrüstung auf Holzbalken legen und witterungsgeschützt aufbewahren.

EMMAGASINAGE DE LA MACHINE POUR UNE LONGUE PÉRIODE.

Eviter possiblement des am-biants humides et salmâtres. Si cela n'est pas possible, protéger le produit avec des pellicules protectives thermoisolantes.
Avant d'installer la machine contrôler l'intégrité de l'instal-lation électrique et pneumatique.
Pour stocker correctement la machine pour une longue période d'inactivité, il est conseillé de nettoyer parfaitement toutes les pièces et de graisser les parties élastiques. Stocker sur une palette en bois à l'abri des intempéries.

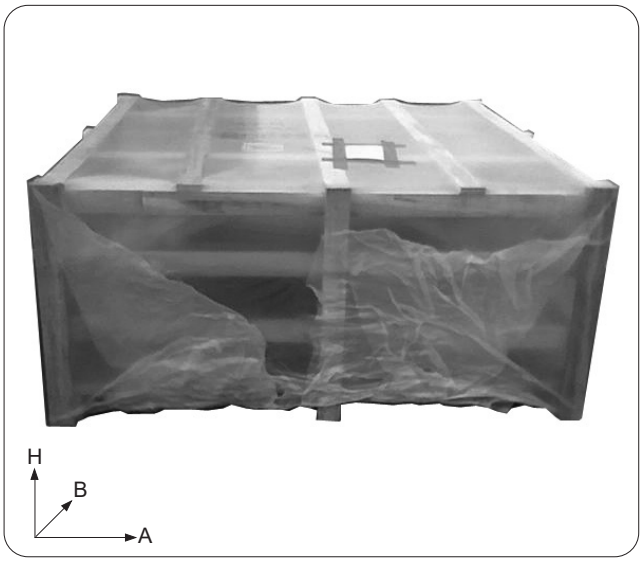
IMMAGAZZINAGGIO DELLA MACCHINA PER PERIODO PROLUNGATO.

Evitare possibilmente ambienti umidi e salmastri.
Qualora ciò non sia possibile, proteggere il prodotto con pellicole protettive termoisolanti.
Prima di installare la macchina controllare l'integrità dell'impianto elettrico e pneumatico.
Per immagazzinare correttamente la macchina per un periodo di inattività, bisogna pulire accuratamente tutte le parti e ingrassare le parti metalliche.
Sistemare l'attrezzatura su pedane in legno e locarla al riparo dalle intemperie.



The FIBC is basically supplied on a pallet of suitable dimensions, protected with a heat-shrink polythene cover.

In ihrer Standardversion wird die Big-Bag-Entleerstation auf einer Palette entsprechender Größe stehend ausgeliefert und ist durch eine Schrumpffolie aus Poly-äthylen geschützt.



Le vide BIG-BAG est livré en standard sur une palette de dimensions appropriées et enveloppée dans un film en polyéthylène thermo-rétractable.

Di base lo svuota BIG-BAG viene fornito su un pallet di dimensioni opportune e protetto da un involucro di polietilene termoretraibile. A richiesta può essere fornito all'interno di gabbia di protezione in legno.

IME.SBB.125.M.G00	SBB.x.125.M	-	-	-	-	-	-

1 - STORAGE PRIOR TO INSTALLATION
- Avoid damp, salty environments, if possible.
- Place the equipment on wooden platforms and store them protected from unfavourable weather conditions.

2 - PROLONGED MACHINE SHUTDOWNS AFTER ASSEMBLY
- Before starting up the machine, set it in safety status.
- Prior to commissioning the machine check the vibrator motor and all other machine components are intact and functioning.
- Allow the pneumatic actuators to run load-free for **at least 10 minutes** without any material inside to ensure that all components work correctly.
- Check to ensure correct working of the electric vibrator, running it **only for a few seconds** with the hopper empty.

N.B.: prolonged use of the vibrator with the machine devoid of product can damage the machine.

3 - POSSIBLE REUSE AFTER PERIODS OF INACTIVITY
- During machine halts, avoid damp, salty environments
- Place the equipment on wooden platforms and store them protected from unfavourable weather conditions.
- Set the machine in safety status before starting it up.
- Before starting up the machine, check the condition of the electric vibrator and all parts for which long shutdowns may affect working.
- Clean the machine thoroughly before starting it.

1) EINLAGERUNG VOR DEM EINBAU
- Feuchte und salzhaltige Luft für die Einlagerung vermeiden.
- Die Einrichtung auf Holzpaletten setzen und vor Witterung schützen.

2) LÄNGERE BETRIEBSUNTERBRECHUNGEN NACH DEM EINBAU
- Vor der Inbetriebnahme ist das Gerät in einen sicheren Zustand zu versetzen.
- Vor der Inbetriebnahme des Gerätes den elektrischen Unwuchtmotor und alle anderen Geräteteile auf Unversehrtheit prüfen sowie auf deren Funktionstüchtigkeit die nach einem längeren Geräte-stillstand in Frage gestellt sein könnte.
- Vor dem Einschalten des Gerätes eine Reinigung durchführen.
- Die pneumatischen Austraghilfen wenigstens **10 Minuten** lang ohne Materialfüllung bei leerem Gerät laufen lassen, um den korrekten Betrieb aller Komponenten zu sicherzustellen.
- Den Unwuchtmotor auf korrekten Betrieb prüfen, indem man ihn **nur ein paar Sekunden** bei leerem Trichter laufen lässt.

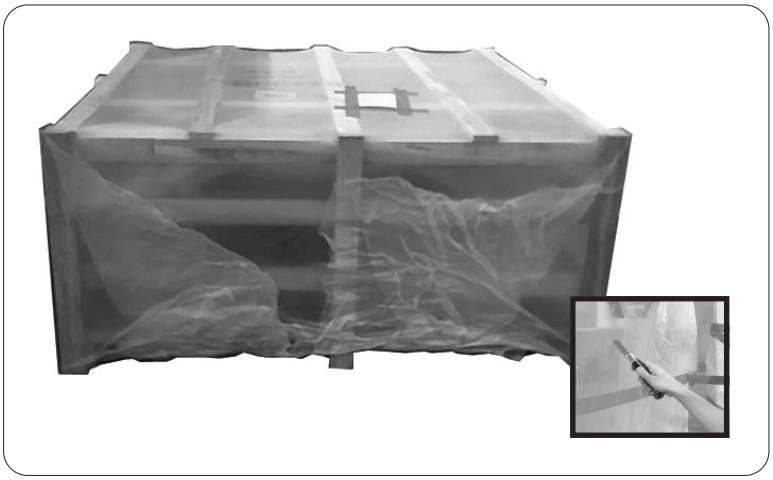
N.B.: Eine längerer Betrieb des Unwuchtmotors bei leerem Gerät könnte dieses beschä-digen.

3) MÖGLICHE WIEDERVERWENDUNG NACH EINEM LÄNGEREN STILLSTAND
- Während des Stillstands des Gerätes Räume mit feuchter und salzhaltiger Luft vermeiden.
- Das Gerät auf Holzpaletten setzen und vor Witterung schützen.
- Vor der Inbetriebnahme ist das Gerät in einen sicheren Zustand zu versetzen.
- Vor der Inbetriebnahme des Gerätes den elektrischen Unwuchtmotor und alle Teile auf Unversehrtheit prüfen, deren Funktionstüchtigkeit durch die längere Betriebs-unterbrechung in Frage gestellt sein könnte.
- Vor dem Einschalten des Gerätes eine Reinigung durchführen.

1-EMMAGASINAGE AVANT LA MISE EN PLACE
- Si possible éviter les locaux humides et les saumâtres
- Placer l'équipement sur des palettes en bois et les ranger à l'abri des intempéries.

2-ARRÊT MACHINE PROLONGÉ APRÈS LE MONTAGE
- Avant la mise en service, mettre la machine en sécurité.
- Avant la mise en service de la machine, contrôler l'intégrité du motovibrateur électrique et de toutes les parties pour lesquelles un arrêt prolongé pourrait compromettre le fonctionnement.
- Effectuer un cycle complet de nettoyage avant de mettre la machine en marche.
- Laisser fonctionner à vide les actionneurs pneumatiques pendant **10 minutes** sans matière à l'intérieur pour vérifier le fonctionnement correct de chaque composant.
- Vérifier le bon fonctionnement du moto-vibrateur en le faisant fonctionner **seulement quelques secondes** avec la trémie vide.

N.B.: l'utilisation prolongée du vibrateur avec la machine sans produit pourrait provoquer des dommages à la machine.



3-RÉ-UTILISATION APRES UNE PÉRIODE D'INACTIVITÉ
- Pendant la période d'inactivté de la machine éviter les locaux humides et saumâtres
- Placer l'équipement sur des palettes en bois et les ranger à l'abri des intempéries.
- Prima della messa in servizio
- Avant la mise en service, mettre la machine en sécurité.
- Avant la mise en service de la machine, contrôler l'intégrité du motovibrateur électrique et de toutes les parties pour lesquelles un arrêt prolongé pourrait compromettre le fonctionnement.
- Effectuer un cycle complet de nettoyage avant de mettre la machine en marche.

1-IMMAGAZZINAGGIO PRIMA DELL'INSTALLAZIONE
- Evitare possibilmente ambienti umidi e salmastri
- Sistemare l'attrezzatura su pedane di legno e locarle al riparo dalle intemperie.

2-FERMO MACCHINA PROLUNGATO DOPO IL MONTAGGIO
- Prima della messa in servizio mettere in sicurezza la macchina.
- Prima della messa in servizio della macchina controllare l'integrità del motovibratore elettrico e di tutte le parti per le quali un prolungato arresto potrebbe compromettere la funzionalità.
- Eseguire un ciclo di pulizia completa prima di attivare la macchina.
- Lasciare funzionare a vuoto gli attuatori pneumatici per **almeno 10 minuti** senza materiale all'interno per verificare il corretto funzionamento di ogni componente.
- Verificare il corretto funzionamento del motovibratore facendolo funzionare **solo per pochi secondi** con tramoggia vuota.

N.B.: un utilizzo prolungato del vibratore con macchina scarica di prodotto potrebbe arrecare danni alla macchina.

3-POSSIBILE REIMPIEGO DOPO PERIODO DI INATTIVITÀ
- Durante il fermo macchina evitare ambienti umidi e salmastri
- Sistemare l'attrezzatura su pedane di legno e locarle al riparo dalle intemperie.
- Prima della messa in servizio mettere in sicurezza la macchina.
- Prima della messa in servizio della macchina controllare l'integrità del motovibratore elettrico e di tutte le parti per le quali un prolungato arresto potrebbe compromettere la funzionalità.
- Eseguire un ciclo di pulizia completa prima di attivare la macchina.

To remove the packing, use a cutter or a pair of scissors to cut the heat-shrink nylon covering.
Take special care to avoid damaging parts of the machine and/or scratch the paint with the blade.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
The FIBCs require certain operations for completing assembly before starting operation, in particular:

- **MODEL T** must be fixed to a solid structure (constructed by the plant designer).

- **MODELS C, S, M**
  The machines are already partially assembled; the frame is to be assembled and the hopper is to be installed (see below).

- All the machines must be fixed to the ground or to a solid structure before use.
- Make the electrical connections of the electric vibrator to all the machines.
- For all the assembly operations listed above, proceed as described below.

NOTE:
It is the installer's responsibility to dispose off the packaging in a suitable manner, in compliance with existing legislation.

Zum Entfernen der Verpackung reicht es aus, einen Cutter oder eine Schere zu benutzen, mit der man die Nylon-Schrumpffolie aufschneidet.
Besonders darauf achten, dass das Messer keine Teile der Maschine beschädigt und/oder den Lack aufkratzt.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
Die BIG-BAG Entleerstationen verlangen noch, dass der Zusammenbau beendet wird, bevor man sie in Betrieb nehmen kann, insbesondere:

- **MODELL T**: Dieses muss an einer festen Struktur befestigt werden (Anfertigung durch den Anlagenbauer).

- **MODELLE C, S, M**
  Die Maschinen sind bereits teilweise montiert; das Gestell ist zu montieren und der Trichter ist zu installieren (siehe unten).

- Alle Maschinen müssen vor dem Gebrauch am Boden oder einer soliden Struktur verankert werden.
- Auf allen Maschinen ist der elektrische Anschluss des Unwuchtmotors vorzunehmen.
- Für die oben genannten Montagevorgänge ist so vorzuge

N.B.:
Der Anlagenaufsteller ist dafür verantwortlich, das Verpackungsmaterial auf angemessene Art und in Übereinstimmung mit den einschlägigen, geltenden Gesetzen zu entsorgen.

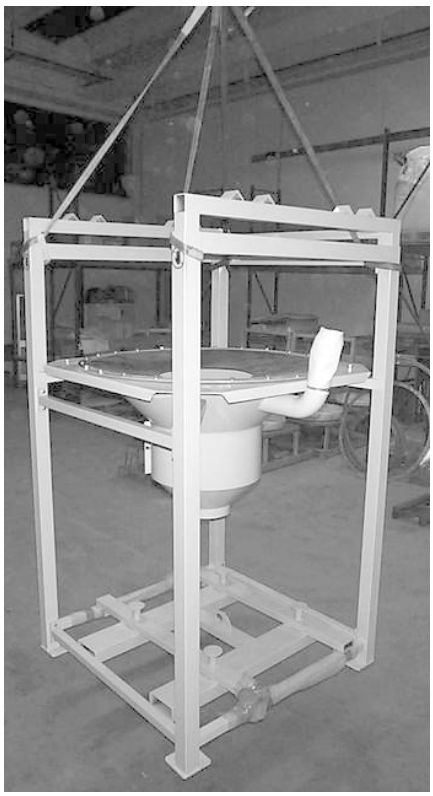
Pour le déballage il suffit d'utiliser un cutter ou des ciseaux et de couper le film en nylon thermorétractable.
Prêter une attention particulière à ne pas endommager des parties de la machine et/ou rayer le vernis avec la lame.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
Les vide BIG-BAG nécessitent quelques opérations pour terminer l'assemblage avant la mise en marche, à savoir:

- le **MODELE T** devra être fixé à une structure solide (réalisée par l'installateur).

- **MODÈLES C, S, M**
  Les machines sont déjà partiellement assemblées ; le cadre doit être assemblé et la trémie doit être installée (voir ci-dessous).

- Toutes les machines seront ancrées par terre ou fixées à une structure solide avant l'utilisation.
- Sur toutes les machines il faudra réaliser le raccordement électrique du motovibrateur.
- Pour toutes les opérations de montage décrites ci-dessus, suivre les instructions des pages suivantes.

N.B.:
L'installateur doit, à ses frais, éliminer les emballages de manière adéquate et conformément aux lois en vigueur en la matière.



Per la rimozione dell'imballo è sufficiente utilizzare un cutter o un paio di forbici per tagliare l'involucro in naylon termoretraibile.
Prestare particolare attenzione a non danneggiare con la lama parti della macchina e/o scalfire la vernice.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
Gli svuota BIG-BAG necessitano di alcune operazioni per concluderne l'assemblaggio prima della messa in funzione, in particolare:

- **MODELLO T** dovrà essere fissato ad una struttura solida (fabbricazione a cura dell'impiantista).

- **MODELLI C, S, M**
  Le macchine sono già parzialmente assemblate; dovrà essere assemblato il telaio ed installata la tramoggia. (vedi oltre)

- Tutte le macchine dovranno essere ancorate a terra o ad una struttura solida prima dell'utilizzo.
- Su tutte le macchine andrà effettuato il collegamento elettrico del motovibratore.
- Per tutte le operazioni di montaggio sopraelencate, procedere come descritto in seguito.

N.B.:
è a cura dell'installatore smaltire gli imballi in modo adeguato e secondo le leggi vigenti in materia.

Use lifting equipment that is suitable for the weight, dimensions and movements required.

Hook the equipment to the lifting device by means of flexible straps and use hooks with safety fasteners.

Do not use clamps, rings, open hooks or other systems which do not guarantee the same safety as shackles or hooks with safety fasteners.

If the straps are in close contact with the equipment it is advisable to place protective elements between the two to avoid damage.

CAUTION !
1- Use lifting equipment which acts from above.
2- Keep the equipment at a minimum distance above the ground.
3- Do not stand near or walk under suspended loads.

Zum Heben Vorrichtungen verwenden, die dem Gewicht der zu hebenden Last, deren Abmessungen und dem Transport entsprechen.

Die Befestigung an den Lastaufnahmestellen mittels elastischer Gurte vornehmen und Haken mit Sicherheitsverschluß verwenden.

Es ist verboten, Klammern, Ringe, offene Haken oder andere Systeme zu verwenden, die nicht den Sicher-heitsnormen entsprechen.

Sollten die Anschlaggurte die Maschine berühren, Schutzelemente dazwischen schieben, um die Ausrüstung nicht zu beschädigen.

ACHTUNG !
1- Nur Hebezeug verwenden, das von oben her angreift.
2- Die Ausrüstung nur so wenig wie gerade erforderlich heben.
3- Nicht unter der hängenden Last gehen oder stehen.

Utiliser des systèmes de levage appropriés aux poids, dimensions et déplacements prévus.

Effectuer l'accrochage aux prises de levage à l'aide de sangles élastiques et utiliser des crochets avec fermeture de sécurité.

L'utilisation de mors, anneaux, crochets ouverts ou tout système ne garantissant pas la même sécurité que les manilles ou les crochets à fermeture de sécurité est interdite.

En cas de contact entre les sangles et les pièces de l'équipement, il est conseillé d'intercaler des protections pour ne pas endommager ce dernier.

ATTENTION !
1- Utiliser des appareils de levage agissant par le haut.
2- Tenir la machine à une distance minimum du sol.
3- Ne pas stationner sous les charges suspendues.

Utilizzare sistemi di sollevamento idonei alle masse, alle dimensioni e agli spostamenti previsti.

Eseguire l' aggancio alle prese di sollevamento mediante fasce elastiche e utilizzare ganci con chiusure di sicurezza.

E' vietato l' utilizzo di morsetti, anelli, ganci aperti o qualsiasi sistema che non garantisca la stessa sicurezza dei grilli o dei ganci con chiusura di sicurezza.

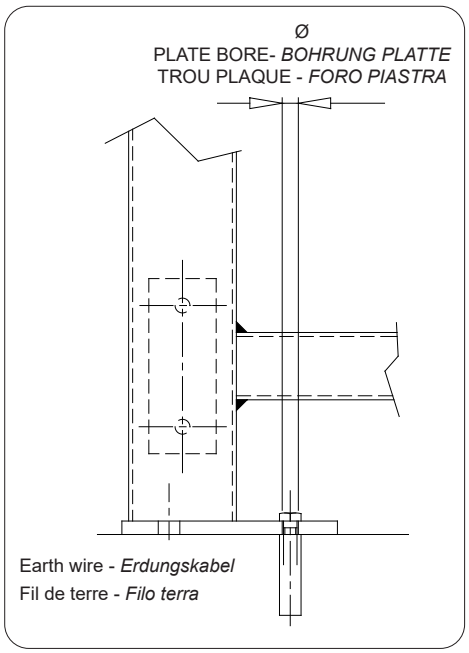
Nel caso si verificassero contatti tra le fasce e parti della macchina, è consigliabile frapporre degli elementi di protezione per evitare danni a quest' ultima.

ATTENZIONE !
1- Utilizzare apparecchi di sollevamento che agiscono dall' alto.
2- Tenere la macchina alla minima distanza da terra.
3- Non sostare o passare sotto i carichi sospesi.

While defining the installation of the equipment, take into account the space required for maintenance and access, for loading the FIBCs, especially as regards height, as it is variable.
This space depends on the lifting and handling equipment available at the work site.
The place in which the equipment is located must have the necessary connections (electricity, air, etc.) for operating the equipment.
It is the Customer's responsibility to equip the assembly area in accordance with the existing regulations and safety requirements: aeration, earthing, etc.

Bei der Festlegung des Standortes der Ausrüstung auch den für die Wartung und den Zugriff erforderlichen Platz berücksichtigen, der für die Aufgabe des Big-Bags dient, vor allem deshalb, weil die Höhe variabel ist.
Dieser Platz hängt vom Förder- und Hebezeug ab, das auf der Baustelle vorhanden ist.
Der Standort muß mit den erforderlichen Anschlüssen (Strom, Luft etc.) versehen sein, damit die Ausrüstung in Betrieb genommen werden kann.
Für die Einrichtung des Montageraums und die Beachtung der geltenden Normen und die Sicherheitserfordernisse (Belüftung, Erdung etc. ist der Anwender verantwortlich.

Lors de la détermination de l'emplacement de l'équipe-ment tenir compte des espaces d'entretien et d'accès, pour le chargement du sac, surtout en hauteur car celle-ci est variable.
Cet espace dépend des moyens de levage et de manutention disponibles au chantier.
Le local devra être doté des raccordements nécessaires (énergie électrique, air, etc.) pour le fonctionnement de l'équipement.
Le client a la responsabilité d'équiper le lieu de montage dans le respect des normes en vigueur sur la sécurité: aération, mise à la terre, etc.



Nel definire la dislocazione della macchina tenere conto degli spazi di manutenzione e di accesso, per il carico del saccone, soprattutto in altezza in quanto questa è variabile.
Suddetto spazio dipende dai mezzi di sollevamento e movimentazione disponibili in cantiere.
Il locale dovrà essere dotato degli allacciamenti necessari (energia elettrica, aria, ecc...) per il funzionamento della macchina.
E' responsabilità del cliente attrezzare il luogo di montaggio rispettando le normative vigenti e i requisiti di sicurezza: aereazione, messa a terra, ecc...

Assembly instructions:
- Lift and position the equipment (according to the procedure indicated on the previous page) near the supply lines.
- Countermark the position of the four anchor holes on the ground corresponding to the frame supporting plate.
- Move the frame, make the bores as shown in the Table and reposition the equipment.
- Check that the equipment is longitudinally and transversely perfectly level.
- Fit the plugs into the bores and tighten them.

Montageanweisungen:
- Das Gerät auf der Höhe der Versorgungsleitung aufstellen (Vorgehensweise siehe vorangegangene Seite).
- Die Befestigungsbohrungen, die sich auf der Platte der Stellfläche des Rahmens befinden, am Boden markieren.
- Das Gestell seitlich ablegen, Bohrungen lt. Tabelle vorsehen und das Gerät wieder aufstellen.
- Sicherstellen, daß das komplette Gerät in der Waage steht, sowohl in der Längs- als auch in der Querrichtung.
- Die Dübel in die Bohrungen einführen und anziehen.

Instructions de montage:
- Soulever et mettre en place (suivant les procédures indiquées dans la page précédente) au niveau de la ligne d'alimentation.
- Faire sur le sol les marques des trous de fixation situés sur les plaques d'ancrage du bâti.
- Déplacer le bâti, exécuter les trous comme indiqué dans le tableau et positionner de nouveau l'équipement.
- Contrôler que l'équipement est parfaitement horizontal dans le sens longitudinal et transversal.
- Insérer les bouchons dans les trous et visser.

Istruzioni per il montaggio:
- Sollevarlo e posizionarlo (secondo le procedure indicate nella pagina precedente) in corrispondenza della linea di alimentazione.
- Contromarcare sul pavimento i fori di fissaggio situati sulle piastre d' appoggio del telaio.
- Spostare il telaio, eseguire i fori come indicato nella tabella e riposizionare la macchina.
- Controllare che la macchina sia perfettamente orizzontale in senso longitudinale e trasversale.
- Inserire i tappi nei fori e avvitare.

Verify the presence and integrity of all constituent parts of the machine which is supplied already partially assembled.

Das Vorhandensein und die Unversehrtheit aller Bestandteile der Maschine, die bereits teilweise montiert geliefert werden, überprüfen.

Vérifiez la présence et l’intégrité de toutes les pièces constitutives de la machine fournie déjà partiellement assemblée.

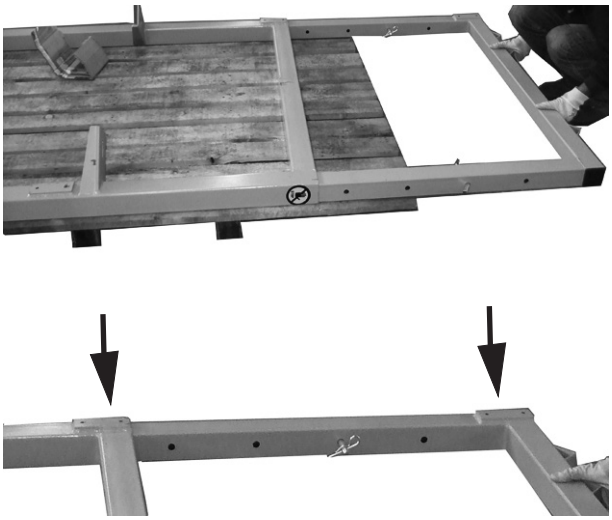
Verificare la presenza e l’integrità di tutte le parti costituenti la macchina che viene fornita già parzialmente assemblata.

Remove the components of the machine from the packing by using an appropriate lifting system and position them in the proximity of the assembling area, taking care not to damage them.

Die Komponenten der Maschine mit einem geeigneten Hubsystem aus der Verpackung nehmen und in der Nähe des Montagebereichs positionieren, wobei darauf zu achten ist, dass sie nicht beschädigt werden.

Retirez les composants de la machine de l’emballage en utilisant un système de levage approprié et placez-les à proximité de la zone de montage en veillant à ne pas les endommager.

Mediante apposito sistema di sollevamento, rimuovere i componenti della macchina dall’imballo e posizionarli in prossimità della zona di assemblaggio avendo cura di non danneggiarli.

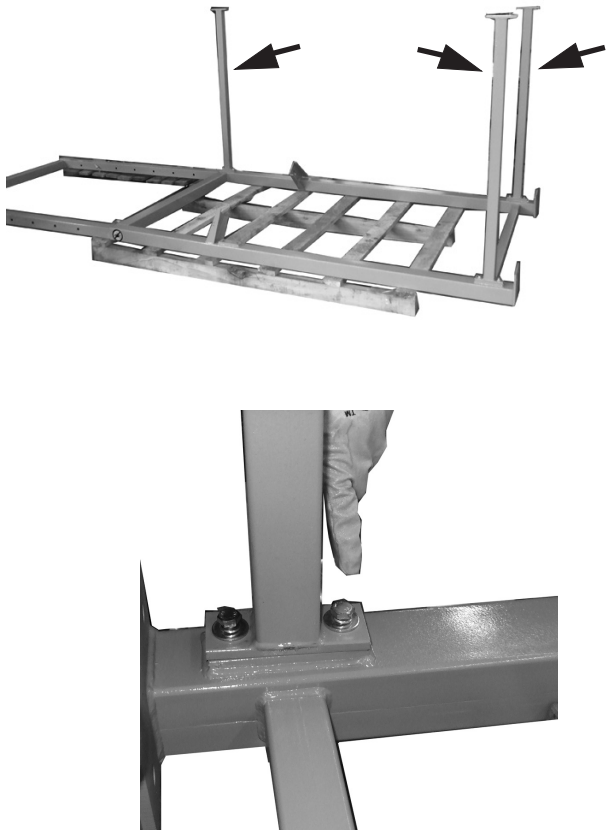


In particular, use the supplied eyebolts for lifting the hopper.

Die mitgelieferten Ringschrauben sind insbesondere zum Anheben des Trichters zu verwenden.

Utilisez en particulier les boulons à œil fournis pour soulever la trémie.

In particolare, per il sollevamento della tramoggia utilizzare i golfari forniti in dotazione.



(ONLY MODEL S)
Start assembling the frame by inserting each of the two removable parts within the respective fixed part of the frame; Pay attention to the direction of insertion: the flanges used to join the cross beams on the removable and fixed part must be on the same side as shown in the figure.

(NUR MODELL S)
Mit der Montage des Gestells beginnen, indem jedes der beiden abnehmbaren Teile in den jeweiligen festen Teil des Gestells eingesetzt wird; dabei ist die Einbaurichtung zu beachten: Die Flansche, mit denen die Querträger am abnehmbaren und festen Teil verbunden sind, müssen auf der gleichen Seite wie in der Abbildung dargestellt sein.

(UNIQUEMENT MODÈLE S)
Commencez à assembler le cadre en insérant chacune des deux parties amovibles dans la partie fixe respective du cadre ; Faites attention au sens d’insertion : les brides utilisées pour joindre les traverses de la partie amovible et fixe doivent être du même côté que celui indiqué sur la figure.

(SOLO MODELLO S)
Iniziare l’assemblaggio del telaio infilando ciascuna delle due parti sfilabili all’interno della rispettiva parte fissa del telaio; Prestare attenzione al verso di inserimento: le flange per la giunzione delle traverse sulla parte sfilabile e della parte fissa devono risultare dalla stessa parte come in figura.

Proceed by connecting the first 3 cross beams to the fixed part of the frame. For the moment, do not tighten the screws until they cannot be tightened further but leave a clearance of approximately 4-5 mm.

Anschließend werden die ersten 3 Querträger mit dem festen Teil des Gestells verbunden. Vorläufig die Schrauben nicht festziehen, bis sie nicht mehr festgezogen werden können, sondern einen Abstand von ca. 4-5 mm freilassen.

Continuez en connectant les 3 premières traverses à la partie fixe du cadre. Pour le moment, ne serrez pas les vis jusqu’à ce qu’elles ne puissent plus être serrées, mais laissez un jeu d’environ 4-5 mm.

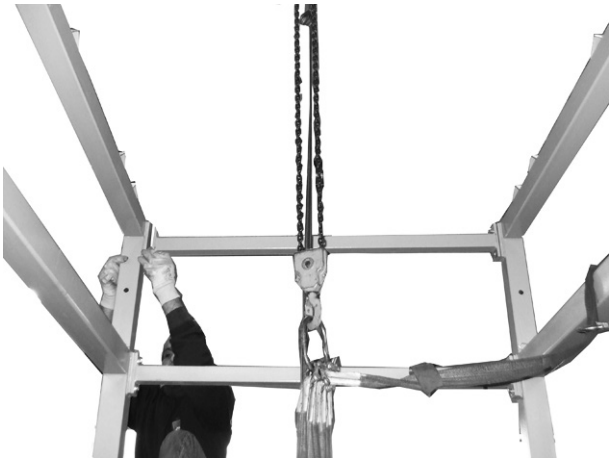
Procedere collegando le prime 3 traverse alla parte fissa del telaio. Per il momento non serrare fino a battuta le viti ma lasciare un gioco di circa 4-5 mm.

Lift the frame upright as shown and push the other side.

Das Gestell wie abgebildet aufrecht anheben und die andere Seite schieben.

Soulevez le cadre verticalement comme indiqué et poussez l’autre côté.

Sollevare il telaio in posizione verticale come indicato ed avvicinare l’altra fiancata.



Connect the two sides via the cross beams, without entirely tightening the screws.

Die beiden Seiten über die Querträger verbinden, ohne die Schrauben vollständig anzuziehen.

Reliez les deux côtés par les traverses sans serrer entièrement les vis.

Collegare le due fiancate mediante le traverse senza portare del tutto a battuta le viti.

At this point, mount the connecting cross beam of the two removable parts, without fully tightening the screws (for the moment).

An diesem Punkt die Verbindungsquerträger der beiden abnehmbaren Teile montieren, ohne die Schrauben (vorerst) vollständig anzuziehen.

À ce stade, montez la traverse de connexion des deux pièces amovibles sans serrer complètement les vis (pour le moment).

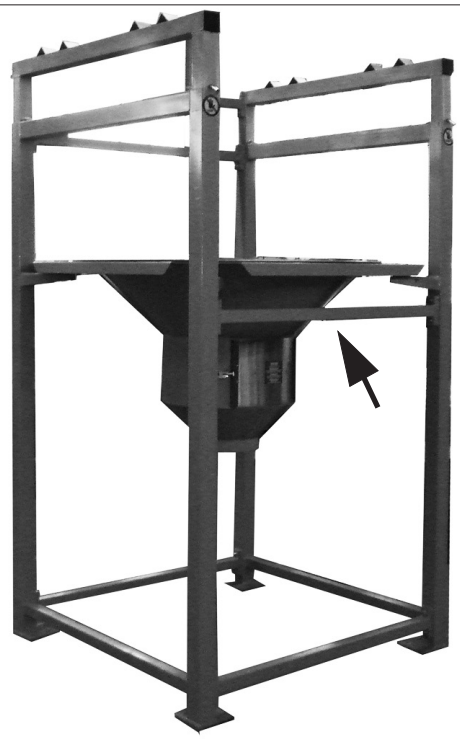
A questo punto, montare la traversa di collegamento delle due parti sfilabili, per il momento senza portare a battuta le viti.

Lift the hopper by means of the eyebolts and place it on the appropriate shelf.

Den Trichter mit den Ringschrauben anheben und auf die entsprechende Ablage stellen.

Soulevez la trémie à l’aide des boulons à œil et placez-la sur l’étagère appropriée.

Sollevare la tramoggia mediante i golfari ed posizionarla sulle apposite mensole.

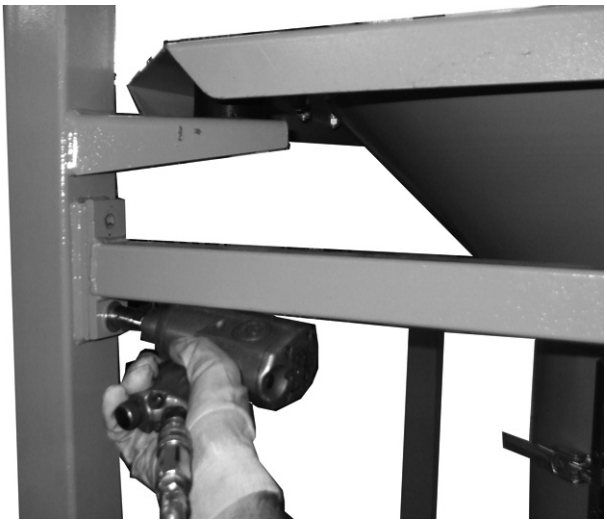


Secure the hopper via the screws provided, without tightening them all the way.

Den Trichter mit den mitgelieferten Schrauben sichern, ohne sie ganz festzuziehen.

Fixez la trémie à l’aide des vis fournies, sans les serrer complètement.

Fissare la tramoggia mediante le viti in dotazione, senza serrare a battuta.



Mount the front cross beam.

Den vorderen Querträger montieren.

Montez la traverse avant.

Montare la traversa anteriore.

Proceed by fully tightening all screws, starting with those of the frame and, subsequently, with those of the hopper.

Alle Schrauben, beginnend mit denen des Gestells und anschließend mit denen des Trichters, vollständig festziehen.

Procédez en serrant complètement toutes les vis, en commençant par celles du châssis et, ensuite, par celles de la trémie.

Procedere al serraggio competo di tutte le viti, partendo da quelle del telaio e successivamente della tramoggia.

Lift the machine as shown in the figure, position it in the final arrangement and secure it to the ground.

Die Maschine wie in der Abbildung gezeigt anheben, in der endgültigen Position positionieren und am Boden absichern.

Soulevez la machine comme indiqué sur la figure, positionnez-la dans l’agencement final et fixez-la au sol.

Sollevare la macchina come indicato in figura posizionarla nella sistemazione definitiva e fissarla a terra.

Then proceed with the wiring of the electric vibrator (see section on page …)

Dann mit der Verdrahtung des Elektrovibrators fortfahren (siehe Abschnitt auf Seite ...)

Ensuite, procédez au câblage du vibrateur électrique (voir section à la page…)

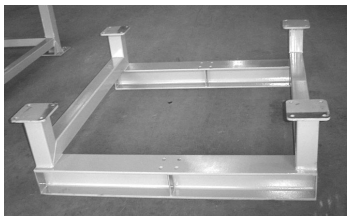
Procedere quindi al cablaggio del vibratore elettrico (Vedi sezione dedicata pag…)

1) The MODEL M BIG-BAG unloader is supplied partially dismantled to optimize transport. About two hours are required to complete assembly at the site; after unpacking and placing all the objects on the floor, proceed as follows:

1) Die BIG-BAG Entleerstation MODELL M wird teilweise zerlegt ausgeliefert, um den Transport zu optimieren. Um den Zusammenbau vor Ort zu vervollständigen, sind circa 2 Arbeitsstunden anzuschlagen. Nach dem Erntfernen der Verpackung und dem Anlegen aller Teile am Boden wie folgt vorgehen:

1) Le vide BIG-BAG MODELE M est fourni partiellement démonté pour optimiser le transport. Il faut environ 2 heures de travail pour réaliser l'assemblage sur place; après avoir enlevé le film d'emballage, procéder de la manière suivante :

1) Lo svuota BIG-BAG MODELLO M viene fornito parzialmente smontato per ottimizzarne il trasporto. Sono necessarie all'incirca 2 ore di lavoro per ultimarne l'assemblaggio in loco; una volta rimosso l'involucro dell'imballo e depositati tutti gli oggetti a terra, procedere come segue:



2) Slacken the screws connecting the hoist frame 1 to hopper frame 2.

2) Die Schrauben losdrehen, die den Flaschenzugrahmen 1 mit dem Trichtergestell 2 verbinden.

2) Dévisser les vis qui relient le châssis palan 1 et le châssis de la trémie 2.

*2) Svitare le viti che collegano il telaio paranco **1** dal telaio tramoggia **2**.*

3) Using a suitable lifting system, lift the hoist frame and put it aside upside down

3) Das Flaschenzuggestell mit einem geeigneten Gerät heben und separat auf dem Kopf abstellen.

3) Soulever le châssis palan à l'aide d'un système de levage approprié et le mettre de côté, renversé.

3) Sollevare mediante apposito sistema di sollevamento il telaio paranco e deporlo in disparte rovesciato

4) Lift the hopper frame and place it in the final position, fixing the feet to the ground

4) Das Trichtergestell heben und in der endgültigen Position abstellen, um dann die Füße am Boden zu befestigen.

4) Soulever le châssis de la trémie et le mettre dans sa position définitive, en fixant les pieds par terre

4) Sollevare il telaio della tramoggia e disporlo in posizione definitiva fissandone i piedi a terra

5) Place a rear strut 4 on the ground as shown in the Figure and connect a cross beam 5 to it by means of screws, taking care to avoid tightening the screws excessively

5) Einen hinteren Mast 4 auf den Boden legen, wie im Bild zu sehen ist, und eine Querstrebe 5 anschrauben, wobei zu beachten ist, dass die Schrauben nicht zu fest angezogen werden.

5) Placer un pylône 4 arrière par terre, comme montré sur la figure et visser une traverse 5 sans serrer excessivement les vis

*5) Disporre un pilone **4** posteriore al suolo come mostrato in figura e avvitare una traversa **5** avendo cura di non serrare eccessivamente le viti*

6) Place the frame down and connect the second rear strut taking care to orient it as shown in the Figure.

6) Die Struktur hinlegen und den zweiten hinteren Mast befestigen, wobei darauf zu achten ist, dass er wie im Bild gezeigt ausgerichtet wird.

6) Allonger la structure et relier le deuxième pylône arrière en le dirigeant comme indiqué par la figure.

6) Sdraiare la struttura e collegare il secondo pilone posteriore avendo cura di orientarlo come in figura.

7) Connect a second beam 6 as shown in the Figure, taking care to avoid tightening the screws excessively

7) Eine zweite Querstrebe 6 anschließen, wie in der Abbildung zu sehen ist, wobei darauf zu achten ist, dass die Schrauben nicht zu straff angezogen werden.

7) Relier une deuxième traverse 6, comme l'indique la figure, en faisant attention à ne pas trop serrer les vis

*7) Collegare una seconda traversa **6** come mostrato in figura avendo cura di non serrare eccessivamente le viti*

8) Connect the last cross beam as shown in the Figure, taking care to avoid tightening the screws excessively.

8) Die vormontierte Struktur mit einem Kran oder einen ähnlichen System heben und den zweiten hinteren Mast befestigen, wobei darauf zu achten ist, dass die Schrauben nicht zu straff angezogen werden. Nun muss die Struktur ein stabiles Gleichgewicht aufweisen.

8) Relier la dernière traverse comme l'indique la figure, sans serrer excessivement les vis.

8) Collegare l'ultima traversa come mostrato in figura, avendo cura di non serrare eccessivamente le viti.

8) Using a crane or similar system, lift the pre-assembly and fix the third strut taking care to avoid tightening the screws excessively. The structure will now be stable

8) Die vormontierte Struktur mit einem Kran oder einem ähnlichen System heben und den dritten Mast befestigen, wobei ebenfalls zu beachten ist, dass man die Schrauben nicht zu fest anzieht. Nun muss die Struktur ein stabiles Gleichgewicht haben.

8) A l'aide d'une grue ou d'un système similaire soulever la structure pré-assemblée et fixer le troisième pylône sans serrer excessivement les vis. Après quoi la structure sera en équilibre stable

8) Sollevare mediante gru o sistema simile il pre-assemblato e fissare il terzo pilone avendo cura di non serrare eccessivamente le viti. A questo punto la struttura sarà in equilibrio stabile

10)Complete the chassis fixing the last of the struts as shown in the Figure; again take care to avoid tightening the screws excessively

10)Das Gestell fertig montieren, indem man den letzten der Maste befestigt, wie in der Abbildung zu sehen ist. Erneut darauf achten, die Schrauben nicht zu fest anzuziehen.

10)Compléter le châssis en fixant le dernier pylône comme l'indique la figure ; même dans ce cas il ne faut pas trop serrer les vis

10)Completare lo chassis fissando l'ultimo dei piloni come mostrato in figura; ancora una volta non serrare eccessivamente le viti

11) Lift the chassis carefully using a crane or a forklift truck and place it on top of the hoist frame as shown in the Figure

11) Das Gestell sorgfältig mit einem Kran oder Gabelstapler geben und über dem Flaschenzuggestell abstellen, wie im Bild zu sehen ist.

11) A l'aide d'une grue ou d'un chariot élévateur soulever le châssis et l'appuyer sur le châssis pour palan comme le montre la figure.

11) Sollevare con cura mediante una gru o carrello elevatore lo chassis ed appoggiarlo sopra al telaio per paranco come mostrato in figura

12) Fix the hoist frame to the chassis by means of the 16 M16 bolts and tighten these

12) Das Flaschenzuggestell mit 16 Schraubbolzen M16 am Gestell befestigen und diese Schrauben gut anziehen.

12) Fixer le châssis du palan sur le châssis au moyen des 16 boulons M16 en veillant à bien les serrer

12) Fissare il telaio paranco allo chassis mediante i 16 bulloni M16 e serrare bene questi ultimi

13) Fix the beam 3 for the hoist on hoist frame using the 8 M20 bolts and tighten the assembly firmly

13) Den Balken 3 für den Flaschenzug mit den 8 Schraubbolzen M20 am Flaschenzugrahmen befestigen und alles gut anziehen.

13) Fixer la poutre 3 pour le palan sur le châssis du palan au moyen des 8 boulons M20 et bien serrer le tout

*13) Fissare la trave **3** per il paranco sul telaio paranco mediante gli 8 bulloni M20 e serrare bene il tutto*

14) Using a suitable crane or forklift truck lift the entire block A and position it on top of the hopper frame B taking care to align the holes of the connecting flanges

14) Den ganzen Block A mit Kran oder Gabelstapler heben und über dem Trichtergestell B anordnen, wobei darauf zu achten ist, dass die Löcher der Verbindungsflansche übereinander zu liegen kommen.

14) A l'aide d'une grue ou d'un chariot élévateur soulever tout l'ensemble **A** et le poser au-dessus du châssis trémie **B** en veillant à faire coïncider les orifices des brides d'accouplement

*14) Mediante gru o carrello elevatore adeguato sollevare l'intero blocco **A** e posizionarlo sopra il telaio tramoggia **B** avendo cura di far combaciare i fori delle flangie di collegamento*

15) Insert the connecting bolts and tighten them

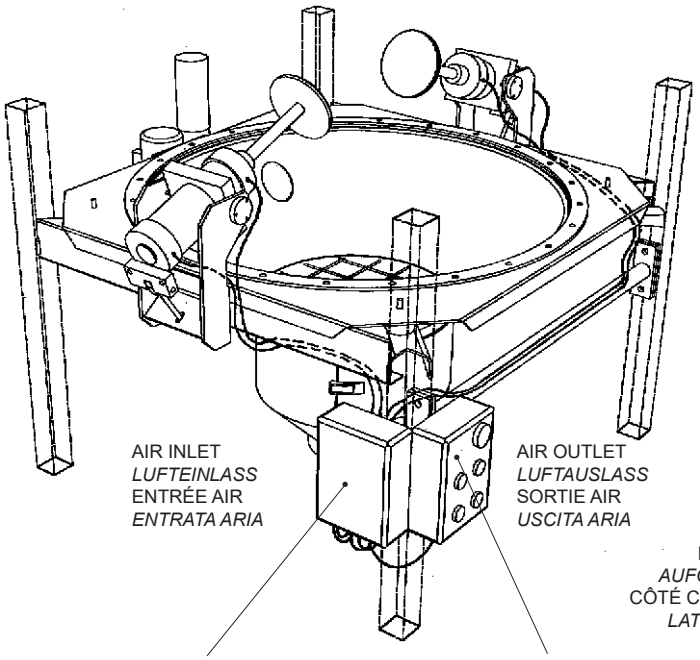
15) Die Verbindungsschrauben einstecken und gut anziehen.

15) Introduire les boulons d'accouplement et les serrer

15) Inserire i bulloni di collegamento e serrarli bene

16) Now tighten all the bolts of the chassis and carry out a final check on all the bolts to make sure they are tightened perfectly

16) Nun alle Schraubbolzen des Gestells gut anziehen und die anschließende Kontrolle ausführen, um sicherzugehen, dass alle Schraubteile fest angezogen sind.



16) Après quoi bien serrer tous les boulons du châssis et effectuer un contrôle final du serrage correct de tous les boulons

16) Provvedere ora a serrare bene tutti i bulloni dello chassis ed eseguire un controllo finale sul corretto serraggio di tutta la bulloneria

Important: use a torque wrench to ensure the following tightening torques: M16 screws: 225 Nm M18 screws: 439 Nm	**Wichtig:** Einen Drehmomentschlüssel benutzen, um die folgenden Anzugsdrehmomente zu erhalten: Schrauben M16: 225 Nm Schrauben M18: 439 Nm	**Important :** utiliser une clé dynamométrique afin de garantir les couples de serrage suivant : Vis M16 : 225 Nm Vis M18 : 439 Nm	**Importante:** utilizzare una chiave dinanometrica al fine di garantire le seguenti coppie di serraggio: Viti M16: 225 Nm Viti M18: 439 Nm

GENERAL WARNINGS	ALLGEMEINE WARNHINWEISE	CONSIGNES GENERALES	AVVERTENZE GENERALI
1.1 All the connections to the supplies must be carried out according to existing safety regulations.	1.1 Alle Anschlüsse an das Stromnetz müssen gemäß der geltenden Sicherheitsbestimmungen ausgeführt werden.	1.1 Tous les raccordements au secteur électrique doivent être réalisés conformément aux normes de sécurité en vigueur.	1.1 Tutti i collegamenti alla rete di alimentazione devono essere eseguiti secondo le norme di sicurezza vigenti.
1.2 Before start-up, check the efficiency of the earth connection.	1.2 Vor der Inbetriebnahme ist der Erdungsanschluß auf Funktionstüchtigkeit zu prüfen.	1.2 Avant la mise en route vérifier la mise à la terre et son efficacité.	1.2 Prima dell' avviamento assicurarsi del perfetto collegamento a terra verificandone l' efficienza.
1.3 Check the supply voltage and cycles to ensure these correspond with the values on the motor rating plate.	1.3 Sicherstellen, daß Spannung und Frequenz den Werten auf dem Typenschild des Motors entsprechen.	1.3 Contrôler que la tension et la fréquence d'alimentation correspondent aux valeurs de plaque du moteur.	1.3 Controllare che tensione e frequenza di alimentazione siano corrispondenti ai valori di targa del motore.
1.4 Provide protection against overload; ensure the calibrated values of the thermal or magnetothermal current do not exceed those on the rating plate.	1.4 Einen Überlastschutz vorsehen, dabei auch prüfen, ob die Einstellwerte der Thermorelais oder Motorschutzschalter nicht über dem Wert des Typenschilds liegen.	1.4 Prévoir des protections contre les surcharges, en vérifiant que les valeurs du courant de réglage de l'interrupteur ne dépasse pas ceux de plaque.	1.4 Prevedere delle protezioni di sovraccarico, verificando che i valori della corrente di taratura del termico o magnetotermico non superino più del 10% quelli di targa.
1.5 The electrical connection must be carried out according to the following sequence: - disconnect the mains supply. - Pass the power cable through the cable gland into the junction box. - make the connections using the accessories provided. - tighten the cable glands completely. - fit the junction box cover taking care to avoid damaging the seal.	1.5 Der Stromanschluß ist in folgender Reihenfolge vorzunehmen: - Die allgemeine Stromversorgung ausschalten. - Die Speisekabel durch die Kabeldurchführung in das Innere des Anschlußkastens stecken. - Die Anschlüsse mit den vorgesehenen Zubehörteilen vornehmen. - Die Kabeldurchführungen fest anziehen. - Den Kastendeckel montieren und dabei beachten, daß die Dichtung nicht beschädigt wird.	1.5 Le raccordement électrique doit être effectué dans la séquence ci-dessous: - débrancher l'alimentation électrique générale. - Passer les câbles d'alimentation à travers les serre-câbles, à l'intérieur du boîtier de connexion. - Exécuter les raccordements en utilisant les accessoires prévus à cet effet. - Serrer à fond les serre-câbles. - Monter le couvercle du boîtier en faisant attention à ne pas endommager le joint.	1.5 Il collegamento elettrico dovrà essere eseguito in sequenza: - disinserire l' alimentazione elettrica generale. - inserire i cavi di alimentazione attraverso i pressacavi, all' interno della scatola di collegamento. - eseguire i collegamenti utilizzando gli appositi accessori. - serrare a fondo i pressacavi. - montare il coperchio della scatola facendo attenzione a non danneggiare la guarnizione.
CAUTION ! **The cross section of the power cable and safety cable must be defined by the buyer. The user must provide a differential automatic circuit-breaker upline of the main switch.**	**ACHTUNG !** **Für die Stromkabel- und Sicherungskabelquer-schnitte ist der Betreiber verantwortlich. Der Betreiber muß stromauf vom Hauptschalter der Anlage einen Fehlerstrom-Schutzschalter vorsehen.**	**ATTENTION !** **Le dimensionnement des câbles d' alimentation et du câble de protection est sous la responsabilité de l'acheteur. L' utilisateur doit appliquer en amont de l'interrupteur général de l'installation, un interrupteur automatique différentiel.**	**ATTENZIONE !** **Il dimensionamento dei cavi di alimentazione e del cavo di protezione è responsabilità dell' acquirente. L' utilizzatore deve applicare a monte dell' interruttore generale dell' impianto, un interruttore automatico differenziale.**
PRECAUTION **Connecting the machine to the mains supply must be done in accordance with the existing regulations of the country where the machine is being used.**	**VORSICHTMASSNAHME** **Der Anschluß der Ausrüstung an das Netz muß unter Beachtung der Normen ausgeführt werden, die im Land des Anwenders gelten.**	**PRECAUTION** **Le raccordement de la machine au secteur doit être effectué dans le respect de la réglementation en vigueur dans le pays de l'utilisateur.**	**PRECAUZIONE** **Nel collegare la macchina alla rete, rispettare la regolamentazione in vigore nel paese dell' utilizzatore.**

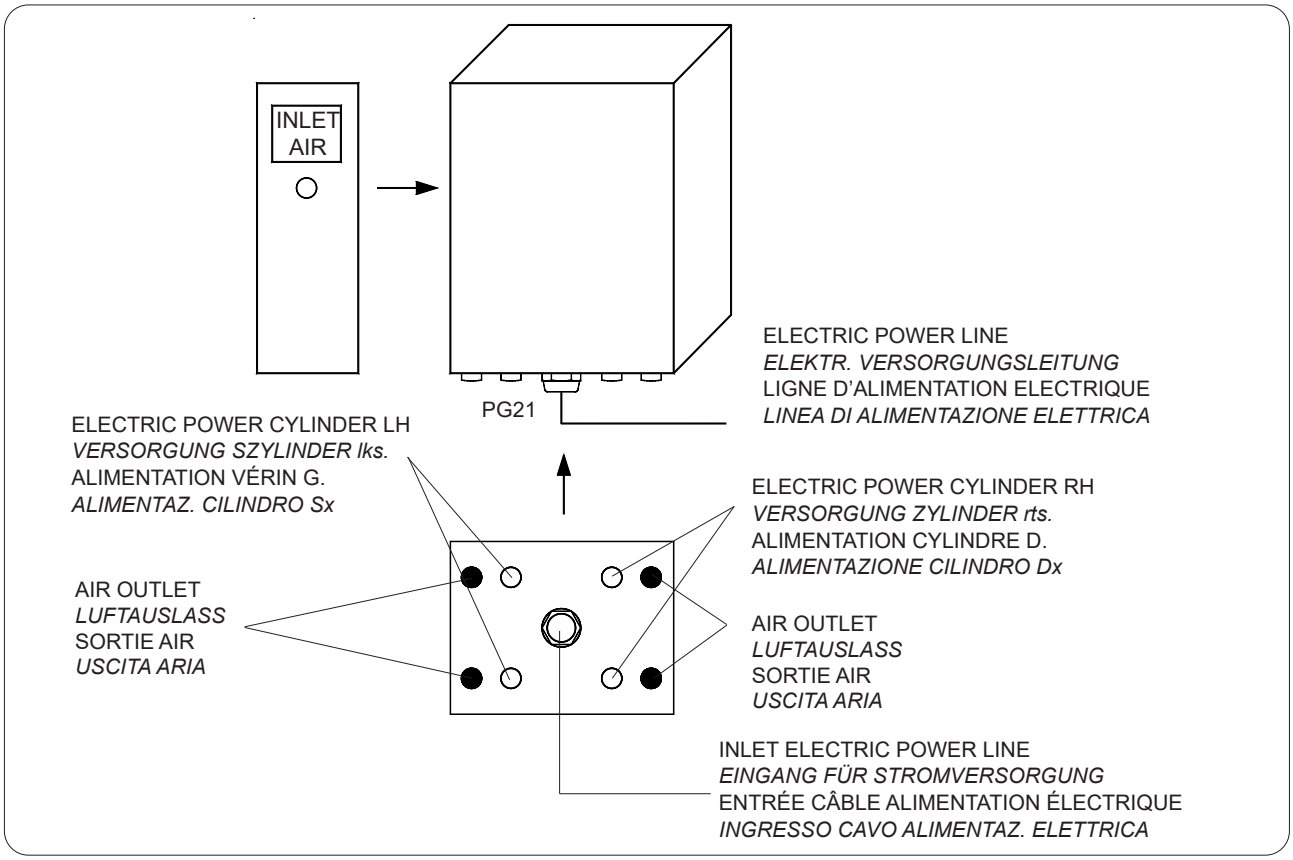
The control board comprises a box with front door on which the controls and operation indicators are fitted.

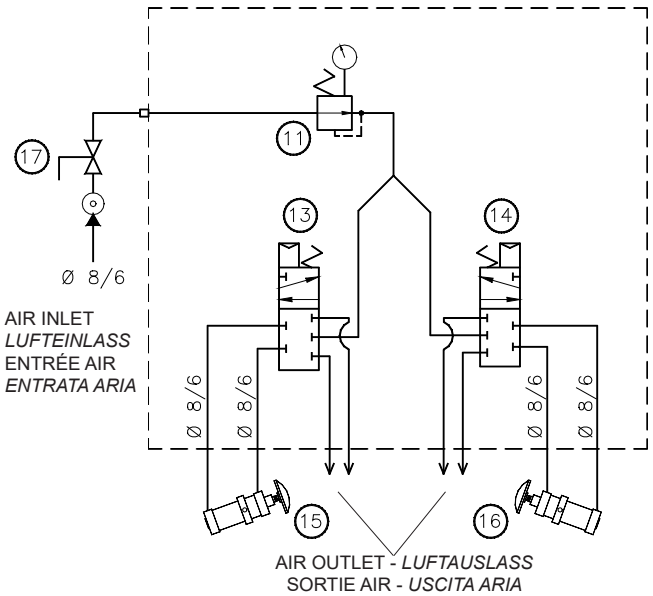
Description of controls and indicators:
SB/EM = PUSHBUTTONS:
controls with single operating mode
SA = SELECTORS:
double-function switches
QS = SWITCHES:
controls with two possible positions.

Die elektrische Steuerung ist mit einer Tür ausgestattet, auf der sich die Bedienelemente und Kontrollanzeigen befinden.

Beschreibung der Bedienelemente und Kontrollanzeigen:
SB/EM = DRUCKKNÖPFE:
Bedienelemente mit nur einer Betriebsart.
SA = WAHLSCHALTER:
Bedienelemente mit zwei Betriebsarten.
QS = SCHALTER:
Bedienelemente mit zwei möglichen Positionen.



L`armoire électrique de commande est constituée d'un boîtier à porte frontale sur lequel sont montés les commandes et témoins de fonctionnement.



Description commandes et indicateurs:
SB / EM = BOUTONS: commandes avec un seul mode de fonctionnemnt.
SA= SÉLECTEURS: commutateurs à deux fonctions.
QS=INTERRUPTEURS commandes à deux positions possibles.

Il quadro elettrico di comando è costituito da una cassetta con portello frontale sul quale sono montati dei comandi ed indicatori di funzionamento.

Descrizione comandi ed indicatori:
SB / EM =PULSANTI:
sono comandi con un'unica modalità di funzionamento
SA=SELETTORI:
sono commutatori a due funzioni.
QS=INTERRUTTORI:
sono comandi con due posizioni possibili.

PNEUMATIC POWER

The compressed air coupling on the equipment is achieved by means of a hose connector pipe having internal diameter 8x6mm.

COMPRESSED AIR PRESSURE

- Minimum 5 bar
- Maximum 6 bar

It is advisable to connect a manual cut-off device on the air infeed line (ball valve or similar) to facilitate subsequent maintenance operations.

DRUCKLUFTVERSORGUNG

Die Einleitung der Druckluft auf die Vorrichtung erfolgt mit einem Gummistutzen mit Innendurchmesser 8x6 mm.

DRUCK DER DRUCKLUFT

- Minimum 5 bar
- Maximum 6 bar

Auf die Zufuhrleitung der Druckluft sollte ein von Hand zu betätigendes Absperrorgan (Kugelventil oder ähnliches) installiert werden, das die anschließenden Wartungsarbeiten vereinfacht.

ALIMENTATION PNEUMATIQUE

Le branchement de l'air comprimé sur les filtres est réalisé par un tube de diamètre 8x6 mm.

PRESSION AIR COMPRIMÉ

- Minimum 5 bar
- Maximum 6 bar

Il est conseillé d 'insérer sur la circuit d' alimentation de l'air un dispositif de coupure manuelle (robinet à boisseau ou similaire) pour faciliter les opérations d' entretien.

ALIMENTAZIONE PNEUMATICA

L' innesto dell' aria compressa sulla macchina è realizzato da un tubo portagomma di diametro 8x6 mm.

PRESSIONE ARIA COMPRESSA

- Minimo 5 bar
- Massimo 6 bar

É consigliabile inserire sulla linea di alimentazione della aria un organo di intercettazione manuale (valvola a sfera o simile) che faciliterà le successive operazioni di manutenzione.

The compressed air must be:

1- Clean
Free of impurities which may damage the solenoid valve.

Warning: Before connecting the compressed air to the equipment, empty the piping.

2 - Dehumidified
However, it is advisable to use a condensate trap.

3 - Oil-free
The presence of oily substances in the air may cause precocious, irreversible clogging.

Die Druckluft muß sein:

1- Sauber
Sie darf keinen Schmutz enthalten, der das Magnetventil des Filters beschädigen könnte.

Achtung: Vor dem Anschluß der Druckluft an die Vorrichtung die Leitungen entleeren.

2 - Trocken
Es sollte aber besser ein Kondensatabscheider benutzt werden.

3 - Ölfrei
Das Vorhandensein von Ölteilchen in der Druckluft würde unweigerlich zum vorzeitigen Verstopfen führen.

L' air comprimé doit être :

1- Propre
Sans impuretés pouvant endommager l'électrovanne du filtre

Attention: avant de brancher l'air comprimé au filtre vider les tuyauteries

2 - Déshumidifié
Il faut prévoir l'utilisation d'un séparateur d'eau de condensation.

3 - Déshuilé
La présence de substances huileuses dans l'air constitue une cause de colmatage précoce et irréversible.

L' aria compressa deve essere:

1- Pulita
Esente da impurità che potrebbe danneggiare l' elettrovalvola

Attenzione: prima di collegare l' aria compressa alla macchina vuotare le tubazioni

2 - Deumidificata
E' opportuno comunque prevedere l' utilizzo di un separatore di condensa.

3 - Disoleata
La presenza di sostanze oleose nell' aria costituirebbe una causa d' intasamento precoce ed irreversibile.

PRELIMINARY OPERATIONS PRIOR TO START-UP

Before starting up the plant, it is essential to carry out a series of checks to prevent problems or risks.

Ascertain that all the equipment components are positioned and fixed correctly.

Carefully check all the connections, the rubber hoses and fixtures.

If pneumatic activators are provided, special attention must be paid to the compressed air connections.

WARNINGS

1) - It is recommended not to operate the motor vibrator when the machine is empty (not even in the test phase) in order to avoid the overheating of said device, as well as to avoid the subsequent possible and irreversible damaging thereof.
2) - In order to ensure the proper operation of the machine, it is advisable to operate the motor vibrator for periods not longer than 10-15 seconds per minute in order to avoid the compaction of the product within the hopper; Please remember that it takes about 40-45 seconds for the masses to completely stop.
3 - For proper functioning of the FIBC unloader, the equipment downline must be capable of removing all the product extracted from the FIBC.
4 - The connection between the outlet spout of the FIBC Unloader and any other equipment positioned downline must be made using a flexible connector to prevent vibrations of the hopper from being transmitted to the equipment.
5 - It is advisable to provide a butterfly valve or slide valve at the hopper outlet in order to prevent outflow of product when the motovibrator stops operating.

VORBEREITUNG DER INBETRIEBNAHME

Vor der Inbetriebnahme des Systems müssen eine Reihe von Kontrollen vorgenommen werden, um etwaige Probleme oder Risiken zu vermeiden.

Sicherstellen, daß alle Bestandteile der Vorrichtung korrekt aufgestellt und befestigt sind.

Alle Anschlüsse, Gummischläuche und entsprechenden Befestigungen sorgfältig prüfen.

Falls pneumatische Aus-traghilfen vorgesehen sind, ist besonders auf die pneumatischen Anschlüsse zu achten.

VORSICHT

1) - Es wird empfohlen, den Motorvibrator nicht zu betreiben, wenn die Maschine leer ist (auch nicht in der Testphase), um eine Überhitzung der Vorrichtung zu vermeiden und eine nachfolgende mögliche und irreversible Beschädigung derselben zu vermeiden.
2) - Um den ordnungsgemäßen Betrieb der Maschine zu gewährleisten, ist es ratsam, den Motorvibrator nicht länger als 10-15 Sekunden pro Minute zu betreiben, um die Verdichtung des Produkts im Trichter zu vermeiden; Es ist zu beachten, dass es etwa 40-45 Sekunden dauert, bis die Massen vollständig gestoppt sind.
3 - Für den korrekten Betrieb der Big-Bag-Entleerstation müssen die Geräte stromab unbedingt in der Lage sein, das aus dem Big-Bag entleerte Produkt aufzunehmen.
4 - Der Anschluß zwischen dem Auslauf der Big-Bag-Entleerungsstation und dem stromab eingebauten Gerät ist mittels einer flexiblen Verbindung vorzunehmen, damit die Vibrationen des Trichters nicht auf das Gerät übertragen werden.
5- Am Trichterauslauf sollte ein Flachschieber oder eine Drehklappe vorgesehen werden, damit kein Produkt mehr ausströmt, wenn der Vibrationsmotor einge-schaltet wird.

OPERATIONS PRELIMINAIRES A LA MISE EN MARCHE

Avant d'effectuer la mise en marche de l'installation il est important de faire une série de contrôles pour prévenir les problèmes et les risques.

S' assurer que tous les composants de l'équipement sont bien positionnés et fixés correctement.

Vérifier soigneusement tous les raccordements, les tubes en caoutchouc et leurs fixations.

Si l'équipement est équipé d'activateurs pneumatiques, faire tout particulièrement attention aux raccordements pneumatiques.

RECOMMANDATIONS

1) - Il est recommandé de ne pas utiliser le vibrateur moteur lorsque la machine est vide (même pendant la phase de test) afin d'éviter la surchauffe dudit dispositif et d'éviter tout endommagement ultérieur éventuel et irréversible de celui-ci.
2) - Afin de garantir le bon fonctionnement de la machine, il est conseillé de faire fonctionner le vibrateur moteur pendant des périodes ne dépassant pas 10-15 secondes par minute afin d'éviter le compactage du produit dans la trémie; S'il vous plaît rappelez-vous qu'il faut environ 40-45 secondes pour que les masses s'arrêtent complètement.
3 - Pour un bon fonctionnement du vide-sac il est indispensable que les machines en aval soient en mesure d'évacuer le produit extrait des sacs.
4 - La liaison à la bouche de sortie du vide-sacs et de toute machine placée en aval doit être réalisée à travers un raccord flexible de manière à éviter que les vibrations de la trémie soient transmises à l'équipement.
5 - Il est conseillé de prévoir en sortie de la trémie une vanne papillon ou une vanne à guillotine pour éviter la sortie de produit lors de l'arrêt du fonctionnement du moto-vibrateur.

OPERAZIONI PRELIMINARI ALL' AVVIAMENTO

Prima di effettuare l' avviamento dell' impianto è importante che vengano eseguiti una serie di controlli al fine di prevenire problemi o rischi.

Accertarsi che tutti i componenti della macchina siano collocati in modo opportuno e correttamente fissati.

Verificare accuratamente tutti gli allacciamenti, i tubi gomma ed i relativi fissaggi.

Nel caso siano previsti gli attivatori pneumatici porre particolare attenzione ai collegamenti pneumatici.

AVVERTENZE

1) - Si raccomanda di non far funzionare mai il motovibratore a macchina vuota (anche in fase di collaudo) onde evitare il rischio di surriscaldamento dello stesso e conseguente possibile danneggiamento irreversibile dello stesso.
2) - Per un corretto funzionamento della macchina si consiglia di far funzionare il motovibratore per intervalli di tempo non superiori a 10-15 secondi ogni minuto onde evitare il compattamento del prodotto nella tramoggia; Si ricorda che le masse impiegano circa 40-45 secondi ad arrestarsi completamente.
3 - Per un buon funzionamento dello svuota big bag è indispensabile che le macchine a valle siano in grado di evacuare il prodotto estratto dal big bag.
4 - Il collegamento tra la bocca di scarico dello svuota big bag e qualunque macchina posizionata a valle dovrà essere effettuata mediante un raccordo flessibile in modo da evitare che le vibrazioni della tramoggia vengano trasmesse alla macchina stessa.
5 - Si consiglia di prevedere allo scarico della tramoggia una valvola a farfalla o una serranda a ghigliottina in modo da evitare fuoriuscita di prodotto all' arresto del funzionamento del motovibratore.

1) Lift the fixing cross of the FIBC above the FIBC by means of a forklift truck or a hoist, and fix the slings to the hooks as shown in the Figure.

1) Das Kreuzstück zur Befestigung des Big-Bag per Gabelstapler oder Flaschenzug über denselben heben und die Gurte zum Einhaken wie in der Abbildung gezeigt befestigen.

1) Soulever le croisillon de fixation du BIG-BAG au-dessus du BIG-BAG au moyen d'un chariot élévateur ou d'un palan; fixer ensuite les sangles dans les crochets, comme l'indique la figure.

1) Sollevare la apposita crociera di fissaggio del BIG-BAG al di sopra del BIG-BAG stesso mediante carrello elevatore o paranco, e fissare le bretelle agli agganci come mostrato in figura.

2) Lift the cross on which the FIBC is hooked by means of a forklift truck or hoist and insert it in the supporting frame.

2) Mit dem Gabelstapler oder dem Flaschenzug das Kreuzstück heben, in den der Big-Bag eingehängt ist, und ihn in die Tragstruktur einführen.

2) A l'aide d'un chariot élévateur ou d'un palan soulever le croisillon sur lequel est accroché le BIG-BAG et l'introduire dans la structure de soutien.

2) *Sollevare col muletto o paranco la crociera sul quale è agganciato il BIG-BAG e introdurlo nella struttura di sostegno.*

3) While inserting the frame, take care to fit the tailpieces of the cross in the seats provided (MODEL S).

3) Beim Einführen darauf achten, dass sich die Vorsprünge des Kreuzstücks innerhalb der vorgesehenen Winkeleisen befinden (MODELL S).

3) En phase d'introduction, veiller à encastrer les extrémités du croisillon dans leurs sièges (MODELE S).

3) *In fase di introduzione avere cura di incastrare le appendici della crociera nelle apposite sedi (MODELLO S).*

4) In the working position the FIBC must only rest on the seal and not exert its weight on it. If this is not the case, modify the position of the removable frame to obtain proper stretching of the FIBC. In the version with hoist it is sufficient to modify the length of the chain. For other versions, it shall be the responsibility of the plant technician or the user to use structures or forklift trucks of suitable height to ensure this condition.

4) *Es ist wichtig, daß der Big-Bag in der Arbeitsstellung auf der Dichtung nur leicht aufliegt und nicht mit seinem Gewicht auf sie drückt. Andernfalls ist die Einstellung des ausziehbaren Gestells so weit zu verändern bis die richtige Streckung des Big-Bag erreicht ist. In der Version mit Seilwinde muß lediglich die Kettenlänge angepaßt werden. Für die anderen Versionen muss der Anlagenbauer bzw. der Betreiber dafür sorgen, dass Strukturen oder Gabelstapler geeigneter Höhe verwendet werden, die diesen Zustand gewährleisten.*

4) Il est très important que le Big-Bag en position de travail soit seulement appuyé sur le joint et qu'il ne repose pas de tout son poids sur celui-ci. Dans le cas contraire modifier la position du châssis démontable jusqu'à obtenir une juste tension du Big-Bag. Dans la version à palan il suffit de modifier la longueur de la chaîne. Pour les autres versions, l'installateur ou l'utilisateur devront se servir de structures ou de chariots élévateurs d'une hauteur appropriée pour garantir cette condition.

4) *É molto importante che il BIG-BAG, in posizione di lavoro, sia solo appoggiato sulla guarnizione e che non gravi col proprio peso sulla stessa. In caso contrario modificare la posizione del telaio sfilabile fino ad ottenere un giusto tensionamento del Big-Bag. Nella versione con paranco sarà sufficente modificare la lunghezza della catena. Per le altre versioni sarà cura dell'impiantista o dell'utilizzatore provvedere ad utilizzare strutture o carrelli elevatori di altezza adeguata a garantire questa condizione.*

5) Open the hatch.

5) *Inspektionsklappe öffnen.*

5) Ouvrir la trappe en actionnant le crochet prévu à cet effet.

5) *Aprire il portello agendo sull' apposito gancio.*

6) Extract the FIBC outlet spout and untie the cord to allow the product to start flowing out.

6) *Die Auslaßöffnung des Big-Bag herausziehen und die Verschlußleine öffnen, damit das Produkts langsam herausströmen kann.*

6) Extraire la bouche de sortie du Big-Bag et délacer le cordon de fermeture de manière à faire tomber la première partie de produit.

6) *Estrarre la bocca di scarico del Big-Bag e slacciarne il cordone di chiusura in modo da fare defluire lentamente la prima parte di prodotto.*

7) Close the hatch and start up the motovibrator to begin emptying the FIBC.

7) *Die Klappe wieder verschließen und den Vibrationsmotor starten, um mit der eigentlichen Entleerung zu beginnen.*

7) Fermer la trappe en agissant sur le crochet prévu à cet effet et commencer le vidage en mettant en marche le motovibrateur.

7) *Chiudere il portello agendo sull' apposito gancio ed iniziare lo svuotamento avviando il motovibratore.*

Operation of the motovibra-tor will be cyclic or continuous according to the flow required. At the end of the emptying process, it is advisable to continue to operate the motovibrator for another one or two minutes in order to remove any product remaining in the folds of the FIBC. Do not start up the motovibrator without the FIBC or without product.

To unload the FIBC empty the hopper completely, then proceed with the operations indicated in reverse order.

Der Vibrationsmotor arbeitet je nach dem geforderten Durchsatz zyklisch oder im Dauerbetrieb. Am Ende der Entleerphase sollte der Vibrationsmotor noch 1 oder 2 Minuten weiterlaufen, um die Restmenge auszutragen, die in den Sackfalten verblieben ist. Den Vibrationsmotor nicht einschalten, wenn kein Sack oder kein Produkt vorhanden ist.

Zur Entfernung des Big-Bag den Trichter ganz entleeren, um die beschriebenen Vorgänge dann in umgekehrter Reihenfolge vorzunehmen.

Le fonctionnement du moto-vibrateur sera cyclique ou continu suivant le débit requis. Il est conseillé, à la fin du vidage, de faire fonctionner le motovibrateur encore 1 à 2 minutes pour extraire le produit qui est resté dans les plis du sac. Ne pas mettre le moto-vibrateur en marche en l'absence de Big Bags ou sans produit.

Pour décharger le Big-Bag vider complètement la trémie puis procéder dans l'ordre inverse aux opérations indiquées.

Il funzionamento del motovibratore sarà ciclico o in continuo a seconda della portata richiesta. Si consiglia, al termine dello svuotamento, di far funzionare ancora il motovibratore per 1 o 2 minuti al fine di estrarre l' eventuale prodotto rimasto nelle pieghe del big bag. Non avviare il motovibratore in assenza di Big Bag o senza prodotto.

Per scaricare il BIG-BAG svuotare completamente la tramoggia poi procedere in senso contrario alle operazioni indicate.

If, during operation, there is a problem with downflow of the product, the motovibrator can be adjusted, by increasing or decreasing its intensity of vibration.

PROCEDURES FOR ADJUSTING MOTOVIBRATOR

The motovibrator installed is of the variable weights type; it is therefore necessary to change the degree of intensity of vibrations according to the method described in the (enclosed) USE AND MAINTENANCE manual supplied by the Manufacturer.

The value of regulation of the motovibrator fitted on the FIBC, is closely linked to the conditions of use.

The adjustment must be made before start-up.

The parameters to be taken into consideration are:

- Type of product;
- Humidity;
- Temperature;
- FIBC storage time;
- Flow rate;
- FIBC dimensions.

The adjustment defined by the Manufacturer during the acceptance test phase is 70%.

If it is necessary to change this value, it is advisable to proceed gradually.

If the results are not satisfactory, before proceeding with another adjustment, empty the product from the hopper in order to avoid residue from previous tests.

THE OPERATION MUST BE CARRIED OUT EXCLUSIVELY BY QUALIFIED PERSONNEL, WITH THE POWER SUPPLY DISCONNECTED.

- Remove the side covers after unscrewing the screws.
- Slacken the Allen nut (photo 1) and move the mobile mass (photo 2) to the required position, and tighten all the way after fitting the respective washers.
- Retighten the Allen nut all the way (Photo 3).

The weights must be adjusted perfectly equal and in the same direction on both sides.

Maximum intensity is obtained with the adjustable masses perfectly aligned with the fixed masses.

Refit the covers, after replacing the OR sealing ring without damaging it.

For more information, refer to the vibrator motor manual available on the site www.wamgroup.com.

Wenn während des Betriebs der Entleerungsstation feststellt wird, daß das Produkt unregelmäßig ausgetragen wird, kann eine Einstellung des Vibrationsmotors vorgenommen werden, indem man die Stärke der Vibrationen erhöht oder verringert.

VORGEHENSWEISE ZUR EINSTELLUNG DES VIBRATIONSMOTORS

Der eingebaute Vibrationsmotor hat einstellbare Un-wuchtmassen. Man kann daher die Stärke der Vibrationen nach Bedarf einstellen. Dazu die Beschreibungen der BETRIEBS- UND WARTUNGSANLEITUNG (in der Anlage) beachten, die der Hersteller des Motors liefert.

Der Wert, auf den der Vibrationsmotor eingestellt ist, der in der Big-Bag- Entleerungsstation installiert ist, ist abhängig von den Einsatzbe-dingungen.

Die Einstellung ist vor der Inbetriebnahme vorzunehmen.

Die zu berücksichtigenden Parameter sind:

- Produkttyp;
- Feuchtegehalt;
- Temperatur;
- Lagerzeit des BIG-BAG;
- Durchsatzmenge;
- BIG-BAG-Abmessungen.

Vom Hersteller ist der Motor bei der Abnahmeprüfung auf einen Wert von 70% eingestellt.

Falls dieser Wert geändert werden muß, immer stufenweise vorgehen.

Wenn das Resultat nicht zufriedenstellend ausfällt, vor weiteren Einstellungen das Produkt aus dem Trichter entfernen, um bei weiteren Versuchen keine Restmengen zu haben.

DER VORGANG DARF NUR DURCH QUALIFIZIERTES PERSONAL UND BEI AUSGESCHALTETER VERSORGUNG AUSGEFÜHRT WERDEN.

- Die Seitendeckel abnehmen, nachdem man die Schrauben losgedreht hat.
- Die Innensechskantmutter (Bild 1) lockern, das bewegliche Gewicht (Bild 2) in die gewünschte Position bringen und fest anziehen, nachdem man immer die entsprechenden Unterlegscheiben dazwischengelegt hat.
- Die Mutter fest anziehen (Bild 3)

Die Gewichte müssen perfekt gleichmäßig und auf beiden Seiten in der gleichen Richtung eingestellt werden.

Die max. Stärke erhält man, wenn die einstellbaren Gewichte perfekt zu den festen Gewichten ausgerichtet sind.

Die Deckel wieder montieren. Vorsichtig den O-Ring dazwischen legen, ohne diesen zu beschädigen.

Für weitere Informationen ist Bezug auf das Handbuch des Unwuchtmotors auf der Webseite www.wamgroup.com zu nehmen.

Si pendant le fonctionnement des irrégularités se vérifient dans la descente du produit, on peut effectuer le réglage du motovibrateur, en augmentant ou en diminuant son intensité de vibration.

PROCEDURES DE REGLAGE DU MOTOVIBRATEUR

Le motovibrateur installé est à masses variables, donc, s'il s'avère nécessaire de changer le degré d'intensité des vibrations suivre les modalités prévues sur la notice UTILISATION ET ENTRETIEN (ci-joint) fournie par le constructeur.

La valeur de réglage du motovibrateur, monté sur le Big Bag est étroitement lié aux conditions d'utilisation.

Le réglage devra être effectué avant le démarrage.

Les paramètres à prendre en compte sont:

- Type de produit;
- Humidité;
- Température;
- Temps de stockage du BIG-BAG;
- Débit;
- Dimensions du BIG-BAG.

Le réglage prévu par le constructeur en phase de réception, est de 70%.

S'il s'avère nécessaire de modifier cette valeur il est conseillé de procéder graduellement.

Si le résultat n'est pas satisfaisant, avant de faire un nouveau réglage, vider la trémie du produit pour ne pas avoir les résidus des essais précédents.

L'OPÉRATION DOIT ÊTRE EXÉCUTÉE UNIQUEMENT PAR DU PERSONNEL QUALIFIÉ ET AVEC L'ALIMENTATION DÉBRANCHÉE.

- Déposer les couvercles latéraux en dévissant les vis.
- Desserrer le boulon d'Allen (photo 1), déplacer la masse mobile (photo 2) dans la position désirée.
- Resserrer à fond l'écrou à six pans creux (Photo 3)

Les poids doivent être réglés de manière parfaitement identique et dans le même sens de deux côtés.

L'intensité maximale s'obtient avec les poids réglables parfaitement alignés aux poids fixes.

Remonter le couvercles en montant, sans l'endommager, le joint d'étanchéité OR.

Pour tout complément d'informations faire référence au Manuel du motovibrateur repérable sur le site www.wamgroup.com.

Se durante il funzionamento si riscontrano delle irregolarità nella discesa del prodotto si può effettuare la regolazione del motovibratore, aumentando o riducendo la sua intensità di vibrazione.

PROCEDURE PER LA REGOLAZIONE DEL MOTOVIBRATORE

Il motovibratore installato è a masse variabili, pertanto, nel caso si renda necessario variare il grado di intensità delle vibrazioni seguire le modalità previste sul libretto USO E MANUTENZIONE (in allegato) fornito dal Costruttore.

Il valore di regolazione del motovibratore, montato sul big bag, è strettamente legato alle condizioni di utilizzo.

La regolazione dovrà essere effettuata prima dell' avviamento.

I parametri da considerare sono:

- Tipo di prodotto;
- Umidità;
- Temperatura;
- Tempo di stoccaggio del BIG-BAG;
- Portata;
- Dimensioni del BIG-BAG.

La regolazione prevista dal Costruttore in fase di collaudo, è del 70%.

Nel caso si renda necessario modificare tale valore è consigliabile procedere gradualmente.

Se il risultato non è soddisfacente, prima di procedere a una nuova regolazione, svuotare la tramoggia dal prodotto per non avere residui di prove precedenti.

L'OPERAZIONE DEVE ESSERE ESEGUITA ESCLUSIVAMENTE DA PERSONALE QUALIFICATO E CON ALIMENTAZIONE DISINSERITA.

- Togliere i coperchi laterali svitando le viti.
- Allentare il dado a brugola (foto 1), spostare la massa mobile (foto 2) nella posizione desiderata.
- Riserrare a fondo il dado a brugola (Foto 3)

Le masse devono essere regolate in modo perfettamente uguale e nello stesso senso in entrambi i lati.

La massima intensità si ottiene con le masse regolabili perfettamente allineate alle masse fisse.

Rimontare i coperchi, interponendo, senza danneggiarla, la guarnizione OR di tenuta.

Per ulteriori informazioni riferirsi al manuale del motovibratore reperibile sul sito www.wamgroup.com

Weights - *Unwuchtmassen*
Masses - Masse

Before starting up the plant, it is necessary to carry out a series of checks in order to prevent problems or risks.
Make sure that all the equipment components are positioned and fitted properly.
Carefully check all the electric and pneumatic connections.

Vor Inbetriebnahme des Systems muß eine Reihe von Prüfungen vorgenommen werden, um Probleme oder Risiken zu vermeiden.
Sicherstellen, daß alle Bestandteile der Vorrichtung korrekt aufgestellt und befestigt wurden.
Alle elektrischen und pneumatischen Anschlüsse sorgfältig prüfen.

Avant de mettre en marche l'installation il est important d'effectuer une série de contrôles afin de prévenir les problèmes ou les risques.
S'assurer que tous les composants de la machine sont placés de la bonne manière et fixés correctement.
Vérifier soigneusement tous les raccordements électriques et pneumatiques.

Prima di effettuare l' avviamento dell' impianto è importante che vengano eseguiti una serie di controlli al fine di prevenire problemi o rischi.
Accertarsi che tutti i componenti della macchina siano collocati in modo opportuno e correttamente fissati.
Verificare accuratamente tutti gli allacciamenti elettrici e pneumatici.

OPERATION

The work cycle can be:
- automatic
- manual.

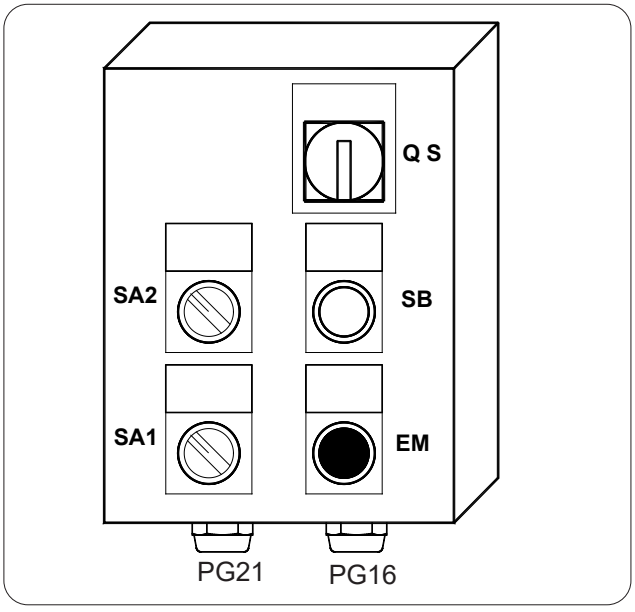
The cylinders may operate:
- in pairs (the two pneumatic hammers move in parallel towards the FIBC).
- In single mode (the two pneumatic hammers move alternately).

FUNKTIONSWEISE

Der Betriebszyklus kann wie folgt ablaufen:
- automatisch
- von Hand.

Der Betrieb der Zylinder erfolgt:
- gleichzeitig (die beiden Betätigungsstangen fahren parallel zum BIG-BAG vorwärts)
- abwechselnd (die beiden Betätigungsstangen fahren abwechselnd vorwärts).

FONCTIONNEMENT



Le cycle de fonctionnement peut être:
- automatique
- manuel

En outre il est prévu que les cylindres fonctionnement de manière:
- simultanée (les deux percuteurs avancent parallèles vers le BIG-BAF).
- alternée (les deux percuteurs avancent alternativement).

FUNZIONAMENTO

Il ciclo di funzionamento può essere:
- automatico
- manuale.

Inoltre è previsto un funzionamento dei cilindri:
- simultaneo (i due percussori avanzano in parallelo verso il BIG-BAG).
- alternato (i due percussori avanzano alternativamente)

A - AUTOMATIC - SINGLE operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the "AUTOMATIC" position.
- Turn selector SA1 to the "SINGLE" position.
- Set the operating times on timers KT1-KT2-KT3.

A - Betrieb AUTOMATISCH - ABWECHSELND

- Den Hauptschalter QS drehen, um die Schalttafeln (elektrisch und pneumatisch) spannungsführend zu machen.
- Das Sperrventil der Druckluft (Installation auf Veranlassung des Kunden) zum Speisen der elektrischen Schalttafel öffnen.
- Den Wahlschalter SA2 auf die Stellung „AUTOMATIK" drehen.
- Den Wahlschalter SA1 auf die Stellung „SINGLE" drehen.
- Auf den Zeitschaltern KT1-KT2-KT3 die Betriebszeiten einstellen.

A - Fonctionnement AUTOMATIQUE - ALTERNÉ

- Tourner l'interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d'arrêt de l'air comprimé (installation à la charge du Client) pour alimenter l'armoire électrique.
- Tourner le sélecteur SA2 sur la position «AUTOMATIQUE».
- Tourner le sélecteur SA1 sur la position «SINGLE».
- Programmer les temps de fonctionnement sur les temporisateurs KT1-KT2-KT3

A - Funzionamento AUTOMATICO - ALTERNATO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione "AUTOMATICO".
- Ruotare il selettore SA1 in posizione "SINGLE".
- Impostare i tempi di funzionamento sui timer KT1-KT2-KT3.

- Press the cycle start pushbutton SB (the automatic cycle relay KA0 is energized - solenoid valve YV1 is energized and it pushes activator 1 regulated by timer KT1 forward.
- At the end of the time set on timer KT1, solenoid valve YV2 is energized which pushes activator 2 regulated by timer KT2 forward and at the same time activator 1 is drawn back.
- At the end of the time set on timer KT2, activator 2 is drawn back and at the same time energizes relay KA1 which holds the two activators in pause in the retracted position.
  The pause time is regulated by timer KT3 which, at the end of the set time, allows the next cycle to be started up.
- When the FIBC is completely empty, select push-button EM to stop the working of the system.

- Die Starte Zyklus-Start SB drücken (das Relais Zyklus Automatik KA0 zieht an - das Magnetventil YV1 wird erregt, das den Trieb 1, der vom Timer KT1 aktiviert wird, vorwärts schiebt.
- Nach Ablauf der auf Zeitschalter KT1 eingestellten Zeit erregt sich das Magnetventil YV2, das den Trieb 2, der vom Timer KT2 aktiviert wird, vorwärts schiebt, wobei der Trieb 1 sich gleichzeitig rückwärts bewegt.
- Nach Ablauf der auf Zeitschalter KT2 eingestellten Zeit bewegt sich der Trieb 2 rückwärts und gleichzeitig zieht das Relais KA1 an, das die beiden Triebe in der zurückgefahrenen Position in der Pause hält.
  Die Pausenzeit wird vom Zeitschalter KT3 geregelt, der nach Ablauf der Zeit die Wiederaufnahme des anschließenden Zyklus gestattet.
- Nach dem Entleeren des Big-Bag die Taste EM wählen, um den Betrieb des Systems zu stoppen.

- Appuyer sur le bouton de marche cycle SB (excitation du relais de cycle automatique KA0 - excitation de l'électrovanne YV1 qui pousse vers l'avant l'activateur 1 réglé par le temporisateur KT1).
- Quand le temps programmé sur le temporisateur KT1 est terminé, l'électrovanne YV2 s'excite et pousse vers l'avant l'activateur 2 réglé par le temporisateur KT2 et simultanément l'activateur 1 recule.
- Quand le temps programmé sur le temporisateur KT2 est terminé, l'activateur 2 recule et simultanément s'excite le relais KA1 qui tient en pause les deux activateurs dans la position rentrée.
  Le temps d'arrêt est réglé par le temporisateur KT3 qui à la fin du temps permet la reprise du cycle successif.
- Quand le vidage du Big-Bag est terminé, appuyer sur le bouton EM pour arrêter le fonctionnement du système.

- Premere il pulsante di marcia ciclo SB (si eccita il relè di ciclo automatico KA0 - si eccita l'elettrovalvola YV1 che spinge in avanti l'attivatore 1 regolato dal timer KT1.
- Scaduto il tempo impostato sul timer KT1 si eccita l'elettrovalvola YV2 che spinge in avanti l'attivatore 2 regolato dal timer KT2 e contemporaneamente retrocede l'attivatore 1.
- Scaduto il tempo del timer KT2 l'attivatore 2 retrocede e contemporaneamente si eccita il relè KA1 che tiene in pausa i due attivatori in posizione retratta.
  Il tempo di sosta è regolato dal timer KT3 che a fine tempo consente la ripresa del ciclo successivo).
- Completato lo svuotamento del Big - Bag selezionare il pulsante EM per arrestare il funzionamento del sistema.

B - AUTOMATIC - IN PAIRS operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the "AUTOMATIC" position.
- Turn selector SA1 to the "IN PAIRS" position.
- Set the operating times on timers KT1-KT2-KT3.
- Press the cycle start pushbutton SB (the automatic cycle relay KA0 is energized - solenoid valves YV1 and YV2 are energized and simultaneously push the two pneumatic hammers for the time set on timer KT1.
- At the end of the time set on timer KT1, both pneumatic hammers are retracted and remain in pause for the time set on timer KT3.
- When the FIBC is completely empty, select push-button EM to stop the operation of the system.

B - Betrieb AUTOMATISCH - SIMULTAN

- Den Hauptschalter QS drehen, um die (elektrische und pneumatische) Schalttafel spannungsführend zu machen.
- Das Sperrventil der Druckluft öffnen (Installation durch den Kunden), um die elektrische Schalttafel zu speisen.
- Den Wahlschalter SA2 auf die Stellung „AUTOMATIK" drehen.
- Den Wahlschalter SA1 auf die Stellung „IN PAIRS" drehen.
- Die Betriebszeiten auf den Zeitschaltern KT1-KT3 einstellen.
- Die Taste Zyklus Start SB drücken (das Relais Zyklus Automatik KA0 zieht an - die Magnetventile YV1 und YV2 erregen sich, welche die beiden Betätigungsstangen für die auf Zeitschalter KT1 eingestellte Zeit gleichzeitig nach vorn schieben.
- Nach Ablauf der auf dem Zeitschalter KT1 eingestellten Zeit fahren beide Betätigungsstangen zurück und bleiben die auf Zeitschalter KT3 eingestellte Zeit in der Pause).
- Nach Ablauf der Entleerung des Big-Bag die Taste EM wählen, um den Betrieb des Systems anzuhalten.

B - Fonctionnement AUTOMATIQUE - SIMULTANÉ

- Tourner l'interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d'arrêt de l'air comprimé (installation à la charge du Client) pour alimenter l'armoire électrique.
- Tourner le sélecteur SA2 sur la position «AUTOMATIQUE».
- Tourner le sélecteur SA1 sur la position «IN PAIRS».
- Programmer les temps de fonctionnement sur les temporisateurs KT1-KT2-KT3.
- Appuyer sur le bouton de marche cycle SB (excitation du relais de cycle automatique KA0 - excitation des électrovannes YV1 et YV2 qui poussent vers l'avant simultanément les deux percuteurs pour la durée programmée sur le temporisateur KT1).
- Quand le temps programmé sur le temporisateur KT1 est terminé, les deux percuteurs reculent et restent en pause pendant le temps programmé sur le temporisateur KT3.
- Quand le vidage du Big-Bag est terminé, appuyer sur le bouton EM pour arrêter le fonctionnement du système.

B - Funzionamento AUTOMATICO - SIMULTANEO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione "AUTOMATICO".
- Ruotare il selettore SA1 in posizione "IN PAIRS".
- Impostare i tempi di funzionamento sui timer KT1-KT3.
- Premere il pulsante di marcia ciclo SB (si eccita il relè di ciclo automatico KA0 - si eccitano le elettrovalvola YV1 e YV2 che spingeranno in avanti contemporaneamente i due percussori per il tempo impostato sul timer KT1.
- Scaduto il tempo impostato sul timer KT1 retrocedono ambedue i percussori restando in pausa per il tempo impostato sul timer KT3).
- Completato lo svuotamento del Big - Bag selezionare il pulsante EM per arrestare il funzionamento del sistema.

C - MANUAL - IN PAIRS operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the “MANUAL” position.
- Turn selector SA1 to the “IN PAIRS” position.
- Press the cycle start pushbutton SB. The system works as long as the start pushbutton is kept pressed.

C - Betrieb VON HAND - SIMULTAN

- Den Hauptschalter QS drehen, um den (elektrischen und pneumatischen) Schaltkasten spannungsführend zu machen.
- Das Sperrventil der Druckluft öffnen (Installation durch den Kunden), um die elektrische Schalttafel zu speisen.
- Den Wahlschalter SA2 auf die Stellung „VON HAND“ drehen.
- Den Wahlschalter SA1 auf die Stellung „SIMULTAN“ drehen.
- Die Start-Taste SB drücken. Das System funktioniert, solange man die Start-Taste gedrückt hält.

C - Fonctionnement MANUEL - SIMULTANÉ

- Tourner l’interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d’arrêt de l’air comprimé (installation à la charge du Client) pour alimenter l’armoire électrique.
- Tourner le sélecteur SA2 sur la position «MANUEL».
- Tourner le sélecteur SA1 sur la position «SIMULTANÉ».
- Appuyer sur le bouton de marche SB. Le système fonctionne tant que le bouton de marche est maintenu enfoncé.

C - Funzionamento MANUALE - SIMULTANEO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione “MANUALE”.
- Ruotare il selettore SA1 in posizione “SIMULTANEO”.
- Premere il pulsante di marcia SB. Il sistema funziona finché si tiene premuto il pulsante di marcia.

D - MANUAL - SINGLE operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the “MANUAL” position.
- Turn selector SA1 to the “SINGLE” position.
- Press the start pushbutton SB. The system works as long as the start pushbutton is kept pressed.

D - Betrieb VON HAND - ABWECHSELND

- Den Hauptschalter QS drehen, um den (elektrischen und pneumatischen) Schaltkasten spannungsführend zu machen.
- Das Sperrventil der Druckluft öffnen (Installation durch den Kunden), um die elektrische Schalttafel zu speisen.
- Den Wahlschalter SA2 auf die Stellung „VON HAND“ drehen.
- Den Wahlschalter SA1 auf die Stellung „ABWECHSELND“ drehen.
- Die Start-Taste SB drücken. Das System funktioniert, solange man die Start-Taste gedrückt hält.

D - Fonctionnement MANUEL - ALTERNÉ

- Tourner l’interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d’arrêt de l’air comprimé (installation à la charge du Client) pour alimenter l’armoire électrique.
- Tourner le sélecteur SA2 sur la position «MANUEL».
- Tourner le sélecteur SA1 sur la position «ALTERNÉ».
- Appuyer sur le bouton de marche SB. Le système fonctionne tant que le bouton de marche est maintenu enfoncé.

D - Funzionamento MANUALE - ALTERNATO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione “MANUALE”.
- Ruotare il selettore SA1 in posizione “ALTERNATO”.
- Premere il pulsante di marcia SB. Il sistema funziona finché si tiene premuto il pulsante di marcia.

CHECKS MADE AT THE FACTORY

The equipment has been subjected to actual operating tests load-free for about 15 minutes at the factory, so as to guarantee correct start-up.

VOM HERSTELLER DURCHGEFÜHRTE KONTROLLEN

Die Vorrichtung wurde im Herstellerwerk einer abschließenden Funktionskontrolle unterzogen der leeren Vorrichtung auf die Dauer von ca. 15 Minuten., um eine korrekte Inbetriebnahme zu garantieren.

CONTRÔLES EFFECTUÉS DANS NOS ETABLISSEMENTS

Cette machine a été soumise, dans l’ établissement du constructeur un fonctionnement à vide pendant environ 15 minutes, à un essai fonctionnel de réception afin de garantir une mise en service correcte.

CONTROLLI EFFETTUATI NEI NOSTRI STABILIMENTI

La macchina ha subito, presso gli stabilimenti del costruttore, un reale collaudo funzionale a vuoto per circa 15 minuti così da garantire la corretta messa in esercizio.

MAINTENANCE

Before carrying out any operation, make sure the machine is in safety condition

In this manual, from here onwards "setting the machine in safety conditions" will indicate the following operations:

- Make sure the machine is disconnected from all electric power supply sources.
- Make sure the machine is completely stopped.
- Wait for the internal and external machine temperatures to reach values not dangerous to the touch.
- Provide sufficient lighting around the machine operating area (the operators may be provided with electric lamps with protection degree IP65, if necessary).
- Make sure the machine is disconnected from the compressed air supply.
- Wait for the powder mass inside the silo to settle down completely.

Before carrying out any operation on the machine (maintenance or cleaning), the operators must use suitable personal protection equipment:

- antistatic safety footwear (certified)
- antistatic protective clothing (certified)
- helmet
- antistatic, cut-proof gloves
- safety masks

In addition to these, use the safety devices specified in the safety chart of the product handled.

Machine operations must be carried out with the machine in safety conditions disconnected from all energy sources and in the absence of airborne dust; follow the machine stop procedure for maintenance.

All maintenance operations, whether ordinary or extraordinary, must be carried out by adopting the suitable personal protection equipment required and by following the instructions in this manual strictly.

To reach the parts at the top of the machine, use a work platform, which must be chosen in such a way as to prevent risk of slipping, tripping or falling of operators.

WARTUNG

Vor Eingriffen jeder Art am Gerät überprüfen, ob dieses in einen sicheren Zustand versetzt wurde.

In diesem Handbuch verstehen wir unter dem Begriff „das Gerät in einen sicheren Zustand bringen" die folgenden Maßnahmen:

- Sicherstellen, dass die Maschine von allen elektrischen Versorgungsquellen getrennt ist.
- Sicherstellen, dass alle beweglichen Geräteteile still stehen.
- Sicherstellen, dass die Innen- und Außentemperatur des Gerä-tes einen Wert erreicht hat, der bei Berührung ungefährlich ist.
- Dafür sorgen, dass der Bereich rings um das Gerät gut be-leuchtet ist (eventuell indem man das Personal mit elektrischen Lampen mit Schutzart IP65 ausstattet).
- Sicherstellen, dass das Gerät vom Versorgungsnetz für Druckluft abgetrennt ist.
- Abwarten, bis der Staub, der sich innerhalb des Gerätes befindet, sich vollkommen abgesetzt hat.

Für jede Arbeit, die am Gerät auszuführen ist, (Wartung und Reinigung) muss das Personal mit den entsprechenden persönlichen Schutzausrüstungen (PSA) ausgestattet sein:

- Antistatische Sicherheitsschuhe (zertifiziert)
- Antistatische Schutzkleidung (zertifiziert)
- Schutzhelme
- Antistatische Schnittschutz-handschuhe
- Atemschutzmasken.

Außerdem auch die Schutzvorrichtungen, die auf dem Sicherheitsdatenblatt zu filternden Produkts stehen.

Die Wartungsarbeiten müssen bei in den sicheren Zustand gebrachter Maschine ausgeführt werden, wenn diese von allen Energiequellen getrennt ist, und in Abwesenheit von durch die Luft verteiltem Staub: Die ganze Prozedur zum Anhalten der Maschine durchführen, bevor man mit der Wartung beginnt.

Alle Wartungsarbeiten, sowohl regelmäßige als auch außerordentliche, müssen unter Anwendung aller erforderlichen persönlichen Schutzeinrichtu ngen und unter Beachtung aller Angaben dieses Handbuchs ausgeführt werden.

Wenn Teile der Maschine erreicht werden müssen, die sich in größerer Höhe befinden, benutzen Sie eine Arbeitsbühne, die so zu wählen ist, dass Ausrutsch-, Stolper- und Abstürzgefahren für das Personal vermieden werden.

ENTRETIEN

Avant d'effectuer une quelconque intervention sur la machine s'assurer que celle-ci a été placée en condition de sécurité.

Dans le présent manuel la consigne "mettre la machine en sécurité" indique les opérations suivantes :

- S'assurer que la machine est débranchée de toutes les alimentations électriques;
- S'assurer que la machine est complètement arrêtée;
- Attendre que la température intérieure et extérieure de la machine a atteint une valeur qui n'est pas dangereuse au toucher;
- Eclairer correctement la zone qui entoure la machine (en dotant éventuellement les opérateur de lampes électriques avec degré de protection IP65);
- S'assurer que la machine est débranchée du réseau de distribution de l'air comprimé;
- Attendre que la poussière contenue à l'intérieur de la machine se soit entièrement déposée.

Pour toute opération à effectuer sur la machine (entretien et nettoyage), les opérateurs devront être munis des équipements de protection individuelle (EPI) :

- Chaussures de sécurité antistatiques (certifiées)
- Vêtements de protection antistatiques (certifiés)
- Casque
- Gants anticoupure antistatiques
- Maques de protection respiratoire

En outre les équipements de protection prévus par la fiche de sécurité du produit filtré.

Les opérations d'entretien doivent être effectuées avec la machine en condition de sécurité, débranché de toute source d'énergie et en absence de poussières dispersée dans l'air : effectuer toute la procédure d'arrêt de la machine avant de commencer l'entretien.

Toutes les opérations d'entretien, aussi bien ordinaire qu'extraordinaire, doivent être exécutées en adoptant tous les dispositifs de protection individuelle requis et en suivant attentivement les indications de cette notice.

Si l'on doit atteindre des parties de la machine, utiliser une plate-forme aérienne de travail qui devra être choisie de manière à éviter les dangers de glissement, heurt ou chute des opérateurs.

MANUTENZIONE

Prima di effettuare un qualsiasi intervento sulla macchina assicurarsi che questa sia messa in sicurezza.

In seguito nel presente manuale indicheremo con la dicitura "mettere in sicurezza la macchina" le seguenti operazioni:

- accertarsi che la macchina sia scollegata da tutte le alimentazioni elettriche;
- accertarsi che la macchina sia completamente ferma;
- attendere che la temperatura interna ed esterna della macchina abbia raggiunto un valore non pericoloso al tatto;
- provvedere ad illuminare correttamente la zona circostante alla macchina (eventualmente dotando gli operatori di lampade elettriche con grado di protezione IP65);
- accertarsi che la macchina sia scollegata dalla rete di distribuzione d'aria compressa;
- attendere che la polvere contenuta all'interno della macchina sia completamente depositata.

Per qualsiasi operazione da effettuarsi sulla macchina (manutenzioni e pulizia), gli operatori dovranno essere muniti degli appositi dispositivi di protezione individuale (DPI):

- scarpe antinfortunistiche antistatiche (certificate)
- indumenti protettivi antistatici (certificati)
- casco
- guanti antitaglio antistatici
- mascherine protettive

Inoltre occorre utilizzare tutti i dispositivi di protezione previsti dalla scheda di sicurezza del prodotto filtrato.

Le operazioni di manutenzione devono essere effettuate a macchina in sicurezza, scollegata da ogni fonte di energia e in assenza di polvere aerodispersa: seguire tutta la procedura di arresto della macchina prima di iniziare la manutenzione.

Tutte le operazioni di manutenzione, sia ordinaria che straordinaria, devono essere eseguite adottando tutti i dispositivi di protezione personale richiesti e seguendo attentamente le indicazioni di questo manuale.

Laddove si debbano raggiungere parti della macchina in quota, utilizzare una piattaforma aerea di lavoro che dovrà essere scelta in modo da evitare pericoli di scivolamento, inciampo o caduta per gli operatori.

The machine can be used with a very large range of products; this involves different degrees of wear on some components.

The recommended maintenance schedules are therefore subject to modifications.

It is always preferable to program maintenance operations periodically instead of having to act in emergency conditions so as to eliminate potential stops during periods of peak production.

Failure to follow the instruc-tions given below can lead to risks for the operators and lead to invalidation of the warranty on the equipment supplied.

CAUTION
All maintenance, lubrication and cleaning operations must be performed with the machine in safety conditions.

For hazardous materials, suitable PPD (personal protection devices) must be used in accordance with the safety chart of the powder handled.

Maintenance must be done only by qualified technicians.
Lift and handle all heavy parts using suitable lifting equipment.
Make sure that the parts or components are supported by suitable harnesses or hooks.
Ensure that there is no one standing in the area where the load is being lifted.

Remember that careful periodic maintenance and correct use are essential requirements for guaranteeing high machine performance.
To ensure that the machine functions constantly and normally and to prevent the guarantee's replacement clauses being invalidated, we recommend that you always use original spare parts.

Maintenance of the vibrator motor must be carried out in accordance with the instructions given in the relevant manual.

Das Gerät kann für unter-schiedliche Medien eingesetzt werden, was einen unterschiedlich schnellen Verschleiß einiger Komponenten zur Folge haben kann.

Die empfohlenen Wartungsabstände können daher Änderungen unterliegen.

Es ist immer besser, regelmäßige Wartungseingriffe zu planen, statt erst im Notfall eingreifen zu müssen, weil dann die Gefahr etwaiger Ausfallzeiten nicht besteht, wenn max. Produktionsauslastung vorgesehen ist.

Die Nichtbeachtung der folgenden Anweisungen kann zur Gefährdung des Personals und zum Ungültigwerden der Garantie auf die gelieferten Maschinen führen.

ACHTUNG
Vor der Ausführung von Wartung, Schmierung oder Reinigungsarbeiten ist die Maschine in den sicheren Zustand zu bringen.

Für gefährliches Schüttgut sind die persönlichen Schutzausrüstungen zu benutzen, die auf den Sicherheitsdatenblättern des behandelten Schüttguts beschrie-ben sind.

Die Wartungsarbeiten sind von spezialisierten Technikern auszuführen.
Alle schweren Einzelteile mit einer angemessenen Hubeinrichtung heben und transportieren.
Sicherstellen, daß Gruppen oder Einzelteile von passenden Anschlagelementen und Haken gehalten werden.
Sicherstellen, daß sich in der Nähe der zu hebenden Maschine keine Personen aufhalten.
Eine genaue und regelmäßige Wartung wie auch eine korrekte Benutzung sind in der Regel die Voraussetzungen für eine hohe Leistung der Maschine.
Um einen konstanten und ordnungsgemäßen Betrieb zu garantieren und zu vermeiden, die Voraussetzungen für die Garantiegewähr zu verlieren, sollte man immer nur Originalersatzteile verwenden.

Die Wartung des Unwuchtmotors ist gemäß der Angaben im Handbuch desselben vorzunehmen.

Il est rappelé que la machine peut travailler avec une très vaste gamme de produits et ceci comporte une rapidité différente dans l'usure de certains composants.

Le calendrier des intervention d'entretien est donc susceptible de variations.

Il convient de programmer régulièrement les interventions au lieu d'intervenir en conditions d'émergence, afin d'éliminer les arrêts potentiels pendant les périodes de production maximale.

L' inobservation des consignes suivantes peut provoquer des risques pour les opérateurs et invalider la garantie des machines fournies.

ATTENTION
Toute intervention d'entretien, lubrification et nettoyage doit être exécutée la machine en condition de sécurité.

Pour les matières dangereuses il faut utiliser les EPI appropriés conformément à la fiche de sécurité de la poudre traitée.

Les opérations d' entretien doivent être effectuées par des techniciens spécialisés.
Soulever et manipuler les pièces lourdes avec un moyen de levage approprié.
S' assurer que les groupes ou les pièces sont soutenues par des élingues et des crochets appropriés.
S' assurer qu' il n' y a personne à proximité de la charge à soulever.
Il est rappelé qu' un entretien régulier et précis ainsi qu'une utilisation correcte sont les conditions indispensables pour garantir un rendement élevé de la machine.
Pour assurer un fonctionnement constant, régulier et ne pas risquer de ne plus bénéficier du remplacement sous garantie, il est recommandé d'utiliser uniquement des pièces détachées d'origine.

L'entretien du motovibrateur doit être réalisé en suivant les indications contenues dans le manuel. tuellement branché à la RSM).

Si ricorda che la macchina può lavorare con una vastissima gamma di prodotti, e ciò comporta una diversa rapidità nell' usura di alcuni componenti.

I tempi di intervento di manutenzione consigliati sono quindi suscettibili di modifiche.

E' sempre preferibile programmare periodicamente gli interventi anziché dover intervenire in condizioni di emergenza così da eliminare potenziali arresti durante i periodi di massima produzione.

Il non attenersi strettamente alle seguenti istruzioni può causare rischi sugli operatori ed invalidare la garanzia sulle macchine fornite.

ATTENZIONE
Ogni intervento di manutenzione, lubrificazione e pulizia deve essere eseguito a macchina in sicurezza.

Per materiali pericolosi si devono usare i DPI idonei in accordo con la scheda di sicurezza della polvere trattata.

Le operazioni di manutenzione devono essere effettuate da tecnici specializzati.
Sollevare e maneggiare tutti i particolari pesanti con un mezzo di sollevamento adatto.
Assicurarsi che i gruppi od i particolari siano sostenuti da imbragature e ganci appropriati.
Accertarsi che non ci siano persone in prossimità del carico da sollevare.
Si ricorda che una precisa e periodica manutenzione ed un uso corretto sono la premessa indispensabile per garantire un elevato rendimento della macchina.
Per assicurare il suo costante e regolare funzionamento ed evitare che vengano a mancare i presupposti per la sostituzione in garanzia, si raccomanda di utilizzare sempre ricambi originali.

La manutenzione del motovibratore deve essere eseguita secondo le indicazioni contenute nel manuale dello stesso.

PERIODIC CHECKS	REGELMÄSSIGE KONTROLLEN	CONTRÔLES PÉRIODIQUES	CONTROLLI PERIODICI
Before every work shift Check the safety devices to ensure they are present and intact.	**Vor jeder Schicht** Sicherstellen, daß die Schutzvorrichtungen vorhanden und unversehrt sind.	**Avant chaque poste de travail** Vérifier la présence et l'intégrité des protections.	**Prima di ogni turno di lavoro** Verificare la presenza e l'integrità delle protezioni.
After every work shift Make sure that the passage of the material is free of residue; if this is not the case, clean carefully.	**Nach jeder Schicht** Sicherstellen, daß der Produktdurchlaufbereich keine Produktreste aufweist; an-dernfalls ist dieser Bereich sorgfältig zu reinigen.	**Après chaque poste de travail** Vérifier que la zone de passage du produit est libre de tous résidus; dans le cas contraire nettoyer soigneusement	**Dopo ogni turno di lavoro** Verificare che la zona di passaggio del materiale sia libera da residui dello stesso ; se non lo è pulire accuratamente
Every 100 hours of operation (every 2 weeks) Check the condition of the FIBC support seal.	**Alle 100 Betriebsstunden (alle 2 Wochen)** Den Zustand der Dichtungen prüfen, auf denen der Sack aufliegt.	**Toutes les 100 heures de travail (tous les 15 jours)** Contrôler l'état du joint d'appui du Big Bag.	**Ogni 100 ore di lavoro (ogni 15 giorni)** Controllare lo stato di efficienza della guarnizione di appoggio Big Bag.
Every 200 hours of operation (monthly) **1** - Check the appearance of the structure, paying particular attention to the state of: - welds in general; - motovibrator fixing plate; - damper support plates.	**Alle 200 Betriebsstunden (monatlich)** **1** - Das Aussehen der Struktur prüfen, wobei besonders auf folgendes zu achten ist: - Schweißstellen im allgemeinen; - Befestigungsplatte des Vibrationsmotors; - Trageplatten der Schwingungsdämpfer.	**Toutes les 200 heures de travail (tous les mois)** **1** - Vérifier l' aspect de la structure du fond en faisant attention à: - points de soudures; - plaque de fixation du motovibrateur; - plaques de soutien des dispositifs anti-vibration.	**Ogni 200 ore di lavoro (ogni mese)** **1** - Verificare l' aspetto della struttura prestando attenzione a: - saldature in genere; - piastra di fissaggio del motovibratore; - piastre di sostegno degli antivibranti.
2 - Check that all bolts are correctly tightened, in par-ticular the motovibrator fixing bolts.	**2** - Kontrolle der Schrauben auf festen Sitz, insbesondere der Schrauben zur Befestigung des Vibrations-motors.	**2**- Contrôler si les boulons ont été serrés correctement en faisant particulièrement attention à ceux qui fixent le motovibrateur.	**2** - Controllare il corretto serraggio dei bulloni prestando particolare attenzione a quelli di fissaggio del motovibratore.
3 - Check the seal for cracks or splits.	**3** - Sicherstellen, daß die Dichtungen keine Risse oder Bruchstellen aufweisen.	**3** - Contrôler que les joint ne présent aucune fissure ou lacération.	**3** - Controllare che non ci siano screpolature o fessurazioni nella guarnizione.
4 - Check the dampers for signs of collapse (load deformation must not exceed 10% of nominal height).	**4**- Sicherstellen, daß die Schwingungsdämpfer nicht verformt sind (die Verformung unter Lasteinwirkung darf nicht mehr als 10% über der Nennhöhe liegen).	**4**- Contrôler que les dispositifs anti-vibration ne sont pas défoncés (la déformation ne doit pas dépasser 10% de la hauteur nominale).	**4** - Controllare che gli antivibranti non presentino segni di sfondamento (la deformazione sotto carico non deve superare il 10% dell' altezza nominale).
5 - Check that the motovi-brator is as clean as pos-sible.	**5** - Sicherstellen, daß der Vibrationsmotor so sauber wie möglich ist.	**5**- Contrôler que le moto-vibrateur est toujours très propre.	**5** - Controllare che il motovibratore sia il più pulito possibile.
6 - Check the seals of the compressed air connections.	**6** - Die pneumatischen Anschlüsse auf dichten Sitz prüfen.	**6**- Contrôler la tenue des raccordements pneumatiques.	**6** - Controllare la tenuta dei collegamenti pneumatici.
7 - Check to make sure the pneumatic cylinders of the pneumatic actuators kit (if present) are in perfect working order.	**7**- Die Funktionstüchtigkeit der pneumatischen Zylinder des Bausatzes pneumatische Austraghilfen prüfen (falls vorhanden).	**7**- Contrôler l'efficacité des cylindres pneumatiques du kit des actionneurs pneumatiques (si prévu)	**7**- Controllare l' efficienza dei cilindri pneumatici del kit attivatori pneumatici (se presente)

The detergents to be used for cleaning the various equipment must have a flash point indicated in the respective safety chart, higher than the temperature reached in normal operating conditions and reasonably expected; therefore, there should be no risk of fire.

Die für die Reinigung der verschiedenen Geräte zu benutzenden Reinigungsmittel müssen einen Flammpunkt aufweisen (siehe entsprechendes Sicherheitsdatenblatt), der über der Temperatur liegt, die unter normalen und vorhersehbaren Einsatzbedingungen erreicht wird. Daher können sie keine Brandgefahr darstellen.

Les détergents à utiliser pour le nettoyage des différents appareillages doivent présenter un point d'inflammabilité, reporté sur les fiches de sécurité correspondantes, supérieur à la température pouvant être atteinte dans les conditions d'utilisation normales et raisonnablement prévisibles; par conséquent ils ne doivent pas déterminer un risque d'incendie.

I detergenti da impiegare per la pulizia delle varie apparecchiature devono presentare un punto di infiammabilità, riportato nelle rispettive schede di sicurezza, superiore alla temperatura raggiungibile nelle condizioni di utilizzo normali e ragionevolmente prevedibili; pertanto non possono determinare pericoli di incendio.

Before starting cleaning operations, set the machine in safety conditions.

Bevor man mit der Reinigung beginnt, ist das Gerät in den sicheren Zustand zu versetzen.

Avant de commencer les opérations de nettoyage, mettre la machine en condition de sécurité.

Prima di iniziare le operazioni di pulizia mettere in sicurezza la macchina.

When removing dust that may be present on the machine, take care to avoid spreading it in the surrounding area.

Beim Entfernen des Staubs, der eventuell im Gerät vorhanden ist, ist darauf zu achten, dass dieser nicht aufgewirbelt wird.

Lors du nettoyage de la poussière présente dans la machine, faire attention à ne pas la disperser dans le milieu ambiant.

Nella rimozione della polvere eventualmente presente nella macchina aver cura di non disperdere la polvere stessa nell'ambiente circostante.

The user must provide for the choice of suitable products for cleaning, depending on the type of plant and the product handled.

Der Benutzer muss Produkte auswählen, die für den jeweiligen Typ der Anlage und das behan-delte Schüttgut geeignet sind.

L'utilisateur devra choisir des produits appropriés pour le nettoyage en fonction de la typologie d'installation et de la matière transportée.

L'utilizzatore dovrà provvedere alla scelta dei prodotti idonei alle fasi di pulizia in base alla tipologia di impianto ed al prodotto trasportato.

the FIBC UNLOADERS meant for use with food products, provision must be made for cleaning at intervals depending on the type or product and plant.

Für die BIG-BAG Entleerstationen, die für Nahrungsmittel eingesetzt werden soll, ist die Häufigkeit der Reinigung abhängig von der Beschaffenheit des behandelten Produkts und vom Anlagentyp.

Pour les vide BIG-BAG destinés à être utilisés avec des produits alimentaires, il faut prévoir une phase de nettoyage à une fréquence qui dépend de la nature du produit et de l'installation.

Per gli svuota BIG-BAG destinati ad essere utilizzati con prodotti alimentari occorre prevedere una fase di pulizia con frequenza che dipende dalla natura del prodotto e dell'impianto.

In case of harmful products, the cleaning wastes must be conveyed to a tank and disposed off according to relevant regulations.

Bei schädlichen oder giftigen Produkten muss das Spülwasser in geeigneten Wannen aufgefangen und in Übereinstimmung mit den einschlägigen geltenden Bestimmungen entsorgt werden.

Dans le cas de produits nocifs, toxiques, les effluents de la phase de nettoyage doivent être convoyés dans une cuve appropriée et éliminés conformément à la norme en vigueur en la matière.

Nel caso di prodotti nocivi, tossici, i reflui della fase di pulizia dovranno essere convogliati in idonea vasca e smaltiti in accordo alle normative vigenti in materia.

OPERATION NOISE

The noise level values, expressed in dB(A) are obtained from readings made in an open field, at maximum performance, on 4 cardinal points at a distance of 1.5 metres from the equipment.

The values obtained are:

max. 75 dB(A)

The user may obtain values different from those indicated depending on the environment in which the equipment is installed.
It is therefore advisable to avoid installing the equipment near corners, walls and boxed metal structures.

The noise values refer to the machine complete with accessories, if any.

BETRIEBSGERÄUSCHE

Die Werte des Lärmpegels, ausgedrückt in dB(A), resultieren aus Freifeldmessungen bei maximaler Leistungsstufe, in den 4 Himmelsrichtungen, in 1,5 Meter Abstand von der Vorrichtung.

Meßwerte:

max. 75 dB(A)

Der Betreiber kann je nach der-Positionierung der Vorrichtung im Raum auf andere Werte treffen.
Daher die Vorrichtung nicht in Ecken, nahe an Wänden oder Metallstrukturen aufstellen.

Der Wert des Lärmpegels bezieht sich auf die Maschine mit eventuellen angebauten Zubehörteilen.

NIVEAU SONORE

Les valeurs du niveau sonore, exprimées en dB(A) sont obtenues à travers des lectures en champ libre, au rendement maximum, sur les 4 points cardinaux à 1,5 mètres de la machine.

Valeurs mesurées:

max. 75 dB(A)

L' utilisateur pourrait relever des valeurs différentes de celles indiquées en fonction de l' emplacement de la machine.
Il est préférable d' éviter de placer la machine à proximité des angles, murs, structures métalliques en caisson.

La valeur de bruit se réfère à la machine complète avec tout accessoire éventuel.

RUMOROSITÀ

I valori di rumorosità, espressi in dB (A) sono ottenuti attraverso letture eseguite in campo libero, al massimo rendimento, sui 4 punti cardinali a 1,5 metri dalla macchina.

I **valori rilevati sono:**

dB(A) max. 75

L' utilizzatore potrebbe rilevare valori diversi da quelli indicati in funzione della collocazione ambientale.
Pertanto è preferibile evitare di collocare la macchina in prossimità di angoli, pareti, strutture metalliche cassonate.

Il valore di rumorosità si riferisce alla macchina completa di eventuali accessori.

During operations and/or maintenance, the operators ARE NOT exposed to any residual risks.

In any case, it shall be the installer's responsibility to provide further indications and/or warning notices which may be necessary depending on the machine installation site and the material handled.

When servicing, inspecting or cleaning, the operator, after setting the machine to safety conditions, must use some of the individual protection devices indicated on the additional special plates to be affixed to the various machine sections.

Given below are examples of some warning notices which may be necessary, depending on the type of powder handled.

Während des Betriebs und der Wartung ist das Personal KEINEN Restgefahren ausgesetzt.

Es ist daher auf jeden Fall Aufgabe des Monteurs, weitere Angaben und /oder Schilder anzubringen, die in bezug auf den Einbauort und das behandelte Schüttgut erforderlich werden könnten.

Während der Wartungsarbeiten, der Inspektion und Reinigung und, nachdem man die Maschine in den sicheren Zustand gebracht hat, ist es auf jeden Fall erforderlich, dass das Bedienungspersonal einige persönliche Schutzausrüstungen benutzt, so wie durch Warnschilder, die in den einzelnen Bereichen des Geräts hinzuzufügen sind.

Untenstehend folgen Beispiele einiger Schilder, die je nach Art der verarbeiteten Pulver erforderlich sein könnten.

Pendant le travail et/ou l'entretien, les opérateurs ne sont PAS exposés à certains risques résiduels.

Dans tous le cas, l'installateur devra se charger d'apposer les indications ou les panneaux de signalisation qui peuvent s'avérer nécessaires en fonction du lieu d'installation de la machine et de la matière traitée.

Pendant les activités de maintenance, inspection et nettoyage et après avoir mis la machine en sécurité il est obligatoire que l'opérateur utilise des équipements de protection individuelle comme indiqué sur les plaques signalétiques à ajouter dans les différentes sections de la machine.

Voir ci-après, à titre d'exemple, quelques plaques qui pourraient se rendre nécessaires en fonction du type de poudre traitée.

Durante la lavorazione e/o la manutenzione, gli operatori NON sono esposti ad alcuni rischi residui.

In ogni caso sarà cura dell'installatore apporre ulteriori indicazioni e/o cartellonistiche che si potrebbero rendere necessarie in funzione del luogo di installazione della macchina e del materiale trattato.

Durante le attività di manutenzione, ispezione, pulizia, dopo aver messo in sicurezza la macchina, è obbligatorio che l'operatore utilizzi alcuni dispositivi di protezione individuale come indicato da apposite targhe monitorie da aggiungere nelle singole sezioni della macchina.

Di seguito si riportano a titolo esemplificativo alcune targhe che potrebbero rendersi necessarie in funzione del tipo di polvere.

Before carrying out any operation, set the machine in safety status and use suitable personal protection devices.

Vor Arbeiten jeglicher Aret an dem Gerät muss dieses in einen sicheren Zustand versetzt werden und geeignete PSA angelegt werden.

Avant toute intervention mettre la machine en condition de sécurité et utiliser les EPI appropriés.

Prima di qualsiasi intervento mettere in sicurezza la macchina e far uso degli idonei DPI.

SCRAPPING

For scrapping the machine at the end of its life, make sure the plastic parts (seals and components) are collected separately and sent to special centres for disposal.

The other parts meant for recycling must be sent to iron scrap yards.

When dismantling the machine make sure the lifting procedures indicated in the HANDLING section (page M.14) are followed.

For disposal of materials contained in the machine, refer to the existing legislation concerning disposal and the product safety chart.

VERSCHROTTUNG

Bei Verschrottung des Gerätes sind die Teile aus Kunststoff (Dichtungen und Komponenten) auszubauen und vorschriftsmäßig zu entsorgen.

Die restlichen Teile sind beim Scrotthändler abzugeben.

Während des Zerlegens des Gerätes die Anleitungen zum Anheben beachten, die im Teil HANDLING DES GERÄTES auf Seite M.14 nachzulesen sind.

Für die Entsorgung des im Gerät vorhandenen Produkts ist Bezug auf die geltenden Bestimmungen zur Materialentsorgung und die Sicherheitsdatenblätter der Produkte zu nehmen.

DEMANTELEMENT

En cas de démantèlement de la machine, démonter les parties en matières plastique (joints et composants) et les mettre à la décharge dans les déchetteries spécialisées.

Les parties restantes sont destinées à la récupération des matériaux ferreux.

Pendant les phases de démantèlement de la machine respecter les procédures de levage comme indiqué dans la section MANUTENTION (page M.14)

Pour l'élimination de la matière contenue dans la machine, se conformer aux normes en vigueur en matière d'élimination et à la fiche de sécurité du produit.

ROTTAMAZIONE

In caso di rottamazione a fine vita della macchina, aver cura di smontare le parti in materiale plastico (guarnizioni e componenti) e destinarle agli appositi centri di raccolta.

Le restanti parti sono da destinare al recupero dei materiali ferrosi.

Durante le fasi di smantellamento della macchina osservare le procedure di sollevamento come indicato nella sezione MOVIMENTAZIONE (pag. M.14)

Per lo smaltimento del materiale contenuto nella macchina, fare riferimento all norme vigenti in materia di smaltimento ed alla scheda di sicurezza del prodotto.

RETURNING THE MACHINE

To return the machine, fasten to a pallet and cover it with.heat-shrink nylon to protect it from knocks during transport

In any event, make sure the machine does not contain any material residue.

MASCHINENRÜCKGABE

Bei der etwaigen Rückgabe des Geräts ist dieses auf einer Palette zu befestigen und mit Schrumpffolie zu schützen. Auf jeden Fall versuchen, es so weit wie möglich vor etwaigen Stößen beim Transport zu schützen.

Sicherstellen, daß sich keine Materialrückstände im Gerät befinden.

RESTITUTION MACHINE

En cas de restitution de la machine, la fixer sur une palette et la protéger au moyen de Nylon thermorétractable, en essayant de la protéger au mieux contre les chocs éventuels du transport.

Vérifier dans tous les cas qu'il n'y a pas de résidus de matériel dans la machine.

RESO MACCHINA

In caso di reso della macchina fissarla su di un pallet e proteggerla con del nylon termoretraibile , cercando di proteggerla al meglio da eventuali urti derivanti dal trasporto.

In ogni caso assicurarsi che la macchina non abbia residui di materiale.

Minor problems may often be solved without calling a technician.
The most common faults with relevant solutions are given in the Table below.

Kleinere Probleme können oft ohne die Einschaltung eines Fachmanns behoben werden. Hier folgt eine Aufstellung der häufigsten Probleme und deren Abhilfe.

Les problèmes mineurs peuvent être résolus sans consulter un spécialiste. Vous trouverez ci-dessous une liste des inconvénients les plus communs avec les solutions éventuelles.

I problemi minori possono essere risolti senza consultare uno specialista.
Diamo di seguito un elenco degli inconvenienti più comuni con le eventuali soluzioni.

N.	Problem	Cause	Solution
1	Vibrator does not work.	Connection not made.	Check fuses.
		Incorrect voltage.	Correct voltage.
		Vibrator.	Replace faulty parts.
2	Product does not flow down.	Insufficient vibration.	Adjust vibrator size value.
		Outlet is obstructed.	Check extraction system below outlet.
		Valve closed..	Open.
		Vibrator burnt out.	Check; replace the vibrator if necessary.
3	Product under the hopper..	Hatchway seal damaged.t.	Locate cause, then replace if necessary.
		Welded joints are cracked.	Repair welds immediately.
4	Hopper vibrates irregularly.s.	Damper(s) damaged.	Locate, then replace.

N.	Problem	Ursache	Abhilfe
1	Vibrationsmotor funktioniert nicht.	Kein Anschluß..	Sicherungen prüfen..
		Falsche Spannung.	Spannung anpassen.
		Vibrationsmotor defekt.	Defektes Teil ersetzen.
2	Produkt wird nicht gefördert.	Schlechte Vibration.	Unwuchtmassen im Motor ersetzen.
		Verstopfung des Auslaufs.	Austragesystem stromab vom Trichter prüfen.
		Klappe oder Schieber geschlossen.	Klappe oder Schieber öffnen.
		Vibrationsmotor durchgebrannt.	Ursache suchen und Vibrationsmotor ersetzen.
3	Unter Trichter tritt Produkt aus.	Dichtung der Klappe beschädigt.	Ursache suchen und dann ersetzen.
		Risse in der Schweißnaht.	Sofort reparieren.
4	Unregelmäßige Vibrationen des Trichters.	Bruch der Schwingungsdämpfer.	Ursache suchen und ersetzen.

N.	Problème	Cause	Remède
1	Le motovibrateur ne fonctionne pas	Absence de courant..	Contrôler les fusibles.
		Tension erronée.	Adapter la tension.
		Motovibrateur défectueux..	Changer le composant défectueux.
2	Le produit ne descend pas.	Vibration faible.	Régler les masses du motovibrateur.
		Obstruction de la bouche de sortie.	Contrôler le système d'extraction en aval du fond.
		Vanne fermée.	Ouvrir la vanne. .
		Motovibrateur brûlé.	Rechercher la cause puis remplacer le motovibrateur.e.
3	Présence de produit sous la trémie	Joint de trappe endommagé.	Rechercher la cause puis le remplacer.
		Présence de criques dans les soudurese	Réparer immédiatement.
4	Vibration décomposée de la trémie.	Rupture d'un anti-vibrant..	Rechercher la cause et le remplacer.

N.	Problema	Causa	Soluzione
1	Il motovibratore non funziona.	Manca il collegamento.	Controllare fusibili.
		Tensione errata.	Adeguare la tensione.
		Motovibratore difettoso.	Sostituire il componente difettoso.
2	Il prodotto non scende.	Vibrazione scarsa.	Regolare masse motovibratore.
		Ostruzione della bocca di scarico.	Controllare sistema di estrazione a valle del fondo
		Valvola o serranda chiusa.	Aprire la valvola o serranda.
		Motovibratore bruciato.	Indagare il motivo poi sostituire il motovibratore.
3	Presenza prodotto sotto la tramoggia.	Guarnizione boccaporto danneggiata.	Scoprire il motivo e poi sostituirla.
		Presenza di cricche nelle saldature	Riparare immediatamente.
4	Vibrazione scomposta della tramoggia.	Rottura di un antivibrante/i.	Scoprire il motivo e sostituirlo/i.

CATALOGUE No. **EXT.096.--.R.4L**			
ISSUE **A3**	CIRCULATION **100**	LATEST UPDATE **04.15**	

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*

PROCEDURE FOR PARTS REPLACEMENT	AUSTAUSCH VON ERSATZ-TEILEN	PROCÉDURES POUR LE REMPLACEMENT DES PIÈCES DETACHEES	PROCEDURA PER LA SOSTITUZIONE DELLE PARTI DI RI-CAMBIO
ITEM 6 **REPLACING SEAL** - Disconnect power supply to the panel and terminal board. - Unscrew the screws blocking the seal to the underlying hopper. - Remove the seal and replace it. - Restore the power supply connections.	**POS. 6** **AUSTAUSCH DER DICHTUNG** - Den elektrischen Anschluß am Schaltkasten und der Klemmenleiste abtrennen. - Die Schrauben lösen, welche die Dichtung am unteren Trichter befestigen. - Die Dichtung entfernen und ersetzen. - Die elektrischen Anschlüsse wieder herstellen.	**POS. 6** **REMPLACEMENT DU JOINT** - Débrancher le raccordement électrique au tableau et au bornier. - Dévisser les vis de serrage qui bloquent le joint à la trémie inférieure. - Enlever et changer le joint. - Rétablir les raccordements électriques.	**POS. 6** **SOSTITUZIONE GUARNIZIONE** - Disconnettere l' allacciamento elettrico al quadro e alla morsettiera. - Svitare le viti di serraggio che bloccano la guarnizione alla tramoggia inferiore. - Rimuovere e sostituire la guarnizione. - Ripristinare i collegamenti elettrici.
ITEM 3 **REPLACING DAMPERS** - Disconnect power supply to the motor and panel. - Harness the hopper and support it using suitable lifting equipment that will keep it balanced. - Unscrew the four fixing screws which fix the dampers to the supporting frame. - Remove the dampers and replace them. - Repeat the operations in reverse order. - Restore the electrical connections.	**POS. 3** **ERSETZEN DER SCHWINGUNGSDÄMPFER** - Den elektrischen Anschluß am Motor und am Schaltkasten unterbrechen. - Den Trichter anschlagen und mit einem geeigneten Hebezeug im Gleichgewicht halten. - Die vier Schrauben lösen, mit denen die Schwingungsdämpfer an den Gestellträgern befestigt sind. - Die Schwingungsdämpfer entfernen und ersetzen. - Zusammenbau in umgekehrter Reihenfolge vornehmen. - Die elektrischen Anschlüsse wieder herstellen.	**POS. 3** **REMPLACEMENT DES SILENTBLOCS** - Débrancher le raccordement électrique au moteur et au tableau. - Elinguer la trémie et la soutenir avec un moyen de levage approprié pour la maintenir en équilibre. - Dévisser les quatre vis de serrage qui bloquent les silentblocs aux supports du châssis. - Enlever et changer les silentblocs. - Exécuter les opérations dans l'ordre inverse. - Rétablir les raccordements électriques.	**POS. 3** **SOSTITUZIONE ANTIVIBRANTI** - Disconnettere l' allacciamento elettrico al motore e al quadro. - Imbragare la tramoggia e sostenerla con mezzo di sollevamento idoneo in modo da tenerla in equilibrio. - Svitare le quattro viti di serraggio che bloccano gli antivibranti ai sostegni del telaio. - Rimuovere e sostituire gli antivibranti. - Eseguire le operazioni in senso inverso. - Ripristinare i collegamenti elettrici.
ITEM 4 **REPLACING FILTER BAG** - Slacken the locking clamp - Remove the filter bag and replace it. - Refit the clamp.	**POS. 4** **AUSTAUSCH DES FILTERSCHLAUCHS** - Die Befestigungsschelle lösen. - Den Filterschlauch entfernen und ersetzen. - Die Befestigungsschelle wieder anschrauben.	**POS. 4** **REMPLACEMENT DU MANCHON FILTRANT** - Dévisser le collier de blocage. - Enlever et remplacer le manchon filtrant. - Revisser le collier.	**POS. 4** **SOSTITUZIONE MANICA FILTRANTE** - Svitare la fascetta di bloccag-gio. - Rimuovere e sostituire la manica filtrante. - Riavvitare la fascetta.
ITEM 5 **REPLACING VIBRATOR** - Disconnect power supply to the terminal board and panel - Remove the fixing bolts. - Remove the vibrator safety cable. - Install the new vibrator. - Refit the safety cable. - Restore the electrical connections.	**POS. 5** **AUSTAUSCH DES SCHWINGUNGSDÄMPFERS** - Den elektrischen Anschluß an der Klemmenleiste und dem Schaltkasten unterbrechen. - Die Befestigungsschrauben entfernen. - Das Sicherheitskabel des Schwingungsdämpfers entfernen. - Den neuen Schwingungsdämpfer einbauen. - Das Sicherheitskabel wieder befestigen. - Elektrische Anschlüsse vornehmen.	**POS. 5** **REMPLACEMENT DU VIBRATEUR** - Débrancher le raccordement électrique du bornier et du tableau. - Enlever les boulons de fixation. - Enlever le câble de sécurité du vibrateur. - Installer le nouveau vibrateur. - Remettre le câble de sécurité. - Rétablir les raccordements électriques.	**POS. 5** **SOSTITUZIONE VIBRATORE** - Disconnettere l' allacciamento elettrico alla morsettiera e al quadro - Togliere i bulloni di fissaggio. - Togliere il cavo di sicurezza del vibratore. - Installare il nuovo vibratore. - Reinserire il cavo di sicurezza. - Ripristinare i collegamenti elettrici.

Manual No. VAL.VL.--.M.A11.0318.4L Issue: A11
Latest Update: March 2018

ORIGINAL INSTRUCTIONS IN ENGLISH

ADDRESS OF LOCAL DEALER OR SERVICE POINT	ANSCHRIFT DES LOKALEN HÄNDLERS ODER KUNDEN-DIENSTES	ADRESSE DU REVENDEUR OU DU SERVICE APRES-ENTE LOCAL	INDIRIZZO RIVENDITORE O PUNTO DI ASSISTENZA LOCALE

IDENTIFICATION
Refer to order code in acknowledgement of order, in invoice and on packaging to identify equipment.

CONTRA - INDICATIONS
None if all safety instructions are followed.

REMARKS REGARDING VALVES FOR FOODSTUFF:
Wash valve regularly with water.
Clean valve disc and seal with particular care.
Check first with supplier before using any cleaning product.
Check first with supplier when handling acid containing products or particularly hot or cold materials.
VL-type Slide Valves must only be closed with bulk material column in motion.
Valves are dust-tight.

The valve must not be put into service before the machine or plant it has been fitted to has been declared in conformity with the regulations of the Machinery Directive 2006/42/EC.
It is the plant designer's / plant fitter's responsibility to design and install all necessary protection in order to avoid that breaking and/or yielding of the quipment or of parts of it might damage people and/or parts of the plant (e.g. adequate protection against falling down of the motor etc.).
For dangerous materials, i.e. those that must not get in contact with the human body or be inhaled, for flammable, explosive and bacteriologically dangerous materials the plant manufacturer or fitter must provide for the required safety devices and measures.

IDENTIFIKATION
Zur korrekten Identifikation auf den Bestellcode in der Auftragsbestätigung, in der Rechnung und auf der Verpackung Bezug nehmen.

KONTRAINDIKATIONEN
Keine, sofern alle allgemeinen Sicherheitsvorschriften befolgt werden.

BEMERKUNGEN ZU SCHIEBERN FÜR NAHRUNGSMITTEL:
In regelmäßigen Abständen mit Wasser abwaschen.
Schieberblech und Dichtung sind besonders sorgfältig zu reinigen.
Reinigungsmittel nur in Absprache mit dem Hersteller verwenden.
Bei säurehaltigen sowie bei besonders heißen oder kalten Medien vor dem Einsatz Rücksprache mit dem Hersteller halten.
Flachschieber vom Typ VL dürfen nur bei in Bewegung befindlicher Materialsäule geschlossen werden.
Schieber sind staubdicht.
Der Schieber darf nicht in Betrieb genommen werden, bevor die Anlage oder Maschine, in die er eingebaut wurde mit den Vorschriften der Maschinenrichtlinie 2006/42/EG als konform erklärt wurden.
Es liegt in der Verantwortung des Anlagenplaners bzw. –aufstellers, alle notwendigen Schutzvorrichtungen vorzusehen, welche es verhindern, dass durch einen Geräte- oder Teiledefekt Personen- und/oder Sachschäden verursacht werden (z.B. geeigneter Schutz gegen das Herunterfallen des Motors etc.).
Für Gefahrenprodukte, bzw. solche, die nicht mit dem menschlichen Körper in Kontakt geraten oder eingeatmet werden dürfen, für leicht entzündbare, explosive sowie bakteriologisch gefährliche Medien muß der Anlagenbauer bzw. –errichter die für die Sicherheit erforderlichen Vorrichtungen vorsehen und Maßnahmen treffen.

PLAQUE D'IDENTIFICATION
Pour identifier correctement la machine, vous devez vous référer au code qui se trouve sur la confirmation de commande, sur la facture et sur la plaque qui se trouve sur l'emballage.

CONTRE - INDICATIONS POUR L'UTILISATION DE LA VANNE
Il n'existe aucune contreindication pour l'utilisation de la vanne si vous prenez les précautions normales pour les machines de ce genre.

INSTRUCTIONS POUR LES VANNES DESTINEES AUX PRODUITS ALIMENTAIRES:
Nettoyez régulièrement les vannes avec de l'eau.
Nettoyez tout particulièrement le disque de la vanne et le joint.
Avant d'employer d'autres produits pour le nettoyage, consultez votre fournisseur. Si le produit qui entre en contact avec la vanne est acide ou bien si sa température est trop élevée ou trop basse, adressez-vous directement à notre service aprés-vente.
Les vannes à guillotine de type VL doivent être fermées seulement avec la colonne de matériau en mouvement.
Nos vannes sont étanches à la poussière.
Il est interdit de mettre en fonction la vanne avant que l'installation dans laquelle elle doit etre installée soit déclarée conforme aux dispositions de la Directive Machines 2006/42/CE.
Dans ce cadre il est la responsabilité du constructeur de l'installation ou de l'installateur de projeter et d'installer tout équipement de protection nécessaire afin d'éviter que des ruptures et/ou des tassements de la machine et/ou des parties d'elle puissent causer de dégâts à des personnes et/ou des choses (par ex.: des protections appropriées contre la chute du moteur etc.).
Pour des produits dangereux, nuisibles au contact et/ou à l'inhalation, inflammables, explosifs et dangereux du point de vue bactériologique et/ou viral, le constructeur de l'installation ou l'installateur devront prévoir des dispositifs appropriés au besoin.

INTERPRETAZIONE DELLA TARGHETTA
Per una corretta identificazione della macchina, bisogna fare riferimento al codice che si trova sulla conferma d'ordine, sulla fattura e sulla targhetta posta sull'imballo.

CONTROINDICAZIONI ALL'USO
Non vi é nessuna controindicazione all'uso, se vengono osservate le normali precauzioni per macchine di questo tipo.

NOTE PER VALVOLE PER PRODOTTI ALIMENTARI:
Pulire periodicamente le valvole con acqua.
Pulire lama e rivestimento con particolare cura.
Prima di usare altri prodotti di pulizia consultare il fornitore.
Nel caso in cui il prodotto a contatto con la valvola sia acido o a temperatura troppo elevata o troppo bassa, rivolgersi direttamente al ns. Uff. Tecnico Comm.le.
Le valvole a ghigliottina tipo VL devono essere chiuse soltanto con colonna di prodotto in movimento.
Ricordiamo che le nostre valvole sono a tenuta polvere.
E' vietato mettere le valvole in funzione prima che la macchina/impianto nel quale devono essere installate sia dichiarato conforme alle disposizioni della Direttiva Macchine 2006/42/CE.
In quest'ambito è cura dell'impiantista / installatore predisporre ed installare tutti gli accorgimenti / protezioni al fine di evitare danni a cose o persone in caso di rotture e conseguente caduta di pezzi della macchina (ad es: rottura del motore).
Per prodotti pericolosi, nocivi al contatto e/o all'inalazione, infiammabili, esplosivi e pericolosi dal punto di vista batteriologico e/o virale, l'impiantista e/o l'installatore, dovranno prevedere idonei dispositivi all'uopo.

TRANSPORT AND RECEIPT OF GOODS

On arrival, prior to unloading, check goods are in compliance with delivery note, invoice and acknowledgement of order.
If any parts are damaged through transport immediately state your claims in writing in the consignment note (waybill). The driver is obliged to accept the claim and to leave you a copy. Send off your claim without hesitation to the supplier if you received the goods free destination. In all other cases send claim to shipping agent. If you fail to state your claims on arrival of the goods it may not be accepted.
Avoid any kind of damage to goods during unloading and handling.
Always handle goods with care.

TRANSPORT UND WARENEMPFANG

Bei Wareneingang vor dem Abladen prüfen, ob die Ware in Beschaffenheit und Menge mit den Angaben auf Lieferschein, Rechnung und Auftragsbestätigung übereinstimmt.
Eventuelle Schäden sofort schriftlich im Frachtbrief reklamieren, da spätere Ansprüche nicht mehr geltend gemacht werden können. Der Fahrer ist dazu verpflichtet, die Reklamation entgegenzunehmen und dem Empfänger eine Kopie dieser zu überlassen. Bei Lieferung frei Haus Reklamation an den Lieferanten schicken, in allen anderen Fällen an den Spediteur.
Beim Abladen Ware nicht beschädigen.
Berücksichtigen, daß es sich um mechanische Teile handelt, die mit Vorsicht zu behandeln sind.

TRANSPORT ET RECEPTION

Au moment où vous recevez la marchandise, vérifiez bien que le modèle et la quantité correspondent aux données indiquées sur le bulletin de livraison, sur la facture et sur la confirmation de commande.
Si vous constatez des dommages, vous devez immédiatement le faire savoir en l'écrivant dans l'emplacement prévu à cet effet sur la lettre de voiture. Le chauffeur a l'obligation d'accepter votre réclamation et de vous en laisser une copie. Si la fourniture a été livrée franco destination, envoyez-nous votre réclamation, sinon, envoyez-la directement au transporteur.
Si vous ne réclamez pas les dommages et intérêts immédiatement après avoir reçu la marchandise, votre réclamation risque de ne pas être acceptée.Veillez à ne pas endommager la marchandise durant le déchargement et la manutention.
Faites toujours extrêmement attention quand vous la déplacez.

TRASPORTO - RICEVIMENTO

Al ricevimento della merce controllare se la tipologia e la quantità corrispondono con i dati di bolla di consegna, fattura e conferma d'ordine.
Eventuali danni devono essere fatti presenti immediatamente per iscritto nell'apposito spazio della lettera di vettura. L'autista è obbligato ad accettare un tale reclamo e lasciarne una copia a Voi. Se la fornitura è franco destino, inviate il Vs. reclamo a noi, altrimenti direttamente allo spedizioniere.
Se non richiederete i danni immediatamente all'arrivo della merce, la vostra richiesta potrebbe non essere accolta.
Evitate ogni tipo di danneggiamento durante lo scarico e le movimentazioni.
Movimentate sempre la merce con cura.

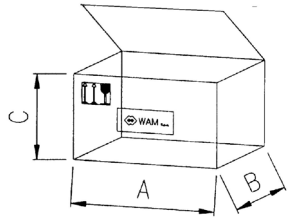
PACKAGING DATA

N.B.: The above weights do not include any additional packaging such as pallets or similar.

KOLLIMASSE UND GEWICHTE

N.B.: Die o.a. Gewichte beinhalten keine zusätzlichen Verpakkungen wie Paletten o.ä.

EMBALLAGES ET POIDS



N.B.: Les données ci-dessous ne comprennent pas le poids d'un éventuel emballage supplémentaire (palette ou autre).

IMBALLI - PESI

N.B.: I dati sopra riportati non comprendono il peso di un eventuale imballo cumulativo (pallet o altro).

INSTALLATION
The valves have been pre-assembled and tested at the factory.

PREPARATION
Remove packaging.
Mount actuator (hand wheel, manual chain actuator, electropneumatic, gear motor or others). WAM® supplies some of the above-mentioned actuators which have to be bolted on by the customer.

ELECTRICAL AND PNEUMATIC CONNECTIONS
Electrical and pneumatic connections must be carried out by qualified personnel ONLY.

DISCONNECT MAINS SUPPLY!
Check voltage corresponds with motor plate data.
Follow general safety instructions.

SAFETY NOTICE
Never introduce hands in the area between valve body and disc when valve is working.
Provide for a saftey grille or a hopper above the machine in order to avoid harm to extremities.
To avoid harm also at the outlet side, provide a vertical outlet spout or an equivalent system.

START - UP
Especially with materials which tend to harden or become sticky through longer periods of storage ensure no material is deposited on the shaft passages. In such a case clean the area thoroughly.
Start valve operation without material. If valve works correctly add material and proceed with regular operation.

EINBAU
Die Schieber sind werksseitig komplett vormontiert und getestet.

VORBEREITUNG
Verpackung entfernen.
Antrieb (Handrad, manuell über Kette, elektropneumatisch, elektromotorisch, o.a.) montieren. WAM® liefert einige der vorgenannten Antriebe, deren Anbau mittels Schraubverbindungen erfolgt.

ELEKTRISCHER UND PNEUMATISCHER ANSCHLUSS
Elektrische und pneumatische Anschlüsse dürfen NUR von Fachpersonal vorgenommen werden.

STROMZUFUHR ABSCHALTEN !
Kontrollieren, ob Netzspannung mit den Typenschildangaben übereinstimmt. Allgemeine Sicherheitsvorschriften beachten.

SICHERHEITSHINWEIS
Niemals im Betriebszustand mit den Händen in den Bereich zwischen Klappenkörper und -Teller greifen!
Über dem Gerät ein fest montiertes Schutzgitter oder einen Trichter vorsehen, der so hoch ist, daß die Verletzung von Körperextremitäten ausgeschlossen ist.
Ebenfalls zur Ausschließung der Verletzungsgefahr am Auslauf einen vertikalen Aufsteckstutzen oder ein gleichwertiges System vorsehen.

INBETRIEBNAHME
Besonders bei Medien, die durch längere Lagerung zum Aushärten neigen oder klebrig werden, sicherstellen, daß sich zwischen Gehäuse und Schieberblech kein Material abgelagert hat. Ist dies doch der Fall, den Bereich gründlich säubern.
Schieber zunächst ohne Materialzugabe in Betrieb nehmen. Wenn Schieber problemfrei funktioniert, Material zugeben und normalen Betrieb aufnehmen.

INSTALLATION
Nous fournissons nos vannes déjà complètes et testées.

PREPARATION
Enlevez la vanne de son emballage.
Montez sur la vanne l'actionneur prévu (manuel à volant, manuel à distance avec poulie à chaîne, pneumatique, électrique, etc.).
La société WAM® construit quelques-unes des actionneurs énumérés ci-dessus et les fournit séparément: ils doivent donc être boulonnées par le client.

BRANCHEMENTS ELECTRIQUES ET PNEUMATIQUES
Les branchements électriques et pneumatiques doivent être exécutés UNIQUEMENT par du personnel spécialisé.

AVANT D'EFFECTUER N'IMPORTE QUELLE OPERATION, DEBRANCHEZ LA MACHINE DU COURANT ELECTRIQUE!
Avant de brancher votre machine, assurez-vous que le voltage du réseau correspond bien à celui indiqué sur la plaque du moteur.
Respectez toujours les consignes générales de sécurité.

PRECAUTIONS GENERALES
Ne mettez jamais vos mains entre la partie en mouvement et le corps de la vanne quand celle-ci est en marche!
Monter au-dessus de la machine une grille de sécurité fixe ou une trémie d'une hauteur suffisante pour empêcher des dommages les membres d'une personne.
Pour la même raison il est nécessaire d'utiliser à la décharge un raccordement vertical ou un système équivalent.

MISE EN MARCHE
Vérifiez qu'il ne reste pas de substances étrangères entre la partie mobile et le corps de la vanne, surtout s'il s'agit de substances dures ou collantes; s'il y en a, nettoyez soigneusement.
Quand vous mettez la machine en marche pour la première fois, vous devez le faire sans produit; si tout marche régulièrement, mettez du produit et procédez normalement.

INSTALLAZIONE:
Le valvole vengono fornite già complete e collaudate prima della consegna.

PREPARAZIONE
Togliere le valvole dall'imballo
Montare sulla valvola il comando previsto (volantino, manuale a distanza con puleggia a catena, pneumatico, elettrico, ecc.).
La ditta WAM® costruisce e fornisce separatamente alcuni dei tipi sopraelencati: vanno imbullonati dal cliente.

COLLEGAMENTI ELETTRICI E PNEUMATICI
I collegamenti elettrici e pneumatici devono essere eseguiti SOLTANTO da personale specializzato.

PRIMA DI QUALSIASI OPERAZIONE STACCARE L'ALIMENTAZIONE DI CORRENTE!
Prima del collegamento assicurarsi che il voltaggio di rete coincida con quello indicato sulla targhetta del motore.
Seguire sempre le norme generali di sicurezza.

PRECAUZIONI GENERALI
Mai mettere le mani tra la parte in movimento e il corpo valvola mentre la valvola è in funzione!
In ogni caso é necessario che sopra la macchina venga montata una griglia di sicurezza fissa o una tramoggia che sia di altezza sufficiente ad impedire che gli arti di una persona vengano danneggiati.
Lo stesso discorso vale per lo scarico: é necessario usare lo scarico verticale o un sistema equivalente.

AVVIAMENTO
Verificare che sostanze estranee non si siano fermate tra lama e corpo valvola, soprattutto se sono dure o collanti; se così fosse pulire accuratamente.
La prima prova di avviamento deve essere fatta senza prodotto; se tutto funziona regolarmente, alimentare con il materiale e procedere normalmente.

OPERATION

Depending on the type of plant, the valve can be operated either manually, electropneumatically or by a gear motor. In the two latter versions the valve is controlled by a remote control panel or by a local starter.
The weight of the material column must not exceed the resistance of the mobile valve parts. Materials with bulk density < 1.3 t/m³ normally do not create any problem. When dealing with materials with higher bulk density check with customer service.

N.B.: Regular cleaning increases the life of the valve. This applies in particular to applications where materials are handled which either tend to harden or become sticky when stored for a longer period.

BETRIEB

Je nach Anlagentyp wird der Schieber entweder von Hand, elektropneumatisch oder elektromotorisch betrieben. In den letzten beiden Versionen wird der Schieber entweder über eine zentrale Steuerung oder über einen Vor-Ort-Schaltkasten in Betrieb genommen.
Das Gewicht der Materialsäule darf nicht größer sein als der Widerstand der beweglichen Schieberteile. Medien mit einem Schüttgewicht <1.3 t/m³ stellen in der Regel kein Problem dar. Bei Medien mit höherem Schüttgewicht Rücksprache mit dem Kundendienst halten.

N.B.: Regelmäßiges Säubern erhöht die Lebensdauer des Schiebers. Dies gilt insbesondere für Medien, die bei längerer Lagerung aushärten oder klebrig werden

FONCTIONNEMENT

Suivant le type d'installation, la vanne peut fonctionner manuellement, pneumatiquement ou électriquement; dans les deux derniers cas, l'actionneur peut se trouver sur un tableau central ou sur place.
Il est très important de savoir le poids du produit qui pèse sur la partie mobile de la vanne; il ne doit jamais dépasser la résistance maximum de cette dernière.
Pour les silos et les trémies de série avec des produits dont le poids spécifique est inférieur à 1.3 t/m³, il n'y a pas de problèmes; dans les autres cas, consultez notre bureau de vente

N.B.: Pour augmenter de beaucoup la durée de la vanne, nettoyez-la régulièrement. Ce nettoyage est particulièrement important si le produit traité a la tendance à se durcir ou à se tasser quand il reste quelque temps immobile.

FUNZIONAMENTO

In base al tipo di impianto, il funzionamento di una valvola è manuale, pneumatico o elettrico: in questi due ultimi casi il comando può essere o in un quadro centrale o in loco.
E' molto importante conoscere il peso del prodotto che grava sulla parte mobile della valvola: esso non deve mai superare la sua massima resistenza.
Con sili e tramogge standard con prodotti di peso specifico inferiore a 1.3 non vi sono problemi; in caso contrario consultare il ns. Uff. Tecnico Commerciale.

N.B.: Si aumenta notevolmente la durata della valvola pulendola periodicamente. Questo è particolarmente importante quando il prodotto trattato tende ad indurirsi o a compattarsi se rimane fermo per un certo periodo di tempo.

ASSEMBLY - DISMANTLING

MONTAGE - DEMONTAGE

MONTAGE - DEMONTAGE

MONTAGGIO - SMONTAGGIO

ASSEMBLY

Put the valve in position and bolt it on carefully using nuts and bolts.
Securely bolt the valve into position, as established.
(Make sure that the valve works perfectly in axis.)
Check valve is properly mounted, with the upper part in the correct position.
Connect the pneumatic parts to the air supply and the electrical parts to the power mains.
Ensure the valve is mounted the right way round.
Carry out pneumatic und electrical connections in the correct manner.
IMPORTANT: For accident prevention it is <u>essential</u> to keep the valve <u>out of reach</u> of personnel during operation. With this aim in mind the customer has to provide suitable safety devices such as grilles, as well as protective inlet and outlet joints (either robust flexible socks or rigid pipe unions).
When using movable safety devices provide protection limit switches which stop the valve instantaneously if the protection is opened or removed. Restarting of the valve operation must only be possible when the protection is effective again.

MONTAGE

Klappe in Einbaulage bringen und mittels Schrauben und Muttern gründlich befestigen.
Sicherstellen, dass der Schieber perfekt in Achse arbeitet.
Sicherstellen, daß der Schieber richtig herum eingebaut ist.
Pneumatische und elektrische Anschlüsse vorschriftsmäßig vornehmen.
WICHTIG:Zur Unfallverhütung <u>unbedingt darauf achten</u>, daß das Betriebspersonal den Schieber im Betriebszustand <u>nicht mit den Händen erreichen kann</u>. Zu diesem Zweck müssen kundenseitig geeignete Schutzvorrichtungen wie z.B. Gitter sowie zu- und abflußseitig geschützte Verbindungen (z.B. robuste, flexible Schlauch-oder starre Rohrverbindungen) vorgesehen werden.
Bei Verwendung von beweglichen
Schutzvorrichtungen sind Schutz-Endschalter vorzusehen, die beim Öffnen oder Entfernen der Schutzvorrichtung des Schiebers augenblicklich außer Betrieb setzen und die neuerliche Inbetriebnahme erst dann ermöglichen, wenn die Schutzvorrichtung wieder wirksam ist.

MONTAGE

Assujettissez la vanne à l'endroit prévu en la boulonnant solidement.
Fixez la vanne à l'endroit prévu en la boulonnant solidement.
(Assurez-vous que la vanne fonctionne parfaitement en axe).
Vérifiez si elle est montée correctement avec sa partie supérieure dans la bonne position.
Branchez les parties pneumatiques à la ligne d'air et les parties électriques au réseau électrique.
IMPORTANT: Pour respecter les dispositions en vigueur en matière de prévention des accidents, <u>il faut absolument empêcher</u> qu'une main d'homme puisse atteindre l'intérieur de la vanne pendant que celle-ci est en marche.
Pour ce faire, la personne qui installe la machine doit prévoir des obstacles tels que des grilles, des filets de protection, etc. et/ou des entretoises, aussi bien pour la partie supérieure que pour la partie inférieure (manchons, etc.) qui en empêchent l'accès.
Si ces "protections" sont mobiles, vous devez équiper l'appareil d'un dispositif qui provoque immédiatement l'arrêt de la vanne quand cette protection est retirée ou ouverte. En outre, ce même dispositif ne doit pas permettre que la machine démarre si la protection n'est pas placée dans la bonne position.

MONTAGGIO

Fissare la valvola, dove è previsto, imbullonandola saldamente.
(Accertarsi che la valvola lavori perfettamente in asse).
Controllare che sia montata correttamente con la parte superiore nella giusta posizione.
Collegare le parti pneumatiche alla linea aria e le parti elettriche alla rete.
IMPORTANTE: Per rispettare le vigenti disposizioni in materia di prevenzione <u>è assolutamente da evitare</u> la possibilità che l'interno della valvola in funzione sia raggiungibile da mano d'uomo. Per ottenere ciò, l'installatore deve prevedere ostacoli (griglie, reti di protezione, ecc.) e/o distanziali sia per la parte superiore che per la parte inferiore (calzoni, ecc.) che non permettano l'accesso.
Se queste "protezioni" sono mobili, è obbligatorio dotare l'apparecchiatura di un dispositivo che provochi l'immediato arresto della valvola all'atto della rimozione o apertura della protezione. Tale dispositivo inoltre non deve consentire l'avviamento della macchina se la protezione non è collocata nella posizione corretta.

DISMANTLING
Prior to dismantling ensure mains supply is disconnected.

MAINTENANCE
Failure to follow the maintenance instructions could cause problems and might invalidate the warranty.
Once a week, check material flows freely and no material deposits spoil the function of the valve. If necessary clean contact parts thoroughly.

PRIOR TO EVERY MAINTENANCE JOB, DISCONNECT VALVE FROM MAINS SUPPLY!

The bearings must be cleaned on a routine basis to prevent incrustations from forming which might impede the bearings from rotating and, therefore, the blade from becoming worn.
Routinely empty the rear casing of the valve to prevent the accumulation of powder and allow for the ducts and the limit sswitch to function properly.

REPLACEMENT OF WEAR PARTS
No replacement required.

DEMONTAGE
Vor Demontage des Schiebers oder von Schieberteilen sicherstellen, daß die Stromzufuhr unterbrochen ist.

WARTUNG
Das Nichtbefolgen der Wartungsvorschriften kann zu Störungen führen und die Gewährleistung außer kraft setzen.
Einmal wöchentlich sicherstellen, daß das Material frei fließen kann und keine Ablagerungen die Schieberfunktion beeinträchtigen. Ggfls. den produktberührenden Bereich gründlich säubern.

VOR JEDER WARTUNGS-ARBEIT HAUPTSTROMZUFUHR UNTERBRECHEN!

Die Lager regelmäßig säubern, um Verkrustungen zu vermeiden, die ihre Drehfähigkeit behindern mit daraus resultierendem Verschleiß des Schieberbleches. Das hintere Gehäuseteil des Flachschiebers regelmäßig säubern, um die Ansammlung von Material zu vermeiden und das gute Funktionieren des Zu- und Auslaufes sowie der Endschalter zu gewährleisten.

AUSTAUSCH VON VERSCHLEISSTEILEN
Es ist kein Austausch von Verschleißteilen erforderlich.

DEMONTAGE
Avant de démonter une pièce quelconque de la vanne, assurez-vous que cette dernière est bien débranchée du réseau électrique.

ENTRETIEN
Si vous ne respectez pas exactement les consignes suivantes vous pouvez avoir de graves problèmes et invalider la garantie des machines fournies.
Toutes les semaines, vérifiez s'il n'y a pas de résidus dans la zone de passage du produit. S'il y en a, nettoyez soigneusement afin d'éviter tout engorgement.

AVANT D'ENTREPRENDRE N'IMPORTE QUELLE OPERATION, DEBRANCHEZ LA VANNE DU RESEAU ELECTRIQUE!

Nettoyez périodiquement les roulements afin d'éviter toute incrustation qui en empêche la rotation et provoque l'usure de la lame.
Nettoyez périodiquement le boîtier arrière de la vanne de manière à éviter toute accumulation de poudre encrassante en vue d'assurer le bon fonctionnement des conduits et du fin de course.

REMPLACEMENT DES PIECES USEES
Les pièces usées ne seront pas remplacées.

SMONTAGGIO
Prima di smontare qualsiasi pezzo della valvola, assicurarsi che l'alimentazione di corrente sia staccata.

MANUTENZIONE
Il non attenersi strettamente alle seguenti istruzioni può causare problemi ed invalidare la garanzia sulle macchine fornite.
Ogni settimana, verificare che la zona di passaggio del materiale sia libera da residui dello stesso: se non lo è, pulire accuratamente per evitare ogni ostruzione.

PRIMA DI QUALSIASI OPERAZIONE STACCARE L'ALIMENTAZIONE DI CORRENTE!

Pulire periodicamente i cuscinetti, onde evitare incrostazioni che ne impediscono la rotazione con conseguente usura della lama.
Vuotare periodicamnete la carcassa posteriore della valvola in modo da evitare ristagno di polvere per permettere il buon funzionamento dei condotti e del fine corsa.

SOSTITUZIONE DEI PEZZI DI USURA
Non è prevista nessuna sostituzione di pezzi soggetti ad usura.

LUBRICATION
No lubrication required.
N.B.:only for CRG and AR-type gear motor actuators regular lubrication once every 300 cycles (openings-closings) approximately is recommended.

NOISE
Noise level depends on handled material and on actuator type.
DISMANTLING AND DISPOSAL
Storage of equipment for longer periods
Clean the equipment thoroughly.
Store the equipment in a container.
Scrapping
Recycle plastic materials (e.g. seals, coatings etc.) and dispose according to regulations.
Dispose of metal parts at the scrap yard.
FAULT FINDING
Minor problems can be resolved without consulting a specialist.

SCHMIERUNG
Keine Schmierung erforderlich.
N.B.: Nur für elektromechanische Antriebe vom Typ CRG und AR ist ein Nachschmieren ca. alle 300 Zyklen (Öffnungen und Schliessungen) empfehlenswert.

BETRIEBSGERÄUSCHE
Die Intensität der Betriebsgeräusche hängt vom behandelten Schüttgut sowie vom Typ des Schieberantriebs ab.
DEMONTAGE UND VERSCHROTTUNG
Lagerung des Geräts über längere Zeiträume
Gerät gründlich säubern.
Gerät in einem Behälter lagern.
Verschrottung
Kunststoffteile (z.B. Dichtungen, Beschichtungen etc.) gemäß den Vorschriften recyclen.
Metallteile beim Schrotthändler abgeben.
BETRIEBSSTÖRUNGEN UND ABHILFE
Kleinere Störungen können ohne die Einschaltung eines Fachmanns behoben werden.

LUBRIFICATION
Il n'est prévu aucune lubrification.
N.B.: Seulement pour les actionneurs électromécaniques CRG et AR on conseille le cycle de lubrification ordinaire au bloc en bronze toutes les 300 cycles (environ) d'ouverture / fermeture.

BRUYANCE
Le niveau de bruyance des vannes dépend de la nature du produit dosé et de l'actionneur accouplé.
DEMONTAGE ET DEMOLITION
Mise en entrepôt de la machine pendant une longue période:
nettoyez soigneusement la machine;
protégez-la en la mettant dans un conteneur.
Démontage et mise à la ferraille à la fin de la vie de la machine:
récupérez les pièces en matière plastique (par ex. revêtements, joints, etc.) et remettez-les aux centres de récolte spécialisés;
remettez les autres pièces en métal aux centres de récupération des métaux.
PROBLEMES EVENTUELS
Vous pouvez résoudre vous-même les petits problèmes sans devoir consulter un spécialiste.

LUBRIFICAZIONE
Nessuna operazione di lubrificazione è prevista.
N.B.: unicamente per il comando elettromeccanico CRG si consiglia ciclo di lubrificazione ordinaria al blocchetto in bronzo ogni 300 cicli circa apertura/chiusura.

RUMORE
Il livello di rumorosità delle valvole dipende dalla natura del materiale dosato e dall'attuatore accoppiato.
SMANTELLAMENTO E DEMOLIZIONE
Immagazinaggio della macchina per periodo prolungato
Pulire accuratamente la macchina.
Immagazinare la macchina dentro un contenitore.
Rottamazione
Riciclare i pezzi in plastica (per es. guarnizioni, rivestimenti etc.) a norma di legge.
Consegnare i pezzi in metallo ai centri di raccolta.
POSSIBILI INCONVENIENTI
I problemi minori possono essere risolti senza consultare uno specialista.

Item	PROBLEM	Item	REASON	Item	SOLUTION
1	Valve does not open or stays always open	1.1	Material has formed a block	1.1	Dismantle, clean and reassemble
		1.2	Material weight too high	1.2	Provide weight relief above valve
		1.3	Insufficient air pressure	1.3	Check compressed air mains
		1.4	Drive unit too weak	1.4	Check mains supply and gear motor
2	Valve leaks	2.1	Valve stays always completely or partly open	2.1	See solution item 1.1
3	Valve opens and closes with difficulty	3.1	See item 1.1 - 1.2 1.3 - 1.4	3.1	Ensure valve works in axis
4	Excessive presence of dust	4.1	Fluidization nozzles too close to valve	4.1.1	Substitute nozzles with vibrator o knocker or move nozzles from present position
				4.1.2	Provide breather hole in rotary valve
		4.2	Material column always too high	4.2	Provide weight relief above valve
		4.3	St. steel 304 blade, thickness 9.4 ± 0.1 mm	4.3	Mount polyurethane blade with thickness 10 ± 0.1 mm for greater interference
5	Infiltration of powder or water in the rear part of the valve	5.1	Guard incorrectly positioned	5.1	Mount guard tightly onto valve frame

Pos.	STÖRUNG	Pos.	URSACHE	Pos.	LÖSUNG
1	Schieber offnet nicht oder bleibt offen.	1.1	Materialverklumpung	1.1	Ausbauen, säubern und wieder einbauen
		1.2	Zu hohes Material-gewicht	1.2	Entlastungskegel vorsehen
		1.3	Luftdruck unzureichend	1.3	Druckluftleitung überprüfen
		1.4	Getriebemotor zu schwach	1.4	Stromzufuhr und Getriebemotor überprüfen
2	Schieber leckt	2.1	Schieber bleibt ständig gänzlich oder nur zum Teil geöffnet	2.1	Siehe 1.1
3	Schieber beim Öffnen und Schliessen schwergangig	3.1	Siehe Punkt 1.1 - 1.2 1.3 - 1.4	3.1	Prüfen, ob Schieberblech exakt axial arbeitet
4	Zu große Staubentwicklung	4.1	Luftauflockerungsdüsen zu nahe am Schieber	4.1.1	Düsen durch Rüttler oder Klopfer ersetzen, oder Düsen versetzen
				4.1.2	In Zellenradschleuse Entlüftung vorsehen
		4.2	Ständig sehr hohe Materialsäule	4.2	Entlastungskegel vorsehen
		4.3	Schieberblech aus Edelstahl 1.4301, Stärke 9.4 ± 0.1 mm	4.3	Schieberblech aus Polyurethan, Stärke 10 mm ± 0.1 im Interesse einer besseren Passung vorsehen
5	Eindringen von Material oder Wasser in den hinteren Teil des Shiebers	5.1	Schutzblech nicht korrekt positioniert	5.1	Schutzblech dicht an den Schieberrahmen montieren

Pos.	PROBLEME	Pos.	CAUSE	Pos.	SOLUTION
1	Vanne n'ouvre pas ou reste toujours ouverte.	1.1	Produit à l'intérieur a formé un bloc	1.1	Démonter, nettoyer et remonter
		1.2	Poids élevé du produit	1.2	Prévoir un toit de protection
		1.3	Pression d'air insuffisante	1.3	Controler la ligne pneumatique
		1.4	Motoréducteur insuffisant	1.4	Controler ligne électrique et motoréducteur
2	Vanne perd	2.1	Vanne reste toujours ouverte (complètement ou partiellement)	2.1	Voir solution au point 1.1
3	Vanne s'ouvre et se ferme avec peine	3.1	Voir au point 1.1 - 1.2 1.3 - 1.4	3.1	Vérifier si la vanne travaille parfaitement en axe
4	Présence excessive de poussière	4.1	Buses de fluidification trop près de la vanne	4.1.1	Substituer buses avec vibrateur ou percuteur, ou eventuellement les déplacer
				4.1.2	Créer dans la vanne alvéolaire un évent
		4.2	Colonne de matériau élevée toujours présente	4.2	Prévoir toit de protection
		4.3	Guillotine AISI304 épaisseur 9.4 ± 0.1 mm	4.3	Monter guillotine en polyuréthane d'épaiss. 10 mm ± 0.1, afin d'obtenir interférence plus grande
5	Entrée de produit ou d'eau dans la partie arrière de la vanne	5.1	Tôle de protection ne pas positionnée correctement	5.1	Monter la tôle de protection adhérente au châssis

Pos.	PROBLEMA	Pos.	CAUSA	Pos.	SOLUZIONE
1	La valvola non si apre o rimane sempre aperta.	1.1	Il prodotto all'interno ha fatto blocco	1.1	Smontare, pulire e rimontare
		1.2	Elevato peso del prodotto	1. 2	Prevedere un corpo di protezione
		1.3	La pressione aria è insufficiente	1.3	Controllare la linea pneumatico
		1.4	Il motoriduttore è insufficiente	1.4	Controllare linea elettri ca e motoriduttore
2	La valvola perde	2.1	La valvola rimane sempre aperta completamente o parzialmente	2.1	Vedi soluzione al punto 1.1
3	La valvola apre e chiude con fatica	3.1	Vedi al punto 1.1 - 1.2 1.3 - 1.4	3.1	Verificare che la valvola lavori perfettamente in asse
4	Eccessiva presenza di polvere	4.1	Gli ugelli di fluidificazione sono eccessivamente vicini alla valvola	4.1.1	Sostituire gli ugelli con vibratore o percussore, eventualmente spostarli da tale posizione
				4.1.2	Creare nella rotovalvola un foro di sfiato
		4.2	Elevata colonna di materiale sempre presente	4.2	Posizionare coppo di protezione
		4.3	Lama in AISI304 spessore 9.4 ± 0.1 mm	4.3	Montare lama in poliuretano di spessore 10 mm ± 0.1, per una maggiore interferenza
5	Entrata di polvere o acqua nella parte posteriore della valvola	5.1	Lamiera di protezione non posizionata correttamente	5.1	Montare lamiera di protezione aderente alla lamiera piegata

N.B.: VL-type Slide Valves are dust proof but NOT pressure proof.

N.B.: Schieber vom Typ VL sind staubdicht, d.h. NICHT druckdicht.

N. B.: les vannes guillotine du type VL sont étanches aux poudres mais PAS à la pression

N. B.: le valvole a ghigliottina WAM® tipo VL sono a perfetta tenuta polvere/granuli NON a tenuta pressione

Environmental temperature
-5°C / +40°C
Maximum temperature of dusts:
+60°C continuous, +80°C for short time intervals (maximum of 1 minute).
These temperature limits are linked to the features of the gaskets and plastic coatings, with their efficiency affected by extremely high temperatures, leading to loss of material and contributing to the formation of potentially explosive hazardous mixtures.

Noise level
The machine without material has a maximum noise level of 55 dB(A). The noise values are connected to the type of material batched and the type of actuator. The user is advised to take noise measurements directly on the application to check the values.

- The VL slide valves must be closed only by the moving product column.
- The VL valves are not suitable for applications with liquids or with pressure values different from that of the atmosphere.

THE VL SLIDE VALVES ARE NOT FLAME-PROOF AND MUST NOT BE USED AS SAFETY DEVICE FOR SHUTTING OFF A FLAME SOURCE.

Features of the dusts:

Umgebungstemperatur
-5°C / +40°C
Max. Staubtemperatur:
+60°C ständig, +80°C für kurze Zeitintervalle (max. 1 Minute).
Diese Grenztemperaturen sind von den Eigenschaften der Dichtungen und der Auskleidung aus Kunst-stoff abhängig, deren Wirksamkeit durch zu hohe Temperaturen in Frage gestellt werden kann. Dabei käme es zum Austritt von Material und zum etwaigen Entstehen explosionsgefährdeter Staubmi-schungen.

Lärmpegel
Das Gerät ohne Materialfüllung hat einen Lärmpegel von max. 55 dB(A). Die Lärmwerte hängen vom Me-dium und der Ausführung des Antriebs ab. Unter diesem Aspekt sollte der Anwender die Lärm-messungen direkt am Anwen-dungsort ausführen, um diese Werte festzustellen.

- Die Flachschieber Typ VL dürfen nur geschlossen werden, wenn die Produktsäule sich in Bewegung befindet.
- Die Schieber Typ VL eignen sich nicht für Anwendungen mit Flüssigkeiten oder mit Druckwerten, die vom normalen Luftdruck abweichen.

DIE FLACHSCHIEBER VL SIND NICHT FLAMMENSICHER UND DÜRFEN NICHT ALS SICHERHEITSVORRICHTUNG ZUM UNTERBRECHEN EINER FLAMMENFRONT BENUTZT WERDEN.

Eigenschaften der Stäube:

Température ambiante
-5°C +40°C
Température maximum des poudres :
+60°C en continu, +80°C pour intervalles de temps brefs (1 minute maximum).
Ces limites de température sont liées aux caractéristiques des joints et des revêtements en matière plastique, dont l'efficacité peut être compromise par des températures trop élevées, donnant lieu à des pertes de matière et contribuent à former des mélanges explosibles dangereux.

Niveau sonore
Le niveau sonore maxi de la machine sans matière est de 55 dB(A). Les valeurs de bruit sont associées au type de matière dosée et au type d'actionneur. A ce propos, il est recommandé à l'utilisateur de faire des relevés de bruit directement sur l'application afin de vérifier les valeurs.

- Les vannes à guillotine type VL doivent être fermées seulement avec la colonne de produit en mouvement.
- Les vannes type VL ne sont pas indiquées pour les applications avec des liquides ou avec des valeurs de pression différente de celle atmosphérique.

LES VANNES A GUILLOTINE VL NE SONT PAS A TENUE DE LA FLAMME ET NE DOIVENT PAS ETRE UTILISÉES COMME DISPOSITIF DE SÉCURITÉ POUR INTERROMPRE LE FRONT DE FLAMME.

Caractéristiques des poussières :

Temperatura ambiente
-5°C / +40°C
Temperatura massima delle polveri:
+60°C in continuo, +80°C per brevi intervalli di tempo (massimo 1 minuto).
Tali limiti di temperatura sono legati alle caratteristiche delle guarnizioni e dei rivestimenti in materiale plastico, la cui efficienza può essere compromessa da temperature troppo elevate, dando origine a perdite di materiale e contribuendo a formare pericolose miscele potenzialmente esplosive.

Livello di rumorosità
La macchina senza materiale ha un livello di rumorosità max. pari a 55 dB(A).
I valori di rumore sono legati al tipo di materiale dosato ed al tipo di attuatore. A tal proposito, si raccomanda all'utilizzatore di fare dei rilievi di rumore direttamente all'applicazione al fine di verificare i valori.

- Le valvole a ghigliottina tipo VL devono essere chiuse soltanto con colonna di prodotto in movimento.
- Le valvole tipo VL non sono idonee per applicazioni con liquidi o con valori di pressione diversi da quella atmosferica.

LE VALVOLE A GHIGLIOTTINA VL NON SONO A TENUTA FIAMMA E NON DEVONO ESSERE UTILIZZATE COME DISPOSITIVO DI SICUREZZA PER INTERROMPERE IL FRONTE DI FIAMMA.

Caratteristiche delle polveri:

The Manufacturer provides a **12**-month warranty on their products. This period starts from the date of the consignment note.

Der Hersteller gewährt auf ihre Erzeugnisse eine Garantie von **12** Monaten. Die Garantiezeit beginnt mit dem Datum des Lieferscheins.

Le constructeur reconnaît une période de **12** mois de garantie sur les produits de sa fabrication. La période prend effet à compter de la date indiquée sur le bon de livraison.

Il costruttore riconosce un periodo di **12** mesi di garanzia sui prodotti di propria costruzione. Il periodo decorre dalla data della bolla di consegna.

The warranty is not applicable for breakage and/or defects caused by incorrect installation or use, or incorrect maintenance, or modifications not authorized by the Manufacturer.

Die Garantie ist nicht anwendbar, wenn es sich um Schäden und/ oder Defekte handelt, die auf falschem Einbau oder Gebrauch, nicht korrekter Wartung oder Änderungen beruhen, die ohne die Genehmigung des Herstellers ausgeführt wurden.

La garantie ne s'applique pas à la suite de ruptures et/ou de défauts provoqués par un montage et une utilisation impropre, des entretiens qui ne sont réalisés correctement ou des modifications apportées sans autorisation du constru cteur.

La garanzia non è applicabile a seguito di rotture e/o difetti causati da errata installazione o utilizzo, oppure da manutenzioni non corrette o modifiche apportate senza autorizzazione del costruttore.

The warranty does not extend to parts that wear out following normal use and electrical components.

Die Garantie deckt keine Teile ab, die infolge des normalen Gebrauchs verschleißen, und auch keine elektrischen Teile.

La garantie s'étend aux pièces qui s'usent à la suite d'une utilisation normale et aux parties électriques.

La garanzia non si estende alle parti che si logorano in seguito al normale uso e alle parti elettriche.

The warranty elapses if the vanne:
- has been tampered with or modified,
- has not been used correctly,
- has been used without respecting the limits indicated in this manual and/or has been subjected to excessive mecha nical stress,
- has not been subjected to the necessary maintenance or these operations have been carried out partly and/or or by unskilled personnel incorrectly,
- has been damaged due to carelessness during transport, installation and use,
- has been fitted with spare parts that are not original.

Genauer gesagt, verfällt die Garantie, wenn die Klappe:
- manipuliert oder geändert wurde,
- nicht korrekt benutzt worden ist,
- bei ihrem Gebrauch nicht die in diesem Handbuch stehenden Einsatzbeschränkungen beachtet wurden und/oder sie zu starken mechanischen Belastungen ausgesetzt wurde,
- nicht der erforderlichen Wartung unterzogen wurde oder wenn die Wartung nur teilweise und/ oder nicht korrekt oder durch nicht korrekt angeleitetes Personal ausgeführt wurde.
- beschädigt wurde, weil Transport, Einbau oder Gebrauch ohne die erforderliche Sorgfalt vorgenommen wurden,
- wenn keine Original-Ersatzteile verwendet worden sind.

Plus précisément la garantie est sans effet si la vanne:
- a été manipulée ou modifiée,
- a été utilisée de manière incorrecte,
- a été utilisée sans respecter les limites indiquées dans la présente notice et/ou qu'elle a été soumise à des contraintes mécaniques excessives
- elle n'a pas été soumise aux entretiens nécessaires ou que ces opérations ont été effectuées partiellement, de manière incomplète ou incorrecte, ou par du personnel pas instruit correctement
- a subit des dommages par négligence pendant le transport, la mise en place et l'utilisation,
- a été réparée avec des pièces qui ne sont pas d'origine.

A miglior precisazione la garanzia decade nei casi in cui la valvola:
- sia stata manomessa o modificata,
- sia stata utilizzata non correttamente,
- sia stata utilizzata non rispettando i limiti indicati nel presente manuale e/o sia stata sottoposta ad eccessive sollecitazioni meccaniche,
- non sia stato sottoposta alle necessarie manutenzioni o queste siano state eseguite solo in parte e/o non correttamente, o da personale non correttamente istruito
- abbia subito danni per incuria durante il trasporto, l'installazione e l'utilizzo,
- siano state inserite parti di ricambio non originali.

On receiving the product, the user must check these for defects deriving from transport and/or incomplete supply.

Beim Empfang der Ware hat der Empfänger sicherzustellen, dass die Ware keine durch den Transport verursachten Schäden oder Defekte aufweist, und/oder dass der Lieferumfang vollständig ist.

Dès réception de la marchan dise, le destinataire doit vérifier que celle-ci n'a pas de défauts ou subit de dégâts dus au tran sport et que la fourniture n'est pas incomplète.

Al ricevimento del prodotto, il destinatario deve verificare che lo stesso non presenti difetti o danni derivanti dal trasporto e/o incompletezza della fornitura.

Defects, damage or incom pleteness of the supply must be immediately communicated to the Manufacturer in writing and countersigned by the haulage transporter.

Etwaige Defekte, Schäden oder Fehlmengen sind mittels schriftlicher und vom Frachtführer gegengezeichneter Mitteilung sofort dem Hersteller zu melden.

Tout défaut, dommage ou four niture incomplète doit immédia tement être signalée au constru cteur par communication écrite et contresignée par le tran sporteur.

Eventuali difetti, danni o incompletezza vanno immediatamente segnalati al costruttore mediante comunicazione scritta e controfirmata dal vettore.

STORAGE
BEFORE INSTALLATION
- Avoid damp, salty environments, if possible.
- Place the slide valve on wooden platforms, protected from unfavourable weather conditions.
- The valves must not be stored in the open or in areas in the presence of vapours or substances (however weakly corrosive) not compatible with the materials used for constructing the slide valve.
- Avoid storage temperatures below -20° C.

LONG MACHINE SHUTDOWNS AFTER ASSEMBLY
- Set the slide valve in safety condition before starting up the plant.
- Before starting operation with the slide valve, check all parts for which prolonged disuse may have affected the functionality.

POSSIBLE REUSE AFTER SHUTDOWNS
- Avoid damp, salty environments during machine shutdowns.

Place the slide valve on wooden pallets, protected from unfavourable weather conditions.
- The valve must not be stored in the open or in the presence of vapours or substances (however weakly corrosive) not compatible with the materials used for construction of the slide valve.
- Before start up set the slide valve in safety condition.
- Before starting operation with the slide valve, check all parts for which prolonged disuse may have affected the functionality.
- Before starting operation with the slide valve, carry out a complete cleaning cycle according to the indications in the safety sheet of the product to be handled.
- If the slide valve operates in conditions and with materials different from the previous application, check the compatibility of this use with the indications in the INDICATION FOR USE section.

EINLAGERUNG VOR DEM EINBAU
- Feuchte Räume mit salzhaltiger Luft möglichst vermeiden.
- Den Flachschieber auf einen Holzuntersatz legen und ihn vor der Witterung geschützt ufstellen..
- Die Lagerung im Freien oder in Bereichen, wo Dämpfe oder auch nur schwach korrosiv wirkende Substanzen vorhanden sind, die nicht mit den Konstruktionsmaterialien des Flachschiebers verträglich sind ist verboten. - Eine Lagerhaltung bei Temperaturen unter -20° C ist zu vermeiden.

LÄNGERER STILLSTAND DES GERÄTS NACH DEM EINBAU
- Vor der Inbetriebnahme ist der Flachschieber in einen sicheren Zustand zu bringen.
- Vor der Inbetriebnahme des Flachschiebers sind alle Teile, deren Funktionstüchtigkeit durch einen längeren Stillstand in Frage gestellt werden könnte, auf Unversehrtheit zu prüfen.

MÖGLICHER WIEDERGEBRAUCH NACH EINEM STILLSTAND
- Während des Stillstands des Geräts feuchte Räume mit salzhaltiger Luft vermeiden.
- Den Flachschieber auf einen Holzuntersatz legen und witterungsgeschützt lagern.
- Die Lagerung im Freien oder in Bereichen, wo Dämpfe oder auch nur schwach korrosiv wirkende Substanzen vorhanden sind, die nicht mit den Konstruktionsmaterialien des Flachschiebers verträglich sind ist verboten.
- Vor der Inbetriebnahme ist der Flachschieber in einen sicheren Zustand zu bringen.
- Vor der Inbetriebnahme des Flachschiebers sind die Teile, deren Funktionstüchtigkeit durch einen längeren Stillstand in Frage gestellt ist, auf Unversehrtheit prüfen.
- Vor der Aufnahme des Betriebs des Flachschiebers eine kom-plette Reinigung durchführen, wobei zu beachten ist, was auf dem Sicherheitsdatenblatt des Staubes steht.
- Wenn der Flachschieber unter Bedingungen und mit Medien betrieben wird, die von der letzten Anwendung abweichen, die Kompatibilität mit dem vergleichen, was im Abschnitt GEBRAUCHSANWEISUNG steht.

STOCKAGE
AVANT L'INSTALLATION
- Eviter le plus possible les environnements humides et saumâtres.
- Placer la vanne à guillotine sur une plate-forme en bois et à l'abri des intempéries.
- Il est interdit de la stocker en plein air ou dans des zones où sont présentes des vapeurs ou des substances (même faiblement corrosives) non compatibles avec les matériaux de construction de la vanne à guillotine. - Eviter l'entreposage à des températures inférieures à -20°C.

ARRET PROLONGÉ DE LA MACHINE APRES LE MONTAGE
- Avant la mise en service mettre la vanne à guillotine en conditions de sécurité.
- Avant la mise en service de la vanne à guillotine, contrôler l'intégrité de toutes les parties dont un arrêt prolongé pourrait compromettre le fonctionnement.

RÉEMPLOI POSSIBLE APRES UNE PÉRIODE D'INACTIVITÉ
- Pendant l'inactivité de la machine éviter les environnements humides et saumâtres.

Placer la vanne à guillotine sur une plate-forme en bois et l'entreposer à l'abri des intempéries .
- Il est interdit de l'entreposer en plein air ou dans des zones où sont présentes des vapeurs ou des substances (même faiblement corrosives) non compatibles avec les matériaux de construction de la vanne à guillotine.
- Avant la mise en service mettre la vanne à guillotine en conditions de sécurité.
- Avant la mise en service de la vanne à guillotine, contrôler l'intégrité de toutes les parties dont un arrêt prolongé pourrait compromettre le fonctionnement.
- Avant la mise en service de la vanne à guillotine effectuer un cycle complet de nettoyage en respectant les indications figurant sur la fiche de sécurité de la poudre à traiter.
- Si la vanne à guillotine travaille dans des conditions et avec des matières différentes de l'application précédente, vérifier la compatibilité de cette utilisation suivant ce qui est indiqué dans la section MODE D'EMPLOI.

IMMAGAZZINAGGIO
PRIMA DELL'INSTALLAZIONE
- Evitare possibilmente ambienti umidi e salmastri.
- Sistemare la valvola a ghigliottina, su pedane di legno e locarla al riparo dalle intemperie.
- E' vietata la conservazione all'aperto o in zone dove siano presenti vapori o sostanze (anche debolmente corrosive) non compatibili con i materiali di costruzione della valvola a ghigliottina.
- Le condizioni di immagazzinamento al di sotto di -20° C devono essere evitate.

FERMO MACCHINA PROLUNGATO DOPO IL MONTAGGIO
- Prima della messa in servizio mettere in sicurezza la valvola a ghigliottina.
- Prima della messa in servizio della valvola a ghigliottina, controllare l'integrità di tutte le parti per le quali un prolungato inutilizzo potrebbe compromettere la funzionalità.

POSSIBILE REIMPIEGO DOPO PERIODO DI INATTIVITA'
- Durante il fermo macchina evitare ambienti umidi e salmastri. Sistemare la valvola a ghigliottina, su pedane di legno e locarla al riparo dalle intemperie.
- E' vietato conservare la valvola all'aperto o in zone e dove siano presenti vapori o sostanze non compatibili con i materiali di costruzione della valvola a ghigliottina (sostanze anche debolmente corrosive).
- Prima della messa in servizio mettere in sicurezza la valvola a ghigliottina.
- Prima della messa in servizio del valvola a ghigliottina, controllare l'integrità delle parti per le quali un fermo macchina prolungato potrebbe compromettere la funzionalità.
- Prima della messa in servizio della valvola a ghigliottina, eseguire un ciclo completo di pulizia rispettando quanto riportato sulla scheda di sicurezza della polvere da trattare.
- Se la valvola a ghigliottina opera in condizioni e con materiali diversi dall'applicazione precedente, verificare la compatibilità di tale utilizzo secondo quanto riportato nella sezione INDICAZIONE PER L'USO.

ATTENTION!

1) Valves must **NOT operate in absence of material**!

2) Do **NOT wet** the valve with water or grease!

3) Do not insert **any type of gasket** between the silo flange and the upper flange of the side valve! (Fig.1).

N.B.: VL- type Slide Valves are dust proof but NOT pressure proof.

4)It is advisable to use the valve as an external support for machines below (for example, it is not possible to hang screw feeders, conveyor belts, offlets, etc.).
Fix the valve using bolts or stud bolts that are long enough for a "sandwich" grip with the upper and lower flanges. Lock the outside bolts. The internal bolts are used exclusively as safety for the valve if the conveyor device below were to get detached (Fig. 2).
5) Tighten not too firmly fixing bolts between the flange of the slide valve and the hopper flange!
6) Ensure parallel tolerance of the connecting hopper flange is within 2 mm!
7) Ensure the valve is **perfectly parallel** after installation!
8) Avoid connection of square valve with round silo flange or round valve with square silo flange!
9) Ensure there is no pressurized air present in the valve inlet zone.
10) Strictly follow assembly instruction for actuators!
11) With lumpy, granular and fibrous products, it is advisable to use a steel blade.
12) With raised product columns it is advisable to insert a safety cup in the silo, above the valve

NOTE REGARDING ASSEMBLY OF NON WAM® ACTUATORS!

When valve is closed distance "S" must be minimum 5 mm (see fig.3).

ACHTUNG!

1) Schieber **dürfen NICHT ohne Schüttgutpräsenz** betrieben werden!

2) **Kein Wasser oder Fett** über die Schieber geben!

3) Zwischen Silo- und Flachschieber-Flansch **keine Dichtung, egal welcher Art,** vorsehen! (Abb.1)

N.B.: Schieber vom Typ VL sind staubdicht, d.h. NICHT druckdicht.

4)Die Benutzung als externer Träger für darunter stehende Maschinen ist möglich (man kann beispielsweise keine Schnecken, Förderbänder, Rinnen etc. aufhängen).
Den Schieber mit Schraubbolzen oder Stiftschrauben ausreichender Länge befestigen, um die Sandwich-Einspannung desselben mit dem oberen und unteren Flansch zu erzielen. Die äußeren Schraubbolzen anziehen. Die inneren Schraubbolzen dienen nur als Sicherheitselement des Schiebers, falls die darunter befindliche Fördervorrichtung abgetrennt wird (Abb. 2).
5)Verbindungsschrauben zwischen Flachschieber- und Trichterflansch nicht zu fest anziehen!
6) Sicherstellen, daß die Ebenenabweichung des Trichterflansches nicht mehr als 2 mm beträgt!
7) Sicherstellen, daß sich der Schieber nach dem Einbau **in horizontaler Lage** befindet .
8) Kombination von quadratischem Schieber mit rundem Siloauslauf bzw, von rundem Schieber mit quadratischem Siloauslauf vermeiden!
9) Sicherstellen, dass keine Druckluft im Schiebereinlaufbereich ansteht.
10) Die Montageanleitung für die Antriebe strikt befolgen!
11) Für klumpige, körnige oder faserhaltige Produkte empfiehlt sich Blätter aus Stahl.
12) Bei hohen Produktsäulen empfiehlt es sich, eine Schutzhaube in den Silo einzusetzen, und zwar über dem Ventil.

BEMERKUNG BEZÜGLICH FREMDANTRIEBEN

Bei geschlossenem Schieber muß das Maß "S" mindestens 5 mm betragen (Abb.3).

ATTENTION!

1) Les vannes doivent travailler en présence du matériau et **JAMAIS à vide!**

2) **NE PAS mouiller** le corps avec de l'eau ou de la graisse!

3) N'inserér **aucun type de garniture** entre la bride du silo et la bride de la vanne à guillotine!
(Fig.1)

N.B.: Les vannes guillotine du type VL sont étanches aux poudres mais PAS à la pression.

4) On conseille l'utilisation comme soutien extérieur pour les machines placées dessous (par ex. on ne peut pas y suspendre des vis sans fin, tapis transporteurs, canalisations, etc.).
Fixer la vanne avec des boulons ou des goujons suffisamment longs pour la prise en "sandwich" de celle-ci avec la bride supérieure et inférieure. Serrer les boulons extérieurs. Les boulons intérieurs servent exclusivement comme sécurité de la vanne au cas où le dispositif de transport placé dessous soit décroché (fig.2).
5)Serrer avec modération les boulons de fixation de la vanne à la trémie!
6) S'assurer que la tolérance de planéité de la bride de la trémie de liaison soit entre les 2 mm!
7) S'assurer que à montage terminé, la vanne soit en position **parfaitement horizontale**!
8) Eviter l'accouplement entre vanne carrée et bride de silo ronde ou entre vanne ronde bride de silo carrée!
9) S'assurer qu'il n y ait pas de presénce d'air comprimé dans la zone de chargement de la vanne.
10) Se tenir rigoureusement aux instruction quant au montage des commandes!
11) Avec des produits grumeleux, granulaires ou fibreux il est conseillé d'utilisé lames en acier.
12) En présence de colonnes élevées de produit il est conseillé de placer un carter de protection dans le silo, au-dessus de la vanne.

NOTE EN CE QUI CONCERNE L'INSTALLATION DES COMMANDES NON WAM®

Avec la vanne fermée la distance "S" doit être de 5 mm au minimum (Fig.3).

ATTENZIONE!

1) Le valvole devono lavorare con polvere, **NON a vuoto!**

2) **Non bagnare** il corpo con acqua o grasso!

3) **Non** inserire **guarnizioni di alcun tipo** tra flangia silo e flangia valvola! (Fig.1)

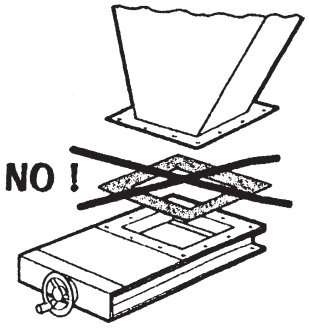
N.B.: Le valvole a ghigliottina WAM® tipo VL sono a perfetta tenuta polvere/granuli NON a tenuta pressione.

4)Si consiglia l'impiego come sostegno esterno per macchine sottostanti (per es. non si possono appendere coclee, nastri trasportatori, canalette, etc.).
Fissare la valvola con bulloni o prigionieri sufficientemente lunghi per la presa a "sandwich" della stessa con la flangia superiore ed inferiore. Serrare i bulloni esterni. I bulloni interni servono esclusivamente come sicurezza della valvola qualora il dispositivo di trasporto sottostante venga staccato (fig.2).
5) Serrare con moderazione le viti di fissaggio della valvola al silo!
6) Accertarsi che la tolleranza di planarità della flangia di collegamento della tramoggia sia entro i 2 mm!
7) Accertarsi che, a montaggio ultimato, la valvola sia **perfettamente planare!**
8) Evitare accoppiamento valvola quadra con silo a bocca tonda e viceversa!
9) Accertarsi che non vi sia aria in pressione in vicinanza della bocca valvola.
10) Attenersi rigorosamente alle istruzioni inerenti al montaggio dei comandi!
11) Con prodotti grumosi, granulari o fibrosi si consiglia l'uso di lame in metallo.
12) Con elevate colonne di prodotto si consiglia di inserire un coppo di protezione nel silo sopra la valvola.

NOTA PER INSTALLAZIONE DI COMANDI NON WAM®

A valvola chiusa la distanza "S" deve essere almeno di 5 mm (Fig.3).

Fig./Abb. 1



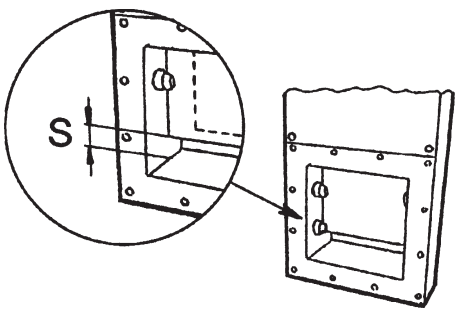


Fig./Abb. 2

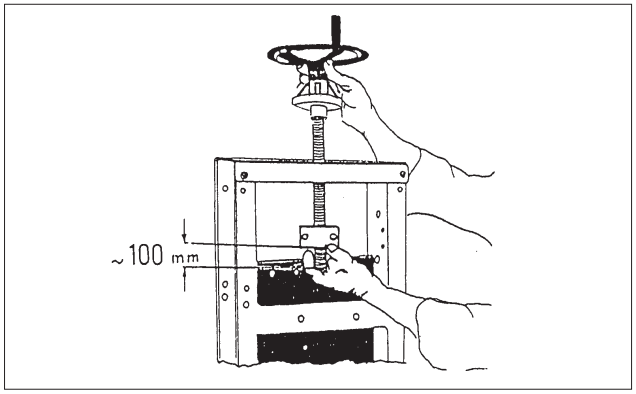
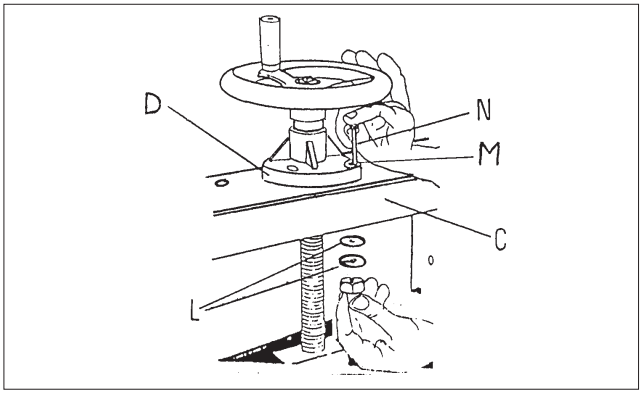
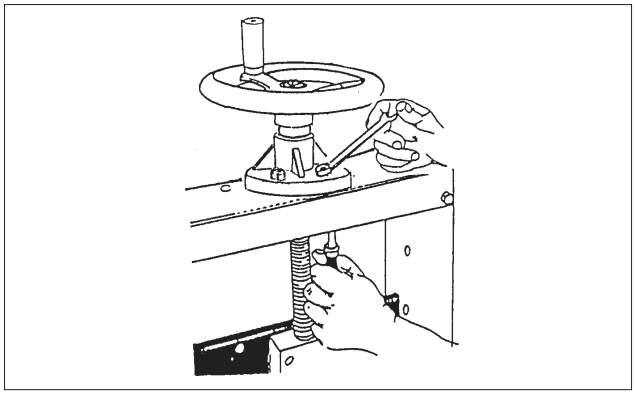
Fig./Abb. 3

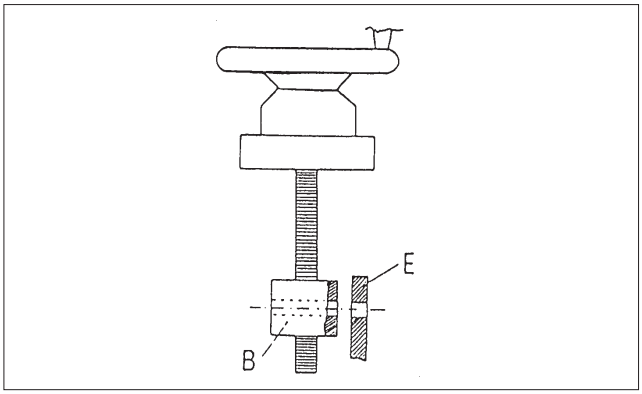




SUPPLY:
A) 1 hand wheel cpl. with spindle
B) 1 nut screw
• Bolts, nuts, washers
• Cardboard box



LIEFERUMFANG:
A) 1 Handrad mit Spindel
B) 1 Schloßmutter
• Schrauben, Muttern, Unterlegscheiben
• Kartonverpackung



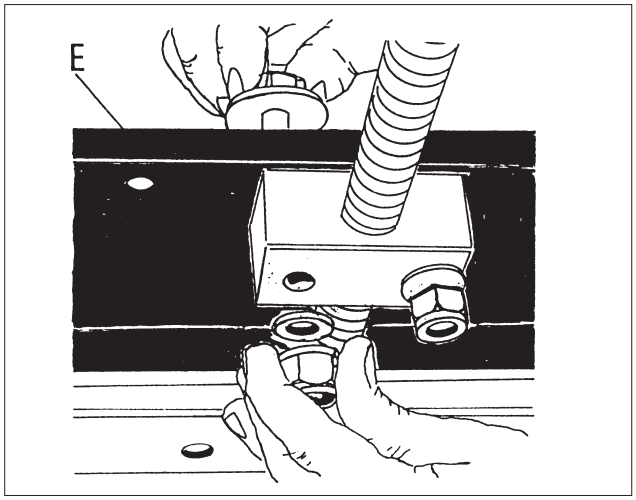
FOURNITURE:
A) 1 volant à main avec vis mère
B) 1 support à écrou
• Boulonnerie
• Emballage

LA FORNITURA COMPRENDE:
A) 1 volantino con madrevite
B) 1 chiocciola
• Bulloneria
• Imballo

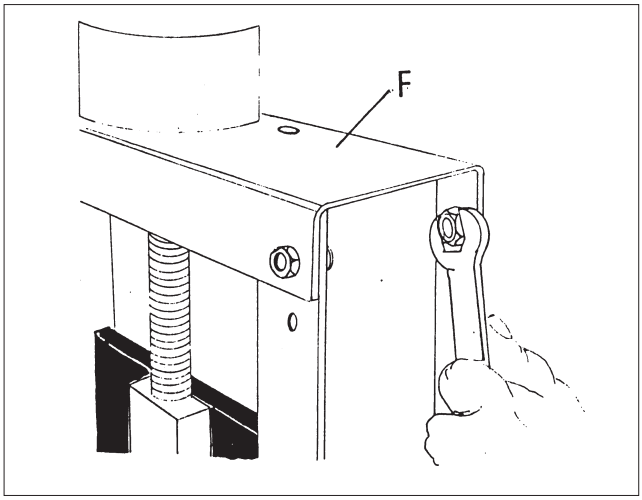
N.B.: DURING ASSEMBLY THE BLADE MUST REST ON ALL BEARINGS. ONLY AFTER THIS CHECK PUT VALVE ON END FOR ACTUATOR ASSEMBLY.

1) Insert spindle (A) into central bore on upper crosspiece of valve body. Screw nut screw (B) onto spindle (A) by approx. 100 mm.
2) Insert larger washers (L) on the inside of the valve frame (C) from below and smaller washers (M) on hand wheel support (D). Insert bolts and nuts (N).
3) Tighten bolts and nuts.
4) Turn hand wheel until holes on nut screw (B) and on blade (E) correspond.

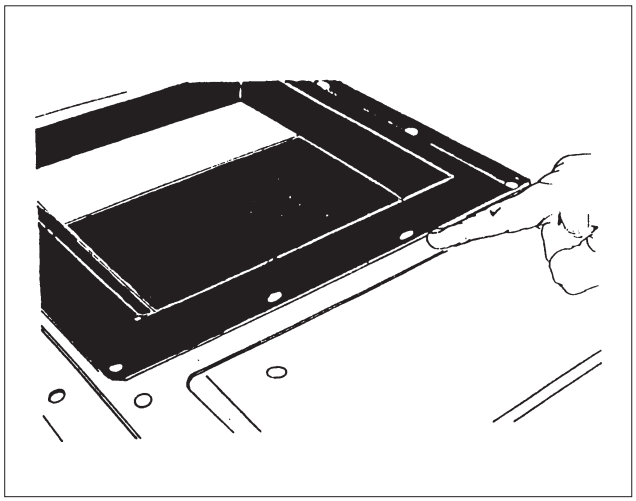
N.B.: ZUR MONTAGE MUSS DAS SCHIEBERBLECH AUF ALLEN ROLLENLAGERN AUFLIEGEN. ERST NACH EROLGTER ÜBERPRÜFUNG, DASS DEM SO IST, SCHIEBER ZWECKS MONTAGE DES HANDRADES HOCHKANT STELLEN.



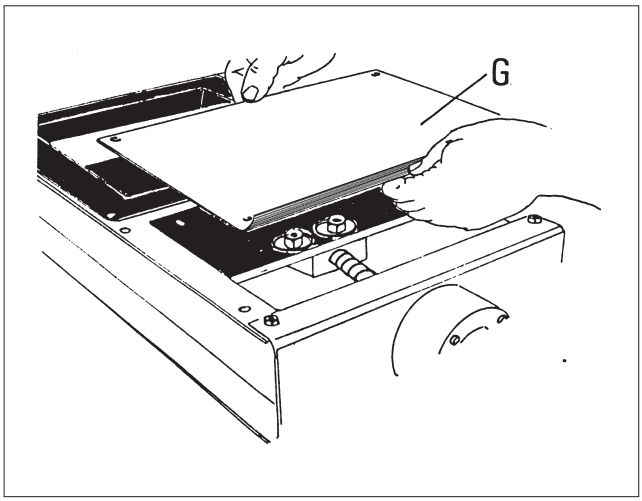
1) Spindel (A) durch mittige Bohrung am oberen Rahmen-Quertrager stecken. Schloßmutter (B) ca. 100 mm weit auf Spindel schrauben.
2) Große Unterlegscheiben (L) von unten innen auf den Schieberrahmen (C) legen, kleinere Unterlegscheiben (M) auf die Handradhalterung (D) legen und mit Schrauben (N) und Muttern befestigen.
3) Schrauben und Muttern festziehen.
4) Handrad so weit drehen bis sich Bohrungen des Schieberblechs (E) mit denen der Schloßmutter (B) exakt überlagern.



N.B.: AVANT LE MONTAGE LA LAME DOIT SE POSITIONNER SUR TOUS LES ROULEMENTS. ENSUITE METTRE LA VANNE EN POSITION VERTICALE POUR LE MONTAGE DE L'ACTIONNEUR.



1) Insérer la vis mère (A) dans le perçage appropié. Visser le support à écrou (B) à une hauter environ 100 mm.
2) Positionner les rondelles grandes (L) sur la plaque à l'interieur du corps de la vanne (C), les plus petites rondelles (M) sur le bloc (D). Insérer les boulons (N) et les écrous.
3) Visser avec les clefs appropriés.
4) Déplacer le volant jusqu'à l'interface du support à écrou (B) et la lame (E).



NB. : ALL'ATTO DEL MONTAGGIO, LA LAMA DEVE TROVARSI APPOGGIATA SU TUTTI I CUSCINETTI. IN SEGUITO METTERE LA VALVOLA IN POSIZIONE VERTICALE PER IL MONTAGGIO DELL'ATTUATORE.

1) Inserire la madrevite (A) nell'apposito foro del corpo valvola. Avvitare la chiocciola (B) per 100 mm.
2) Posizionare le rondelle più grandi (L) sulla carpenteria al l'interno del corpo valvola (C), le piu' piccole (M) sul distanziale (D). Inserire bulloni (N) e dadi.
3) Fissare con chiavi apposite.
4) Ruotare il volantino fino alla sovrapposizione dei fori sulla chiocciola (B) e quelli sulla lama (E).

5) Insert M12 bolts and larger washers on upper side of blade (E). Position smaller washers and self-locking nuts. Do not tighten completely.

6) Tighten 4 connecting nuts between cross bar (F) and body. Check operation of valve is correct by turning hand wheel.

7) For valve installation use bolts which are short enough not to interfere with blade.

8) When assembly is completed mount the top and bottom guard (G) ensuring they perfectly adhere to the frame. Check the positioning of the self-adhesive gasket.

5) Große Unterlegscheiben auf Bohrungen auf Oberseite des Schieberbleches (E) legen und M12-Schrauben einführen. Kleine Unterlegscheiben und selbstsichernde Muttern anbringen, aber nicht zu stark anziehen.

6) Die vier Verbindungsschrauben des Rahmen-Querträgers (F) anziehen. Jetzt prüfen, ob Handrad leicht gängig ist, bzw. ob sich Schieberblech problemfrei öffnen und schließen läßt.

7) Beim Einbau des Schiebers darauf achten, daß nicht zu lange Flanschverbindungsschrauben verwendet werden, bzw. daß diese nicht am Schieberblech schleifen.

8) Oberes und unteres Schutzblech (G) so montieren, daß die Bleche dicht am Eahmen anliegen.
Positionierung der selbst klebenden Dichtung prüfen.

5) Positionner les boulons M12 avec les grandes rondelles sur la partie supérieure de la lame (E). Monter les rondelles plus petites et les écrous autobloquants: ne pas serrer complètement.

6) Serrer les 4 boulons qui mantiennent la plaque (F) sur le corps de la vanne.Verifier le fonctionnement de la vanne en utilisant son actionneur.

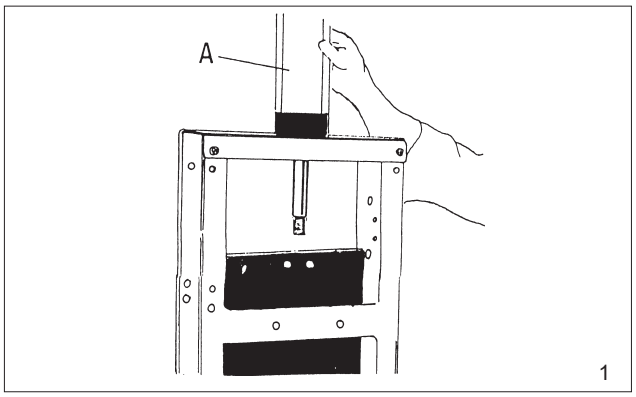
7) Pendant l'installation utiliser sur la partie supérieure des boulons qui ne seront pas en contact avec la lame.

8) Quand le montage est effectué monter les tôles de protection (G) en s'assurant qu'elles sont parfaitement adhérentes au châssis.
Verifier le positionnement de la garniture adhesive.

5) Posizionare i bulloni M12 e le rondelle grandi sulla parte superiore della lama (E). Montare le rondelle piu' piccole e i dadi autobloccanti: non serrare completamente.

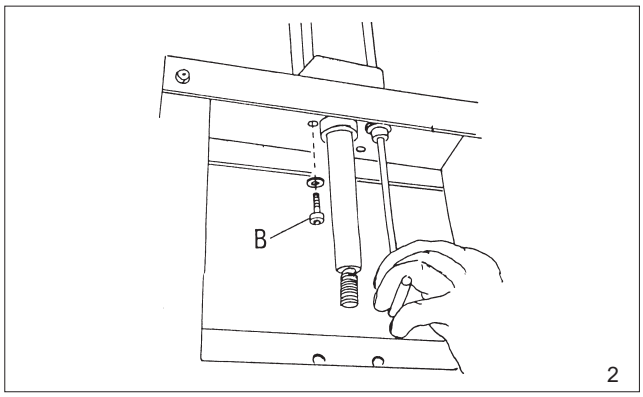
6) Serrare i 4 bulloni che collegano il traverso (F) al corpo valvola. Verificare la funzionalità della valvola agendo sull'attuatore.

7) All'installazione, utilizzare nella parte superiore bulloni di lunghezza tale da non interferire con lo scorrimento della lama.



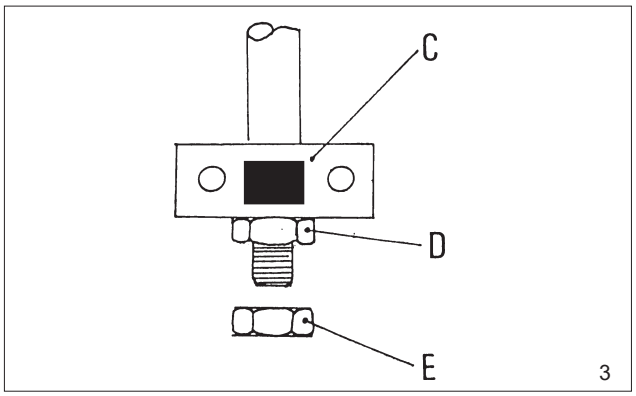
8) Ad installazione effettuata montare le lamiere di protezione (G), accertandosi che siano perfettamente aderenti alla lamiera piegata.
Verificare il corretto posizionamento della mousse.

SUPPLY:
C) 1 bush
H) 1 electrovalve support bracket
B) Bolts, nuts, spring washers and flat washers
• Cardboard box

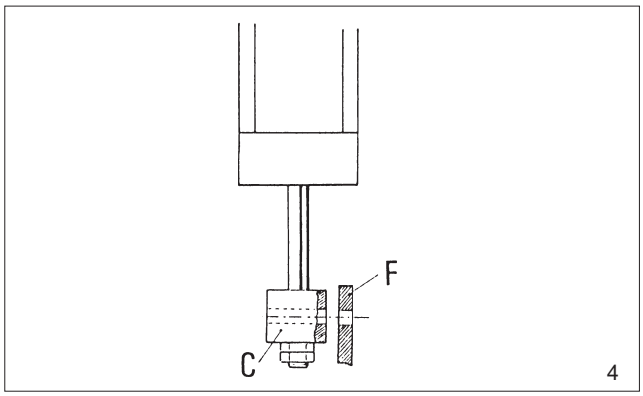


LIEFERUMFANG:
C) 1 Lagerbuchse
H) 1 Magnetventilhalterung
B) Schrauben, Muttern, Sprengringe, Unterlegscheiben
• Kartonverpackung

FOURNITURE:
C) 1 embout
H) 1 support électrovanne
B) Boulonnerie
• Emballage



FORNITURA:
C) 1 boccola
H) 1 staffa per elettrovalvola
B) Bulloneria
• Imballo



1

2

3

4

NOTE.: DURING ASSEMBLY THE BLADE MUST REST ON ALL BEARINGS. ONLY AFTER HAVING CHECKED THIS UP-END VALVE FOR ACTUATOR ASSEMBLY.

1) Insert pneumatic cylinder (A) into central bore on upper crosspiece of valve body.

2) Fix cylinder by inserting 4 bolts M8x25, spring washers, flat washers and nuts (B) from below and tighten crossways.

3) Fit bush onto rod so the sticker on the bush remains visible. Fix bush by screwing on nut (D) and self-locking nut (E).Tighten bolts and nuts.

4) Slide down rod until bores on bush (C) and on blade (F) correspond.

N.B.: ZUR MONTAGE MUSS DAS SCHIEBERBLECH AUF ALLEN ROLLENLAGERN AUFLIEGEN. ERST NACH ERFOLGTER ÜBERPRÜFUNG, DASS DEM SO IST, SCHIEBER ZWECKS MONTAGE DER ANTRIEBSEINHEIT HOCHKANT STELLEN.

1) Pneumatikzylinder (A) durch mittige Bohrung des oberen Rahmen-Quertragers stekken.

2) Mittels 4 Schrauben M8x25 und Sprengringen, Unterlegscheiben und Muttern (B) Zylinder befestigen. Schrauben über Kreuz festziehen.

3) Lagerbuchse (C) auf Zylinderstange schieben, dann Mutter (D) und selbstsichernde Mutter (E) anbringen und festziehen.

4) Zylinderstange so weit vor- oder zurückschieben bis sich Bohrungen von Lagerbuchse (C) und Schieberblech (F) überlagern.

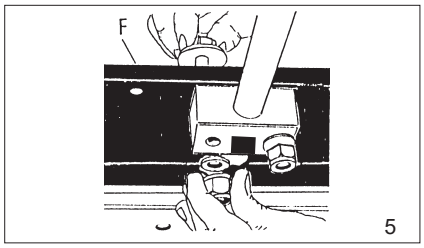
NOTE.: PENDANT LES OPERATIONS DE MONTAGE LA GUILLOTINE DOIT APPUYER SUR TOUS LES ROULEMENTS. ENSUITE METTRE LA VANNE EN POSITION VERTICALE POUR LE MONTAGE DE L'ACTIONNEUR.

1) Insérer cylindre pneumatique (A) dans le logement central.

2) Fixer le avec les boulons M8x25, les rondelles et les écrous (B) et serrer les en croix.

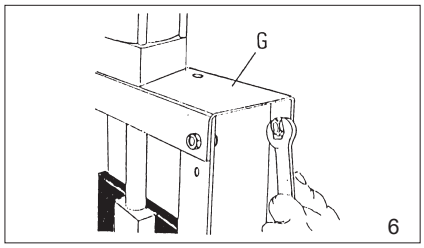
3) Monter sur l'arbre du cylindre l'embout (C), ensuite l'écrou (D) et le contre-écrou (E). Serrer en adhérence.

4) Agir sur l'arbre du cylindre jusq' à la superposition des trous de l'embout (C) de la guillottine (F).



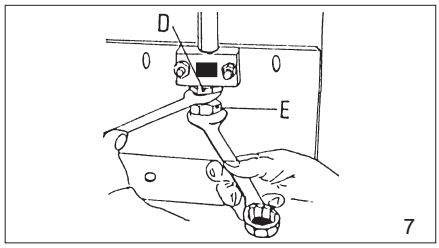
NB. : ALL'ATTO DEL MONTAGGIO, LA LAMA DEVE TROVARSI APPOGGIATA SU TUTTI I CUSCINETTI. SOLTANTO ORA METTERE LA VALVOLA IN POSIZIONE VERTICALE PER IL MONTAGGIO DELL'ATTUATORE.

1) Inserire il pistone pneumatico (A) nell'apposito foro del telaio.

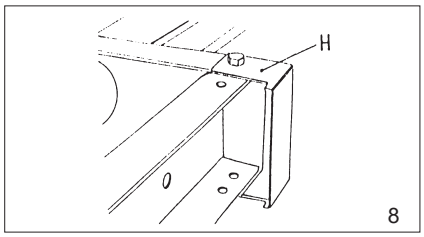


2) Fissare mediante appositi bulloni M8x25, rondelle e dadi (B). Serrare con tecnica a croce.

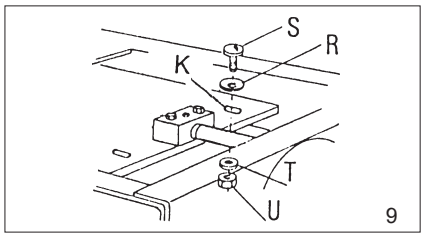
3) Montare sullo stelo la boccola (C), quindi dado (D) e controdado (E). Serrare in aderenza.



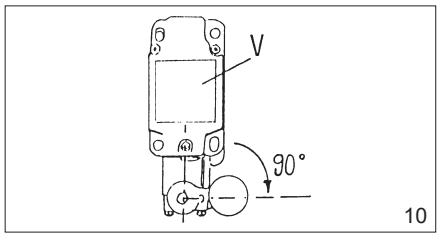
4) Agire sullo stelo fino alla sovrapposizione dei fori sulla boccola (C) e quelli sulla lama (F).



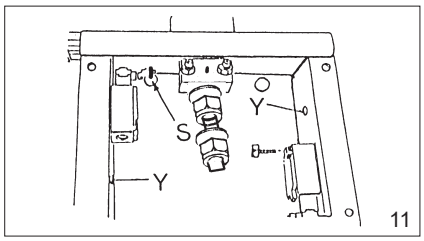
5



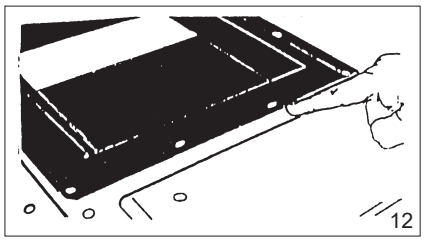
6



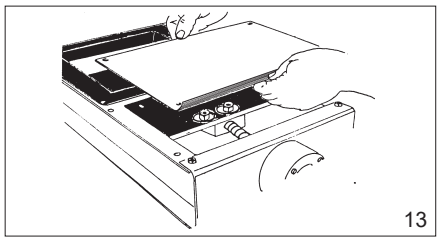
7



8



9



10

11

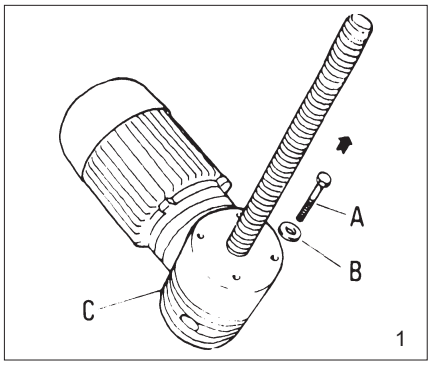
12

13

5) Place M12 bolts and the large washers on top side of blade (F). Insert small washers and self-locking nuts without tightening completely.
6) Tighten 4 bolts that fix upper crosspiece (G) to valve frame.
7) Loosen by a quarter turn bush fixing nuts (D) and (E). Tighten bottom nut (E) to top one (D).
8) If required, now, mount electrovalve for pneumatic actuator onto separately supplied support bracket (H) using 2 crosspiece connecting bolts.
9) Position washers Ø 12 (R) on bottom side of blade. Insert round head bolt M8x25 (S) and fix from top side using washers Ø 8 (T) and nuts (U).
10) Put arms of limit switches (V) at right angle so that after being fitted rollers face blade slots.
11) Fix limit switches to the inside of the side using nuts and bolts. Open valve position = head of the bolt (S) must rest on limit switch roller. Holes (Y) are cable passages. Check switch operation before starting regular operation.
12) For valve installation use bolts which are short enough not to interfere with blade.
13) When assembly is completed mount the top and bottom guard ensuring they perfectly adhere to the frame, and check the positioning of the self-adhesive gasket.

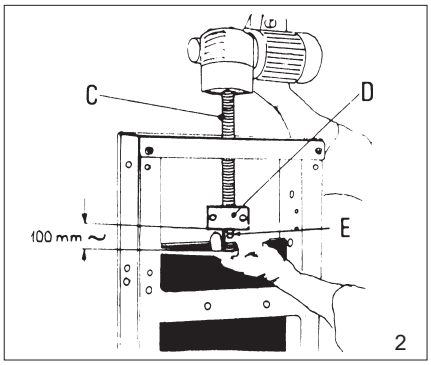
5) M12er Schrauben mit großen Unterlegscheiben von oben in Schieberblech (F) stecken. Mit kleinen Unterlegscheiben und selbstsichernden Muttern befestigen, jedoch nicht zu fest anziehen.
6) 4 Befestigungsschrauben des antriebsseitigen Winkelrahmenbleches (G) festziehen.
7) Muttern (D) und (E) um eine Vierteldrehung lockern. Untere Kontermutter (E) gegen obere Mutter (D) festziehen.
8) Sofern erforderlich, Magnetventil zur Zylinderbetätigung auf der lose mitgelieferten Halterung (H) befestigen und die Einheit gem. Abb. unter Verwendung der zwei Verbindungsschrauben am Rahmen (G) montieren.
9) Schieber flach legen, sodaß die Schieberunterseite nach oben zeigt. Zwei Zylinderkopfschrauben M8x25 (S) und Unterlegscheiben Ø12 (R) mittig in die Langlöcher im Schieberblech stecken. Auf der Gegenseite Muttern (U) mit Unterlegscheiben Ø 8 (T) anbringen und festziehen.
10) Schwenkhebel der Endschalter (V) in rechtwinklige Position bringen. Endschalterhebelrolln müssen Langlochern im Schieberblech gegenüberstehen.
11) Endschalter an den Längsstreben des Schieberrahmens mittels Schrauben und Mutterm befestigen. POSITION SCHIEBER AUF = Schraubenkopf (S) wirkt auf die Schwenkhebelrolle des dem Antrieb näher liegenden Endschalters. Die Bohrungen (Y) in den längsseitigen Winkelrahmenblechen des Schiebergehäuses dienen als Kabeldurchgänge zu den Endschaltern. Vor dem Einbau Schieber- und Endschalterfunktion prüfen.
12) Beim Einbau des Schiebers darauf achten, daß nicht zu lange Flanschverbindungsschrauben verwendet werden, bzw. daß diese nicht am Schieberblech schleifen.
13) Oberes und unteres Schutzblech so montieren, daß die Bleche dicht am Eahmen anliegen und Positionierung der selbst klebenden Dichtung prüfen.

5) Positioner les boulons M12 et les rondelles plus grandes sur la partie supérieure de la guillottine (F). Monter les petites rondelles et les écrous autobloquants; ne pas les serrer complètement.
6) Serrer les 4 boulons positionnées entre la traverse (G) et le corps de la vanne.
7) Dessérer de 1/4 de tour les écrous (D) et (E): serrer l'écrou Inférieur (E) sur l'écrou supérieur.
8) Si nècessaire monter l'electrovanne de commande pour le cylindre, fixer le support (H) avec les deux vis de connexion de la traverse (G).
9) Placer les rondelles Ø 8 (R) dans la partie inférieure de la guillottine en correspondence avec le trou. Insérer la vis a tête ronde M8x25 (S) sur la partie supérieure avec les rondelles Ø8 (T) et les écrous (U).
10) Tourner les bras des fins de courses (V) jusqu'à ce qu' ils soient perpendiculaires à l'axe d'eux-mêmes: le galet doit être positionné sur la guilliottine sur la cotè du trou.
11) Fixer les fin de courses sur le longerons sur la côtè écrous. Position de vanne ouverte: la tête de la vis (S) doit être positionné sur le galet du fin de course. Les trous (Y) sont pour sortir le cäblage. Vèrifier le fonctionnement et le correcte branchement des fins de course.
12) Pendant le montage de la partie supérieure utiliser des boulons avec une longeur qui n'interfèrent pas avec la guillottine.
13) Après l'installation monter les tôles de protection en s'assurant qu'elles sont parfaitement adhérentes au châssis et verifier le positionnement de la garniture adhesive.



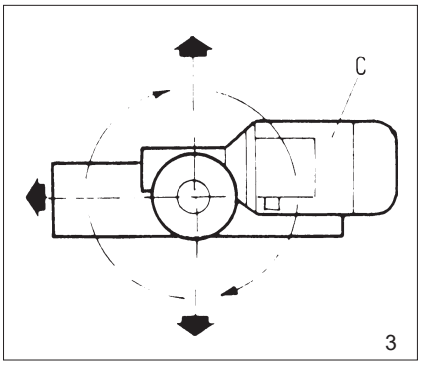
5) Posizionare i bulloni M12 e le rondelle grandi sulla parte superiore della lama (F). Montare le rondelle più piccole e dadi autobloccanti: non serrare completamente.
6) Serrare i 4 bulloni che collegano il traverso (G) al corpo valvola.
7) Allentare di 1/4 di giro i dadi (D) ed (E); serrare il dado inferiore su quello superiore.
8) Se necessario montare l'elettrovalvola di comando per il cilindro, fissare la staffa (H) sfruttando i 2 bulloni di collegamento del traverso (G).
9) Disporre le rondelle Ø12 (R) nella parte inferiore della lama. Infilare la vite a testa tonda M5x25 (S) nell'asola (K) che consente anche una eventuale registrazione della corsa della lama; nella parte superiore, utilizzare rondelle Ø 8 (T) e dadi (U).
10) Portare i braccetti dei finecorsa (V) perpendicolari all'asse degli stessi: la rotella deve disporsi sulla lama dalla parte dell'asola.
11) Fissare i finecorsa sui longheroni del corpo valvola con viti e dadi. Posizione di valvola aperta: testa della vite (S) sulla rotella del finecorsa. Fori (Y) per uscita cablaggi. Verificare funzionalità e consensi fine corsa a banco.
12) All'installazione, utilizzare nella parte superiore bulloni di lunghezza tale da non interferire con lo scorrimento della lama.
13) Ad installazione effettuata montare le lamiere di protezione accertandosi che siano perfettamente aderenti alla lamiera piegata e verificare il corretto posizionamento della mousse.

SUPPLY:
C) 1 gear motor actuator
D) 1 nut screw
V) 2 electrovalves
• Bolts, nuts and washers
• Cardboard box

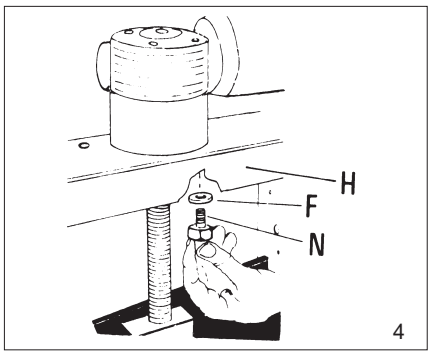


LIEFERUMFANG:
C) 1 Getriebemotor mit Spindel
D) 1 Schloßmutter
V) 2 Magnetventlle
• Schrauben, Muttern, Unterlegscheiben
• Kartonverpackung

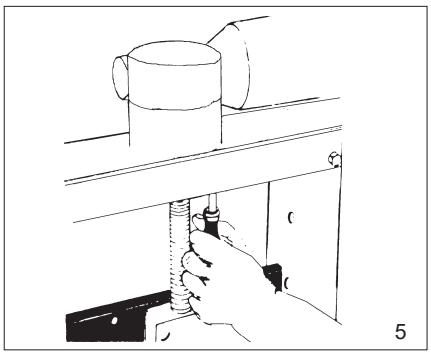
COMPLETE AVEC:
C) 1 actionneur avec motoréducteur
D) 1 support à écrou
V) 2 électrovannes
• Vis et rondelles
• Emballage



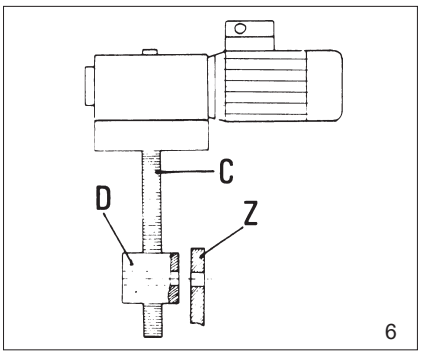
LA FORNITURA COMPRENDE:
C) 1 attuatore con motoriduttore
D) 1 chiocciola
V) 2 elettrovalvole
• Bulloneria
• Imballo



1



2



3

4

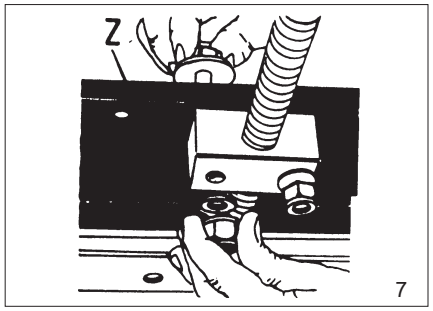
5

6

NOTE: DURING THE INSTALLATION THE BLADE HAS TO BE SUPPORTED ON ALL THE BEARINGS. ONLY AFTER HAVING CHECKED THIS UP-END VALVE FOR ACTUATOR ASSEMBLY.

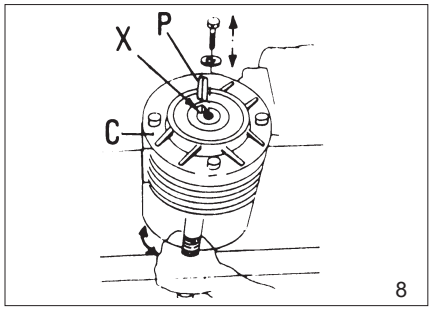
1) Remove the 4 bolts (A) and washers (B) from the actuator.
2) Introduce the actuator spindle (C) into the central bore on the upper crosspiece of the valve body. Screw nut screw (D) onto spindle by approx. 100 mm with grease nipple (E) pointing outside.
3) Choose position of actuator (C).
4) Introduce 4 washers (F) and bolts (N) from below through upper crosspiece (H) into threaded bores of the actuator.
5) Tighten bolts.
6) Turn spindle (C) by hand until bores on nut screw (D) and those on blade (Z) correspond.

N.B.: FÜR DIE MONTAGE MUSS DAS SCHIEBERBLECH AUF ALLEN LAGERROLLEN AUFLIEGEN. ERST NACH ERFOLGTER PRÜFUNG, DASS DEM SO IST, SCHIEBER ZWECKS MONTAGE DES ANTRIEBS HOCHKANT STELLEN.



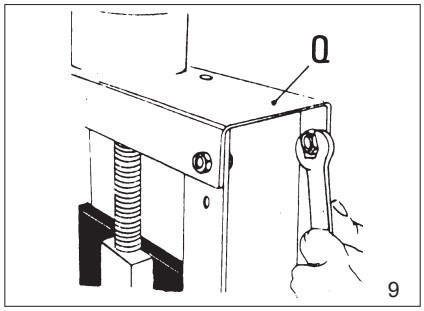
1) Die 4 Schrauben (A) samt Unterlegscheiben (B) vom Antrieb entfernen.
2) Antriebsspindel Spindel (C) durch mittige Bohrung im Rahmen-Quertrager stecken. Schloßmutter (D) ca. 100 mm weit so auf Spindel schrauben, daß Schmiernippel (E) nach außen zeigt.
3) Antriebsposition wählen.
4) Die 4 mit Scheiben (F) unterlegten Schrauben (N) von unten durch den Querträger (H) in die Gewindebohrungen des Antriebs einführen.
5) Schrauben fest anziehen.
6) Spindel (C) so lange von Hand drehen bis sich die Bohrungen der Schloßmutter (D) die des Schieberblechs (Z) überlagern.

NOTE: PENDANT LE MONTAGE DE LA VANNE, LA GUILLOTTINE DOIT APPUYER SUR TOUS LES ROULEMENTS. ENSUITE METTRE LA VANNE EN POSITION VERTICALE POUR LE MONTAGE DE L'ACTIONNEUR.

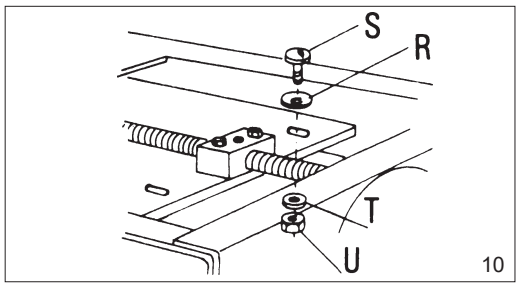


1) Enlever les 4 boulons (A) et les rondelles (B) de l'actionneur.
2) Insérer la vis mère (C) de l'actionneur dans le logement de la vanne. Serrer le support à écrou (D) à environ 100 mm avec le graisseur (E) vers l'extérieur.
3) Orienter l'actionneur.
4) Positionner les 4 rondelles (F) et insérer les boulons (N) du bas à travers le corps (H) dans les trous filetés de l'actionneur.
5) Serrer les boulons.
6) Tourner manuellement la vis mère (C) de l'actionneur jusq'à obtenir la superposition des trous du support à écrou (D) et ceux de la guillottine (Z).

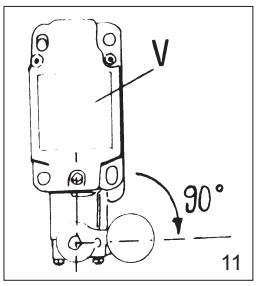
NB. : ALL'ATTO DEL MONTAGGIO LA LAMA DEVE TROVARSI APPOGGIATA SU TUTTI I CUSCINETTI. SOLTANTO ORA METTERE LA VALVOLA IN POSIZIONE VERTICALE PER IL MONTAGGIO DELL'ATTUATORE.



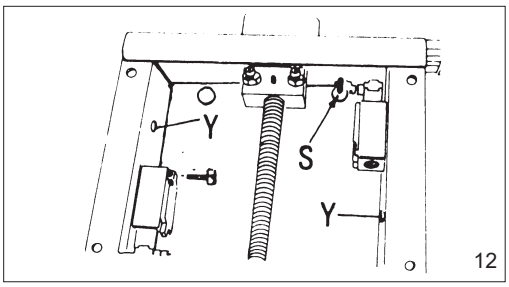
1) Svitare i 4 bulloni (A) e rondelle (B) dall'attuatore.
2) Inserire la madrevite (C) dell'attuatore nell'apposito foro del corpo valvola. Avvitare la chiocciola (D) per ~100 mm, con l'ingrassatore (E) verso l'esterno.
3) Scegliere la posizione dell' attuatore.
4) Posizionare le 4 rondelle (F) e inserire i bulloni (N) dal basso attraverso il corpo (H) nei fori filettati dell'attuatore.
5) Serrare i bulloni.
6) Ruotare manualmente la madrevite (C) dell'attuatore fino alla sovrapposizione dei fori della chiocciola (D) e quelli sulla lama (Z).



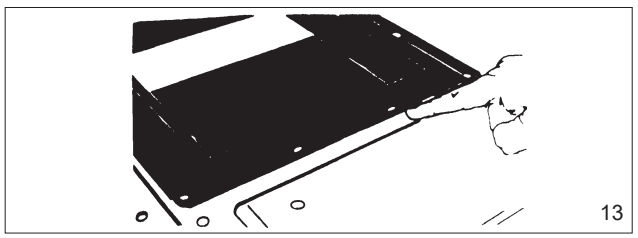
7



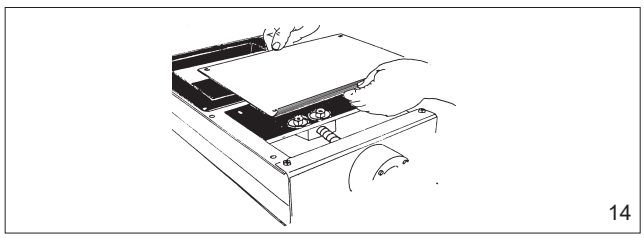
8



9



10



11

12

13

14

7) Introduce into the blade (Z) from above the two M12 bolts along with the large washers. Insert small washers and screw on self-locking nuts from below without tightening them up.
8) Remove central bolt and washer from top side of the actuator. Turn spindle by hand until key slots in the reducer housing (X) are aligned. Insert parallel key (P) and reinsert central bolt and washer. Tighten the bolt.
9) Tighten the 4 bolts that fix upper cross-piece (Q) to valve frame.
10) Position washers D.12 (R) on the rear side in the centre of the slots. Insert round head screws M8x25 (S). Insert washers D.8 (T) and nuts (U) from op-posite side.
11) Put arms of limit switches (V) at right angle so that after being fitted rollers face blade slots.
12) Fix limit switches to the inside of the side using nuts and bolts. **Open valve position** = head of the bolt (S) must rest on limit switch roller. Holes (Y) are cable passages. Check switch opera-tion before starting regular operation.
13) For valve installation use bolts which are short enough not to interfere with blade.
14) Carry out greasing (see operation and maintenance manual, item "**I** 2").
15) Mount the top and bottom guard ensur-ing they perfectly adhere to the frame. Check the positioning of the self-adhesive gasket.

7) Von oben die mit den großen Scheiben unterlegten M12er Schrauben durch das Schieberblech (Z) stecken. Kleine Unterlegscheiben und selbstsichernde Muttern mit zunächst lockerem Sitz von unten anbringen.
8) Mittige Schraube und Unterlegscheibe oben im Antrieb entfernen. Spindel so weit von Hand drehen bis die Paß-federnuten (X) im Getriebegehäuse exakt gegenüberstehen. Paßfeder (P) elnführen und mittige Schraube samt Unterlegscheibe wieder eindrehen und festziehen.
9) Die 4 Verbindungsschrauben zwischen Winkelrahmenblech (Q) und Rahmen festziehen.
10) Schieber flach legen, so daß die Schieberunterseite nach oben zeigt. 2 Zylinderkopfschrauben M8x25 (S) und Unterlegscheiben D.12 (R) mittig in die Langlöcher im Schieberblech plazieren. Auf Gegenseite Muttern (U) mit Unterlegscheiben D.8 (T) anbringen und festziehen.
11) Schwenkhebel der Endschalter (V) in rechtwinklige Position bringen. End-schalterhebelrolln müssen langlöchern Schieberblech gegenüberstehen.
12) Endschalter an den Längsstreben des Schieberrahmens mittels Schrauben und Mutterm befestigen. **Position Schieber auf** = Schraubenkopf (S) wirkt auf die Schwenkhebelrolle des dem Antrieb näher liegenden Endschalters. Die Bohrungen (Y) in den längssetigen Winkelrahmenblechen des Schieber-gehäuses dienen als Kabeldurchgänge zu den Endschaltern. Vor dem Einbau Schieber- und Endschalterfunktion prüfen.
13) Beim Einbau des Schiebers darauf achten, daß nicht zu lange Flanschver-bindungsschrauben verwendet werden, bzw. daß diese nicht am Schieberblech schleifen.
14) Nachschmieren (siehe Betriebs- und Wartungsanleitung, Pos. "**I** 2").
15) Oberes und unteres Schutzblech so montieren, daß die Bleche dicht am Eahmen anliegen.
Positionierung der selbst klebenden Dichtung prüfen.

7) Insérer les boulons M12 et les rondelles les plus grosses à travers la partie supérieure de la guillottine (Z). Monter les rondelles plus petites et le écrous autobloquants dans la partie inférieure; ne pas les serrer completement.
8) Enlever les boulons et les rondelles de l'actionneur. Tourner la vis mère de l'actionneur juaqu'à joindre les logements (X) de la clavette. Insérer la clavette (P) et remonter les rondelles et les boulons; les serrer.
9) Serrer les 4 boulons positionnés entre la traverse (Q) et le corps de la vanne.
10) Placer les rondelles D.12 (R) dans la partie inférieure de la guillottine en correspondance avec le trou. Insérer la vis a tête ronde M8x25 (S) sur la partie supérieure avec les rondelles D. 8 (T) et les écrous (U).
11) Tourner les bras des fins de courses (V) jusqu'à ce qu' ils soient perpendiculaires à l'axe d'eux-mêmes: le galet doit être positionné sur la guillottine sur la côté du trou.
12) Fixer les fin de courses sur le longerons sur la côté écrous. **Position de vanne ouverte** = la tête de la vis (S) doit être positionné sur le galet du fin de course. Les trous (Y) sont pour sortir le câblage. Vérifier le fonctionnement et le correcte branchement des fins de course.
13) Pendant le montage de la partie supé-rieure utiliser des boulons avec une longeur qui n'interfèrent pas avec la guillottine.
14) Pourvoir au graissage du bloc (voir manuel d'utilisation et d'entretien, pos. "**I** 2").
15) Monter les tôles de protection en s'assurant qu'elles sont parfaitement adhérentes au châssis.
Verifier le positionnement de la garniture adhesive.

7) Posizionare le viti M12 e rondelle grandi sulla parte superiore della lama (Z). Montare le rondelle più piccole e dadi autobloccanti nella parte inferiore: non serrare con forza.
8) Togliere vite e rondella dal comando (C). Ruotare la madrevite e far coincidere le sedi (X) di linguetta. Inserire linguetta (P) e rimontare rondella e vite. Serrare.
9) Serrare le 4 viti che collegano il traverso (Q) al corpo valvola.
10) Disporre le rondelle Ø12 (R) nella parte inferiore della lama, contralmente all'a-sola. Infilare la vite a testa tonda M8x25 (S); nella parte superiore utilizzare rondelle Ø8 (T) e dadi (U).
11) Portare i braccetti dei finecorsa (V) perpendicolari all'asse degli stessi: la rotella deve disporsi sulla lama dalla parte dell'asola.
12) Fissare i finecorsa sui longheroni del corpo valvola con viti e dadi. **Posizione di valvola aperta** = testa della vite (S) sulla rotella del fine corsa. Fori (Y) per uscita cablaggi. Verificare funzionalità e consensi fine corsa a banco.
13) Installare valvola: attenzione a non interferire con le viti allo scorrimento della lama.
14) Provvedere all'ingrassaggio del bloc-chetto (vedi cat.USO E MANUTENZIO-NE **"I** 2").
15) Montare le lamiere di protezione accertandosi che siano perfettamente aderenti alla lamiera piegata.
Verificare il corretto posizionamento della mousse.

CHECK LIST IN CASE OF TROUBLE

1) General questions

Fault description

a) Does valve open and close after longer periods without problems?
b) Do atmospheric conditions influence operation in a negative way?
c) If valve is fitted to feeder outlet check centre line of valve shaft is parallel with centre line of feeder, as would be fitted in normal circumstances. Check valve opens completely.
Make sure feeder outlet valve is open when feeder starts and only closes when feeder has stopped.
If necessary disconnect valve actuator in open position.

Silo check

a) Is silo equipped with a deflecting or bridge breaking cone.
b) Is silo equipped with cone fluidization system. If so how does it operate? Automatically at intervals while feeder is running. Manually on emergency in case of bridging.
c) Is silo cone equipped with vibrator or knocker.

Checking of gear motor actuators

a) Is a drop in voltage possible through the contemporary starting of different machines?
b) Is the plant equipped with a generator?
c) Check mains supply arrives at motor.
d) Check electric motor is correctly connected and ensure wires are tightly fastened.
e) Check adjustment of thermal cutout in the control panel and compare with data on motor plate.
f) Check sense of motor rotation is correct.

Checking of pneumatic actuators

Check compress air supply is 6 bar.

CHECKLISTE BEI BETRIEBSSTORUNGEN

1) Allgemeine Fragen

Beschreibung der Fehlfunktion

a) Offnen bzw. Schließen nach längeren Stillstandzeiten problemlos?
b) Spielen beim Auftreten der Storungen Witterungseinflüsse eine Rolle?
c) Wenn Auslaufklappe vorhanden, prüfen ob Klappenachse mit Schneckenachse fluchtet (so wäre es richtig) und ob Klappe ganz offnet.
Ist gewährleistet, daß die Auslaufklappe geoffnet ist, wenn die Schnecke anläuft und erst dann schließt, wenn die Schnecke bereits abgeschaltet ist?
Eventuell bei weiteren Tests Klappenantrieb bei vollkommen geoffneter Klappe abklemmen.

Kontrolle des Silos

a) Ist Silo mit einem Brechkegel ausgestattet?
b) Ist Silo mit einer Luftauflockerung oder einer andersartigen Austraghilfe ausgerüstet? Wenn ja, erfolgt nur eine Notbelüftung von Hand, oder wird die Belüftung bei der Dosierung automatisch zugeschaltet? Wenn automatisch, arbeitet dann die Belüftung im Intervallbetrieb, d.h. stoßweise?
c) Ist Silokonus mit einem Rüttler oder Klopfer ausgestattet. Wenn ja, Funktion beschreiben.

Kontrollen bei elektrischen Antrieben

a) Ist es moglich, daß Spannungsschwankungen infolge eines gleichzeitigen Einschaltens mehrerer Maschinen auftreten?
b) Ist die Anlage mit einem Generator ausgestattet?
c) Prüfen, ob am Motor Spannung anliegt.
d) Prüfen, ob Motor korrekt angeschlossen ist und ob Klemmenmuttern fest angezogen sind.
e) Einstellung der Motorabsicherung in der Steuerung prüfen und mit Typenschildangaben auf dem E-Motor vergleichen.
f) Motor-Drehrichtung prüfen.

Kontrollen bei pneumatischen Antrieben

Druckluftanschluß prüfen (6 bar).

CHECK-LIST EN CAS DE PANNE

1) Demandes générales

Desription de la panne

a) Est ce que la vanne s'ouvre et se ferme sans problèmes méme après des longues périodes d'arrét?
b) Est ce que les conditions atmosphériques ont un róle ìmportant?
c) S'il y a une vanne montée sur la bouche de sortie de la vis, contrólez si l'axe de la vis et l'axe de l'arbre de la vanne sont parallèles (ainsi il est correct) et si la vanne s'ouvre complètement.
Est il sùr que la vanne est ouverte au moment où la vis démarre? Il faut qu'elle soit fermée seulement au moment où la vis est arrétée.
Eventuellement détachez le vérin à vanne ouverte!

Contróles du silo

a) Est ce que le silo est équipé d'un déflecteur casse-voúte?
b) Est ce que le silo est équipé d'un système de fluidification? Entre-t-il en fonctìon automatiquement pendant le dosage ou s'agit-il d'un dispositif manuel d'alerte pour casser des voútes?
c) Est ce que le silo est équipé d'un vibrateur ou d'un marteau pneumatique. Comment est ce qu'il fonctionne?

Controles avec actionneur électromécanique

a) Est qu'il y a la possibilité d'écarts de courant à cause du démarrage de plusieurs machines au méme temps?
b) Est ce que la centrale est équipée d'un générateur de courant?
c) Contrólez si le moteur reçoit courant.
d) Controlez si le moteur a été connecté correctement et si les fils ont été fixé bien aux bornes.
e) Contrólez la régulation thermique du moteur dans le coffret de commande et comparez-la aux données sur la plaque du moteur.
f) Vérifiez que le sens de rotation du moteur électrique soit correct.

Controles avec actionneur électropneumatique

Vérifier connexion avec ligne (6 bar).

CHECK-LIST IN CASO DI GUASTO

1) Domande generali

Descrizionedel guasto

a) La valvola apre e chiude senza problemi anche dopo lunghi periodi di sosta?
b) Pare che le condizioni atmosferiche contribuiscano al malfunzionamento?
c) Qualora vi sia una valvola allo scarico della coclea controllare se l'asse della coclea e l'asse dell'albero della valvola sono paralleli (così sarebbe corretto) e se la valvola si apre completamente!
E' sicuro che la valvola è aperta nel momento in cui la coclea è già stata fermata?
Eventualmente staccare il comando della valvola aperta!

Controlli parte silo

a) Il silo è equipaggiato con un deflettore rompiponte?
b) Il silo è equipaggiato con un impianto di fluidificazione? Entra in funzione automaticamente durante il lavoro della valvola oppure si tratta di un dispositivo manuale di emergenza per eventuali ponti?
c) Il silo è equipaggiato con un vibratore o un martellatore? Come funziona?

Controlli con attuatore elettromeccanico

a) Sono possibili sbalzi di corrente di alimentazione a causa dell'avviamento contemporaneo di diverse macchine?
b) L'impianto è equipaggiato con un generatore di corrente?
c) Controllare se il motore riceve corrente!
d) Controllare se il motore è collegato correttamente e se i fili sono fissati bene i morsetti!
e) Controllare la regolazione della termica del motore nel quadro generale e confrontarla con i dati sulla targhetta del motore!
f) Verificare il giusto senso di rotazione del motore elettrico!

Controlli con attuatore elettropneumatico

Verificare collegamento con la linea (6 bar).

2) Valve check

Check valve connection to upper counterflange is even and dust-tight.

3) Material

a) Material description?
b) Bulk density? (kg/dm^3)
c) Particle size? (µm/mm)
d) Humidity? (%)
e) Flowability? (make material slide down a metal plate by varying the angle from low to steep)
f) Compressible material? (can you make a “snowball”?)
g) Abrasive material? (does it hurt when rubbing it between fingers?).

2) Prüfung der Klappe

Prüfen, ob die KLappe plan auf dem oben anschließenden Gegenflansch anliegt.

3) Prüfung des Fördermediums

a) Materialbezeichnung?
b) Schüttgewicht? (kg/dm^3)
c) Körnung? (µm/mm)
d) Feuchte? (%)
e) Fließfähigkeit?(Materialprobe auf einem geneigten Blech zum Fließen bringen)
f) Komprimierbarkeit? (Kann ein “Schneeball” geformt werden?)
g) Abrasivität? (Schmerzt es, wenn man Material zwischen den Fingern reibt?).

2) Contrôle de la vanne

Vérifier que la vanne soit solidaire à la bride supérieure parfaitement plane.

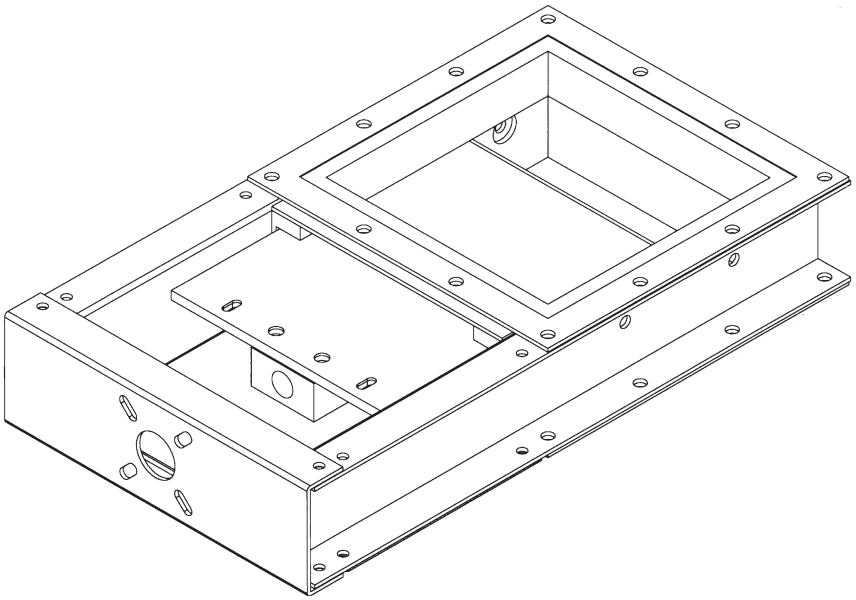
3) Contrôle du Matériau

a) Désignation du matériau
b) Densité? (kg/dm^3)
c) Granulométrie? (µm/mm)
d) Humidité? (%)
e) Fluidité? (faites couler le matériau sur une tôle en augmentant l’inclinaison de la-même)
f) Compressibilité? (est-il possible de faire une “boule de neige”?)
g) Abrasivité? (est ce qu’il fait mal quand on frotte le matériau dans les doigts?).

2) Controllo della Valvola

Verificare che la valvola sia solidale a una flangia superiore che sia perfettamente planare.

3) Controllo del Prodotto



a) Denominazione del prodotto?
b) Densità? (kg/dm^3)
c) Granulometria? (µm/mm)
e) Scorrevolezza? (fare scorrere il materiale su una lamiera aumentando lentamente l’inclinazione)
f) Comprimibilità? (è possibile fare una “palla di neve”?)
g) Abrasività? (fa male quando si sfrega il prodotto tra le dita?).

ORIGINAL INSTRUCTIONS IN ENGLISH

WAM®

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*

This publication cancels and replaces any previous edition and revision.

WATTS

SERIES R119, AIR PRESSURE REGULATOR VALVE

LEFT BLANK

Pneumatic Division
Richland, Michigan 49083
269-629-5000

Installation & Service Instructions
IS-R119

R119, 1/4", 3/8", 1/2", 3/4", 1", 1-1/4", 1-1/2" Series Regulators

ISSUED: October, 2010
Supersedes: November, 2006

Doc. #ISR119, EN #100901, Rev. 5

⚠WARNING

To avoid unpredictable system behavior that can cause personal injury and property damage:

- **Disconnect electrical supply (when necessary) before installation, servicing, or conversion.**
- **Disconnect air supply and depressurize all air lines connected to this product before installation, servicing, or conversion.**
- **Operate within the manufacturer's specified pressure, temperature, and other conditions listed in these instructions.**
- **Medium must be moisture-free if ambient temperature is below freezing.**
- **Service according to procedures listed in these instructions.**
- **Installation, service, and conversion of these products must be performed by knowledgeable personnel who understand how pneumatic products are to be applied.**
- **After installation, servicing, or conversion, air and electrical supplies (when necessary) should be connected and the product tested for proper function and leakage. If audible leakage is present, or the product does not operate properly, do not put into use.**
- **Warnings and specifications on the product should not be covered by paint, etc. If masking is not possible, contact your local representative for replacement labels.**

⚠WARNING

Product rupture can cause serious injury.
Do not connect regulator to bottled gas.
Do not exceed maximum primary pressure rating.

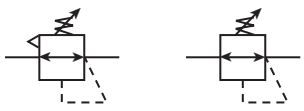
Safety Guide

For more complete information on recommended application guidelines, see the Safety Guide section of Pneumatic Division catalogs or you can download the **Pneumatic Division Safety Guide** at: www.parker.com/safety

Introduction

Follow these instructions when installing, operating, or servicing the product.

Application Limits



These products are intended for use in general purpose compressed media systems only.

Operating Pressure:

	kPa	PSIG	bar
Maximum Inlet Pressure	2068	300	21.0

Ambient Temperature Range: 40°F to 125°F (4°C to 52°C)

Symbols

Relieving Regulator Adjustable **Non-Relieving Regulator Adjustable**

Installation

1. The regulator should be installed with reasonable accessibility for service whenever possible - repair service kits are available. Keep pipe and tubing lengths to a minimum with inside clean and free of dirt and chips. Pipe joint compound should be used sparingly and applied only to the male pipe - never into the female port. Do not use PTFE tape to seal pipe joints - pieces have a tendency to break off and lodge inside unit, possibly causing malfunction.
2. Install regulator so that media flow is in the direction of arrow. Installation must be upstream (high pressure) side and as close to the devices it is to service (valve, cylinder, tool, etc.). Mounting may be in any position.
3. Gauge ports are located on both sides of the regulator body for your convenience. It is necessary to install a gauge or pipe plugs into each port during installation.
4. For protection against rust, pipe scale, and other foreign matter, install a filter on the upstream (high pressure) side as close to the regulator as possible.

Operation

1. Before turning on the media source turn the T-handle counterclockwise until compression is released from the Control Spring. Then turn on media source and adjust regulator to desired secondary pressure by turning T-handle clockwise. This permits pressure to build up slowly, preventing any unexpected operation of the valve, cylinders, tools, etc., attached to the line. Adjustment to desired secondary pressure can be made only with primary pressure applied to the regulator.
2. To decrease regulator pressure setting, always reset from a pressure lower than the final setting desired. For example, lowering the secondary pressure from 550 to 410 kPa (80 to 60 PSIG) is best accomplished by dropping the secondary pressure to 350 kPa (50 PSIG), then adjusting upward to 410 kPa (60 PSIG). Tighten the Locking Nut on the T-handle to lock the pressure setting.

Reduced Pressure Spring Ranges

"A" Range = 1 – 25 PSI (1/4", 3/8", 1/2" Only)
"B" Range = 2 – 60 PSI (1/4", 3/8", 1/2" Only)
"C" Range = 2 – 125 PSI (ALL)
"D" Range = 5 – 250 PSI (ALL)

Service

⚠ **Caution: Disconnect or shut off air supply and exhaust the primary and secondary pressures before servicing unit. Turning the T-handle counterclockwise does not vent downstream pressure on non-relieving regulators. Downstream pressure must be vented before servicing regulator.**

⚠WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from The Company, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application, including consequences of any failure and review the information concerning the product or systems in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

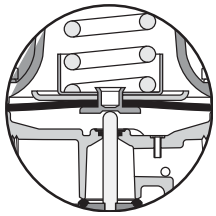
The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by The Company and its subsidiaries at any time without notice.

EXTRA COPIES OF THESE INSTRUCTIONS ARE AVAILABLE FOR INCLUSION IN EQUIPMENT / MAINTENANCE MANUALS THAT UTILIZE THESE PRODUCTS. CONTACT YOUR LOCAL REPRESENTATIVE.

⚠ **Caution: Grease packets are supplied with kits for lubrication of seals. Use only mineral based grease or oils. Do not use synthetic oils such as esters. Do not use silicones.**

Note: After servicing unit, turn on air supply and adjust regulator to the desired downstream pressure. Check unit for leaks. If leakage occurs, do not operate - conduct repairs and retest.

A. Servicing the Bonnet and Diaphragm Assembly



1. Turn the T-handle counterclockwise until the compression is released from the Pressure Control Spring.
2. Remove Bonnet Mounting Screws, Bonnet Assembly, Pressure Control Spring and Spring Button. Remove Diaphragm Assembly. Next, disassemble, clean, and carefully inspect parts for wear and / or damage. Wipe parts, clean with soapy water or denatured alcohol. If using compressed air to blow dry, be sure to wear appropriate eye protection. If replacement is necessary, use parts from service kits.
3. Install Diaphragm Assembly, Pressure Control Spring, Spring Button as shown below. Then, install Bonnet Assembly to Body with Mounting Screws and tighten in an alternating or star pattern to the following torque specifications:

   1/4", 3/8", 1/2" 2.3 to 4.5 Nm (20 to 40 in. lb.)

   3/4", 1-1/4", 1-1/2" 6.8 to 7.9 Nm (60 to 70 in. lb.)

B. Servicing the Poppet Assembly

1. Exhaust system media pressure as previously described. Then remove Bottom Plug by unscrewing it from Body. Next, remove Bottom Plug, O-ring, Bottom Spring and Inner Valve Assembly.
2. Next, disassemble, clean, and carefully inspect parts for wear and / or damage. If replacement is necessary, use parts from service kits.
3. Lubricate O-ring and sliding surfaces using grease supplied with service kit.
4. Install parts as shown.

R119 Regulator – Non-Relieving

R119 Regulator – Relieving

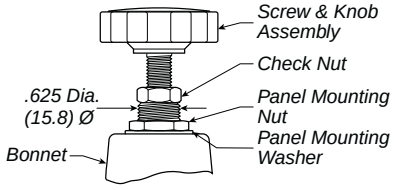
Ⓛ Lightly grease with provided lubricant.

✓ Inspect for nicks, scratches, and surface imperfections. If present, reduced service life is probable and future replacement should be planned.

Ⓒ Clean with lint-free cloth.

5. Lubricate Bottom Plug O-ring and install it in o-ring groove on Bottom Plug. Be sure Inner Valve Stem fits into center area of Diaphragm Assembly before installing Bottom Plug. Then screw Bottom Plug into Body until it bottoms out in body. Tighten to 3.5 to 5.1 Nm (35 to 45 in. lb.).
6. Turn on media source and adjust to desired secondary pressure as described in the Operation section. Check regulator for leakage. If leakage occurs, DO NOT OPERATE — conduct repairs again.

If you have questions concerning how to service this unit, contact your local authorized dealer or your customer service representative.



Service Kits Available

Description	Kit Number	Regulator Size
Bottom Plug Only	118Y2	1/4", 3/8"

Installation, operation and maintenance manual of electric motors

English 57

INSTALLATION, OPERATION AND MAINTENANCE MANUAL OF ELECTRIC MOTORS

This manual provides information about WEG induction motors fitted with squirrel cage, permanent magnet or hybrid rotors, low, medium and high voltage, in frame sizes IEC 56 to 630 and NEMA 42 to 9606/10.
The motor lines indicated below have additional information that can be checked in their respective manuals:

- Smoke Extraction Motors;
- Electromagnetic Brake Motors;
- Hazardous Area Motors.

These motors meet the following standards, if applicable:

- NBR 17094-1: Máquinas Elétricas Girantes - Motores de Indução - Parte 1: trifásicos.
- NBR 17094-2: Máquinas Elétricas Girantes - Motores de Indução - Parte 2: monofásicos.
- IEC 60034-1: Rotating Electrical Machines - Part 1: Rating and Performance.
- NEMA MG 1: Motors and Generators.
- CSA C 22.2 N°100: Motors and Generators.
- UL 1004-1: Rotating Electrical Machines - General Requirements.

If you have any questions regarding this manual please contact your local WEG branch, contact details can be found at www.weg.net.

TABLE OF CONTENTS

1. TERMINOLOGY 61

2. INITIAL RECOMMENDATIONS 62

2.1. WARNING SYMBOL 62

1. TERMINOLOGY

Balancing: the procedure by which the mass distribution of a rotor is checked and, if necessary, adjusted to ensure that the residual unbalance or the vibration of the journals and/or forces on the bearings at a frequency corresponding to service speed are within specified limits in International Standards.
[ISO 1925:2001, definition 4.1]

Balance quality grade: indicates the peak velocity amplitude of vibration, given in mm/s, of a rotor running free-in-space and it is the product of a specific unbalance and the angular velocity of the rotor at maximum operating speed.

Grounded Part: metallic part connected to the grounding system.

Live Part: conductor or conductive part intended to be energized in normal operation, including a neutral conductor.

Authorized personnel: employee who has formal approval of the company.

Qualified personnel: employee who meets the following conditions simultaneously:
- Receives training under the guidance and responsibility of a qualified and authorized professional;
- Works under the responsibility of a qualified and approved professional.

Note*: The qualification is only valid for the company that trained the employee in the conditions set out by the authorized and qualified professional responsible for training.*

2. INITIAL RECOMMENDATIONS

Electric motors have energized circuits, exposed rotating parts and hot surfaces that may cause serious injury to people during normal operation. Therefore, it is recommended that transportation, storage, installation, operation and maintenance services are always performed by qualified personnel.
Also the applicable procedures and relevant standards of the country where the machine will be installed must be considered.
Noncompliance with the recommended procedures in this manual and other references on the WEG website may cause severe personal injuries and/or substantial property damage and may void the product warranty.

For practical reasons, it is not possible to include in this Manual detailed information that covers all construction variables nor covering all possible assembly, operation or maintenance alternatives.
This Manual contains only the required information that allows qualified and trained personnel to carry out their services. The product images are shown for illustrative purpose only.

For *Smoke Extraction Motors*, please refer to the additional instruction manual 50026367 available on the website www.weg.net.

For brake motors, please refer to the information contained in WEG 50021973 brake motor manual available on the website www.weg.net.

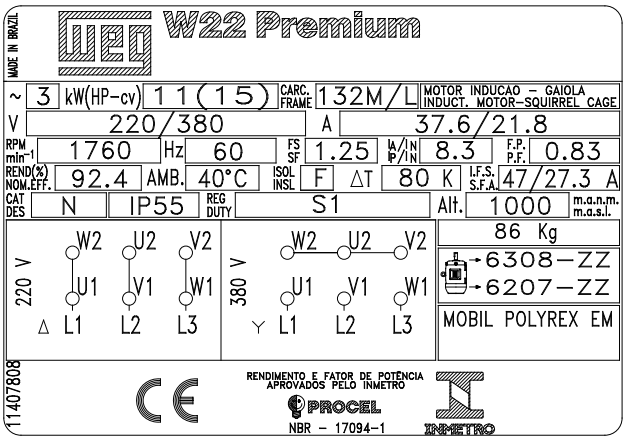
For information about permissible radial and axial shaft loads, please check the product technical catalogue.

The user is responsible for the correct definition of the installation environment and application characteristics.

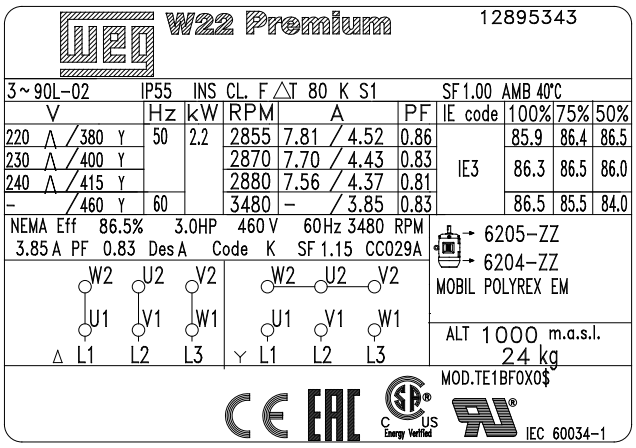
During the warranty period, all repair, overhaul and reclamation services must be carried out by WEG authorized Service Centers to maintain validity of the warranty.

2.1. WARNING SYMBOL

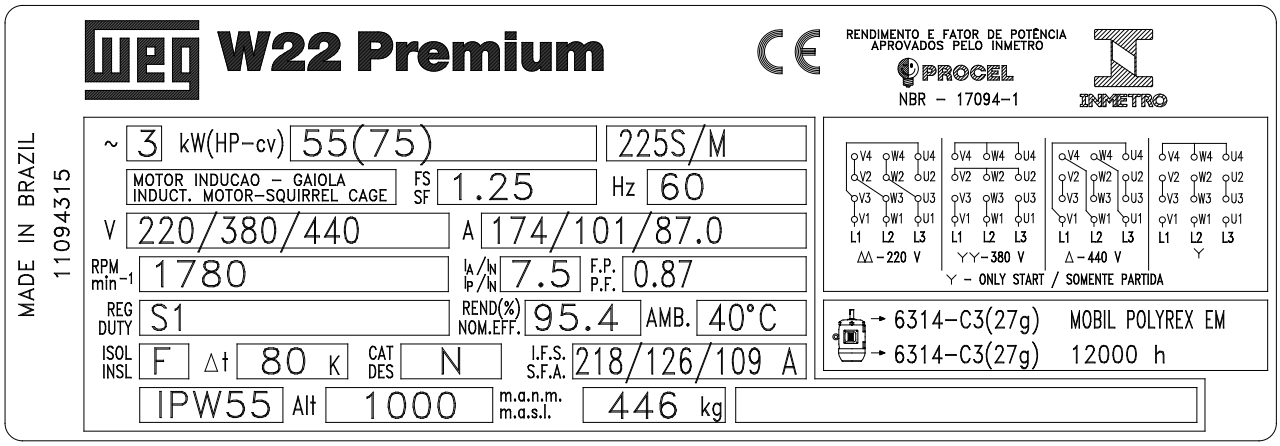
Warning about safety and warranty.



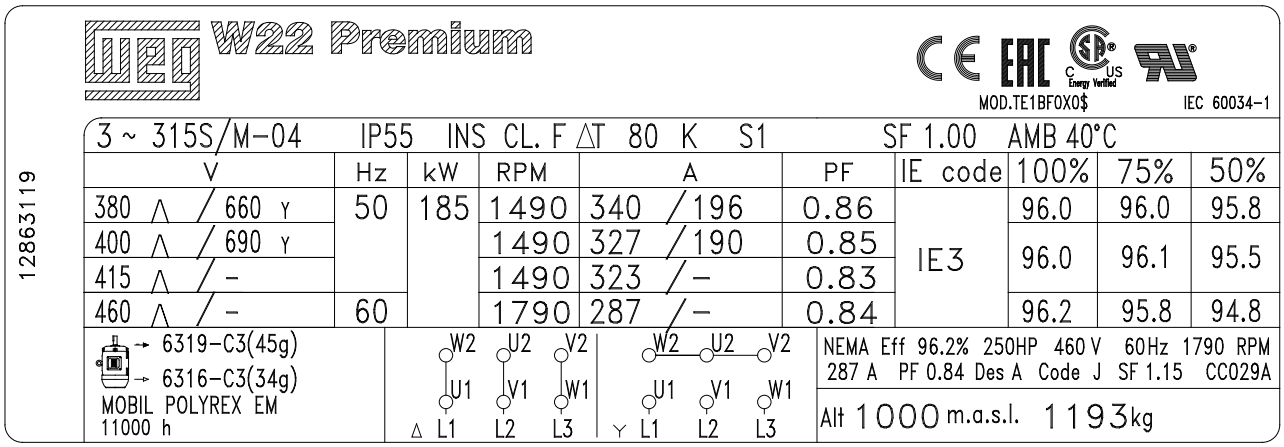
2.2. RECEIVING INSPECTION



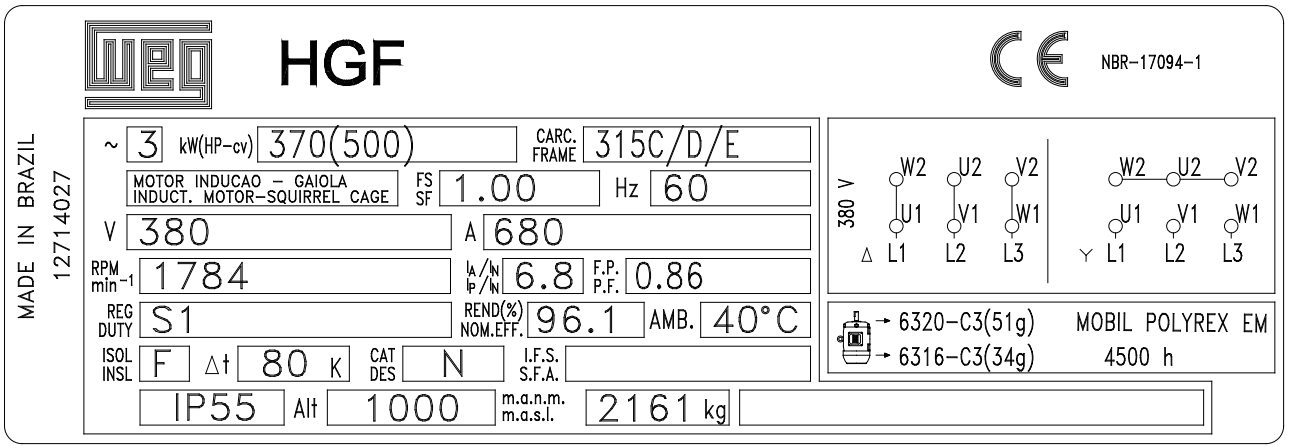
All motors are tested during the manufacturing process.
The motor must be checked when received for any damage that may have occurred during the transportation. All damages must be reported in writing to the transportation company, to the insurance company and to WEG. Failure to comply with such procedures will void the product warranty.
You must inspect the product:
- Check if nameplate data complies with the purchase order;
- Remove the shaft locking device (if any) and rotate the shaft by hand to ensure that it rotates freely;
- Check that the motor has not been exposed to excessive dust and moisture during the transportation.



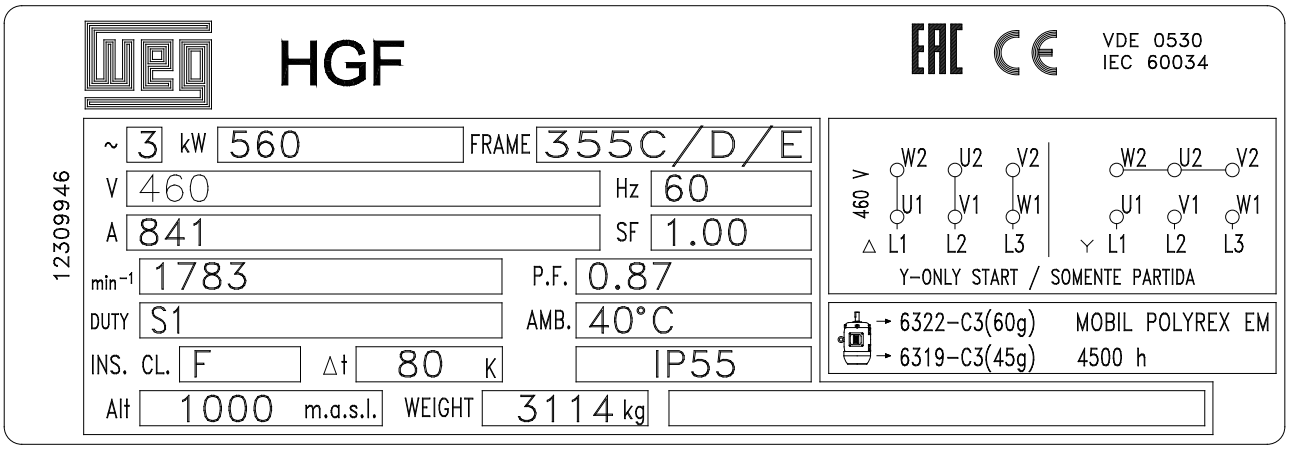
Do not remove the protective grease from the shaft, or the plugs from the cable entries. These protections must remain in place until the installation has been completed.



2.3. NAMEPLATES



The nameplate contains information that describes the construction characteristics and the performance of the motor. Figure 2.1 and Figure 2.2 show nameplate layout examples.



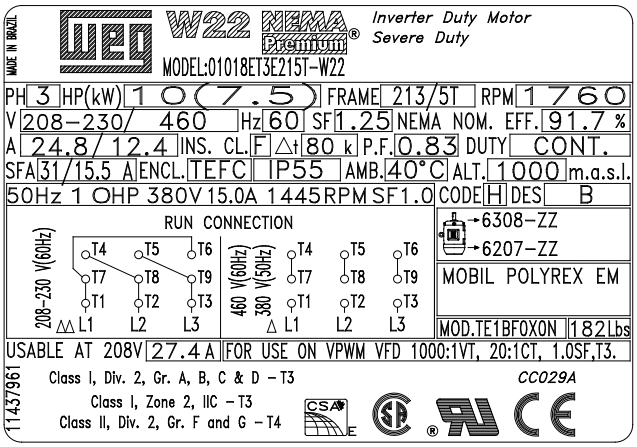


Figure 2.1 *- IEC motor nameplate*

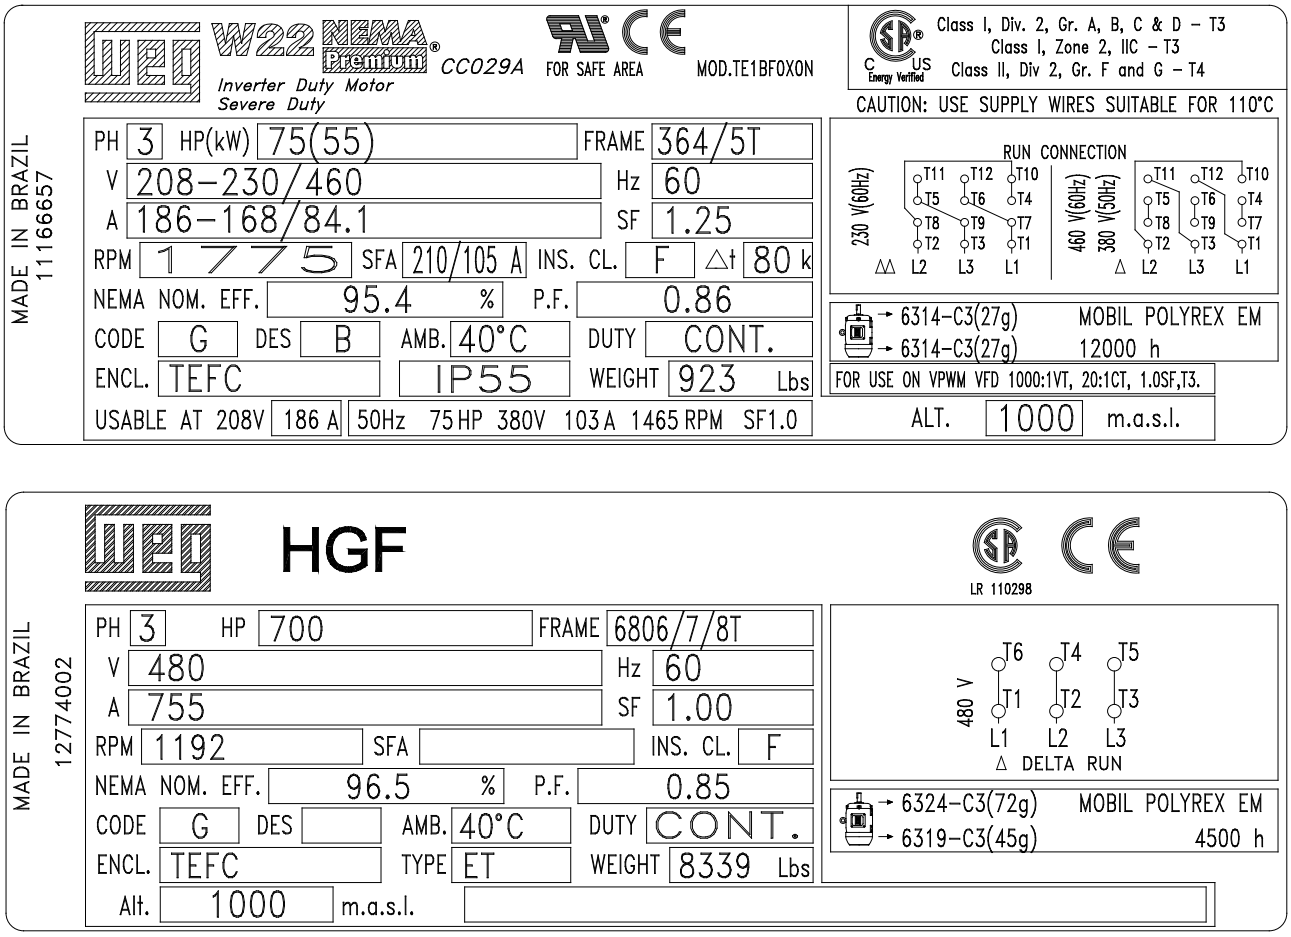

Figure 2.2 - *NEMA motor nameplate*

3. SAFETY INSTRUCTIONS

The motor must be disconnected from the power supply and be completely stopped before conducting any installation or maintenance procedures. Additional measures should be taken to avoid accidental motor starting.

Professionals working with electrical installations, either in the assembly, operation or maintenance, should use proper tools and be instructed on the application of standards and safety requirements, including the use of Personal Protective Equipment (PPE) that must be carefully observed in order to reduce risk of personal injury during these services.

Electric motors have energized circuits, exposed rotating parts and hot surfaces that may cause serious injury to people during normal operation. It is recommended that transportation, storage, installation, operation and maintenance services are always performed by qualified personnel.

Always follow the safety, installation, maintenance and inspection instructions in accordance with the applicable standards in each country.

4. HANDLING AND TRANSPORT

Individually packaged motors should never be lifted by the shaft or by the packaging. They must be lifted only by means of the eyebolts, when supplied. Use always suitable lifting devices to lift the motor. Eyebolts on the frame are designed for lifting the machine weight only as indicated on the motor nameplate. Motors supplied on pallets must be lifted by the pallet base with lifting devices fully supporting the motor weight.

The package should never be dropped. Handle it carefully to avoid bearing damage.

Eyebolts provided on the frame are designed for lifting the machine only. Do not use these eyebolts for lifting the motor with coupled equipment such as bases, pulleys, pumps, reducers, etc..

Never use damaged, bent or cracked eyebolts. Always check the eyebolt condition before lifting the motor.

Eyebolts mounted on components, such as on end shields, forced ventilation kits, etc. must be used for lifting these components only. Do not use them for lifting the complete machine set.

Handle the motor carefully without sudden impacts to avoid bearing damage and prevent excessive mechanical stresses on the eyebolts resulting in its rupture.

To move or transport motors with cylindrical roller bearings or angular contact ball bearings, use always the shaft locking device provided with the motor.
All HGF motors, regardless of bearing type, must be transported with shaft locking device fitted.
Vertical mounted motors with oil-lubricated bearings must be transported in the vertical position. If necessary to move or transport the motor in the horizontal position, install the shaft locking device on both sides (drive end and non-drive end) of the motor.

4.1. LIFTING

Before lifting the motor ensure that all eyebolts are tightened properly and the eyebolt shoulders are in contact with the base to be lifted, as shown in Figure 4.1. Figure 4.2 shows an incorrect tightening of the eyebolt.
Ensure that lifting machine has the required lifting capacity for the weight indicated on the motor nameplate.

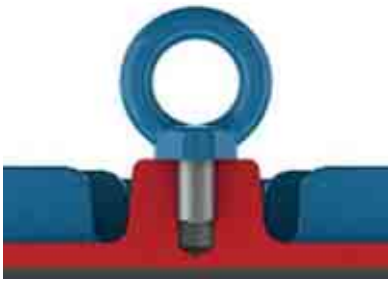

Figure 4.1 *- Correct tightening of the eyebolt*

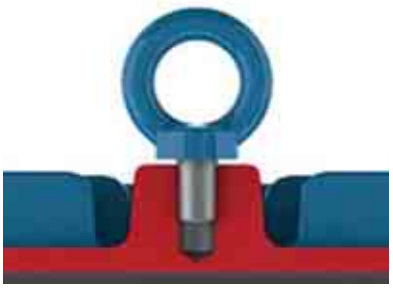

Figure 4.2 *- Incorrect tightening of the eyebolt*

The center-of-gravity may change depending on motor design and accessories. During the lifting procedures the maximum allowed angle of inclination should never be exceeded as specified below.

4.1.1. Horizontal motors with one eyebolt

For horizontal motors fitted with only one eyebolt, the maximum allowed angle-of-inclination during the lifting process should not exceed 30° in relation to the vertical axis, as shown in Figure 4.3.

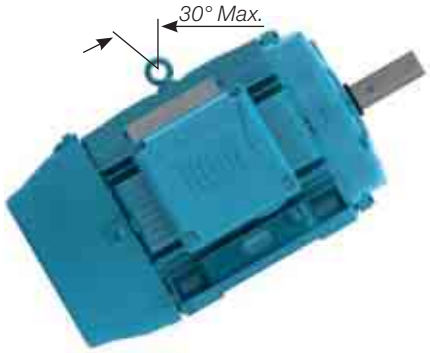

Figure 4.3 *- Maximum allowed angle-of-inclination for motor with one eyebolt*

4.1.2. Horizontal motor with two eyebolts

When motors are fitted with two or more eyebolts, all supplied eyebolts must be used simultaneously for the lifting procedure.

There are two possible eyebolt arrangements (vertical and inclined), as shown below:

- For motors with vertical lifting eyebolts, as shown in Figure 4.4, the maximum allowed lifting angle should not exceed 45° in relation to the vertical axis. We recommend to use a spreader beam for maintaining the lifting elements (chain or rope) in vertical position and thus preventing damage to the motor surface;

Figure 4.4 *- Maximum resulting angle for motors with two or more lifting eyebolts*

- For HGF, W40 and W50 motors, as shown in Figure 4.5, the maximum resulting angle should not exceed 30° in relation to the vertical axis;

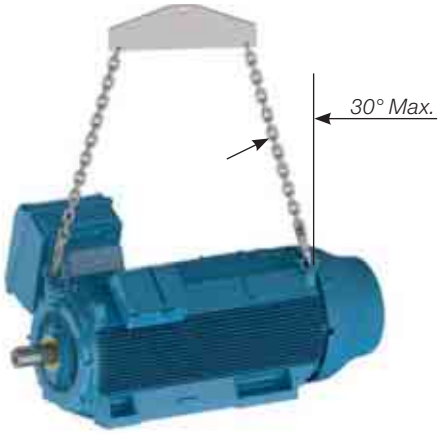

Figure 4.5 *- Maximum resulting angle for horizontal HGF, W40 and W50 motors*

- For motors fitted with inclined eyebolts, as shown in Figure 4.6, the use of a spreader beam is required for maintaining the lifting elements (chain or rope) in vertical position and thus preventing damage to the motor surface.

Figure 4.6 *- Use of a spreader beam for lifting*

4.1.3. Vertical motors

For vertical mounted motors, as shown in Figure 4.7, the use of a spreader beam is required for maintaining the lifting element (chain or rope) in vertical position and thus preventing damage to the motor surface.

Figure 4.7 *- Lifting of vertical mounted motors*

Always use the eyebolts mounted on the top side of the motor, diametrically opposite, considering the mounting position. See Figure 4.8.

Figure 4.8 *- Lifting of HGF and W50 motors.*

4.1.3.1. Procedures to place W22 motors in the vertical position

For safety reasons during the transport, vertical mounted Motors are usually packed and supplied in horizontal position.
To place W22 motors fitted with eyebolts (see Figure 4.6), to the vertical position, proceed as follows:

1. Ensure that the eyebolts are tightened properly, as shown in Figure 4.1;
2. Remove the motor from the packaging, using the top mounted eyebolts, as shown in Figure 4.9;

Figure 4.9 *- Removing the motor from the packaging*

3. Install a second pair of eyebolts, as shown in Figure 4.10;

Figure 4.10 *- Installation of the second pair of eyebolts*

4. Reduce the load on the first pair of eyebolts to start the motor rotation, as shown in Figure 4.11. This procedure must be carried out slowly and carefully.

Figure 4.11 *- End result: motor placed in vertical position*

These procedures will help you to move motors designed for vertical mounting. These procedures are also used to place the motor from the horizontal position into the vertical position and vertical to horizontal.

4.1.3.2. Procedures to place HGF and W50 motors in the vertical position

HGF motors are fitted with eight lifting points: four at drive end and four at non-drive end. W50 motors are fitted with nine lifting points: four at drive end, one in the central part and four at non-drive end. The motors are usually transported in horizontal position, however for the installation they must be placed in the vertical position.
To place an these motors in the vertical position, proceed as follows:

1. Lift the motor by using the four lateral eyebolts and two hoists, see Figure 4.12;

Figure 4.12 *- Lifting of HGF and W50 motors with two hoists*

2. Lower the hoist fixed to motor drive end while lifting the hoist fixed to motor non-drive end until the motor reaches its equilibrium, see Figure 4.13;

Figure 4.13 *- Placing HGF and W50 motors in vertical position*

3. Remove the hoist hooks from the drive end eyebolts and rotate the motor 180° to fix the removed hooks into the two eyebolts at the motor non-drive end, see Figure 4.14;

Figure 4.14 *- Lifting HGF and W50 motors by the eyebolts at the non-drive end*

4. Fix the removed hoist hooks in the other two eyebolts at the non-drive end and lift the motor until the vertical position is reached, see Figure 4.15.

Figure 4.15 *- HGF and W50 motors in the vertical position*

These procedures will help you to move motors designed for vertical mounting. These procedures are also used to place the motor from the horizontal position into the vertical position and vertical to horizontal.

4.2 Procedures to place W22 vertical mount motors in horizontal position

To place W22 vertical mount motor in horizontal position, proceed as follows:

1. Ensure that all eyebolts are tightened properly, as shown in Figure 4.1;

2. Install the first pair of eyebolts and lift the motor as shown in Figure 4.16;

Figure 4.16 - *Install the first pair of eyebolts*

3. Install the second pair of eyebolts, as shown in Figure 4.17;

Figure 4.17 - *Install the second pair of eyebolts*

4. Reduce the load on the first pair of eyebolts for rotating the motor, as shown in Figure 4.18. This procedure must be carried out slowly and carefully;

Figure 4.18 - *Motor is being rotated to horizontal position*

5. Remove the first pair of eyebolts, as shown in Figure 4.19.

Figure 4.19 - *Final result: motor placed in horizontal position*

5. STORAGE

If the motor is not installed immediately, it must be stored in a dry and clean environment, with relative humidity not exceeding 60%, with an ambient temperature between 5 ºC and 40 ºC, without sudden temperature changes, free of dust, vibrations, gases or corrosive agents. The motor must be stored in horizontal position, unless specifically designed for vertical operation, without placing objects on it. Do not remove the protection grease from shaft end to prevent rust.

If the motor are fitted with space heaters, they must always be turned on during the storage period or when the installed motor is out of operation. Space heaters will prevent water condensation inside the motor and keep the winding insulation resistance within acceptable levels. Store the motor in such position that the condensed water can be easily drained. If fitted, remove pulleys or couplings from the shaft end (more information are given on item 6).

The space heaters should never be energized when the motor is in operation.

5.1. EXPOSED MACHINED SURFACES

All exposed machined surfaces (like shaft end and flange) are factory-protected with temporary rust inhibitor. A protective film must be reapplied periodically (at least every six months), or when it has been removed and/or damaged.

5.2. STORAGE

The stacking height of the motor packaging during the storage period should not exceed 5 m, always considering the criteria indicated in Table 5.1:

Table 5.1 *- Max. recommended stacking height*

Packaging type	Frame sizes	Maximum stacking quantity
Cardboard box	IEC 63 to 132 NEMA 143 to 215	Indicated on the top side of the cardboard box
Wood crate	IEC 63 to 315 NEMA 48 to 504/5	06
	IEC 355 NEMA 586/7 and 588/9	03
	W40 / W50 / HGF IEC 315 to 630 W40 / W50 / HGF NEMA 5000 to 9600	Indicated on the packaging

Notes:
1) Never stack larger packaging onto smaller packaging;
2) Align the packaging correctly (see Figure 5.1 and Figure 5.2);

Figure 5.1 *- Correct stacking*

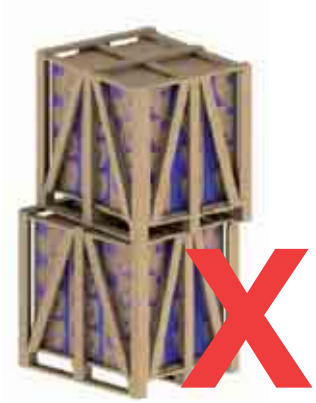

Figure 5.2 *- Incorrect stacking*

ENGLISH

3) The feet of the crates above should always be supported by suitable wood battens (Figure 5.3) and never stand on the steel tape or without support (Figure 5.4);

Figure 5.3 - Correct stacking

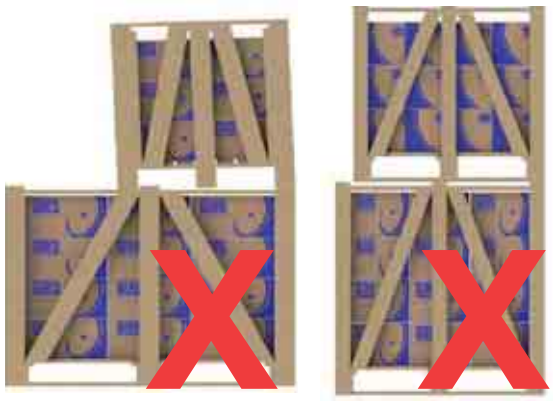

Figure 5.4 - Incorrect stacking

4) When stacking smaller crates onto longer crates, always ensure that suitable wooden supports are provided to withstand the weight (see Figure 5.5). This condition usually occurs with motor packaging above IEC 225S/M (NEMA 364/5T) frame sizes.

***Figure 5.5** - Use of additional battens for stacking*

5.3 BEARINGS

5.3.1 Grease lubricated bearings

We recommend rotating the motor shaft at least once a month (by hand, at least five revolutions, stopping the shaft at a different position from the original one). If the motor is fitted with shaft locking device, remove it before rotating the shaft and install it again before performing any handling procedure. Vertical motors may be stored in the vertical or in horizontal position. If motors with open bearings are stored longer than six months, the bearings must be relubricated according to item 8.2 before commissioning of the motor.
If the motor is stored for longer than 2 years, the bearings must be replaced or removed, washed, inspected and relubricated according to item 8.2.

5.3.2 Oil lubricated bearings

The motor must be stored in its original operating position and with oil in the bearings. Correct oil level must be ensured. It should be in the center of the sight glass.
During the storage period, remove the shaft locking device and rotate the shaft by hand every month, at least five revolutions, thus achieving an even oil distribution inside the bearing and maintaining the bearing in good operating conditions. Reinstall the shaft locking device every time the motor has to be moved.
If the motor is stored for a period equal or longer than the oil change interval, the oil must be replaced according to Item 8.2, before starting the operation. If the motor is stored for a period of over two years, the bearings must be replaced or removed, washed according to manufacturer instructions, checked and relubricated according to Item 8.2. The oil of vertical mounted motors is removed to prevent oils leaks during the transport. After receiving the motor the bearings must be lubricated.

5.3.3 Oil Mist lubricated bearings

The motor must be stored in horizontal position. Lubricate the bearings with ISO VG 68 mineral oil in the amount indicated in the Table 5.2 (this is also valid for bearings with equivalent dimensions). After filling with oil, rotate the shaft by hand, at least five revolutions)
During the storage period, remove the shaft locking device (if any) and rotate the shaft by hand every week, at least five revolutions, stopping it at a different position from the original one. Reinstall the shaft locking device every time the motor has to be moved. If the motor is stored for a period of over two years, the bearings must be replaced or removed, washed according to manufacturer instructions, checked and relubricated according to item 8.2.

Table 5.2 - *Amount of oil per bearing*

Bearing size	Amount of oil (ml)	Bearing size	Amount of oil (ml)
6201	15	6309	65
6202	15	6311	90
6203	15	6312	105
6204	25	6314	150
6205	25	6315	200
6206	35	6316	250
6207	35	6317	300
6208	40	6319	350
6209	40	6320	400
6211	45	6322	550
6212	50	6324	600
6307	45	6326	650
6308	55	6328	700

The oil must always be removed when the motor has to be handled. If the oil mist system is not operating after installation, fill the bearings with oil to prevent bearing rusting. During the storage period, rotate the shaft by hand, at least five revolutions, stopping it at a different position from the original one. Before starting the motor, all bearing protection oil must be drained from the bearing and the oil mist system must be switched ON.

5.3.4 Sleeve bearing

The motor must be stored in its original operating position and with oil in the bearings. Correct oil level must be ensured. It should be in the middle of the sight glass. During the storage period, remove the shaft locking device and rotate the shaft by hand every month, at least five revolutions, and at 30 rpm, thus achieving an even oil distribution inside the bearing and maintaining the bearing in good operating conditions. Reinstall the shaft locking device every time the motor has to be moved.
If the motor is stored for a period equal or longer than the oil change interval, the oil must be replaced, according to Item 8.2, before starting the operation.

If the motor is stored for a period longer than the oil change interval, or if it is not possible to rotate the motor shaft by hand, the oil must be drained and a corrosion protection and dehumidifiers must be applied.

5.4. INSULATION RESISTANCE

We recommend measuring the winding insulation resistance at regular intervals to follow-up and evaluate its electrical operating conditions. If any reduction in the insulation resistance values are recorded, the storage conditions should be evaluated and corrected, where necessary.

5.4.1. Insulation resistance measurement

We recommend measuring the winding insulation resistance at regular intervals to follow-up and evaluate its electrical operating conditions. If any reduction in the insulation resistance values are recorded, the storage conditions should be evaluated and corrected, where necessary.

The insulation resistance must be measured in a safe environment.

The insulation resistance must be measured with a megohmmeter. The machine must be in cold state and disconnected from the power supply.

To prevent the risk of an electrical shock, ground the terminals before and after each measurement. Ground the capacitor (if any) to ensure that it is fully discharged before the measurement is taken.

It is recommended to insulate and test each phase separately. This procedure allows the comparison of the insulation resistance between each phase. During the test of one phase, the other phases must be grounded. The test of all phases simultaneously evaluates the insulation resistance to ground only but does not evaluate the insulation resistance between the phases.
The power supply cables, switches, capacitors and other external devices connected to the motor may considerably influence the insulation resistance measurement. Thus all external devices must be disconnected and grounded during the insulation resistance measurement.
Measure the insulation resistance one minute after the voltage has been applied to the winding. The applied voltage should be as shown in Table 5.3.

Table 5.3 *- Voltage for the insulation resistance*

Winding rated voltage (V)	Testing voltage for measuring the insulation resistance (V)
< 1000	500
1000 - 2500	500 - 1000
2501 - 5000	1000 - 2500
5001 - 12000	2500 - 5000
> 12000	5000 - 10000

The reading of the insulation resistance must be corrected to 40 °C as shown in the Table 5.4.

Table 5.4 *- Correction factor for the insulation resistance corrected to 40 °C*

Measuring temperature of the insulation resistance (°C)	Correction factor of the insulation resistance corrected to 40 °C	Measuring temperature of the insulation resistance (°C)	Correction factor of the insulation resistance corrected to 40 °C
10	0.125	30	0.500
11	0.134	31	0.536
12	0.144	32	0.574
13	0.154	33	0.616
14	0.165	34	0.660
15	0.177	35	0.707
16	0.189	36	0.758
17	0.203	37	0.812
18	0.218	38	0.871
19	0.233	39	0.933
20	0.250	40	1.000
21	0.268	41	1.072
22	0.287	42	1.149
23	0.308	43	1.231
24	0.330	44	1.320
25	0.354	45	1.414
26	0.379	46	1.516
27	0.406	47	1.625
28	0.435	48	1.741
29	0.467	49	1.866
30	0.500	50	2.000

The motor insulation condition must be evaluated by comparing the measured value with the values indicated in Table 5.5 (corrected to 40 °C):

Table 5.5 *- Evaluation of the insulation system*

Limit value for rated voltage up to 1.1 kV (MΩ)	Limit value for rated voltage above 1.1 kV (MΩ)	Situation
Up to 5	Up to 100	Dangerous. The motor can not be operated in this condition
5 to 100	100 to 500	Regular
100 to 500	Higher than 500	Good
Higher than 500	Higher than 1000	Excellent

The values indicated in the table should be considered only as reference values. It is advisable to log all measured values to provide a quick and easy overview on the machine insulation resistance.
If the insulation resistance is low, moisture may be present in the stator windings. In this case the motor should be removed and transported to a WEG authorized Service Center for proper evaluation and repair (This service is not covered by the warranty). To improve the insulation resistance through the drying process, see section 8.4.

6. INSTALLATION

The insulation resistance must be measured in a safe environment.

Check some aspects before proceeding with the installation:

1. Insulation resistance: must be within the acceptable limits. See item 5.4.
2. Bearings:
   If the motor is installed without running immediately, proceed as described in item 5.3.
3. Operating conditions of the start capacitors: If single-phase motors are stored for a period of over two years, it is recommended to change the start capacitors before motor starting since they lose their operating characteristics.
4. Terminal box:
   a. the inside of the terminal box must be clean and dry;
   b. the contacts must be correctly connected and corrosion free. See 6.9 and 6.10;
   c. the cable entries must be correctly sealed and the terminal box cover properly mounted in order to ensure the degree of protection indicated on the motor nameplate.
5. Cooling: the cooling fins, air inlet and outlet openings must be clean and unobstructed. The distance between the air inlet openings and the wall should not be shorter than ¼ (one quarter) of the diameter of the air inlet. Ensure sufficient space to perform the cleaning services. See item 7.
6. Coupling: remove the shaft locking device (where fitted) and the corrosion protection grease from the shaft end and flange just before installing the motor. See item 6.4.
7. Drain hole: the motor must always be positioned so the drain hole is at the lowest position (If there is any indication arrow on the drain, the drain must be so installed that the arrow points downwards).
   Motors supplied with rubber drain plugs leave the factory in the closed position and must be opened periodically to allow the exit of condensed water. For environments with high water condensation levels and motor with degree of protection IP55, the drain plugs can be mounted in open position (see Figure 6.1).
   For motors with degree of protection IP56, IP65 or IP66, the drain plugs must remain at closed position (see Figure 6.1), being opened only during the motor maintenance procedures.
   The drain system of motors with Oil Mist lubrication system must be connected to a specific collection system (see Figure 6.12).

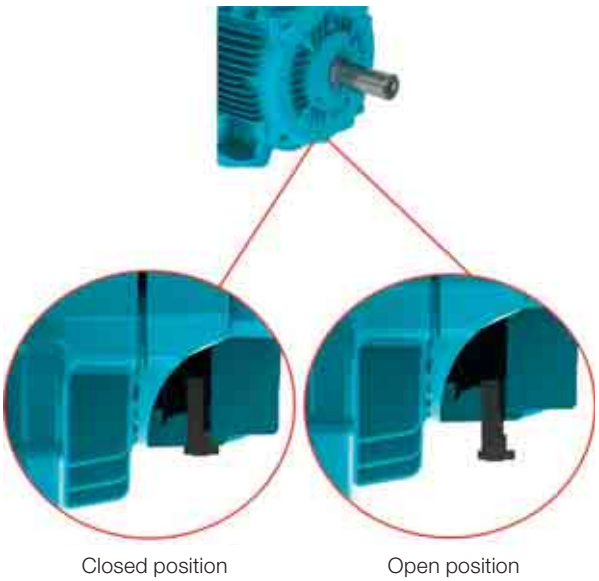

Figure 6.1 *- Detail of the rubber drain plug mounted in closed and open position*

8.Additional recommendations:
a. Check the direction of motor rotation, starting the motor at no-load before coupling it to the load;
b. Vertical mounted motors with shaft end down must be fitted with drip cover to protect them from liquids or solids that may drop onto the motors;
c. Vertical mounted motors with shaft end up should be fitted with water slinger ring to prevent water ingress inside the motor.

Remove or fix the shaft key before starting the motor.

Changes on the motor construction (features), such as installation of extended grease fittings or modification of the lubrication system, installation of accessories at alternative locations, etc., can be carried out only after prior written consent from WEG.

6.1. FOUNDATIONS

The foundation is the structure, structural element, natural or prepared base, designed to withstand the stresses produced by the installed equipment, ensuring safe and stable performance during operation. The foundation design should consider the adjacent structures to avoid the influences of other installed equipment and no vibration is transferred through the structure

The foundation must be flat and its selection and design must consider the following characteristics:

a) The features of the machine to be installed on the foundation, the driven loads, application, maximum allowed deformations and vibration levels (for instance, motors with reduced vibration levels, foot flatness, flange concentricity, axial and radial loads, etc. lower than the values specified for standard motors).

b) Adjacent buildings, conservation status, maximum applied load estimation, type of foundation and fixation and vibrations transmitted by theses constructions.

If the motor is supplied with leveling/alignment bolts, this must be considered in the base design.

Please consider for the foundation dimensioning all stresses that are generated during the operation of the driven load.
The user is responsible for the foundation designing and construction.

The foundation stresses can be calculated by using the following equations (see Figure 6.2):

$$F_1 = 0,5 * g * m - (4 * T_b / A)$$
$$F_2 = 0,5 * g * m + (4 * T_b / A)$$

Where:

F_1 and F_2 = lateral stresses (N);
g = gravitational acceleration (9,8 m/s^2);
m = motor weight (kg);
T_b = breakdown torque (Nm);
A = distance between centerlines of mounting holes in feet or base of the machine (end view) (m).

The motors may be mounted on:

- Concrete bases: are most used for large-size motors (see Figure 6.2);
- Metallic bases: are generally used for small-size motors (see Figure 6.3).

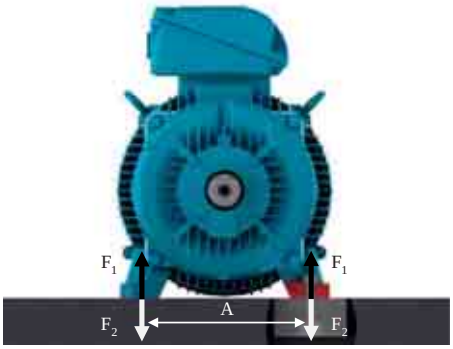

Figure 6.2 *- Motor installed on concrete base*

Figure 6.3 *- Motor installed on metallic base*

The metallic and concrete bases may be fitted with sliding system. These types of foundations are generally used where the power transmission is achieved by belts and pulleys. This power transmission system is easier to assemble/disassemble and allows the belt tension adjustment. Other important aspect of this foundation type is the location of the base locking screws that must be diagonally opposite. The rail nearest the drive pulley is placed in such a way that the positioning bolt is between the motor and the driven machine. The other rail must be placed with the bolt on the opposite side (diagonally opposite), as shown in Figure 6.4 .

To facilitate assembly, the bases may have the following features:

- Shoulders and/or recesses;
- Anchor bolts with loose plates;
- Bolts cast in the concrete;
- Leveling screws;
- Positioning screws;
- Steel & cast iron blocks, plates with flat surfaces.

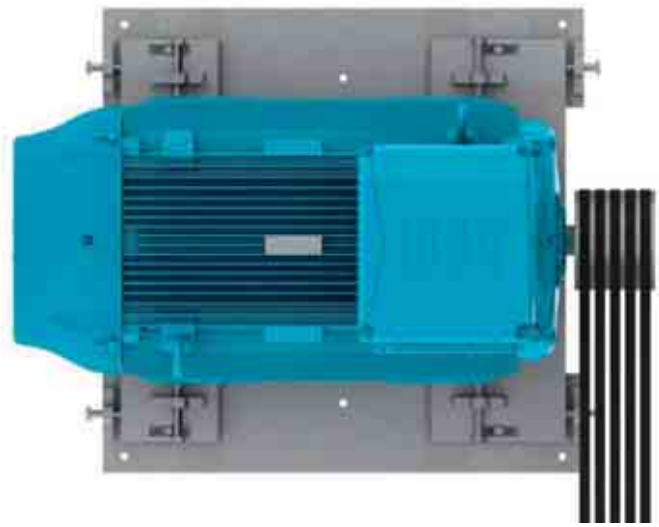

Figure 6.4 *- Motor installed on sliding base*

After completing the installation, it is recommended that all exposed machined surfaces are coated with suitable rust inhibitor.

6.2. MOTOR MOUNTING

Footless motors supplied with transportation devices, according to Figure 6.5, must have their devices removed before starting the motor installation.

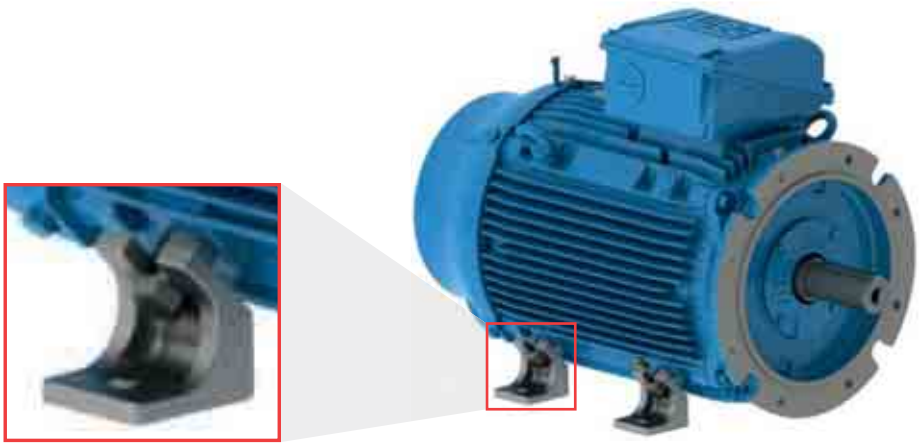

Figure 6.5 *- Detail of the transportation devices for footless motors*

6.2.1. Foot mounted motors

The drawings of the mounting hole dimensions for NEMA or IEC motors can be checked in the respective technical catalogue.
The motor must be correctly aligned and leveled with the driven machine. Incorrect alignment and leveling may result in bearing damage, generate excessive vibration and even shaft distortion/breakage.
For more details, see section 6.3 and 6.6. The thread engagement length of the mounting bolt should be at least 1.5 times the bolt diameter. This thread engagement length should be evaluated in more severe applications and increased accordingly.
Figure 6.6 shows the mounting system of a foot mounted motor indicating the minimum required thread engagement length.

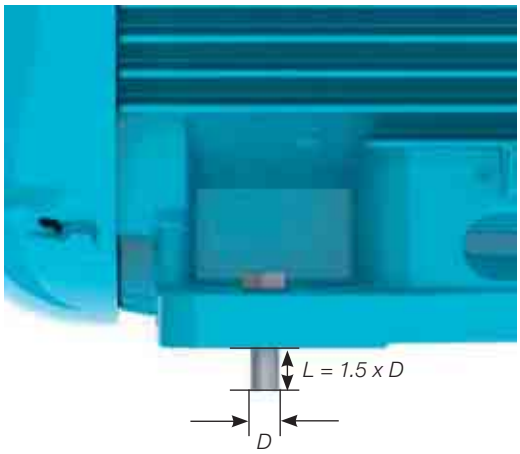

Figure 6.6 *- Mounting system of a foot mounted motor*

6.2.2. Flange mounted motors

The drawings of the flange mounting dimensions, IEC and NEMA flanges, can be checked in the technical catalogue.
The coupling of the driven equipment to the motor flange must be properly dimensioned to ensure the required concentricity of the assembly.
Depending on the flange type, the mounting can be performed from the motor to the driven equipment flange (flange FF (IEC) or D (NEMA)) or from the driven equipment flange to the motor (flange C (DIN or NEMA)).
For the mounting process from the driven equipment flange to the motor, you must consider the bolt length, flange thickness and the thread depth of the motor flange.

If the motor flange has tapped through-holes, the length of the mounting bolts must not exceed the tapped through-hole length of the motor flange, thus preventing damage to the winding head.

For flange mounting the thread engagement length of the mounting bolt should be at least 1.5 times the bolt diameter. In severe applications, longer thread engagement length may be required.
In severe applications or if large motors are flange mounted, a foot or pad mounting may be required in addition to the flange mounting (Figure 6.7). The motor must never be supported on its cooling fins.

Figure 6.7 *- Mounting method of flange mounted motors with frame base support*

Note*:*
When liquid (for example oil) is likely to come into contact with the shaft seal, please contact your local WEG representative.

6.2.3. Pad mounted motors

Typically, this method of mounting is used in axial fans. The motor is fixed by tapped holes in the frame. The dimensions of these tapped holes can be checked in the respective product catalogue. The selection of the motor mounting rods/bolts must consider the dimensions of the fan case, the installation base and the thread depth in the motor frame.
The mounting rods and the fan case wall must be sufficiently stiff to prevent the transmission of excessive vibration to the machine set (motor & fan). Figure 6.8 shows the pad mounting system.

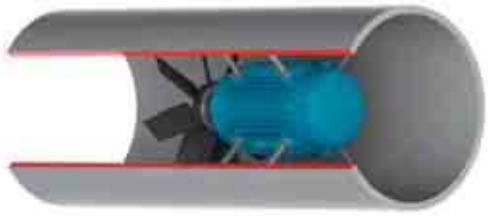

Figure 6.8 *- Mounting of the motor inside the cooling duct*

6.3. BALANCING

Unbalanced machines generate vibration which can result in damage to the motor. WEG motors are dynamically balanced with “half key” and without load (uncoupled). Special balancing quality level must be stated in the Purchase Order.

The transmission elements, such as pulleys, couplings, etc., must balanced with “half key” before they are mounted on the motor shaft.

The balance quality grade meets the applicable standards for each product line.

The maximum balancing deviation must be recorded in the installation report.

6.4. COUPLINGS

Couplings are used to transmit the torque from the motor shaft to the shaft of the driven machine. The following aspects must be considered when couplings are installed:

- Use proper tools for coupling assembly & disassembly to avoid damages to the motor and bearings;
- Whenever possible, use flexible couplings, since they can absorb eventual residual misalignments during the machine operation;
- The maximum loads and speed limits informed in the coupling and motor manufacturer catalogues cannot be exceeded;
- Level and align the motor as specified in sections 6.5 and 6.6, respectively.

Remove or fix the shaft key firmly when the motor is operated without coupling in order to prevent accidents.

6.4.1. Direct coupling

Direct coupling is characterized when the Motor shaft is directly coupled to the shaft of the driven machine without transmission elements. Whenever possible, use direct coupling due to lower cost, less space required for installation and more safety against accidents.

Do not use roller bearings for direct coupling, unless sufficient radial load is expected.

6.4.2. Gearbox coupling

Gearbox coupling is typically used where speed reduction is required.
Make sure that shafts are perfectly aligned and strictly parallel (in case of straight spur gears) and in the right meshing angle (in case of bevel and helical gears).

6.4.3. Pulley and belt coupling

Pulleys and belts are used when speed increase or reduction between motor shaft and driven load is required.

Excessive belt tension will damage the bearings and cause unexpected accidents such as breakage of the motor shaft.

6.4.4. Coupling of sleeve bearing motors

Motors designed with sleeve bearings must be operated with direct coupling to the driven machine or a gearbox. Pulley and belts can not be applied for sleeve bearing motors.

Motors designed with sleeve bearings have 3 (three) marks on the shaft end. The center mark is the indication of the magnetic center and the 2 (two) outside marks indicate the allowed limits of the rotor axial movement, as shown in Figure 6.9.
The motor must be so coupled that during operation the arrow on the frame is placed over the central mark indicating the rotor magnetic center. During start-up, or even during operation, the rotor may freely move between the two outside marks when the driven machine exerts an axial load on the motor shaft. However, under no circumstance, the motor can operate continuously with axial forces on the bearing.

Figure 6.9 *- Axial clearance of motor designed with sleeve bearing*

For coupling evaluation consider the maximum axial bearing clearance as shown in Table 6.1.
The axial clearance of the driven machine and coupling influence the maximum bearing clearance.

Table 6.1 *- Clearance used for sleeve bearings*

Bearing size	Total axial clearance (mm)
9*	3 + 3 = 6
11*	4 + 4 = 8
14*	5 + 5 =10
18	7,5 + 7,5 = 15

** For Motors in accordance with API 541, the total axial clearance is 12.7 mm*

The sleeve bearings used by WEG were not designed to support axial load continuously.
Under no circumstance must the motor be operated continuously at its axial clearance limits.

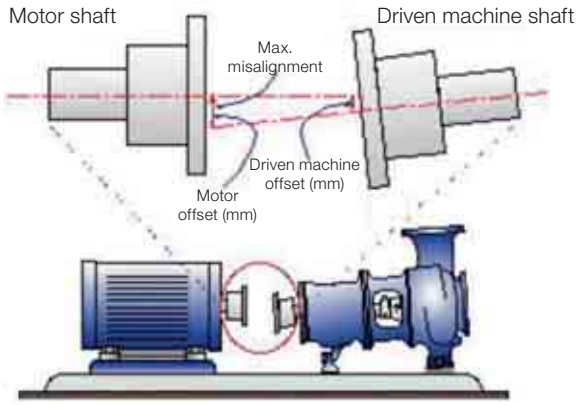
6.5. LEVELING

The motor must be leveled to correct any deviations in flatness arising from the manufacturing process and the material structure rearrangement. The leveling can be carried out by a leveling screw fixed on the motor foot or on the flange or by means of thin compensation shims. After the leveling process, the leveling height between the motor mounting base and the motor cannot exceed 0.1 mm.
If a metallic base is used to level the height of the motor shaft end and the shaft end of the driven machine, level only the metallic base relating to the concrete base.

Record the maximum leveling deviations in the installation report.

6.6. ALIGNMENT

The correct alignment between the motor and the driven machine is one of the most important variables that extends the useful service life of the motor. Incorrect coupling alignment generates high loads and vibrations reducing the useful life of the bearings and even resulting in shaft breakages. Figure 6.10 illustrates the misalignment between the motor and the driven machine.



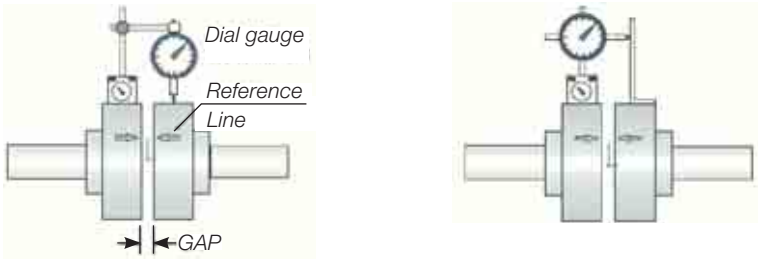


Figure 6.10 *- Typical misalignment condition*

Alignment procedures must be carried out using suitable tools and devices, such as dial gauge, laser alignment instruments, etc.. The motor shaft must be aligned axially and radially with the driven machine shaft.

The maximum allowed eccentricity for a complete shaft turn should not exceed 0.03 mm, when alignment is made with dial gauges, as shown in Figure 6.11. Ensure a gap between couplings to compensate the thermal expansion between the shafts as specified by the coupling manufacturer.

Parallel alignment *Angular alignment*

Figure 6.11 *- Alignment with dial gauge*

If alignment is made by a laser instrument, please consider the instructions and recommendations provided by the laser instrument manufacturer.
The alignment should be checked at ambient temperature with machine at operating temperature.

The coupling alignment must be checked periodically.

Pulley and belt couplings must be so aligned that the driver pulley center lies in the same plane of the driven pulley center and the motor shaft and the shaft of the driven machine are perfectly parallel.
After completing the alignment procedures, ensure that mounting devices do not change the motor and machine alignment and leveling resulting into machine damage during operation.

It is recommended to record the maximum alignment deviation in the Installation Report.

6.7. CONNECTION OF OIL LUBRICATED OR OIL MIST LUBRICATED MOTORS

When oil lubricated or oil mist lubricated motors are installed, connect the existing lubricant tubes (oil inlet and oil outlet tubes and motor drain tube), as shown in Figure 6.12. The lubrication system must ensure continuous oil flow through the bearings as specified by the manufacturer of the installed lubrication system.

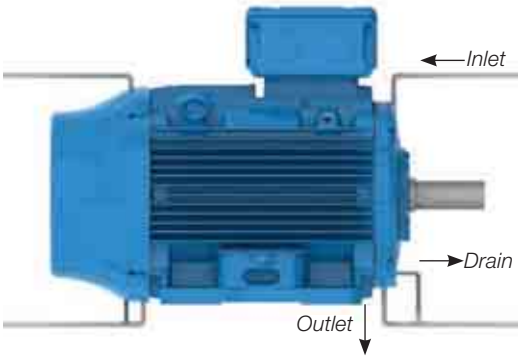

Figure 6.12 *- Oil supply and drain system of oil lubricated or oil mist lubricated motors*

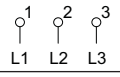
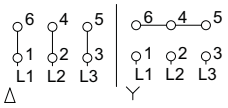
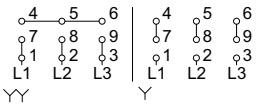
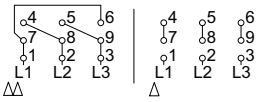
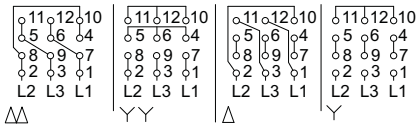
6.8. CONNECTION OF THE COOLING WATER SYSTEM

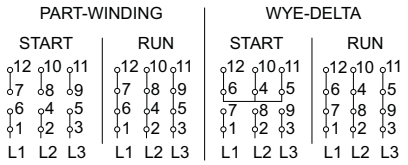


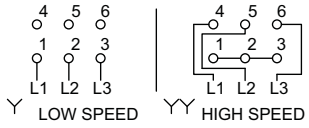


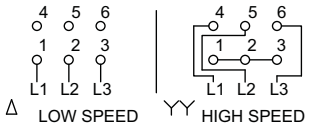


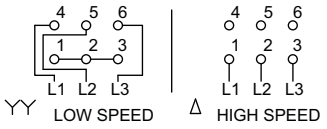


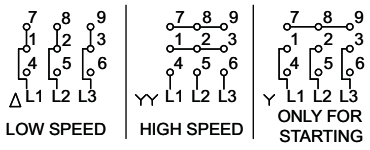












When water cooled motors are installed, connect the water inlet and outlet tubes to ensure proper motor cooling. According to item 7.2, ensure correct cooling water flow rate and water temperature in the motor cooling system.

6.9. ELECTRICAL CONNECTION

Consider the rated motor current, service factor, starting current, environmental and installation conditions, maximum voltage drop, etc. to select appropriate power supply cables and switching and protection devices. All motors must be installed with overload protection systems. Three-phase motors should be fitted with phase fault protection systems.

Before connecting the motor, check if the power supply voltage and the frequency comply with the motor nameplate data. All wiring must be made according to the connection diagram on the motor nameplate. Please consider the connection diagrams in the Table 6.2 as reference value.
To prevent accidents, check if motor has been solidly grounded in accordance with the applicable standards.

Table 6.2 *- Typical connection diagram for three-phase motors.*

Configuration	Quantity of leads	Type of connection	Connection diagram
Single speed	3	-	
	6	Δ - Y	
	9	YY - Y	
		ΔΔ - Δ	
	12	ΔΔ - YY - Δ - Y	
		Δ - PWS Part-winding start	
Double speed Dahlander	6	YY - Y Variable Torque	
		Δ - YY Constant Torque	
		YY - Δ Constant Output	
	9	Δ - Y - YY	
Double speed Double winding	6	-	

Equivalent table for lead identification													
Lead identification on the wiring diagram		**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**
Single speed	NEMA MG 1 Part 2	T1	T2	T3	T4	T5	T6	T7	T8	T9	T10	T11	T12
	IEC 60034-8	U1	V1	W1	U2	V2	W2	U3	V3	W3	U4	V4	W4
	JIS (JEC 2137) - up to 6 terminals	U	V	W	X	Y	Z						
	JIS (JEC 2137) - above 6 terminals	U1	V1	W1	U2	V2	W2	U5	V5	W5	U6	V6	W6
Double speed (Dahlander / Double winding)	NEMA MG 1 Part 2[1)]	1U	1V	1W	2U	2V	2W	3U	3V	3W	4U	4V	4W
	IEC 60034-8	1U	1V	1W	2U	2V	2W	3U	3V	3W	4U	4V	4W
	JIS (JEC 2137)	1U	1V	1W	2U	2V	2W	3U	3V	3W	4U	4V	4W

1) NEMA MG 1 Part 2 defines T1 to T12 for two or more winding, however WEG adopts 1U to 4W.

If motors are supplied without terminal blocks, insulate the cable terminals with suitable insulation material that meets the power supply voltage and the insulation class indicated on the motor nameplate.

Ensure correct tightening torque for the power cable and grounding connections as specified in Table 8.11

The clearance distance (see Figure 6.13) between non-insulated live parts with each other and between grounded parts must be as indicated in Table 6.3.

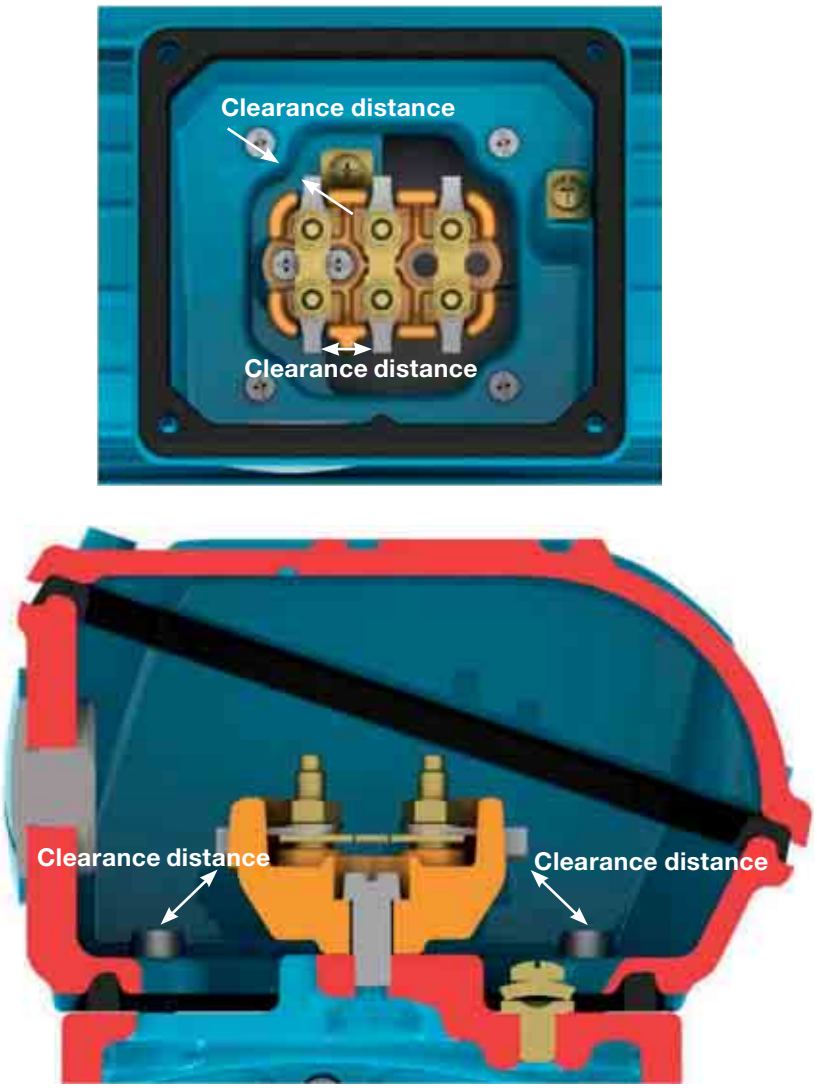


Figure 6.13 *- Clearance distance representation*

Table 6.3 *- Minimum clearance distance (mm) x supply voltage*

Voltage	Minimum clearance distance (mm)
U ≤ 440 V	4
440 < U ≤ 690 V	5.5
690 < U ≤ 1000 V	8
1000 < U ≤ 6900 V	45
6900 < U ≤ 11000 V	70
11000 < U ≤ 16500 V	105

Even when the motor is off, dangerous voltages may be present inside the terminal box used for the space heater supply or winding energization when the winding is used as heating element.
Motor capacitors will hold a charge even after the power has been cut off. Do not touch the capacitors and/or motor terminals, before discharging the capacitors completely.

After the motor connection has been completed, ensure that no tool or foreign body has been left inside the terminal box.

Unused cable inlet holes in the terminal box must be properly closed to ensure the degree of protection indicated on the motor nameplate.
The cable inlets used for power supply and control must be fitted with components (for example, cable-glands and conduits) that meet the applicable standards and regulations in each country.

If the motor is fitted with accessories, such as brakes and forced cooling systems, these devices must be connected to the power supply according to the information provided on their nameplates and with special care as indicated above.

All protection devices, including overcurrent protection, must be set according to the rated machine conditions. These protection devices must protect the machine against short circuit, phase fault or locked rotor condition. The motor protection devices must be set according to the applicable standards.

Check the direction of rotation of the motor shaft. If there is no limitation for the use of unidirectional fans, the shaft rotation direction can be changed by reversing any two of the phase connections. For single-phase motor, check the connection diagram indicated on the motor nameplate.

6.10. CONNECTION OF THE THERMAL PROTECTION DEVICES

If the motor is supplied with temperature monitoring devices, such as, thermostat, thermistors, automatic thermal protectors, Pt-100 (RTD), etc., they must be connected to the corresponding control devices as specified on the accessory nameplates. The non-compliance with this procedure may void the product warranty and cause serious material damages.

Do not apply test voltage above 2.5 V on thermistors and current above 1 mA on RTDs (Pt-100) according to IEC 60751 standard.

Figure 6.14 and Figure 6.15 show the connection diagram of the bimetal thermal protector (thermostats) and thermistors, respectively.

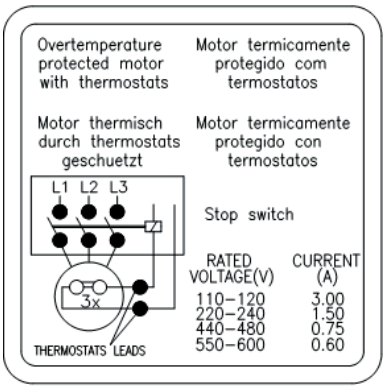

Figure 6.14 *- Connection of the bimetal thermal protectors (thermostats)*

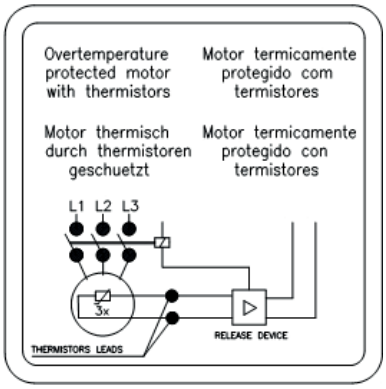

Figure 6.15 *- Thermistor connection*

The alarm temperature limits and thermal protection shutdowns can be defined according to the application; however these temperature limits can not exceed the values in Table 6.4.

Table 6.4 *- Maximum activation temperature of the thermal protections*

Component	Insulation class	Maximum temperature of the protection setting (°C)	
		Alarm	Tripping
Winding	B	-	130
	F	130	155
	H	155	180
Bearing	All	110	120

Notes*:*
1) The number and type of the installed protection devices are stated on the accessory nameplate of the motor.
2) If the motor is supplied with calibrated resistance, (for example, Pt-100), the motor protection system must be set according to the operating temperatures indicated in Table 6.4.

6.11. RESISTANCE TEMPERATURE DETECTORS (PT-100)

The thermocouples Pt-100 are made of materials, whose resistance depends on the temperature variation, intrinsic property of some materials (usually platinum, nickel or copper), calibrated resistance. Its operation is based on the principle that the electric resistance of a metallic conductor varies linearly with the temperature, thus allowing a continuous monitoring of the motor warm-up through the controller display ensuring a high level of precision and answer stability. These devices are widely used for measuring temperatures in various industry sectors.
In general these devices are used in installations where precise temperature control is required, for example, in installation for irregular or intermittent duty.
The same detector may be used for alarm and tripping purposes.

Table 6.5 and Figure 6.16 show the equivalence between the Pt-100 resistance and the temperature.

Table 6.5 *- Equivalence between the Pt-100 resistance and the temperature*

6.12. CONNECTION OF THE SPACE HEATERS

Before switching ON the space heaters, check if the space heaters connection have been made according to the connection diagram shown on the space heater nameplate. For motors supplied with dual voltage space heaters (110-127/220-240 V), see Figure 6.17.

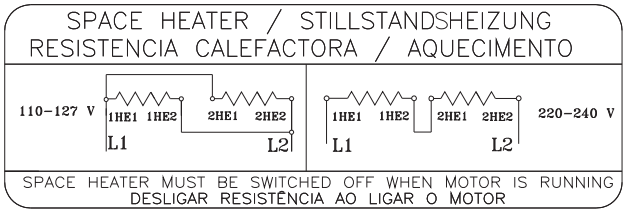

Figure 6.17 *- Dual voltage space heater connection*

The space heaters should never be energized when the motor is in operation.

6.13. STARTING METHODS

Whenever possible, the motor starting must be Direct On Line (DOL) at rated voltage. This is the most simple and feasible starting method. However, it must only be applied when the starting current does not affect the power supply. Please consider the local electric utility regulations when installing a motor.
High inrush current may result in:
a) high voltage drop in the power supply line creating unacceptable line disturbance on the distribution system;
b) requiring oversized protection system (cables and contactor) increasing the installation costs.

If DOL starting is not allowed due to the reasons mentioned above, an indirect starting method compatible with the load and motor voltage to reduce the starting current may be used.
If reduced voltage starters are used for starting, the motor starting torque will also be reduced.

Table 6.6 shows the possible indirect starting methods that can be used depending on the number of the motor leads.

Table 6.6 *- Starting method x number of motor leads*

Number of leads	Possible starting methods
3 leads	Autotransformer Soft-starter
6 leads	Star-Delta Autotransformer Soft-starter
9 leads	Series/Parallel Part winding Autotransformer Soft-starter
12 leads	Star-Delta Series/Parallel Part winding Autotransformer Soft-starter

Table 6.7 shows examples of possible indirect starting methods to be used according to the voltage indicated on the motor nameplate and the power supply voltage.

Table 6.7 *- Starting methods x voltage*

Nameplate voltage	Operating voltage	Star-delta	Autotransformer starting	Starting by series/ parallel switch	Part-winding starting	Starting by Soft-starter
220/380 V	220 V 380 V	YES NO	YES YES	NO NO	NO NO	YES YES
220/440 V	220 V 440 V	NO NO	YES YES	YES NO	YES NO	YES YES
230/460 V	230 V 460 V	NO NO	YES YES	YES NO	YES NO	YES YES
380/660 V	380 V	YES	YES	NO	NO	YES

The WQuattro line motors must be started direct on-line (DOL) or driven by a frequency inverter in scalar mode.

6.14. MOTORS DRIVEN BY FREQUENCY INVERTER

The operation with frequency inverter must be stated in the Purchase Order since this drive type may require some changes of the motor design.

Wmagnet Motors must only be driven by WEG frequency inverter.

The frequency inverter used to drive motors up to 690 V must be fitted with Pulse With Modulation (PWM) with vector control.

When a motor is driven by a frequency inverter at lower frequencies than the rated frequency, you must reduce the motor torque to prevent motor overheating. The torque reduction (derating torque) can be found in the item 6.4 of the "Technical Guidelines for Induction Motors driven by PWM Frequency inverters" available on the site www.weg.net.

If the motor is operated above the rated frequency, please note:
- That the motor must be operated at constant output;
- That the motor can supply max. 95% of its rated output;
- Do not exceed the maximum speed and please consider:
  - max. operating frequency stated on the additional nameplate;
  - mechanical speed limitation of the motor.

Information on the selection of the power cables between the frequency inverter and the motor can be found in the item 6.4 of the "Technical Guidelines for Induction Motors driven by PWM Frequency inverters" available at www.weg.net.

6.14.1. Use of dV/dt filter

6.14.1.1. Motor with enameled round wire

Motors designed for rated voltages up to 690 V, when driven by frequency inverter, do not require the use of dV/dT filters, provided that following criteria are considered.

Criteria for the selection of motors with round enameled wire when driven by frequency inverter [1]				
Motor rated votage [2]	**Peak voltage at the motor terminals (max)**	**dV/dt inverter output (max)**	**Inverter Rise Time [3] (min.)**	**MTBP [3] Time between pulses (min)**
Vnom ≤ 460 V	≤ 1600 V	≤ 5200 V/µs	≥ 0,1 µs	≥ 6 µs
460 < Vnom ≤ 575 V	≤ 1800 V	≤ 6500 V/µs		
575 < Vnom ≤ 690 V [4]	≤ 1600 V	≤ 5200 V/µs		
575 < Vnom ≤ 690 V [5]	≤ 2200 V	≤ 7800 V/µs		

Notes:
1. For the application of motors with round enameled wires designed for 690 < Vnom ≤ 1100 V, please contact WEG.
2. For the application of dual voltage motors, example 380/660 V, consider the lower voltage (380 V).
3. Information supplied by the inverter manufacturer.
4. When not stated in the Purchase Order that the motor will be driven by frequency inverter.
5. When stated in the Purchase Order that the motor will be driven by frequency inverter.

6.14.1.2. Motor with prewound coils

Motors with prewound coils (medium and high voltage motors regardless of frame sizes, and low voltage motors from IEC 500 / NEMA 800 frame on), designed for the use with frequency inverters, do not require the use of filters, provided they comply with the criteria in Table 6.8.

Table 6.8 *- Criteria to be considered when using motor with prewound coils to be drive by frequency inverters*

Motor rated voltage	**Type of modulation**	**Turn to turn insulation (phase-phase)**		**Phase-ground insulation**	
		Peak voltage at the motor terminals	**dV/dt at the motor terminals**	**Peak voltage at the motor terminals**	**dV/dt at the motor terminals**
690 < Vnom ≤ 4160 V	Sinusoidal	≤ 5900 V	≤ 500 V/µs	≤ 3400 V	≤ 500 V/µs
	PWM	≤ 9300 V	≤ 2700 V/µs	≤ 5400 V	≤ 2700 V/µs
4160 < Vnom ≤ 6600 V	Sinusoidal	≤ 9300 V	≤ 500 V/µs	≤ 5400 V	≤ 500 V/µs
	PWM	≤ 14000 V	≤ 1500 V/µs	≤ 8000 V	≤ 1500 V/µs

6.14.2. Bearing insulation

Only the motors in IEC frame size 400 (NEMA 680) and larger are supplied, as standard, with insulated bearing. If motor must be driven by frequency inverter, insulate the bearing according to Table 6.9.

Table 6.9 *- Recommendation on the bearing insulation for inverter driven motors*

Frame size	Recommendation
IEC 315 and 355 NEMA 445/7 to L5810/11	■ Insulated bearing/end shield ■ Grounding between shaft and frame by grounding brush
IEC 400 and larger NEMA 680 and larger	■ Insulated NDE bearing ■ Grounding between shaft and frame by grounding brush

When motors are supplied with shaft grounding system, monitor the grounding brush constantly during its operation and, when it reaches the end of its useful life, it must be replaced by another brush with the same specification.

6.14.3. Switching frequency

The minimum inverter switching frequency must not be lower than 2.5 kHz and should not exceed 5 kHz.

The non-compliance with the criteria and recommendations indicated in this manual may void the product warranty.

6.14.4. Mechanical speed limitation

Table 6.10 shows the maximum speeds allowed for motors driven by frequency inverter.

Table 6.10 *- Maximum motor speed (in rpm)*

Frame size		DE-bearing	Maximum speed for standard motors
IEC	NEMA		
63-90	143/5	6201 6202 6203 6204 6205	10400
100	-	6206	8800
112	182/4	6207	7600
		6307	6800
132	213/5	6308	6000
160	254/6	6309	5300
180	284/6	6311	4400
200	324/6	6312	4200
225-630	364/5-9610	6314	3600
		6315	3600
		6316	3200
		6319	3000
		6218	3600
		6220	3600
		6320	2200
		6322	1900
		6324	1800
		6328	1800
		6330	1800
		6224	1800
		6228	1800

Note:
To select the maximum allowed motor speed, consider the motor torque derating curve.

For more information on the application of frequency inverters, contact WEG or check the “Technical Guidelines for Induction Motors driven by PWM Frequency inverters” available at www.weg.net.

7. COMMISSIONING

7.1. INITIAL START-UP

After finishing the installation procedures and before starting the motor for the first time or after a long period without operation, the following items must be checked:

- If the nameplate data (voltage, current, connection diagram, degree of protection, cooling system, service factor, etc.) meet the application requirements;
- If the machine set (motor + driven machine) has been mounted and aligned correctly;
- If the motor driving system ensures that the motor speed does not exceed the max. allowed speed indicated in Table 6.10;
- Measure the winding insulation resistance, making sure it complies with the specified values in item 5.4;
- Check the motor rotation direction;
- Inspect the motor terminal box for damage and ensure that it is clean and dry and all contacts are rust-free, the seals are in perfect operating conditions and all unused threaded holes are properly closed thus ensuring the degree of protection indicated on the motor nameplate;
- Check if the motor wiring connections, including grounding and auxiliary equipment connection, have been carried out properly and are in accordance with the recommendations in item 6.9;
- Check the operating conditions of the installed auxiliary devices (brake, encoder, thermal protection device, forced cooling system, etc.);
- Check bearing operating conditions. If the motors are stored and/or installed for more than two years without running, it is recommended to change the bearings, or to remove, wash, inspect and relubricate them before the motor is started. If the motor is stored and/or installed according to the recommendations described in item 5.3, lubricate the bearings as described in item 8.2. For the bearing condition evaluation, it is recommended to use of the vibration analysis techniques: Envelope Analysis or Demodulation Analysis.
- For roller bearing motors with oil lubrication, ensure:
  - The oil level should be in the center of the sight glass (see Figure 8.1 and 8.2);
  - That if the motor is stored for a period equal or longer than the oil change interval, the oil must be changed before starting the motor.
- When motors are fitted with sleeve bearings, ensure:
  - Correct oil level for the sleeve bearing. The oil level should be in the center of the sight glass (see Figure 8.3);
  - That the motor is not started or operated with axial or radial loads;
  - That if the motor is stored for a period equal or longer than the oil change interval, the oil must be changed before starting the motor.
- Inspect the capacitor operating condition, if any. If motors are installed for more than two years, but were never commissioned, it is recommended to change the start capacitors since they lose their operating characteristics;
- Ensure that the air inlet and outlet opening are not blocked. The minimum clearance to the nearest wall (L) should be at least ¼ of the fan cover diameter (D), see Figure 7.1. The intake air temperature must be at ambient temperature.

***Figure 7.1**- Minimum clearance to the wall*

Please consider the minimum distances shown in the Table 7.1 as reference value;

Table 7.1 *- Minimum distance between the fan cover and wall*

Frame size		Distance between the fan cover and the wall (L)

500	8006/10	171	6.73
560	8806/10	185	7.28
630	9606/10	200	7.87

- Ensure correct water flow rate and water temperature when water cooled motors are used. See item 7.2;
- Ensure that all rotating parts, such as pulleys, couplings, external fans, shaft, etc. are protected against accidental contact.

Other tests and inspections not included in the manual may be required, depending on the specific installation, application and/or motor characteristics.

After all previous inspections have been carried out, proceed as follows to start the motor:

- Start the motor on no-load (if possible) and check the motor direction of rotation. Check for the presence of any abnormal noise, vibration or other abnormal operating conditions;
- Ensure the motor starts smoothly. If any abnormal operating condition is noticed, switch off the motor, check the assembly system and connections before the motor is started again;
- If excessive vibrations are noticed, check if the motor mounting bolts are well tightened or if the vibrations are not generated and transmitted from adjacent installed equipment. Check the motor vibration periodically and ensure that the vibration limits are as specified in item 7.2.1;
- Start the motor at rated load during a short time and compare the operating current with the rated current indicated on the nameplate;
- Continue to measure the following motor variables until thermal equilibrium is reached: current, voltage, bearing and motor frame temperature, vibration and noise levels;
- Record the measured current and voltage values on the Installation Report for future comparisons.

As induction motors have high inrush currents during start-up, the acceleration of high inertia load requires an extended starting time to reach full speed resulting in fast motor temperature rise. Successive starts within short intervals will result in winding temperature increases and can lead to physical insulation damage reducing the useful life of the insulation system. If the duty cycle S1 / CONT. is specified on the motor nameplate, this means that the motor has been designed for:

- Two successive starts: first start from cold condition, i. e., the motor windings are at room temperature and the second start immediately after the motor stops;
- One start from hot condition, i. e., the motor windings are at rated temperature.

The Troubleshooting Chart in section 10 provides a basic list of unusual cases that may occur during motor operation with the respective corrective actions.

7.2. OPERATING CONDITIONS

Unless otherwise stated in the Purchase Order, electric motors are designed and built to be operated at altitudes up to 1000 meters above sea level and in a temperature range from -20 °C to +40 °C. Any deviation from the normal condition of motor operation must be stated on the motor nameplate. Some components must be changed if the ambient temperature is different from the specified one. Please contact WEG to check the required special features.

For operating temperatures and altitudes differing from those above, the factors indicated in Table 7.2 must be applied to the nominal motor power rating in order to determine the derated available output (Pmax = Pnom x correction factor).

Table 7.2 - *Correction factors for altitude and ambient temperature*

T (°C)	Altitude (m)								
	1000	1500	2000	2500	3000	3500	4000	4500	5000
10							0.97	0.92	0.88
15						0.98	0.94	0.90	0.86
20					1.00	0.95	0.91	0.87	0.83
25				1.00	0.95	0.93	0.89	0.85	0.81
30			1.00	0.96	0.92	0.90	0.86	0.82	0.78
35		1.00	0.95	0.93	0.90	0.88	0.84	0.80	0.75
40	1.00	0.97	0.94	0.90	0.86	0.82	0.80	0.76	0.71
45	0.95	0.92	0.90	0.88	0.85	0.81	0.78	0.74	0.69
50	0.92	0.90	0.87	0.85	0.82	0.80	0.77	0.72	0.67
55	0.88	0.85	0.83	0.81	0.78	0.76	0.73	0.70	0.65
60	0.83	0.82	0.80	0.77	0.75	0.73	0.70	0.67	0.62

70	0.74	0.71	0.69	0.67	0.66	0.64	0.62	0.58	0.53
75	0.70	0.68	0.66	0.64	0.62	0.60	0.58	0.53	0.49
80	0.65	0.64	0.62	0.60	0.58	0.56	0.55	0.48	0.44

Motors installed inside enclosures (cubicles) must be ensured an air renewal rate in the order of one cubic meter per second for each 100 kW installed power or fraction of installed power. Totally Enclosed Air Over motors - TEAO (fan and exhaust / smoke extraction) are supplied without cooling fan and the manufacturer of the driven machine is responsible for sufficient motor cooling. If no minimum required air speed between motor fins is indicated on the motor nameplate, ensure the air speed indicated in the table 7.3 is provided. The values shown in Table 7.3 are valid for 60 Hz motors. To obtain the minimum air speed for 50 Hz motors, multiply the values in the table by 0.83.

Table 7.3 *- Minimum required air speed between motor fins (metres/second)*

Frame		Poles			
IEC	NEMA	2	4	6	8
63 to 90	143/5	13	7	5	4
100 to 132	182/4 to 213/5	18	12	8	6
160 to 200	254/6 to 324/6	20	15	10	7
225 to 280	364/5 to 444/5	22	20	15	12
315 to 450	445/7 to 7008/9	25	25	20	15

The voltage and frequency variations may affect the performance characteristics and the electromagnetic compatibility of the motor. The power supply variations should not exceed the values specified in the applicable standards. Examples:

- ABNT NBR 17094 - Parts 1 and 2. The motor has been designed to supply the rated torque for a combined variation in voltage and frequency:
  - Zone A: ±5% of the rated voltage and ±2% of the rated frequency;
  - Zone B: ±10% of the rated voltage and +3% -5% of the rated frequency.

When operated continuously in Zone A or B, the motor may show performance variations and the operating temperature may increase considerably. These performance variations will be higher in Zone B. Thus it is not recommended to operate the motor in Zone B during extended periods.

- IEC 60034-1. The motor has been designed to supply the rated torque for combined variation in voltage and frequency:
  - Zone A: ±5% of the rated voltage and ±2% of the rated frequency;
  - Zone B: ±10% of the rated voltage and +3% -5% of the rated frequency.

When operated continuously in Zone A or B, the motor may show performance variations and the operating temperature may increase considerably. These performance variations will be higher in Zone B. Thus it is not recommended to operate the motor in Zone B during extended periods. For multivoltage motors (example 380-415/660 V), a ±5% voltage variation from the rated voltage is allowed.

- NEMA MG 1 Part 12. The motor has been designed to be operated in one of the following variations:
  - ±10% of the rated voltage, with rated frequency;
  - ±5% of the rated frequency, with rated voltage;
  - A combined variation in voltage and frequency of ±10%, provided the frequency variation does not exceed ±5%.

If the motor is cooled by ambient air, clean the air inlet and outlet openings and cooling fins at regular intervals to ensure a free airflow over the frame surface. The hot air should never be returned to the motor. The cooling air must be at room temperature limited to the temperature range indicated on the motor nameplate (if no room temperature is specified, please consider a temperature range between -20 °C and +40 °C).

Table 7.4 shows the minimum required water flow for water cooled motors considering the different frame sizes and the maximum allowed temperature rise of the cooling water after circulating through the motor. The inlet water temperature should not exceed 40 °C.

***Table 7.4** - Minimum required water flow and the maximum allowed temperature rise of the cooling water after circulating through the motor*

Frame size		Flow rate (litres/minute)	Maximum allowed water temperature rise (°C)
IEC	NEMA		
180	284/6	12	5
200	324/6	12	5
225	364/5	12	5
250	404/5	12	5
280	444/5 445/7 447/9	15	6
315	504/5	16	6
355	586/7 588/9	25	6

Motors fitted with oil mist lubrication systems can be operated continuously for a maximum of one hour after the failure of the oil pumping system.

Considering the sun's heat increases the operating temperature, externally mounted motors should always be protected from direct sunlight exposure.

Each and every deviation from the normal operating condition (tripping of the thermal protection, noise and vibration level increase, temperature and current rise) should be investigated and corrected by WEG Authorized Service Centers.

Motors fitted with cylindrical roller bearings require a minimum radial load to ensure a normal operation. For information regarding the radial preload, please contact WEG.

7.2.1.Limits of vibration

The vibration severity is the maximum vibration value measured at all positions and in all directions as recommended in the standard IEC 60034-14. Table 7.5 specifies the limits of the maximum vibrations magnitudes according to standard IEC 60034-14 for shaft heights IEC 56 to 400, for vibrations grades A and B. The vibration severity limits in Table 7.5 are given as RMS values (Root Mean Square values or effective values) of the vibration speed in mm/s measured in free suspension condition.

***Table 7.5** - Recommended limits for the vibration severity according to standard IEC 60034-14*

Shaft height [mm]	56 ≤ H ≤ 132	132 ≤ H ≤ 280	H > 280
Vibration grade	Vibration severity on elastic base [mm/s RMS]		
A	1.6	2.2	2.8
B	0.7	1.1	1.8

***Notes**:*

1 - The values in Table 7.5 are valid for measurements carried out with decoupled machines (without load) operated at rated voltage and frequency.

2 - The values in Table 7.5 are valid regardless of the direction of rotation of the machine.

3 - The values in Table 7.5 are not applicable to single-phase motors, three-phase motors powered by a single-phase system or to machines mounted in situ or coupled with inertia flywheels or to loads.

According to NEMA MG 1, the allowed vibration limit for standard motors is 0.15 in/s (peak vibration in in/s).

***Note**:*

For the load operation condition, the use of the standard ISO 10816-3 is recommended for evaluating the motor vibration limits. In the load condition the motor vibration will be influenced by several factors, such as, type of the coupled load, condition of the motor fixation, alignment condition under load, structure or base vibration due to other equipments, etc..

8. MAINTENANCE

The purpose of the maintenance is to extend the useful life of the equipment. The non-compliance with one of these previous items can cause unexpected machine failures.

If motors with cylindrical roller or angular contact bearings are to be transported during the maintenance procedures, the shaft locking device must always be fitted. All HGF motors, regardless of the bearing type, must always be transported with the shaft locking device fitted.

All repairs, disassembly and assembly related services must be carried out only by qualified and well-trained personnel by using proper tools and techniques. Make sure that the machine has stopped and it is disconnected from the power supply, including the accessory devices (space heater, brake, etc.), before any servicing is undertaken.
The company does not assume any responsibility or liability for repair services or maintenance operations executed by non-authorized Service Centers or by non qualified service personnel. The company shall have no obligation or liability whatsoever to the buyer for any indirect, special, consequential or incidental loss or damage caused or arising from the company's proven negligence

8.1. GENERAL INSPECTION

The inspection intervals depend on the motor type, application and installation conditions. Proceed as follows during inspection:

- Visually inspect the motor and coupling. Check if abnormal noises, vibrations, excessive heating, wear signs, misalignment or damaged parts are noticed. Replace the damaged parts as required;
- Measure the insulation resistance according to the item 5.4;
- Clean the motor enclosure. Remove oil spills and dust accumulation from the motor frame surface to ensure a better heat transfer to the surrounding ambient;
- Check cooling fan condition and clean the air inlet & outlet openings to ensure a free air flow over the motor;
- Investigate the actual condition of the seals and replace them, if required;
- Drain the condensed water from inside the motor. After draining, reinstall the drain plugs to ensure the degree of protection as indicated on the motor nameplate. The motor must always be positioned so the drain hole is at the lowest position (see item 6);
- Check the connections of the power supply cables, ensuring the correct clearance distance between live and grounded parts, as specified in Table 6.3;
- Check if the tightening torque of the bolted connections and mounting bolts meets the tightening torque specified in Table 8.11;
- Check the status of the cable passages, the cable gland seals and the seals inside the terminal box and replace them, if required;
- Check the bearing operating conditions. Check for the presence of any abnormal noise, vibration or other abnormal operating conditions, like motor temperature rise. Check the oil level, the lube oil condition and compare the workings hours with the informed life time;
- Record and file all changes performed on the motor.

Do not reuse damaged or worn parts. Damaged or worn parts must be replaced by parts supplied by the manufacturer and must be installed as if they were the original parts.

8.2. LUBRICATION

Proper lubrication plays a vital role in the motor performance. Only use the grease or oil types, amounts and lubrication intervals recommended for the bearings. This information is available on the motor nameplate and the lubrication procedures must be carried out according to the type of lubricant (oil or grease).
When the motor is fitted with thermal protection devices for bearing temperature control, consider the operating temperature limits shown in Table 6.4.
The maximum operating temperature of motors used in special applications may differ from those shown in Table 6.4. The grease and oil disposal should be made in compliance with applicable laws in each country.

Please contact WEG when motors are to be installed in special environments or used for special applications.

8.2.1. Grease lubricated rolling bearings

Excess grease causes bearing overheating, resulting in bearing failure.

The lubrication intervals specified in Table 8.1, Table 8.2, Table 8.3, Table 8.4, Table 8.5, Table 8.6, Table 8.7 and Table 8.8 consider an absolute temperature on the bearing of 70 °C (up to frame size IEC 200 / NEMA 324/6) and 85 °C (for frame size IEC 225 / NEMA 364/5 and above), the motor running at rated speed, a motor mounted in horizontal position and greased with Mobil Polyrex EM grease. Any variation of the parameters listed above must be evaluated.

Table 8.1 *- Lubrication intervals for ball bearings*

Frame		Poles	Bearing designation	Amount of grease (g)	Lubrication intervals (hours)

	450 K/J	L6808/09	4 – 8	NU228	52	4500	3300	NU220	31	4500	4500

For each increment of 15 °C above the bearing temperature, the relubrication intervals given in the Table must be halved. The relubrication interval of motors designed by the manufacturer for mounting in horizontal position, but installed in vertical position (with WEG authorization), must be halved.
For special applications, such as: high and low temperatures, aggressive environments, driven by frequency inverter (VFD - frequency inverter), etc., please contact WEG about the required amount of grease and the relubrication intervals.

8.2.1.1. Motor without grease fitting

Motors without grease fittings must be lubricated in accordance with the existing Maintenance Plan. Motor disassembly must be carried out as specified in Item 8.3. If motors are fitted with shielded bearings (for example, ZZ, DDU, 2RS, VV), these bearings must be replaced at the end of the grease service life.

8.2.1.2. Motor with grease fitting

To lubricate the bearings with the motor stopped, proceed as follows:
- Before lubricating, clean the grease nipple and immediate vicinity thoroughly;
- Lift grease inlet protection;
- Remove the grease outlet plug;
- Pump in approximately half of the total grease indicated on the motor nameplate and run the motor for about 1 (one) minute at rated speed;
- Switch-off the motor and pump in the remaining grease;
- Lower again the grease inlet protection and reinstall the grease outlet protection.

To grease the motor while running, proceed as follows:
- Before lubricating, clean the grease nipple and immediate vicinity thoroughly;
- Pump the total grease indicated on the motor nameplate;
- Lower again the grease inlet protection.

For lubrication, use only manual grease gun.

If Motors are provided with a spring device for grease removal, the grease excess must be removed by pulling the rod and cleaning the spring until the spring does not remove more grease.

8.2.1.3. Compatibility of the Mobil Polyrex EM grease with other greases

The Mobil Polyrex EM grease has a polyurea thickener and a mineral oil thus being compatible with greases that contain:

- Lithium based thickener, lithium-based complex thickener, polyurea thickener and refined mineral oil;
- The used grease must have in its formulation corrosion and oxidation inhibitors.

In general terms, greases with the same type of soap are compatible to each other. However, depending on the proportion of the mixture there may be incompatibility. In such a case, it is not recommended to mix different types of greases without contacting the supplier or WEG beforehand.

8.2.2. Oil lubricated bearings

To change the oil of oil lubricated motor proceed as follows:

- Switch-off the motor;
- Remove threaded oil drain plug;
- Open the valve and drain the oil;
- Close the drain valve again;
- Reinstall the threaded oil drain plug;
- Fill-up with the type and amount of oil as specified on the nameplate;
- Check oil level. The oil level is OK when the lubricant can be viewed approximately in the center of the sight glass;
- Reinstall oil inlet plug;
- Check for oil leaks and ensure that all not used threaded plugs are closed with plugs.

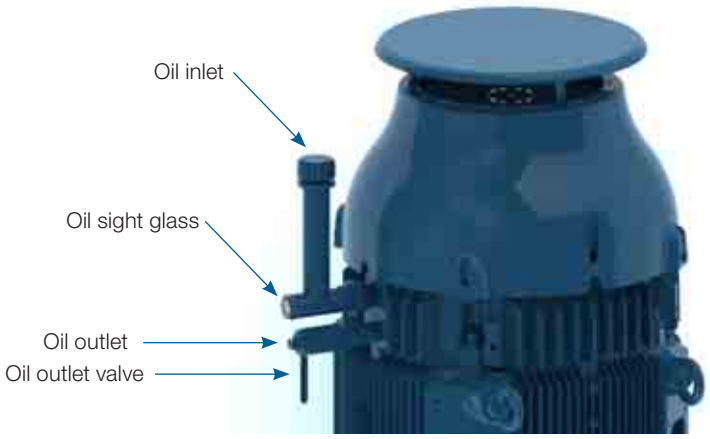

Figure 8.1 *- Oil lubricated bearing - vertical mounting*

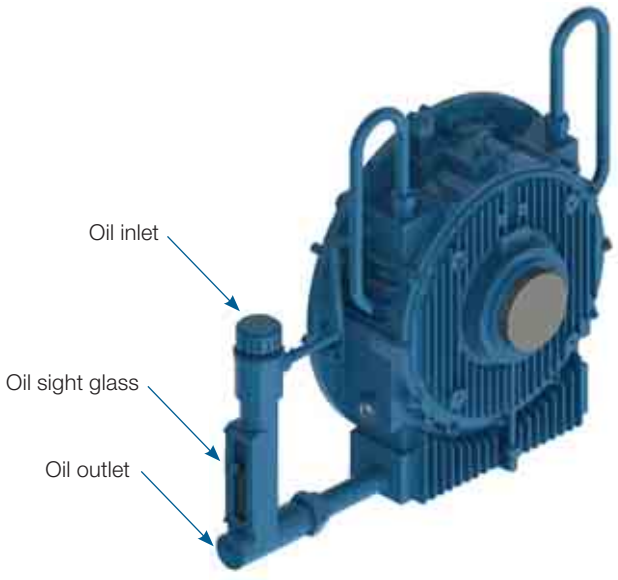

Figure 8.2 *- Oil lubricated bearing - horizontal mounting*

The bearing lubricating oil must be replaced as specified on the nameplate or whenever changes in the oil properties are noticed. The oil viscosity and pH must be checked periodically. The oil level must be checked every day and must be kept in the center of the sight glass.
Please contact WEG, when oils with different viscosities should be used.

***Note**:*
The HGF vertical mounted motors with high axial thrust are supplied with grease lubricated DE-bearings and with oil lubricated NDE-bearings. The DE-bearings must be lubricated according to recommendations in item 8.2.1. Table 8.9 specifies the oil type and the amount of oil required for this motor lubrication.

***Table 8.9** - Oil properties for HGF vertical mounted motors with high axial thrust*

Mounting - high axial thrust	Frame		Poles	Bearing designation	Oil (liters)	Interval (h)	Lubricant	Lubricant specification
	IEC	NEMA						
	315L/A/B e 315C/D/E	5006/7/8T e 5009/10/11T	4 - 8	29320	20	8000	FUCHS Renolin DTA 40 / Mobil SHC 629	ISO VG150 mineral oil with antifoam and antioxidant additives
	355L/A/B e 355C/D/E	5807/8/9T e 5810/11/12T	4 - 8	29320	26			
	400L/A/B e 400C/D/E	6806/7/8T e 6809/10/11T	4 - 8	29320	37			
	450	7006/10	4 - 8	29320	45			

8.2.3. Oil mist lubricated bearings

Check the service conditions of the seals and if replacement is required use only original components. Clean the seal components before assembly (bearing caps, end shields, etc.).
Apply joint sealant between the bearing caps and end shields. The joint sealant must be compatible with the used lubricating oil. Connect the oil lubricant tubes (oil inlet and oil outlet tubes and motor drain tube), as shown in Figure 6.12.

8.2.4. Sleeve bearings

The lubricating oil of sleeve bearings must be changed at the intervals specified in Table 8.10. To replace the oil, proceed as follows:

- NDE-bearing: remove the protection plate from the fan cover;
- Drain the oil through the drain hole located at the bottom of the bearing (see Figure 8.3);
- Close the oil drain hole;
- Remove the oil inlet plug;
- Fill the sleeve bearing with the specified oil and with the amount of oil specified in;
- Check the oil level and ensure it is kept close to the center of the sight glass;
- Install the oil inlet plug;
- Check for oil leaks.

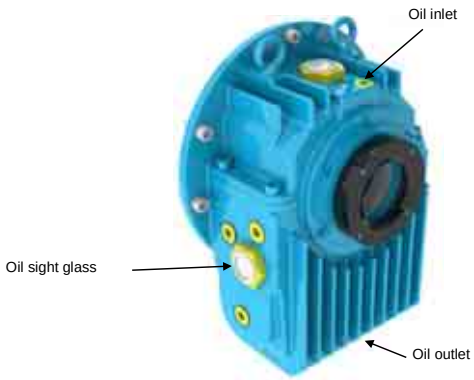

***Figure 8.3** - Sleeve bearing*

355	5800		9-100				
400	6800		11-110	4.7			
450	7000		11-125				
500	8000						

The lubricating oil must be replaced as specified on the nameplate or whenever changes on the oil properties are noticed. The oil viscosity and pH must be checked periodically. The oil level must be checked every day and kept in the center of the sight glass.
Please contact WEG, when oils with different viscosities are to be used.

8.3. MOTOR ASSEMBLY AND DISASSEMBLY

All repair services on motors should be always performed by qualified personnel and in accordance with the applicable laws and regulations in each country. Always use proper tools and devices for motor disassembly and assembly.

Disassembly and assembly services can be carried out only after the motor has been disconnected from the power supply and is completely stopped.

Dangerous voltages may be present at the motor terminals inside the terminal box since capacitors can retain electrical charge for long periods of time even when they are not connected directly to a power source or when space heaters are connected to the motor or when the motor windings are used as space heaters. Dangerous voltages may be present at the motor terminals when they are driven by frequency inverter even when they are completely stopped.

Record the installation conditions such as terminal connection diagram, alignment / leveling conditions before starting the disassembly procedures. These records should be considered for later assembly.

Disassemble the motor carefully without causing scratches on machined surfaces or damaging the threads.

Assemble the motor on a flat surface ensuring a good support base. Footless motors must be fixed/locked on the base to prevent accidents.

Handle the motor carefully to not damage the insulated components such as windings, insulated rolling bearings, power cables etc..

Seal elements, such as joint seals and bearing seals should always be replaced when wear or damage is noticed.

Motors with degree of protection higher than IP55 are supplied with joint and screw seal Loctite 5923 (Henkel) Clean the components and apply a new coat of Loctite 5923 on the surfaces before assembly.

8.3.1. Terminal box

Proceed as follows to remove the terminal box cover and to disconnect/connect the power supply cables and the cables of the accessory devices:

- Ensure that during the screw removal the terminal box cover does not damage the components installed inside the terminal box;
- If the terminal box cover is fitted with lifting eyebolt, lift the terminal box cover always by its lift eyebolt;
- If motors are supplied with terminal blocks, ensure the correct tightening torque on the motor terminals as specified in Table 8.11;
- Ensure that the cables do not contact sharp edges;
- Ensure that the original IP degree of protection is not changed and is maintained as indicate on the motor nameplate. The power supply cables and the control cables must always be fitted with components (cable glands, conduits) that meet the applicable standards and regulations of each country;
- Ensure that the pressure relief device is in perfect operating condition, if provided. The seals in the terminal box must be in perfect condition for reuse and must be reinstalled correctly to ensure the specified degree of protection;
- Ensure the correct tightening torque for the securing bolts of the terminal box cover as specified in Table 8.11.

Table 8.11 *- Tightening torque for the securing bolts [Nm]*

Screw type and seal	M4	M5	M6	M8	M10	M12	M16	M20
Hex bolt/hex socket bolt (without seal)	-	4 to 7	7 to 12	16 to 30	30 to 50	55 to 85	120 to 180	230 to 360
Combined slotted screw (without seal)	-	3 to 5	5 to 10	10 to 18	-	-	-	-
Hex bolt/hex socket bolt (with seal with metallic stop/cord)	-	-	-	13 to 20	25 to 37	40 to 55	50 to 65	-
Combined slotted screw (with flat seal 'and/or mettallic stop/cord)	-	3 to 5	4 to 8	8 to 15	-	-	-	-
Hex bolt/hex socket bolt (with flat seal)	-	-	-	8 to 15	18 to 30	25 to 40	35 to 50	-
Terminal blocks	1 to 1,5	1,5 to 4	3 to 6,5	6 to 9	10 to 18	15,5 to 30	30 to 50	-
Grounding terminals	-	3 to 5	5 to 10	10 to 18	30 to 50	55 to 85	120 to 180	-

8.4. DRYING THE STATOR WINDING INSULATION

Dismantle the motor completely. Remove the end shields, the rotor with the shaft, the fan cover, the fan and the terminal box before the wound stator with the frame is transferred to the oven for the drying process. Place the wound stator in the oven heated to max. 120 °C for two hours. For larger motors a longer drying time may be required. After the drying process has been concluded, allow the stator to cool to room temperature. Measure the insulation resistance again as described in item 5.4. Repeat the stator drying process if the required insulation resistance does not meet the values specified in Table 5.3. If the insulation resistance does not improve despite several drying processes, evaluate the causes of the insulation resistance drop carefully and an eventual replacement of the motor winding may be required. If in doubt contact WEG.

To prevent electrical shock, discharge the motor terminals immediately before, and after each measurement. If the motor is equipped with capacitors, these must be discharged before beginning any repair.

8.5. SPARE PARTS

When ordering spare parts, always provide complete motor designation, indicating the motor type, the code number and the serial number, which are stated on the motor nameplate.

Spare parts must always be purchased from WEG authorized Service Centers. The use of non-original spare parts can cause motor failure, performance drop and void the product warranty.

The spare parts must be stored in a clean, dry and properly ventilated room, with relative air humidity not exceeding 60%, with ambient temperature between 5 °C and 40 °C, free of dust, vibrations, gases, corrosive smokes and at constant temperature. The spare parts must be stored in their normal mounting position without placing other components onto them.

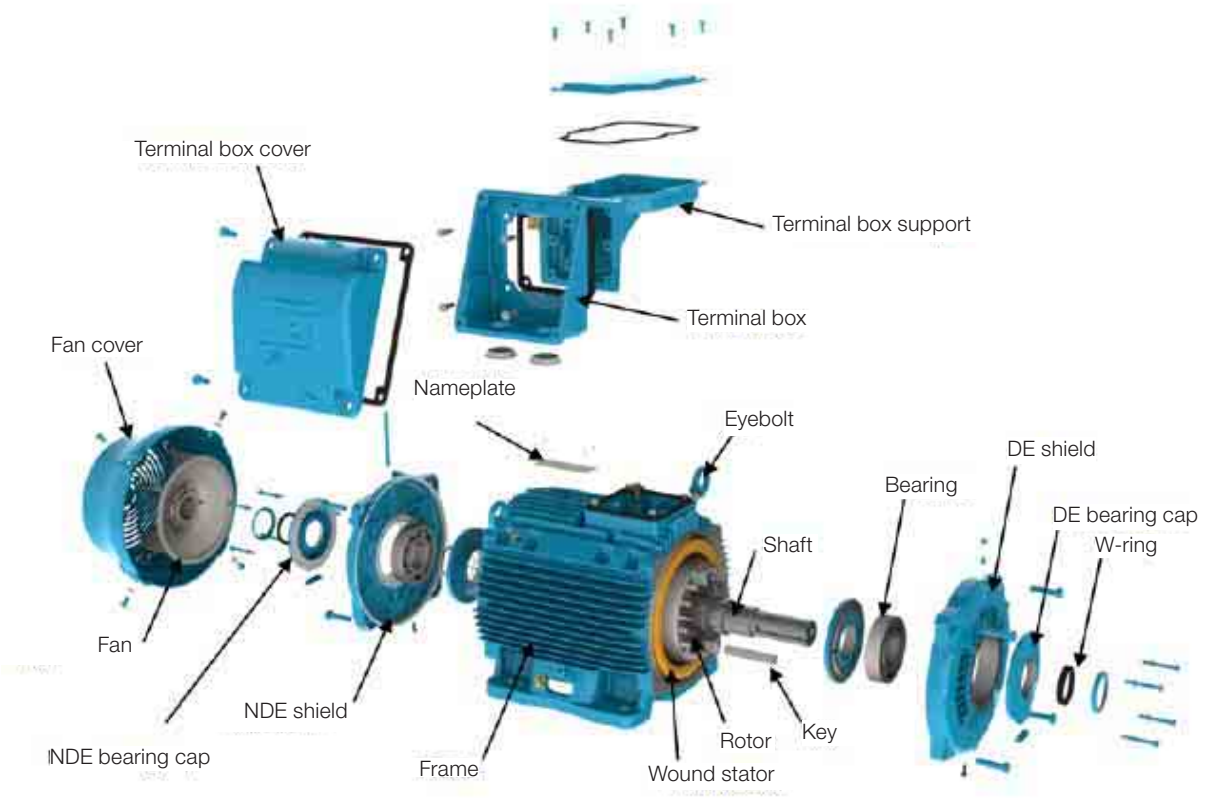

Figure 8.4 *- Exploded view of the components of a W22 motor*

9. ENVIRONMENTAL INFORMATION

9.1. PACKAGING

WEG electric motors are supplied in cardboard, plastic or wooden packaging. These materials can be recycled and must be disposed according to the applicable laws and regulations in each country. All wood used in the packaging of WEG motors come from the company reforestation program and is not submitted to any chemical conservation treatment.

9.2. PRODUCT

Electric motors consist mainly of ferrous metals (steel plates and cast iron), non ferrous metals (copper and aluminum) and plastic materials.

In general, electric motors have relatively long service live. However when they must be discarded, WEG recommends to dismantle the motor, sort the different materials and send them for recycling.

No-recyclable materials should be disposed of at industrial landfills according to the applicable environmental laws and regulations in each country, or co-processed in cement kilns or incinerated.

The recycling service providers, the disposal in industrial landfills, the waste co-processing or the incineration process must be properly authorized by the state environment agency to carry out these activities.

10. TROUBLESHOOTING CHART X SOLUTIONS

This troubleshooting chart provides a basic list of problems that may occur during motor operation, possible causes and recommended corrective actions. In case of doubts, please contact WEG Service Center.

Problem	Possible cause	Corrective action
Motor does not start, neither coupled nor decoupled	Power cables are interrupted	Check the control panel and the motor power supply cables
	Blown fuses	Replace blown fuses
	Wrong motor connection	Correct the motor connection according to connection diagram
	Locked rotor	Check motor shaft to ensure that it rotates freely
The motor starts at no-load, but fails when load is applied. It starts very slowly and does not reach the rated speed	Load toque is too high during start-up	Do not start the motor on load
	Too high voltage drop in the power cables	Check the installation dimensioning (transformer, cable cross section, relays, circuit breakers, etc.)
Abnormal/excessive noise	Defective transmission component or defective driven machine	Check the transmission force, the coupling and the alignment
	Misaligned / unleveled base	Align / level the motor with the driven machine
	Unbalanced components or unbalanced driven machine	Balance the machine set again
	Different balancing methods used for motor and coupling balancing (halve key, full key)	Balance the motor again
	Wrong motor direction of rotation	Reverse the direction of rotation
	Loose bolts	Retighten the bolts
	Foundation resonance	Check the foundation design
	Damaged bearings	Replace the bearings
Motor overheating	Insufficient cooling	Clean air inlet and outlet and cooling fins
		Check the minimum required distance between the fan cover and nearest walls. See item 7
		Check air temperature at inlet
	Overload	Measure motor current, evaluate motor application and if required, reduce the load
	Number of starts per hour is too high or the load inertia moment is too high	Reduce the number of starts per hour
	Power supply voltage too high	Check the motor power supply voltage. Power supply voltage must not exceed the tolerance specified in item 7.2
	Power supply voltage too low	Check the motor power supply voltage and the voltage drop. Power supply voltage must not exceed the tolerance specified in item 7.2
	Interrupted power supply	Check the connection of the power cables
	Voltage unbalance at the motor terminals	Check for blown fuses, wrong commands, voltage unbalance in the power line, phase fault or interrupted power cables
	Direction of rotation is not compatible with the unidirectional fan	Check if the direction of rotation matches the rotation arrow indicated on end shield
Bearing overheating	Excessive grease/oil	Clean the bearing and lubricate it according to the provided recommendations
	Grease/oil aging	
	The used grease/oil does not matches the specified one	
	Lack of grease/oil	Lubricate the bearing according to the provided recommendations
	Excessive axial or radial forces due to the belt tension	Reduce the belt tension
		Reduce the load applied to the motor

ELECTRIC HOIST

VULCAN
HOIST - PALAN

VULCAN'S ELECTRIC HOIST:

- TWO YEARS WARRANTY
- Build to **ASME B30.16**
- Certified to **CSA C22.2 NO. 14 & NO. 33**
- Conforms **UL 508A & 1004-1**
- Design factor **5:1**

MADE IN CANADA CUSTOM-MADE

VULCAN IS THE ONLY CANADIAN MANUFACTURER of electric chain hoists, trolleys and winches.

Intertek

Rugged Worm Gear Drive

- Worm gear drive: robust, reliable and the only one to offer controlled lowering of the load
- Speeds: 2ft/min to 52ft/min
- High quality ball bearing
- Industrial alloy gears running in oil bath

Calibrated load chain

- High performance welded link chain: GR80, tempered and case-hardened alloy steel
- Black finish or zinc plated *(optional)*

Safety brake

- Electromechanical brake reteins load even if power is lost
- Brake holds 200% of hoist working load limit

Electric motor

- Voltages: 115/230-1Ph-50/60Hz, 230/460/575-3Ph-50/60Hz
- Instantly reversible electronic starter (single phase motors)
- Insulation: Class B (standard motors), Class F (high performance motors)
- Options: 2 speeds 3Ph motor, thermal relay, acidity/humidity treatment, TENV or TEFC

Limit switches

- Adjustable upper/lower limit switches
- Chain guide with integrated limit switch *(optional)*

Hooks

- Forged hooks with safety latches
- Bearing-mounted lower hooks
- Options: low headroom (lug), self-locking hook, zinc plating/epoxy paint (lower hooks)

Control

- Standard voltage: 24VAC
- Options: 115VAC, NEMA 4 pendant, ergonomic pendant, emergency stop, radio-control, simultaneous hoist operation, Festoon power system

Other options

- Hour/cycle counter
- Electromechanical overload protection
- Vinyl or metal chain container
- Raincoat cover
- Synthetic oil
- Inverted hoist (theater hoist)

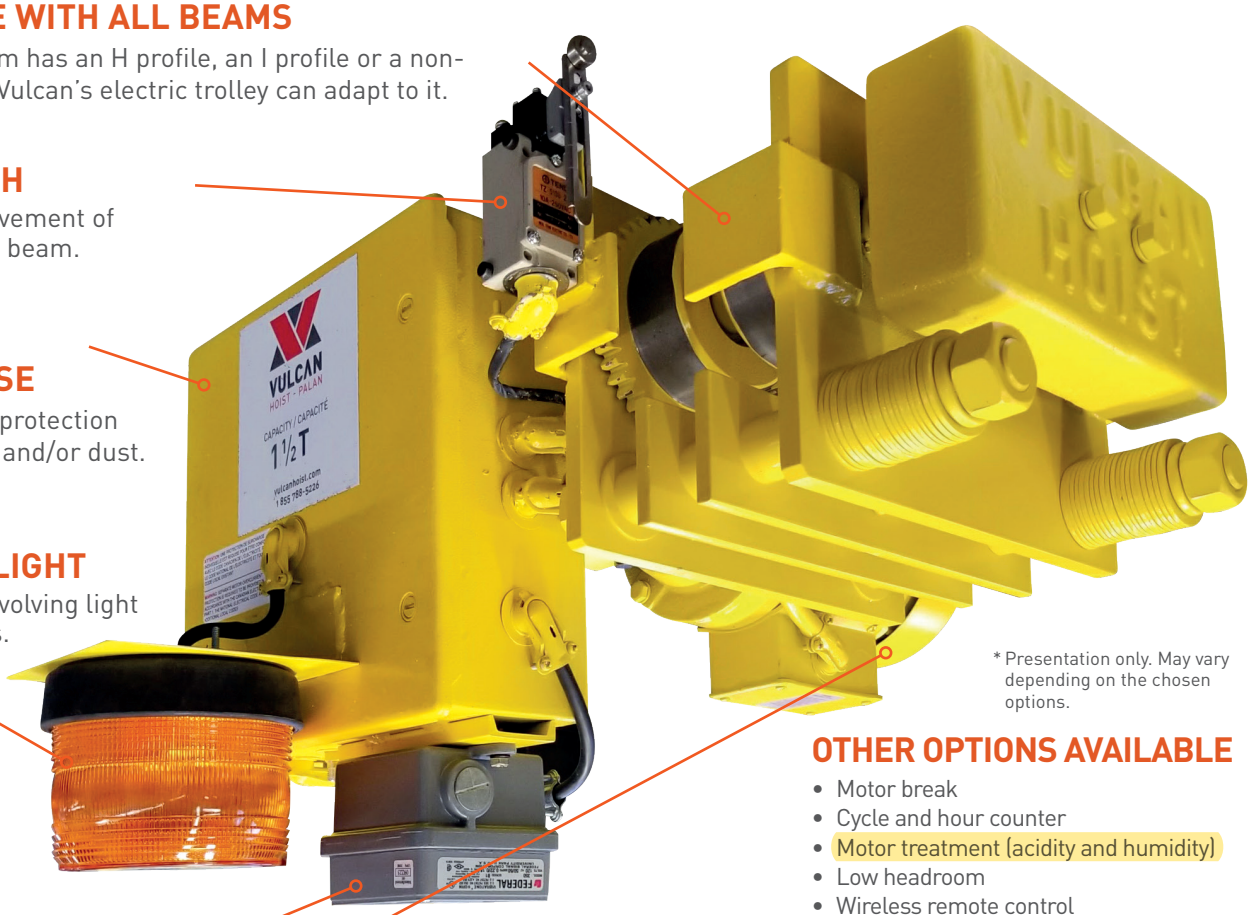
ELECTRIC TROLLEY

VULCAN
HOIST - PALAN

VULCAN'S ELECTRIC TROLLEY,
a sturdy, durable equipment with leading edge safety features*:

Intertek

FABRIQUÉ AU CANADA
FAIT SUR MESURE



VULCAN IS THE ONLY CANADIAN MANUFACTURER of electric chain hoists, trolleys and winches.

COMPATIBLE WITH ALL BEAMS
Whether the beam has an H profile, an I profile or a non-standard shape, Vulcan's electric trolley can adapt to it.

LIMIT SWITCH
For a precise movement of the trolley on the beam.

NEMA 4 OR NEMA 12 CASE
For an improved protection against humidity and/or dust.

REVOLVING LIGHT
High-intensity revolving light for visible travels.

* Presentation only. May vary depending on the chosen options.

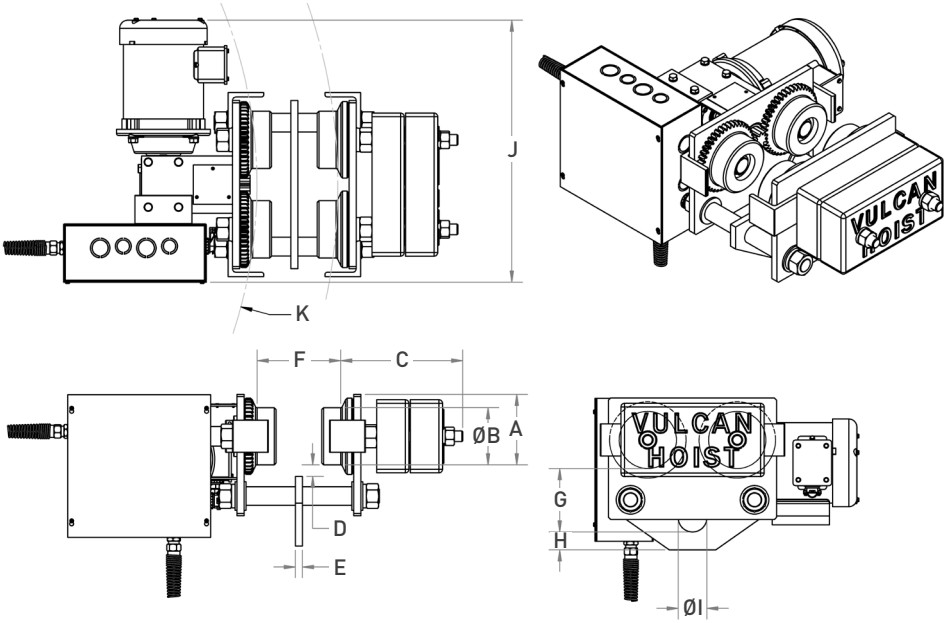
HORN
Device produces a sound signal.

MOTOR TREATMENTS
To use trolley in acidic, damp and/or dusty conditions.

BASE FEATURES
- Emergency stop
- Thermal overload relay
- Controls & pendants
- TEFC motor
- Insulation Class F

OTHER OPTIONS AVAILABLE
- Motor break
- Cycle and hour counter
- Motor treatment (acidity and humidity)
- Low headroom
- Wireless remote control
- Simultaneous control of multiple trolleys
- Synthetic oil
- Revolving light
- Buzzer / horn
- Festoon power system
- Travel limit switch
- Epoxy paint and custom colors
- NEMA 4 push button control pendant
- NEMA 4 & NEMA 12 control enclosure

PLEASE CONTACT US FOR MORE INFORMATIONS



3435, boul. Crémazie Est, Montréal (Québec) H1Z 2J2 / Tel.: 514 728.4527 / Fax: 514 374.4231 / vulcanhoist.com / info@vulcanhoist.com

ELECTRIC TROLLEY

VULCAN HOIST - PALAN

VULCAN'S ELECTRIC TROLLEY:

- Two-year warranty
- Sturdy design
- Machined-steel wheels and gears
- Built-in bumper and drop stop
- Single or double-speed motor
- Multiple travel speeds available
- ANSI/ASME B30.11 & CSA

Like Vulcan's electric chain hoists, electric trolleys have a sturdy, durable design. Their wheels and gears are made of machined, case-hardened steel that provide a maximum resistance to wear. Bumpers and drop stops are built into the design to provide better safety and a protection against contacts.

The trolley design, with 2 support bolts (3 for the 10T model) provides an increased sturdiness under all load conditions.

Mainly designed to be used with Vulcan hoists, these trolleys can also be combined with hoists from other manufacturers on a wide array of H or I beam dimensions. Vulcan's electrical hoists are available with several travel speed options, as well as with a single speed or double-speed motor.

Lastly, depending on the chosen hoist-trolley combination and options, we carry a complete line of available controls, including wireless remote controls.

SELF-LOCKING HOOK

VULCAN
HOIST - PALAN

VULCAN'S SELF-LOCKING HOOK:

- Sturdy and safe build - requires minimal maintenance
- 1/4T to 5T capacity
- Complies with ANSI B30.10 and B30.16 standards
- 5:1 Safety Factor

1/4T - 1 1/2T

2T - 3T

5T

Sturdy

- Hook made of grade-80 forged steel alloy
- Safety yellow finish

Safe

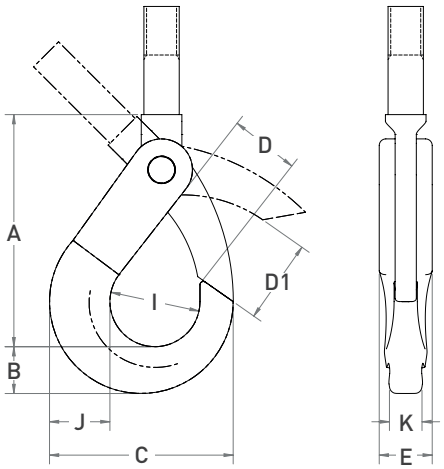
- Latch automatically closes and locks once load is applied on the hook
- Load fitting is secured inside the hook when hook is closed
- Once close, latch fits the hook profile perfectly

Minimal maintenance

- No spring latch to replace
- Save time and money

Easy to handle

- Simplified hook opening with ergonomic release



3435, boul. Crémazie Est, Montréal (Québec) H1Z 2J2 / Tel.: 514 728.4527 / Fax: 514 374.4231 / vulcanhoist.com / info@vulcanhoist.com

Leader mondial dans la technologie de vibration

OLI est **le leader global dans la fabrication des vibrateurs pneumatiques et électriques**. Un niveau élevé de service à la clientèle est garanti à travers 20 filiales de commerce OLI 70+ entrepots et nos 4 usines de fabrication dans le monde entier.

LES 3 DIVISIONS OLI

FOURNISSENT DES SOLUTIONS OPTIMALES POUR TOUTES LES EXIGENCES DES CLIENTS

VIBRATEUR INDUSTRIELS	MATÉRIELS D'AIDE À L ÉCOULEMENT	CONSOLIDATION DU BÉTON
		
Vibarteurs électriques pour équipements vibrant.	Gamme complète de vibrateurs électriques et pneumatiques pour faciliter l'écoulement de produits.	Aiguilles vibrantes et convertisseur de fréquence pour une compaction efficace du béton.

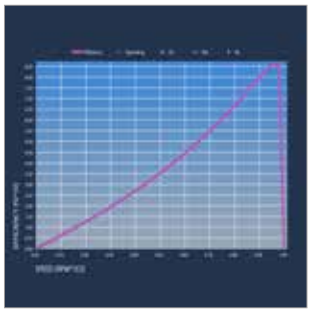
Initialement spécialisé dans les vibrateurs à immersion pour la compaction du béton, OLI est maintenant le leader mondial sur l'ensemble des technologies de la vibration, avec une **gamme complète de vibrateurs électriques et pneumatiques internes et externes.**

En fournissant des solutions et des **produits compétitifs de haute qualité pour les applications les plus rigoureuses**, OLI allie **performance** et **fiabilité** pour un marché en constante évolution. Promoteur de l'innovation, OLI s'efforce continuellement d'être en avance sur ses concurrents.

En tant que leader mondial dans les technologies de la vibration industrielle, l'une des principales préoccupations de la stratégie de OLI est la **livraison rapide à tout moment et partout dans le monde.**
Le service à la clientèle est d'une importance cruciale: il garantit le **traitement rapide des commandes** et les clients du monde entier peuvent avoir accès à des produits et des services de haute qualité.

Une equipe d'ingenieurs specialisees
dans la conception de solutions efficaces, fiables
et sures soutenues par un **management certifié**
au niveau mondial permettent un partage de l'ensemble de nos expériences partout dans le monde.

OLI fournit à ses clients des équipements de pointe et le plan d'action pour la prochaine génération de produits est déjà en cours.



CARACTÉRISTIQUES TECHNIQUES

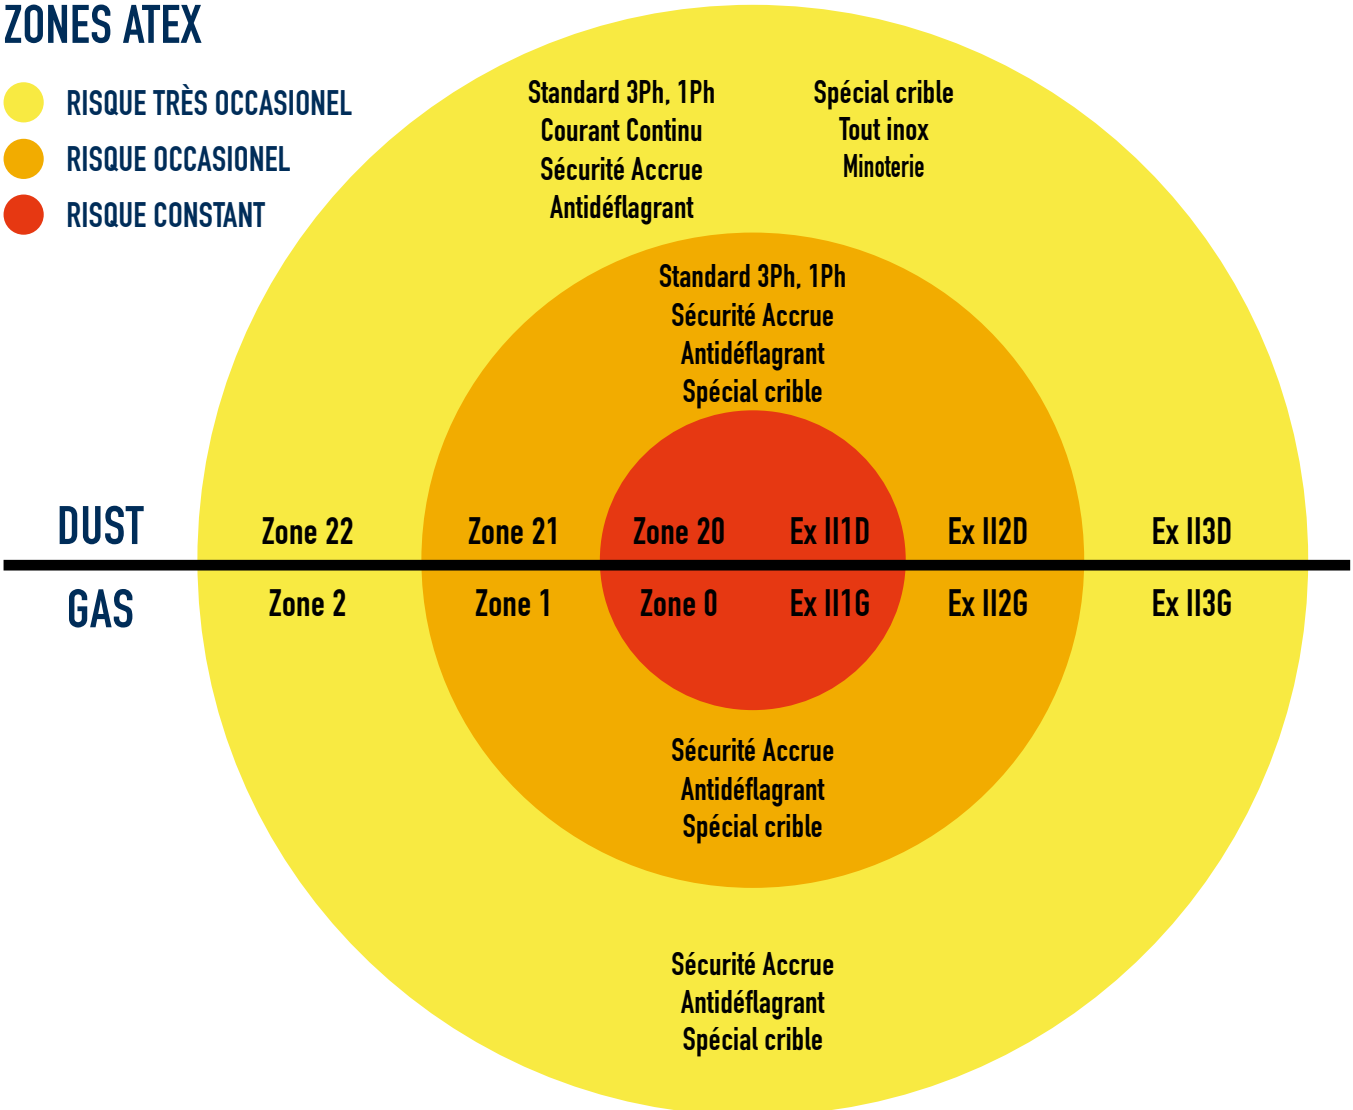
Tous les moteurs sont conçus pour une application de type convertisseur de 20 Hz à la fréquence nominale.		Triphasés de 220 V à 575 V. 50 Hz à 60 Hz. Tous les moteurs sont conçus pour une application de type convertisseur de 20 Hz à la fréquence nominale.	
Temporisation	Service continu (S1).					
Structure de protection	Protection mécanique IP66 selon CEI 60529.					
Paliers	Roulements à billes de la taille MICRO à 50. Roulements à rouleaux de la taille 60 à 110.	Roulements à billes de la taille 10 à 50. Roulements à rouleaux de la taille 60 à 90.	Roulements à rouleaux.			Roulements à billes de la taille 10 à 50 * Roulement à rouleaux pour taille 60.
Couleur revêtement	Revêtement en poudre polyester. Couleur standard RAL 2009. Peinture spéciale anticorrosion disponible sur demande sur la gamme Standard uniquement.					AISI 316 CORPS Sans revêtement
Fixation	Compatibilité avec les fixations des marques les plus connus, à la demande					/
Installation et environnement de fonctionnement	Pour utilisation à l'abri et en plein air					
	Température environnementale: -20 °C à +40 °C. Jusqu'à +55 ° C disponible sur demande.	Température environnementale: -20 °C à +40 °C.	Température environnementale: -20 °C à +40 °C. Jusqu'à +60 ° C disponible sur demande.	Température environnementale: -20 °C à +40 °C.	Température environnementale: -20 °C à +40 °C.	Température environnementale: -20 °C à +40 °C.
Normes respectées	Conformité avec la Directive européenne, Basse tension 2014/35/UE Directive Machines 2006/42/EC, ATEX 2014/34/UE					
Couvercles masses	Aluminium, pour vibrateurs de taille 10 à taille 50 et taille 100, 105, 110. Acier doux, de la taille 60 à la taille 91. Acier inoxydable AISI 304, pour motovibrateurs à courant continu.	Aluminium, pour vibrateurs de la taille 10 à la taille 50. Acier doux, de la taille 60 à la taille 91.	Acier inoxydable AISI 304 .	Acier.	Aluminium.	Acier inoxydable AISI 304 .
Enroulements	moteur asynchrone 2, 4, 6 et 8 pôles triphasés de taille 10 à 110; 2 pôles monophasé de taille 10 à 30.	moteur asynchrone 2, 4, 6 et 8 pôles triphasés.		6, 8 et 10 pôles moteur asynchrone triphasé.	4 pôles.	moteur asynchrone 2, 4, 6 et 8 pôles triphasés.
	Matériaux d'isolement classe F (155 °C). Enroulements imprégnés sous vide; Thermistance 130 °C standard de taille 60.		Interrupteur thermique 130 °C standard à partir de la taille 60.	Matériaux d'isolement classe F (155 °C). Enroulements imprégnés sous vide; Thermistance 130 °C standard de taille 60.	Interrupteur thermique 130 °C.	Matériaux d'isolement classe F (155 °C). Enroulements imprégnés sous vide.
Brides	Boîtier en fonte jusqu'à la taille 80 (y compris), fonte sphéroïdale à partir de la taille 100.				Fonte sphéroïdale.	AISI 316
Cadre	En aluminium jusqu'à la taille 50, fonte à partir de la taille 60.				Aluminium.	AISI 316
Arbre	Alliage d'acier hautement résistant au stress.					
Masses excentriques	Complètement réglable.					

* Sauf pour MVE 710/15N-50A0 et MVE 510/1N-50A0

La gamme des vibrateurs OLI



Fournissant une force centrifuge allant jusqu'a 26 000 kg et plusieurs tension d'alimentation possible, la gamme des moto-vibrateurs électriques OLI couvre plusieurs domaines d'application dans tous les pays et dans tous les secteurs industriels: des aliments aux minéraux, de la fonderie au recyclage et bien plus encore.
Les moto vibrateurs électriques OLI sont conçus et fabriqués en utilisant les dernières technologies et des matériaux et des composants haut de gamme.
Les corps des moteurs, les brides et les arbres de support sont conçus et fabriqués FMEA en alliage d'aluminium de première qualité, fonte et alliage d'acier pour résister aux applications lourdes et garantir un fonctionnement sans danger dans toutes les conditions.

Les enroulements imprégnés sous vide et les matériaux d'isolement classe F améliorent la fiabilité et la longévité.
Les roulements de qualité supérieure et le système de répartition de la graisse assurent une performance et une fiabilité sur le long terme.

Les masses excentriques réglables permettent un réglage facile de la force centrifuge fournie par le moteur.
Plusieurs certifications pour l'utilisation dans des environnements dangereux sont disponibles dans la gamme OLI afin de correspondre à la spécification plus exigeante dans le monde entier.

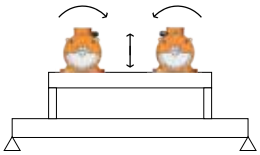
Comment choisir un motovibrateur



1.

Choisissez tr/min et l'amplitude "e" (max. 0) adapté à votre application :

Vibration circulaire

Vibration linéaire

Procédés d'application	Vibration		Tours par minute					
			50Hz	750	1000	1500	3000	6000
	Circulaire	Linéaire	60Hz	900	1200	1800	3600	-
Transport		✓			✓	✓		
Séparation / Dégrillage / Dimensionnement		✓		✓	✓	✓		
Positionnement / Dosage		✓		✓	✓	✓		
Nettoyage filtre	✓						✓	
Déchargement silo/ trémie	✓						✓	
Lits fluidisés		✓		✓	✓			
Fonds vibrants	✓					✓	✓	
Compactage		✓					✓	✓
Consolidation du béton	✓						✓	✓

rpm	e (mm)	
	Min.	Max.
3.600	0,3	0,6
3.000	0,3	0,8
1.800	1,2	2,2
1.500	1,4	2,6
1.200	2,5	4,0
1.000	3,0	5,2
9.00	3,5	5,5
750	3,5	6,0

2.

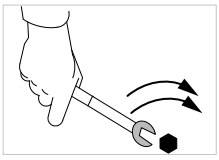
Choisissez un vibrateur MVE des tableaux des pages suivantes et utiliser son Wm dans cette formule:

$$e = 5 \times \frac{n \times Wm}{n \times M_{mot} + M_{vm}}$$

e = amplitude de vibration 0-pic (mm)

n = nombre de moteurs de vibration

Wm = moment dynamique (kgcm)



M_{mot} = poids moteur (kg)

M_{vm} = poids de la machine vibrante (sans matériel et moteurs)

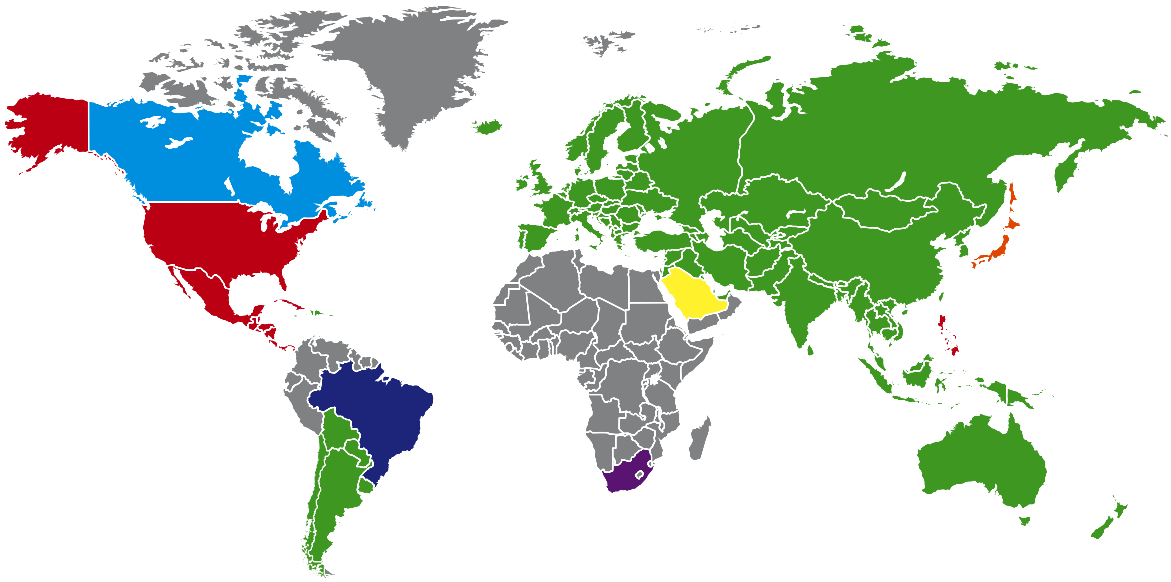
3.

Vérifiez la valeur obtenue “e”:

- Si elle est similaire à celle nécessaire (étape 1) ➡ le modèle MVE est le bon.
- Si elle n’est pas similaire à celle nécessaire (étape 1) ➡ répétez le processus (étape 2) avec un modèle différent de MVE.

Pour obtenir des informations sur l’installation, voir annexe.

Tensions nominales standard



Plusieurs tensions sont disponibles pour correspondre aux spécifications électriques locales
dans le monde entier à 50 Hz et 60 Hz.

Tous les vibrateurs OLI peuvent fonctionner avec une double tension en changeant simplement les connexions à l'intérieur de la boîte à bornes de **Star** à **Delta** ou vice-versa.

En règle générale, les MVE avec une puissance nominale > 4,3kW ont une connexion de boîte à bornes Delta standard , à la seule exception du MVE 5000/3E-75A1. **Les MVE plus petits ont une connexion de boîte à bornes Star standard.** Se référer aux tableaux de spécifications du produit pour voir le réglage d'usine de chaque modèle.
Pour plus de détails sur les connexions « Star » et « Delta », voir page 45.

	Voltzahlen	Hz
	200-230/345-400 V	50/60
	220-240/380-415 V	50
	380-415 V (Delta) *	50
	230/460 V *	60
	460 V (Delta)	60
	330/575 V	60
	575 V (Delta) *	60
	460 V (Delta)	60
	290-300/500-525 V	50
	500-525 V (Delta)	50
	207-253/414-480 V	60
	220-240/380-415 V	50
	220-277/380-480 V	60
	380/415 V (Delta)	50
	460 V (Delta)	60

Options

ACIER-IT
Spécialement développé pour les applications alimentaires avec un revêtement spécial contenant de l'acier inoxydable AiSi 316L.

ARBRES ALLONGÉS
Conçus pour l'utilisation de plusieurs vibrateurs.
Disponibles sur demande.

COUVERCLES EN ACIER INOXYDABLE
Disponibles avec une finition propre.
Couvercles de masse en acier inoxydable AiSi 304 (sur demande) pour les applications les plus exigeantes. Disponibles jusqu'à la taille 91.

CHAUFFAGE
À utiliser dans un environnement très froid.

COUVERCLES FENDUS
Développés pour les applications peu encombrantes. Disponibles à partir de la taille 60 et au-delà.

EMPREINTE
Empreinte du concurrent disponible sur demande.

IMPORTANT:
La tension nominale peut varier en fonction du niveau de certification admis lorsque certaines options sont choisies.

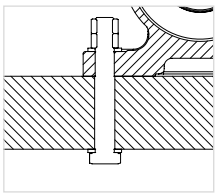
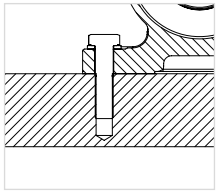
INSTALLATION



Montage

La surface de la plaque de base où le vibrateur est monté doit être totalement plate avec une tolérance maximum de 0.25mm (0,01in), afin que les surfaces reposent uniformément l'une contre l'autre pour éviter les tensions internes qui peuvent provoquer la rupture du pied du moteur vibrateur.
Utiliser des boulons 8.8, des écrous type 8.0 et des rondelles plates appartenant à la catégorie A EN ISO 7089 / 7092.
Le graphique suivant affiche les paramètres du couple correct pour les différentes tailles de boulons utilisés sur les moteurs vibrateurs.



Interface moteur / machine

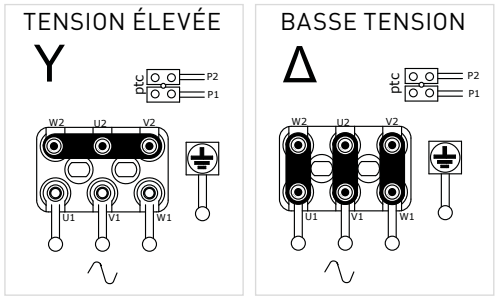
TOLÉRANCE DE PLANÉITÉ SURFACE

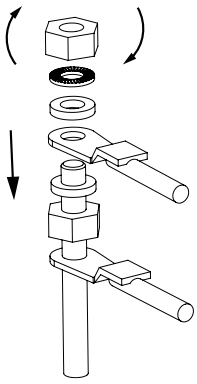
PLAQUE DE SUPPORT USINÉE ET PAS PEINTE

Raccordement électrique



Assurez-vous que l'alimentation en tension et la fréquence correspondent à celles indiquées sur la plaque signalétique du vibrateur électrique.
Si le moteur est alimenté par un entraînement à fréquence variable ne pas démarrer en dessous 20 Hz et au-dessus de la fréquence nominale.
Insérer le câble d'alimentation dans le presse-étoupe. Les câbles doivent être de type œillet, préalablement isolés, avec un alésage pour les bornes de la boîte de jonction afin d'éviter une surchauffe du fil. Utiliser seulement les conducteurs qui ont une section appropriée.

Connecter les câbles aux goupilles (tel que illustré dans le diagramme ci-dessous) et serrer avec le couple spécifié:

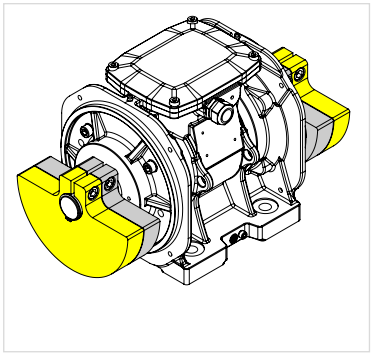


N'oubliez pas de fixer le câble de mise à la terre aux goujons fournis
→ connexion obligatoire!
Avant de fermer la boîte de jonction assurez-vous que le joint du couvercle est fixé afin de maintenir la protection IP spécifiée.
Pour plus de détails sur l'installation du moteur, consulter les manuels du produit.

Écrous boîtier de dérivation couple de serrage		
Vite	Nm	ftlb
M4	2.5	1,84
M5	4	2,95
M6	5	3,69
M8	6	4,43
M10	8	5,90

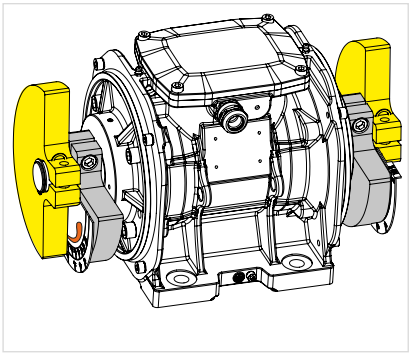
RACCORDEMENTS DES BORNES

Vérifier l'étiquette de la colonne « Raccordements des bornes » pour connaître le raccordement préréglé en usine de chaque moteur.



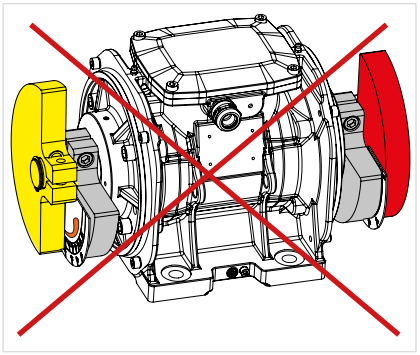
Protection contre les surcharges

Tous les vibrateurs électriques doivent être connectés à une protection contre les surcharges externes.
En utilisant deux vibrateurs électriques synchronisés, chacun d'eux doit être raccordé à un disjoncteur de surcharge externe et ces dispositifs de protection contre la surcharge doivent être verrouillés pour s'assurer que les deux moteurs s'arrêtent en cas de défaillance.



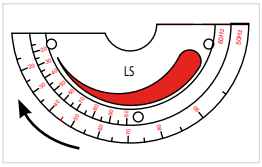
Utilisez toujours un disjoncteur magnéto-thermique pour la protection du moteur, avec seuil de retard, pour éviter d'arrêter le moteur au démarrage quand le courant absorbé est supérieur à la puissance nominale pendant quelques secondes.
Le seuil de protection contre les surcharges doit être défini à un maximum de 10 % du courant nominal.

COMMENT MODIFIER L'INTENSITÉ DES VIBRATIONS



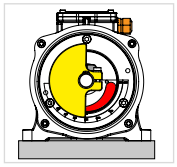
Masses réglables – Type A

MASSES A 100%



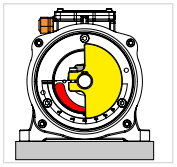
MASSES AJUSTÉS

MASSES MAL AJUSTÉS



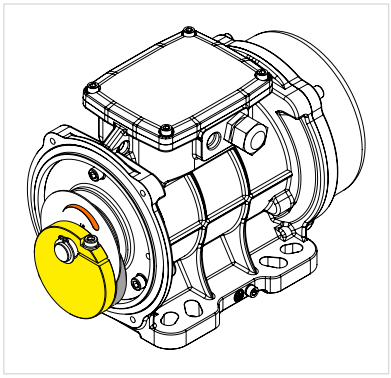
2 CONSEILS POUR BIEN AJUSTER LES MASSES:

Faire tourner la masse selon le dessin sur la plaque: de la pointe plus épaisse vers la pointe fine.

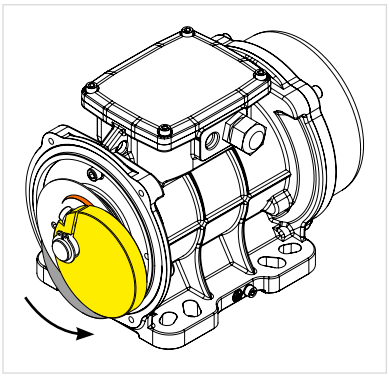


côté gauche du moteur, pour des tailles jusqu'à 60

Faire pivoter les masses dans la direction opposée au presse-étoupe.



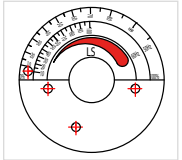
côté gauche



côté droit

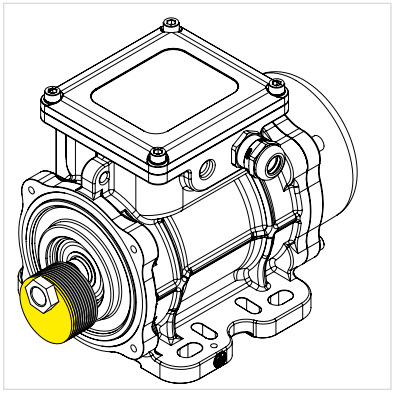
Masses réglables– Type B

MASSES A 100%

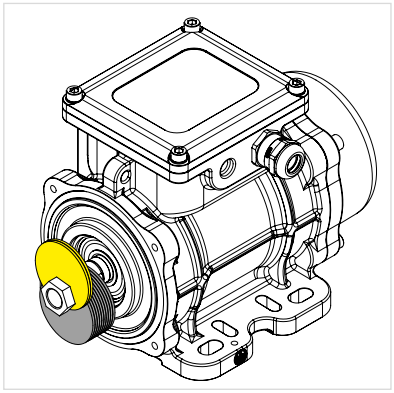


MASSES AJUSTÉS

La fissure dans la masse indique le degré de réglage.

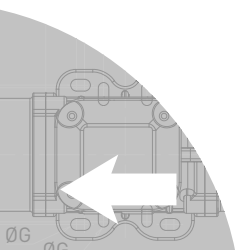


Faire tourner la masse selon le dessin sur la plaque: de la pointe plus épaisse vers la pointe fine.



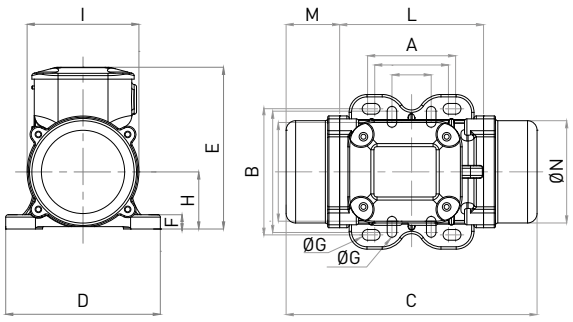
Masses réglables – Type C (masses de lame)

MASSES A 100%



MASSES AJUSTÉS

Pour des informations techniques sur le réglage des masses de la lame consulter le manuel d'utilisation et d'entretien.



Avertissement:
NE PAS graisser de moteurs neufs avant l'installation.

Les roulements à rouleaux OLI pour moteurs quittent l'usine remplis avec la bonne quantité de graisse, tandis que ceux avec roulement à billes n'ont pas besoin de graissage.

This "OPERATING AND MAINTENANCE MANUAL" is an essential and integral part of the machine and must be readily available to operating and servicing personnel.

The owner, operator and maintenance Manager must be familiar with the contents of this Manual.

The description and illustrations used in thus Manual are not binding on Manufacturer.

While the basic characteristics of the machine remain unchanged as described, Manufacturer reserves the right to make any modifications to assemblies, parts and accessories it deems necessary for product improvement on for fabrication or marketing needs and this without prior notice and without being obliged to update this Manual at the time of modifications.

Die "BETRIEBS- UND WARTUNGSANLEITUNG" gehört zur Maschine und muß an einem Ort aufbewahrt werden, der dem Bedienungs- und Wartungspersonal gut zugänglich ist.

Betreiber, Bediener und Wartungspersonal sind verpflichtet, den Inhalt dieses Handbuchs zu kennen.

Unter Beibehaltung der wesentlichen Merkmale der beschriebenen Maschinen behält sich der Hersteller vor, jederzeit an Geräteteilen und/oder am Zubehör Änderungen im Sinne der Produktverbesserung oder aus technisch oder kaufmännisch notwendigen Gründen vorzunehmen.

La présente notice "UTILISATION ET ENTRETIEN" fait partie intégrante de la machine et elle doit être mise à la disposition du personnel préposé à la conduite et à la maintenance de la machine.
L'utilisateur, le conducteur et le technicien de maintenance ont l'obligation de connaître le contenu de cette notice d'instructions.
Les descriptions et les illustrations contenues dans la présente publication sont données sans engagement de la part du constructeur.

Bien que les caractéristiques principales des machines décrites dans les présentes demeurent inchangées, le constructeur se réserve le droit d'apporter, à tout moment et sans obligation, des modifications eventuelles d'organes, pièces et accessoires retenus nécessaires pour l'amélioration du produit ou pour des exigences de fabrication ainsi que commerciales ; et de mettre immédiatement à jour la présente publication.

Il presente libretto " USO E MANUTENZIONE" costituisce parte integrante della macchina e deve essere, facilmente reperibile dal personale addetto alla conduzione ed alla manutenzione.

L'utente, il conduttore e l'addetto alla manutenzione hanno l'obbligo di conoscere il contenuto dei presente libretto.

Le descrizioni e le illustrazioni contenuti nella presente pubblicazione si intendono non impegnative,

Ferme restando le caratteristiche essenziali delle macchine descritte, la ditta costruttrice si riserva il diritto di apportare, le eventuali modifiche di organi, dettagli e, accessori, che riterrà convenienti per il miglioramento del prodotto o per esigenze di carattere costruttivo o commerciale, in qualunque momento e senza impegnarsi ad aggiornare tempestivamente questa pubblicazione.

GENERAL PROHIBITIONS AND REGULATIONS

- This machine must not be used even partially by unauthorised personnel.
- The shop foreman or Department Manager is responsible for Machine operator training and for checking training level achieved.
- The machine must not be used for purposes other than those is was designed for.
- Read carefully the warning notices attached to the machine.
- Do not remove the warning notices attached to the machine,
- When the machine is running, do not service, repair, regulate the machine or carry out any other operation not strictly required by the work cycle. ,Before any of the above listed operations, always disconnect the machine for all electric power supply sources.
- DO not remove the guards and the safety devices on the machine,
- DO not start to work with protections opened or do not open them during the work,
- Always wear safety gloves when working on the machine.
- At the end of the work shift, disconnect the machine from the electric supply.
- Any repair, service or maintenance work, whether electrical or otherwise, must be in compliance with CEI standards in force.

ALLGEMEINE VORSCHRIFTEN

- Jegliche auch teilweise Bedienung der Maschine durch hierzu nicht ausdrücklich autorisiertes Personal ist untersagt.
- Der Betriebsleiter ist dafür verantwortlich, daß das zur Bedienung autorisierte Personal in der Bedienung der Maschine geschult wird.
- Die Maschine darf zu keinem anderen Zweck als zu dem in diesem Handbuch beschriebenen verwendet werden.
- Die Gefahren- und Hinweisschilder an der Maschine müssen beachtet werden.
- Es ist verboten, die Gefahren- und Hinweisschilder an der Maschine zu entfernen.
- Wartungs-, Reparatur-, und/oder vom Hersteller autorisierte Änderungsarbeiten dürfen nicht bei laufender Maschine durchgeführt werden. Vor der Durchführung solcher Arbeiten muß zuerst die Stromversorgung zur Maschine unterbrochen werden.
- Es ist verboten, die an der Maschine angebrachten Schutz- und Sicherheitseinrichtungen zu entfernen.
- Schulzeinrichtungen an der Maschine dürfen bei Kontroll-, Wartungs-, Reparatur- und/oder Anderungsarbeiten weder fehlen noch während dieser Arbeiten entfernt werden.
- Zum Ende der Arbeitsschicht die Stromversorgung der Maschine abschalten.
- Für alle elektrischen und nicht elektrischen Wartungsarbeiten die Vorschriften der geltenden Normen beachten.

PRESCRIPTIONS ET CONSIGNES GENERALES

- L'utilisation, même partielle, de l'équipement de la part du personnel non autorisé est expressément interdit.
- Le chef d'usine et les chefs d'atelier ont l'obligation d'instruire et de contrôler le personnel préposé à l'utilisation de l'équipement.
- L'utilisation de l'équipement pour des usages différents de ceux pour lesquels ils ont été prévus, sont interdits.
- Lire attentivement les plaques signalétiques et de danger apposées sur l'équipement.
- Il est interdit d'enlever de l'équipement les plaques de signalisation et de danger.
- Il est interdit d'effectuer la maintenance, de réparer, de modifier ou de faire tout ce qui n'est pas strictement nécessaire au cycle de travail quand la machine est en marche.
- Il est interdit de démonter les protections et les sécurités présentes sur la machine.
- Il est interdit de commencer le travail avec les protections ouvertes ou de les ouvrir pendant le travail. Le port des gants de protection est obligatoire pour travailler sur la machine.
- A la fin des périodes de travail débrancher toujours la machine des alimentations électriques.
- Toute maintenance électrique et autres doivent être conformes aux normes en vigueur.

PRESCRIZIONI E DIVIETI GENERALI

- E' vietato l'uso, anche parziale, dell'attrezzatura da parte del personale non espressamente autorizzato. L'istruzione del personale preposto all'uso è da realizzare e verificare a cura dei capo officina e dei capi reparto.
- E' vietato l'uso dell'attrezzatura per modalità diverse da quelle per cui è stata prevista.
- Leggere con attenzione le targhe di avvertenza e pericolo poste sulla macchina.
- E' vietato rimuovere le targhe di avvertenza e pericolo sulla macchina.
- E' vietato manutenzionare, eseguire riparazioni, modifiche e quanto non strettamente necessario al ciclo di lavoro con la macchina in movimento. Prima di tutto è obbligatorio disinnestare tutte le alimentazioni elettriche alla macchina.
- E' vietato rimuovere le protezioni e le sicurezze presenti sulla macchina.
- E' vietato iniziare il lavoro con le protezioni aperte o aprirle durante il lavoro.
- Operare sulla macchina solo con i guanti di protezione.
- Al termine dei periodi di lavoro scollegare sempre la macchina dalle alimentazioni elettriche.
- Qualsiasi manutenzione elettrica e non elettrica deve attenersi alle norme vigenti.

TOR.ILT.--.C.A7.0917.4L 5

DESCRIPTION
Bin Level Indicator for point level limit detection in bulk materials

FUNCTION
The device is used for level monitoring in all types of containers and silos.
It can be used with all powdery and granular bulk materials that do not show a strong propensity to form crusts or deposits.
When the material level reaches the measuring paddle the rotation is blocked.
The resulting reaction torque activates a limit switch output signal that stops the motor.
As soon as the material level sinks below the paddle radius, the switch returns to the OFF position and the motor is switched on.

IMPROPER USE
ILT level indicators are not designed to work in dangerous conditions or with dangerous materials. If the machine has to operate in these conditions, the manufacturer must be informed.

Dangerous materials:
- explosives,
- toxic,
- flammable,
- harmful and similar.

BESCHREIBUNG
Füllstandmelder für Behälter zur punktuellen Füllstandbestimmung bei Schüttgütern

FUNKTION
Das Gerät wird verwendet zur Füllstandüberwachung in Behältern und Silos aller Art.
Es ist einsetzbar für alle pulverförmigen Schüttgüter und Granulate, die nicht zu starker Ansatzbildung neigen.
Erreicht der Füllstand des Schüttgutes das Messpaddel, wird dessen Rotationsbewegung unterbrochen. Das entstehende Drehmoment aktiviert ein Ausgangssignal am Begrenzungsschalter, welches den Motor stoppt.
Sinkt der Füllstand unterhalb des Radius des Paddels, der Schalter kehrt in die AUS-Position zurück und der Motor ist eingeschaltet.

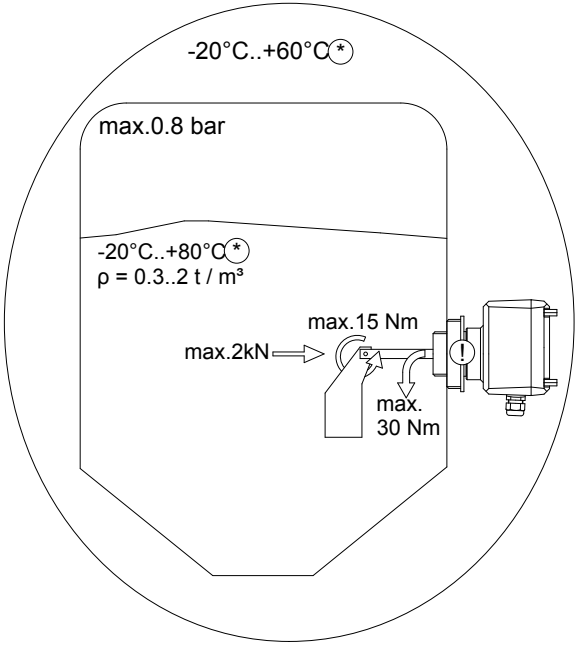
UNZULÄSSIGE VERWENDUNGSZWECKE
Die Füllstandanzeiger der Modellreihe ILT sind weder für gefährliche Anwendungen noch zum Handling von gefährlichen Medien geeignet. Sollte der Betreiber eine ILT - Füllstandanzeiger für gefährliche Medien bzw. Anwendungen einsetzen wollen, so muß er unbedingt vorher den Hersteller um Erlaubnis fragen.

Als gefährliche Medien gelten:
- explosive,
- giftige,
- feuergefährliche,
- in irgendeiner Weise schädliche.

DESCRIPTION
Indicateur de niveau pour le contrôle du niveau des matériaux en vrac

FONCTION
L'appareil sert à surveiller le niveau de remplissage dans les réservoirs et silos de types les plus divers.
Il peut être utilisé pour tous produits pulvérulents et granulés n'ayant pas tendance à former de dépôts importants.
Lorsque le niveau du matériau atteint la palette de mesure, la rotation est bloquée.
Le couple de réaction résultant active un signal de sortie de l'interrupteur de fin de course, qui arrête le moteur.
Dès que le niveau du matériau descend en dessous du rayon d'action de la palette, l'interrupteur revient à la position OFF (ARRÊT) et le moteur est remis en marche.

CONTRE-INDICATION
Les indicateurs de niveau standards de la classe ILT N'ONT pas été projetés pour travailler dans des conditions ou avec des produits dangereux; par conséquent si la, machine ne répond pas à ces exigences, le constructeur doit obligatoirement en être informé



Les produits suivants sont considérés comme dangereux, si ceux-si sont:
- explosifs,
- toxiques,
- inflammables,
- nocifs et/ou similaires.

DESCRIZIONE:
Indicatore di livello a pala rotativa per il controllo di livello di materiale sfuso

FUNZIONE D'USO
Il dispositivo è utilizzato per il monitoraggio del livello all'interno di container e sili di qualsiasi tipo.
Può essere utilizzato in presenza di polveri e granulati con scarsa tendenza alla formazione di incrostazioni o depositi.
Quando il livello del materiale raggiunge la paletta sensore, la rotazione si blocca.
La coppia risultante attiva un finecorsa che invia un segnale per fermare il motore.
Appena il livello del materiale scende al di sotto del raggio di azione della paletta, il finecorsa si disattiva e fa ripartire il motore.

CONTROINDICAZIONI
Gli indicatori di livello standard della ILT NON sono stati progettati per operare in condizioni o con materiali pericolosi pertanto quando la macchina deve assolvere a queste esigenze è d'obbligo informare il costruttore.

Si ritengono materiali pericolosi:
- esplosivi,
- tossici,
- infiammabili,
- nocivi e/o simili.

!

Maximum value of impact energy on connecting bush.

Max. Schlagenenergie auf die Verbindungsbuchse.

Valeur maximum de l'énergie d'impact sur la bague de connexion.

Massimo valore dell'energia di impatto sulla boccola di connessione.

*

Different process and ambient temperatures available as an option.

Verschiedene Prozess- und Umgebungstemperaturen als Option verfügbar.

Différentes températures environnementales et de processus disponibles en option.

Diverse temperatura ambiente e di processo disponibili come opzione.

Restrictions

The bushing is suitable for withstanding sunlight and atmospheric agents. The mechanical features of the material are not guaranteed in case of acidic or basic environments.
These environmental conditions must be checked for each application.
The breaking load of the plastic material gets reduced over a period of time with the following proportions:
- approx. 50% in two years
- approx. 60% in five years

Einschränkungen

Die Buchse ist sonnenlicht- und witterungsbeständig. Die mechanischen Werkstoffeigenschaften werden bei saurer und Basischer umgebung nicht gewährleistet.
Die Umgebungsbedingungen müssen für jede Anwendung gesondert geprüft werden.
Die Bruchlast des Kunststoffs verringert sich im Laufe der Zeit im folgenden Verhält-nis:
- ca 50% in zwei Jahren
- ca 60% in fünf Jahren

Restrictions

La bague est adaptée pour résister à la lumière solaire et aux agents atmosphériques. Les caractéristiques mécaniques du matériau ne sont pas garanties en milieu acide et basique.
Ces conditions ambiantes doivent être vérifiées pour chaque application.
La charge de rupture de la matière plastique diminue dans le temps dans les proportions suivantes :
- 50% au bout de deux ans
- 60% au bout de cinq ans

Restrizioni

La boccola è adatta per resistere alla luce solare ed agenti atmosferici. Non sono garantite le caratteristiche meccaniche del materiale in caso di ambienti acidi e basici.
Tali condizioni ambientali devono essere verificate per ogni applicazione.
Il carico di rottura del materiale plastico si riduce nell'arco del tempo con le seguenti proporzioni:
- circa 50% in due anni
- circa 60% in cinque anni

MECHANICAL DATA	
Enclosure	IP 65
Process connection	Thread G1 1/4", G1 1/2", G2 1/2"
Material process-connection	Plastic and aluminium
Material vane shaft and measuring	Stainless steel
Paddle shaft clutch	Protection of the gearing from impacts on the measuring vane
Pickup delay	Approx. 1.3 sec.
Sensitivity	Adjustable via reset force of spring in three positions
Paddle speed	1 rpm

ELECTRICAL DATA	
Supply voltage (!)*	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (all voltage +/- 10%)
Power	3W
Connection terminal	1 x max. 1.5 mm2
Signal output	Floating microswich max.250V (AC/DC), 2A.
Protection class	I
Over voltage category	II

* Power supply voltage must never come directly from the mains but always obtained by a secondary transformation winding.

MECHANISCHE DATEN	
Gehause	IP 65
Prozessanschluss	Gewinde G1 1/4", G1 1/2", G2 1/2"
Material des Anschlussgewindes	Kunststoff und Aluminium
Material von Welle und Flugel	Rostfreier Stahl
Paddelklaue	Schutz der Messwelle vor Stoften auf das Messpaddel
Signalverzogerung	c.a 1.3 sec.
Empfindlichkeit	Einstellbar durch Ruckholfeder mit drei Stellungen
Umdrehungszahl Paddel	1 Umdrehung/min.

ELEKTRISCHE DATEN	
Versorgungs-spannung (!)*	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (alle Spannungen +/- 10%)
Leistung	3W
Anschluftklemmen	1 x max. 1.5 mm2
Ausgangssignal	Potentialfreier mikroschalter max. 250V (AC/DC) 2A
Schutzart	I
Uberspannung Kategorie	II

* Die Versorgungsspannung darf nie direkt aus der Netzleitung kommen, sondern muss immer über eine Trafospule geleitet werden.

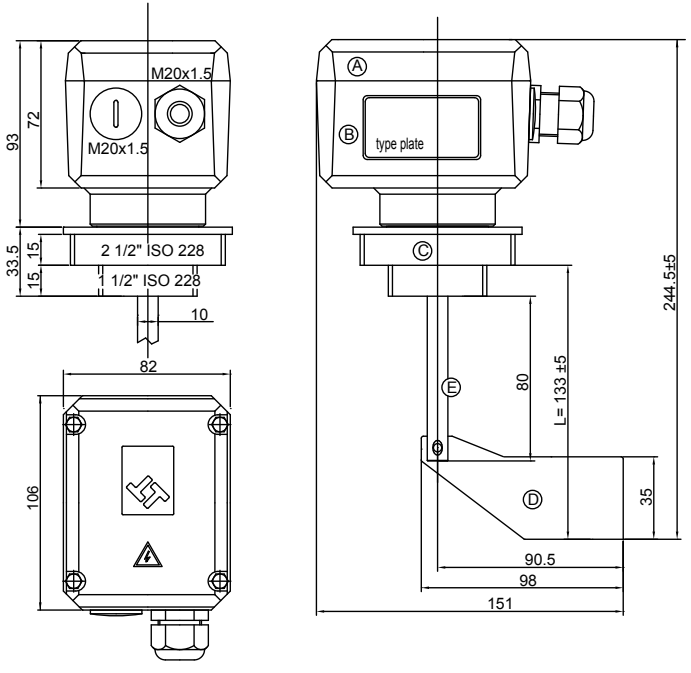
CARACTERISTIQUES MECANIQUES	
Enveloppe	IP 65
Raccordement processus	Filetage G1 1/4", G1 1/2", G2 1/2"
Matiere du filetage de raccord	Plastique et aluminium
Matiere de l'arbre et de la palette	Acier inoxydable
Embrayage de l'arbre de la palette	Protection de l'engrenage contre les impacts sur la palette de mesure
Retard de signal	1.3 s. environ.
Sensibilite	Reglable par le rappel du ressort dans trois positions
Vitesse de la palette	1 tour/min

CARACTERISTIQUES ELECTRIQUES	
Tension d'alimentation (!) *	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (toutes les tensions +/- 10%)
Energie	3W
Borne	1 x 1.5 mm^2 max.
Signal de sortie	Microrupteur flottant max. 250V (AC/DC), 2A
Classe de protection	I
Categorie de surtension	II

* La tension d'alimentation ne doit jamais venir directement du réseau, mais toujours obtenue d'un transformateur secondaire.

DATI MECCANICI	
Protezione	IP 65
Connessioni standard	Filettato G1 1/4", G1 1/2", G2 1/2"
Materiale del mozzo di collegamento	Plastica e Alluminio
Materiale dell' albero e della paletta	Acciaio inossidabile
Frizione albero paletta	Protezione degli ingranaggi dagli impatti della paletta sensore
Ritardo di segnale	1.3 sec. circa
Sensibilità	Regolabile mediante il tensionamento di una molla su 3 diverse posizioni
Velocità paletta	1 giro/min

DATI ELETTRICI	
Tensione d'alimentazione (!)*	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (tutte le tensioni +/- 10%)
Assorbimento	3W
Morsetto d'attacco	1 x 1.5 mm^2 max.
Segnale di uscita	Microinterruttore flottante max.250V (AC/DC), 2A
Classe di protezione	I
Categoria di sovratensione	II



* La tensione di alimentazione non deve provenire direttamente dalla rete, ma dev'essere sempre ottenuta da un avvolgimento secondario.

TOREX®

ILT
- SAFETY NOCITES
- SICHERHEITSHINWEISE
- INDICATIONS DE SÉCURITÉ
- ISTRUZIONI DI SICUREZZA

WARNING: high voltage!

- Disconnect from all mains before opening the device.
- Start the device up only when the cover is closed.
- Before opening the lid take care that no dust deposits or whirlings are present.
- Do not allow any dust/water to enter the casing when the lid is open.
- Provide protection for relay contacts and output transistors to protect the device against spikes with inductive loads.
- Make sure that max. 8mm of the pigtails are bared (danger of contact with live parts).
- Make sure that the boots for protecting cable terminations are not longer than 8mm (danger of contact with live parts). Make sure that the screwed cable gland safely seals the cable and that it is tight (danger of water intrusion).
- A voltage-disconnecting switch must be provided near the device.
- In the case of inexpert handling or handling malpractice, the electric safety of the device cannot be guaranteed.
- In the case of a defect, the distribution voltage must automatically be cut off by a RCCB protective switch so as to protect the user of the device from indirect contact with dangerous electric tensions.
- Provide protection for relay contacts to protect the device against spikes, if inductive loads are connected.
- Provide a disconnect switch near the device.
- All field wirings must have insulation suitable for at least 250VAC. The temperature rating must be at least 90°C. (194°F).
- Protect the power of the device by means of a fuse.
- The device body has to be earthed to avoid static charges. This is particularly important in pneumatic conveying applications or with non-metallic containers.

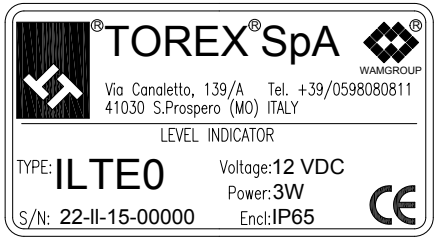
ACHTUNG: Hochspannung!

- Vor der Öffnung des Geräts, dieses von allen Stromnetzen trennen.
- Das Gerät in Betrieb nehmen, nur wenn die Abdeckung geschlossen ist.
- Vor der Öffnung des Deckels sicherstellen, dass keine Staubablagerungen oder - aufwirbelungen vorhanden sind.
- Beim geöffneten Deckel darf kein Staub/Wasser innerhalb des Gehäuses gelangen.
- Zum Schutz vor Spannungsspitzen bei induktiven Lasten einen Schutz für Relaiskontakte / Ausgangstransistoren vorsehen.
- Darauf achten, daß die Anschlußlitzen max. 8 mm abisoliert werden (Gefahr der Berührung spannungs- führender Teile).
- Darauf achten, daß die Aderendhülsen der Anschlußkabel max. 8 mm lang sind (Gefahr der Berührung spannungsführender Teile).
- Darauf achten, daß die Kabelverschraubung das Kabel sicher dichtet u. fest angezogen ist (Wassereintritt).
- Es muß in der Nähe des Gerätes ein Schalter als Trennvorrichtung für die Anschlußspannung vorgesehen werden.
- Bei unsachgemäßem Gebrauch des Gerätes ist die elektr. Sicherheit nicht gewährleistet.
- Zum Schutz gegen indirektes Berühren gefährlicher Spannung muß im Fehlerfall ein automatisches Ausschalten (RCCB - Schutzschalter) der Versorgungsspannung gewährleistet sein.
- Für ein geeignetes System zum Schutz der Relaiskontakte sorgen, um die Vorrichtung vor Spannungsspitzen zu schützen, wenn induktive Lasten angelegt werden.
- Einen Trennschalter in der Nähe des Gerätes vorsehen.
- Alle Anschlusskabel müssen für wenigstens 250V AC Betriebsspannung isoliert sein. Die Temperaturbeständigkeit muss mindestens 90°C (194°F) betragen.
- Die Stromversorgung des Gerätes über eine Sicherung absichern.
- Um eine statische Aufladung zu vermeiden, muss das Gerätegehäuse geerdet sein. Dies ist insbesondere wichtig bei pneumatischer Materialförderung und bei nichtmetallischen Gehäusen.

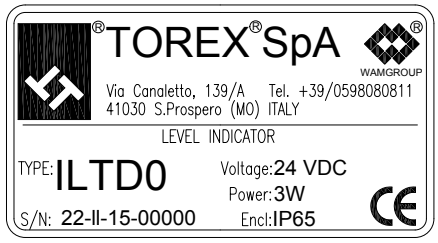
AVERTISSEMENT: haute tension!

- Débranchez toutes alimentations électriques avant d'ouvrir le couvercle.
- Démarrer l'équipement seulement quand le couvercle est fermé.
- Avant d'ouvrir le couvercle assurez-vous qu'il n'y a pas de poussière ou des dépôts présents.
- Ne laissez pas la poussière/l'eau entrer dans le boîtier lorsque le couvercle est ouvert.
- Prévoir une protection pour les contacts de relais/les transistors de sortie afin de les protéger contre les pointes de tension en cas de charges inductives.
- Veiller à ce que les torons de raccordement soient dénudés à 8 mm au maximum (danger de contact avec des pièces sous tension).
- Veiller à ce que les cosses d'adhérence des câbles de connexion aient une longueur maximale de 8 mm (danger de contact avec des pièces sous tension).
- Veiller à ce que le presse étoupe ferme le câble hermétiquement et qu'il soit bien serré (arrivée d'eau).
- Prévoir un interrupteur à proximité de l'appareil.
- La garantie ne s'applique pas en cas de utilisation non conforme.
- En cas de défaut, l'alimentation doit être coupée automatiquement: (disjoncteur RCCB) pour protéger l'utilisateur contre toute tension dangereuse.
- Prévoir un dispositif approprié de protection des relais pour protéger l'équipement contre les pics de tension de courte durée, si les charges inductives sont reliées.
- Prévoir un interrupteur près du dispositif.
- Tous les câbles doivent être pourvus d'isolation appropriée d'au moins 250VAC. Le rapport de température doit être au moins 90°C (194°F).
- Protéger l'alimentation du dispositif avec un fusible.
- Le corps du dispositf doit être mis à la terre pour prévenir la formation de charges électrostatiques. Ceci est particulièrement important pour les applications de transport pneumatique ou dans le cas des conteneurs non-métalliques.

ATTENZIONE: Tensione pericolosa!

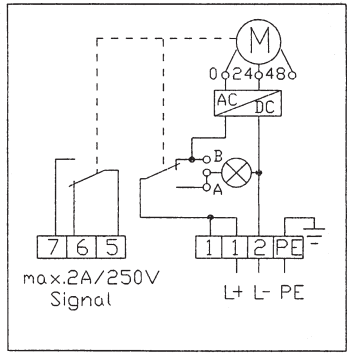


- Scollegare tutte le alimentazioni elettriche al dispositivo prima di aprire il coperchio.
- Avviare il dispositivo solamente con il coperchio del corpo chiuso.
- Prima di aprire il coperchio assicurarsi che non vi siano presenti depositi di polvere.
- Non far entrare la polvere/acqua all'interno della carcassa quando il coperchio viene aperto.
- Fornire una protezione per i contatti dei relè e i transistor d'uscita contro i picchi di tensione con cariche induttive.
- Assicurarsi che la superficie scoperta dei fili connettori non superi gli 8 mm (pericolo di contatto con parti sotto tensione).
- Assicurarsi che le guaine di protezione delle terminazioni dei cavi non superino gli 8 mm di lunghezza (pericolo di contatto con parti sotto tensione).
- Assicurarsi che il pressacavo stringa il cavo in modo sicuro, fissandolo adeguatamente (pericolo di infiltrazione d'acqua).
- Collocare un interruttore di tensione nei pressi del dispositivo.
- Non si garantisce la sicurezza elettrica del dispositivo in caso di impiego improprio o non conforme.
- In caso di guasto, l'alimentazione dovrà essere automaticamente interrotta mediante un interruttore di protezione RCCB al fine di proteggere l'utilizzatore dal contatto indiretto con tensioni elettriche pericolose.
- Predisporre un sistema idoneo di protezione dei contatti relé per proteggere il dispositivo da transitori di breve durata, se sono collegati i carichi induttivi.
- Prevedere un sezionatore vicino al dispositivo.
- Tutti i cavi devono disporre di isolamento idoneo ad almeno 250 VAC. IL rapporto di temperatura deve essere di almeno 90°C. (194°F).
- Proteggere l'alimentazione del dispositivo mediante fusibile.
- Il corpo del dispositivo deve essere collegato a terra per evitare la formazione di cariche elettrostatiche. Questo è particolarmente importante in applicazioni di trasporto pneumatico o con contenitori non metallici.

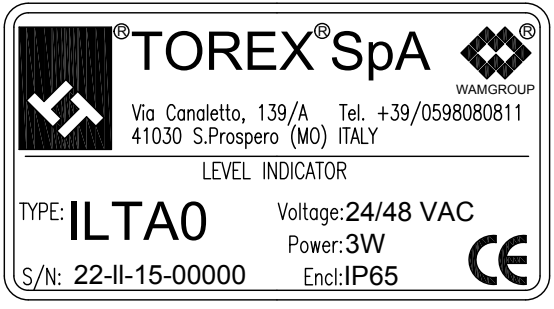


ELECTRICAL CONNECTIONS
The connection has to be carried out on the basis of the voltage indicated on the ID plate and according to the standards in force.
The wiring diagram is indicated on the electronic board (for AC devices) or inside the cover (for DC devices).

ELEKTRISCHE ANSCHLÜSSE
Der Anschluss muss aufgrund der auf dem Typenschild angegebenen Spannung und gemäß den geltenden Normen durchgeführt werden.
Das Schaltschema ist auf der elektronischen Karte (mit Wechselstrom betriebene Geräte) oder innerhalb der Abdeckung (mit Gleichstrom betriebene Geräte).



RACCORDEMENTS ELECTRIQUES
La connexion doit être effectuée conformément à la tension indiquée sur la plaque signalétique et conformément à la réglementation en vigueur. Le schéma de raccordement est montré sur la carte électronique (dispositifs alimentés en courant alternatif) ou à l'intérieur du couvercle (dispositifs alimentés en courant continu).



COLLEGAMENTI ELETTRICI
Il collegamento deve essere eseguito in accordo alla tensione riportata sulla targhetta identificativa ed in accordo alle normative vigenti.
Lo schema di connessione è riportato sulla scheda elettronica (dispositivi alimentati in corrente alternata) o sull'interno del coperchio (dispositivi in corrente continua).

- **OPTIONS**
- **OPZIONI**

TOR.ILT.--.C.A7.0917.4L 17

Version with rotation control, universal voltage
Version mit Rotationskontrolle, Universalspannung
Version avec contrôle rotation, tension universelle
Versione con controllo rotazione, tensione universale

Checking the rotation
Switching mode
When the unit is switched on and works normally (paddle spinning freely or paddle stopped by material) contact 5-8 is Normally Closed.

In case of:
- missing power supply
- problems on connections
- unit defect

the contact 5-8 will open.

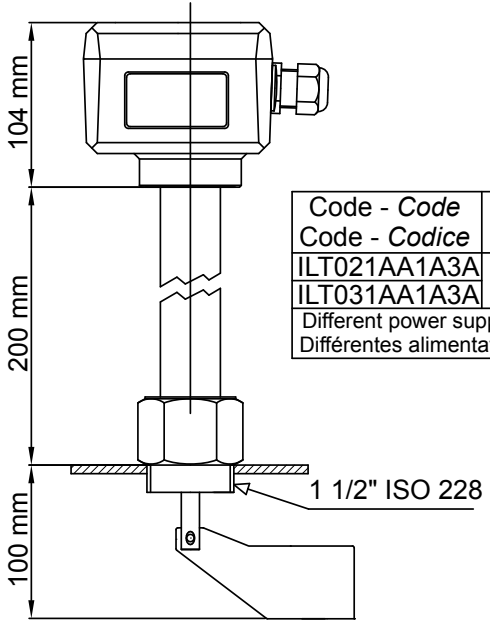
Rotationsprüfung
Einschalt-Modus
Wenn die Einheit eingeschaltet ist und normal funktioniert (das Paddel dreht sich unbehindert oder ist vom Material gestoppt), ist der Kontakt 5-8 ein Öffner.

Im Fall von:
- fehlender Spannungsversorgung,
- Problemen bei den Anschlüssen,
- Fehler der Einheit,

wird der Kontakt 5-8 öffnen.

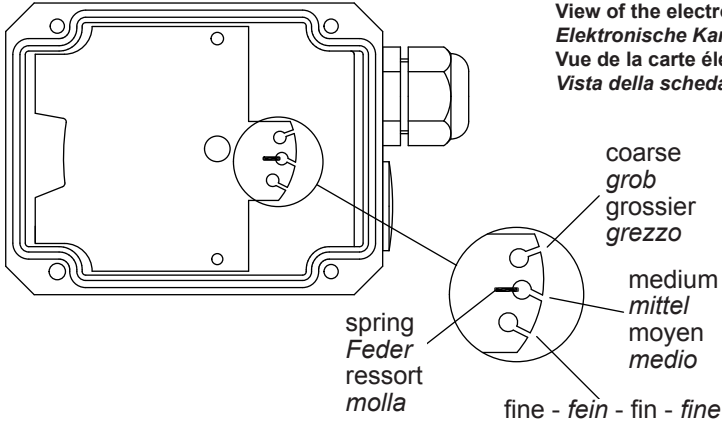
Contrôle de rotation
Mode de commutation
Lorsque l'équipement est mis en marche et fonctionne normalement (avec la palette en rotation libre ou bloquée par le matériau) le contact 5-8 est Normal fermé.

En cas de :
- panne d'électricité
- problèmes de connexion
- appareil défectueux



le contact 5-8 s'ouvre.

Controllo di rotazione
Modalità di commutazione
Quando l'unità é avviata e funziona normalmente (con la paletta in rotazione libera o bloccata dal materiale) il contatto 5-8 é Normale Chiuso.



In caso di:
- blackout
- problemi di connessione
- unità difettosa

il contatto 5-8 si aprirà.

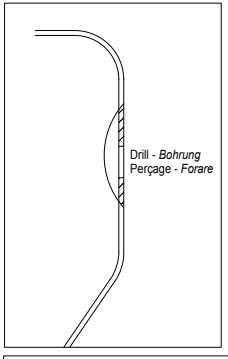
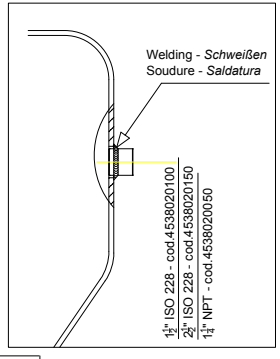
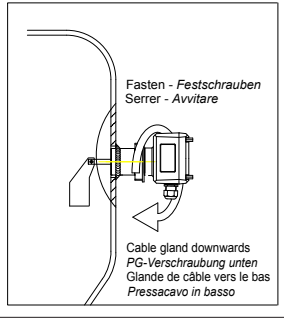
Grezzo: per il materiale molto appiccicoso
La posizione della molla può essere modificata tramite una piccola pinza.

Switching logic
Logischer Umschaltplan
Schéma logique de commutation
Schema logico di commutazione





The unit must be mounted with the threaded fitting on the container. It is possible to use a suitable sealing material (teflon tape) to fix and seal the unit: fasten the plastic bush in manually, do not use any tool.
The cable gland must be downwards in order to prevent dust/water from entering the casing.
It is not possible to turn the housing after fastening.
All electrical connections must be made according to the connection diagram: make sure the cable is sealed tightly inside the cable gland.



Die Einheit muss mit dem Gewindestück auf dem Behälter eingebaut werden. Es ist möglich, eine geeignete Dichtmasse zu verwenden (Band aus Teflon), um die Einheit zu befestigen oder abzudichten: die Buchse aus Kunststoff von Hand festschrauben, kein Werzkeug benutzen.
Um das Eintretten von Staub/Wasser innerhalb des Gehäuses zu vermeiden, muss die PG-Verschraubung nach unten zeigen. Es ist nicht möglich, das Gehäuse nach dem Festschrauben zu drehen.
Alle elektrischen Anschlüsse müssen gemäß dem Anschlussschema ausgeführt werden: sicherstellen, dass das Kabel innerhalb der PG-Verschraubung abgedichtet ist.

L'unité doit être installée avec le raccord fileté sur le conteneur. Vous pouvez utiliser un joint d'étanchéité adéquat (téflon) pour la fixation et l'étanchéité de l'unité: serrer la douille en plastique manuellement, n'utilisez pas d'outils. La glande de câble doit être positionnée vers le bas pour empêcher l'entrée d'eau ou de la poussière. ce n'est pas possible de tourner la carcasse après fixation.Toutes les connexions électriques doivent être effectuées selon le schéma de câblage: assurez-vous que le câble est fixé à l'intérieur de la glande de câble.

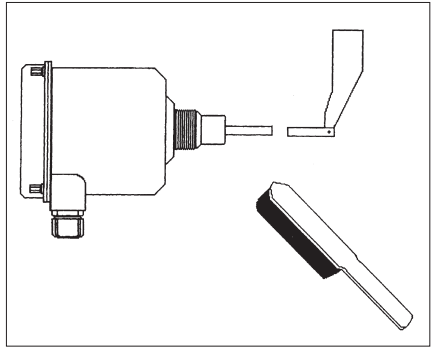
L'unità deve essere montata con il raccordo filettato sul contenitore. È possibile utilizzare un sigillante adatto (nastro teflon) per il fissaggio e la tenuta dell'unità: serrare manualmente la boccola di plastica, non utilizzare attrezzi.
Il pressacavo deve essere posizionato in basso per impedire l'entrata di acqua/polvere.
Non è possibile girare la carcassa dopo il fissaggio.
Tutte le connessioni elettriche devono essere eseguite secondo lo schema elettrico: assicurarsi che il cavo sia ben fissato all'interno del pressacavo.

BEFORE CARRYNG OUT ANY TYPE OF WORK ON THE MACHINE STOP IT AND DISCONNECT IT FROM ALL ELECTRIC SUPPLY SOURCES

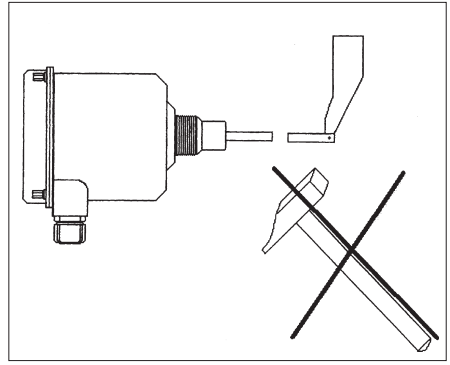
N.B.: Failure to observe these instructions can cause problems and make the warranty null and void.

VOR BEGINN DER WARTUNGSARBEITEN SICHERSTELLEN, DASS DIE MASCHINE UND DER HAUPTSCHALTER AUSGESCHALTET SIND.

N.B.: Die Nichtbeachtung der oben genannten Vorschriften kann zu Betriebsstörungen und zum Verfall der auf die maschine gewährten Garantie führen.



AVANT D' EFFECTUER UNE QUELCONQUE OPERATION SUR LA MACHINE, IL FAUT L' ARRETER ET LA DEBRANCHER DE TOUTES LES ALIMENTATIONS ELECTRIQUES.



N.B.: L' inobservation de ces instructions peut provoquer des problémes et invalider la garantie sur les machines fournies.

PRIMA DI ESEGUIRE QUALSIASI OPERAZIONE SULLA MACCHINA ARRESTARLA E SCOLLEGARE TUTTE LE ALIMENTAZIONI ELETTRICHE.

N.B.: Il non attenersi strettamente alle suddette istruzioni può causare dei problemi ed invalidare la garanzia sulle macchine fornite.

BUILD REMOVAL - *ANBACKUNGEN ENTFERNEN* - ENLEVER LES INCRUSTATIONS - *RIMOZIONE DELLE INCROSTAZIONI*

To scrap:	Verschrottung:	En cas de mise à décharge:	In caso di rottamazione:
When the machine's working life ends, remove the plastic parts (seal rings) and take them to specialised disposal centres. The remaining components can be sent to metal salvage centres.	Nach Ausbau der Maschine, Teile aus Kunststoff (Wellendichtringe) ausbauen und bei der entsprechenden Sammelstelle abgeben. Alle restlichen Teile können als Alteisen verschrottet werden.	A la fin de la vie de la machine; démonter les pièces en matière plastique (anneaux d'étanchéité) et les destiner aux déchetteries spécialisées; les parties restantes sont destinées à la récupération des matériaux ferreux.	A fine vita della macchina, smontare le parti in materiale plastico (anelli di tenuta) e destinarle agli appositi centri di raccolta; le restanti parti sono da destinare al recupero dei materiali ferrosi.
When scrapping the machine, bear in mind the different kinds of material used to fabricated it.	Bei der Entsorgung der Maschine muß die unterschiedliche Beschaffenheit der Werkstoffe berücksichtigt werden,	En cas de mise à la décharge il faut tenir compte de la diversification et de la qualité des matériaux.	In caso di demolizione considerare la diversificazione della qualità dei materiali.

WAMGROUP®

LEVEL MONITORING

Rotating Level Indicators

ILT

WAMGROUP®

TOREX®

Rotating Level Indicators ILT

PRECISE AND RELIABLE LEVEL INDICATORS FOR POWDERY AND GRANULAR MATERIALS

ILT Rotating Level indicators are designed for level monitoring of bins, hoppers or silos by means of the rotating paddle.

When the material level reaches the measuring paddle the rotation is blocked. The motor is freely suspended within the casing.

The resulting reaction torque activates a limit switch output signal that stops the motor.

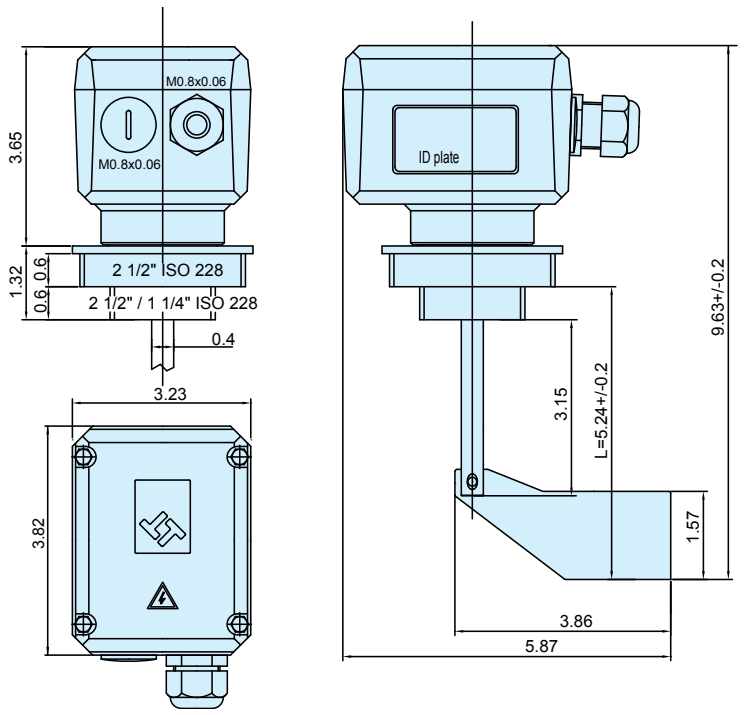
As soon as the material level sinks below the paddle radius, a spring pulls the motor back into its operating position. The switch returns to the OFF position and the motor is switched on.

The top or side-mounted indicators are commonly used for materials having a minimum bulk density of 0.3 t/m^3 (0.01 lbs per cu in).

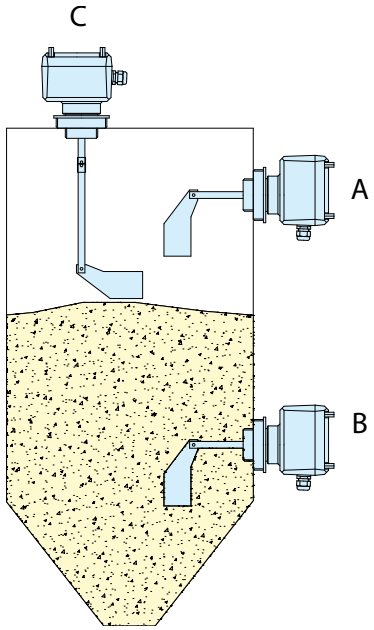
Features

MECHANICAL DATA

- Enclosure: IP 66
- Process connection: Thread G1 1/4", G1 1/2", G2 1/2"
- Material process connection: Plastic and aluminium
- Material shaft and measuring vane: stainless steel
- Friction clutch: Protection of the gearing from impact of the measuring vane
- Pickup delay: Approx. 1.3 sec
- Sensitivity: adjustable via reset force of spring in three positions
- Speed of measuring vane: 1 r.p.m.



ELECTRICAL DATA

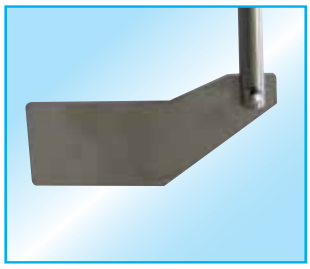


- Mains voltage: 24/48V 50-60Hz or 115V / 230V, 50-60Hz or 24V DC (all voltages +10% / -15%)
- Installed load: 3 VA (3W)
- Signal output: Floating micro-switch
- Signal output: Floating micro-switch (AC max. 250V, 2 A, 500W - DC max. 300V, 2A, 60W)
- Protection class: I

OPERATING CONDITIONS

- Container excess pressure: max. 0.8 bar
- Temperature inside vessel: -4F~176F (-4F / 482F with high temperature version)
- Ambient temperature inside the casing: -4F~158F

Overall Dimensions

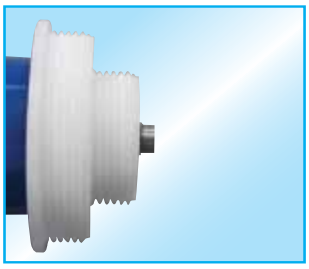


A = Maximum horizontal installation level
B = Minimum installation level
C = Maximum vertical installation level

Benefits

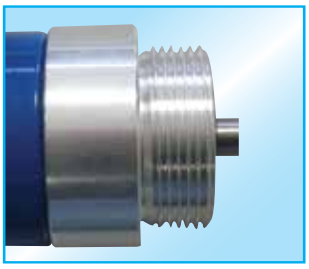
- ✓ ATEX certified version available for use in hazardous classified areas;
- ✓ High or low process temperature options;
- ✓ Various process connections (flange and thread);
- ✓ Easy installation;
- ✓ Uninfluenced by material properties such as conductivity, dust, dielectricity;
- ✓ Extremely reliable level measuring of bulk solids;
- ✓ Different measuring paddle types, suitable for all densities.

1 ROTATING PADDLE



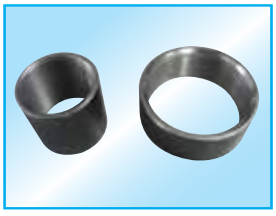
Made from 304 Stainless Steel

2 CASING



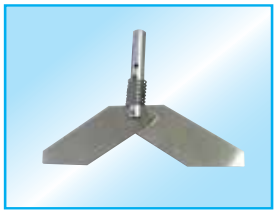
Die-cast Aluminium
Protection IP66
Electronic Panel Included

3 THREADED FITTING



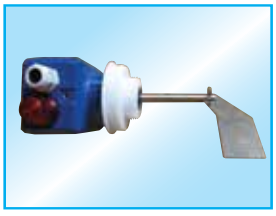
Standard
Thread: 1" ½ ISO 228
Thread: 2" ½ ISO 228
Material: Delrin

ATEX Ex II 1/2 D IP66 T 100°C
Thread: 1" ½ ISO 228
Material: Aluminum



Accessories

Threaded bushes



Made from carbon steel, to be welded on to the silo/hopper wall to facilitate installation of the ILT
Thread: 1" ½ ISO 228
Thread: 2" ½ ISO 228

Double paddle for light materials

External light

Rotation control

ILTRO is the code for rotation control multi-voltage version of ILT indicators

Shaft extension

Shaft extensions are available in zinc-coated carbon steel or 304 stainless steel

- Available 19.69 inch and 39.37 inch pieces
- Modular extension-type
- Maximum extension length allowed: 118.1 inch
- To be used in vertical position only

Application

ILT Rotating Level Indicators are fitted on the walls of a bin, silo or hopper, depending on the type of detection they are installed for.

Intelligent Drivesystems

SCREW CONVEYOR GEARMOTORS & SPEED REDUCERS

Durable & Premium Efficient Gear Units

G1129

NORD DRIVESYSTEMS

Screw Conveyor Package
Innovative Design

SCP - PRODUCT FEATURES

OPTIMIZED SEALING SYSTEM

- Dual Viton lip seals
- Grease impregnated packing seal
- Dual gap seals (excludes particles) – 0.03" gap
- Material evacuation ports
- Shaft material ditch
- Quadrilip™ sealing

MOUNTING

- Standard CEMA mounting
- Versatile flange – multiple bolt patterns
- 3-Hole tapered CEMA drive shaft
  - Easy mounting
  - Easy removal (less fretting – due to less material contact)
- Reduced bearing loads – tapered shaft allows for screw pipe misalignment
- Quick external removal feature

FLANGE

- Standard CEMA mounting
- High strength class 35 gray cast iron
- Versatile flange – multiple bolt patterns

HIGH EFFICIENCY

The NORD SCP design is extremely effective due to the direct coupled gearmotor or NEMA C-face input design. Belted input systems have significantly lower total drive performance. You can further increase the overall efficiency by applying the NORD "H" line of energy efficient motors.

www.nord.com

Company Overview

Since 1965, NORD Gear has grown to global proportions on the strength of product performance, superior customer service, and intelligent solutions to a never ending variety of industrial challenges.

All mechanical and electrical drive components are available from NORD Gear. Our products cover the full range of drive equipment: helical in-line, Clincher™ shaft-mount, helical-bevel, and helical-worm gearboxes, motors and AC drives from 1/6 hp to 250 hp, with torques from 90 lb-in to 900,000 lb-in.

But NORD Gear does far more than manufacture the world's finest drive components. We provide our customers with optimum drive configurations for their specific purposes. NORD provides each and every one of them with truly complete and efficient systems at a price/quality ratio unmatched in today's fast-changing markets.

NORD Gear makes its wide range of products easily available through a global network that provides all customers with prompt delivery and expert support services to consistently exceed customer expectations. We are firmly committed to being totally responsive to the ideas and specifications of every customer, anywhere in the world.

High-Performance Motors & Brakemotors

NORD motors are designed to run cool for longer service life. Low rotor inertia and high starting torque allow peak performance in the most difficult applications for inverter and vector duty per NEMA MG 1-2006 Section 31.4.4.2 voltage spikes. Our motors are internationally accepted, conforming to North American NEMA MG 1 and international IEC electrical specifications. High performance options include brakes, encoders, and forced cooling fans.

Short, On-Time Delivery

As a NORD customer, you can rest assured that your order will be delivered on time. Because NORD has both decentralized assembly and manufacturing operations paired with a globally linked network, we have the ability to offer our customers:

- Fast, reliable responses
- Greater product versatility
- Shorter lead times
- Timely shipping
- Rapid delivery

Quality

Quality is assured at NORD's assembly and manufacturing facilities, based on ISO 9000 standards — from careful inspection of incoming materials to closely monitored machining operations, including gear cutting, turning, hardening & grinding as well as finishing & assembly.

NORD 911

Trouble? Just call 715-NORD-911 (in Canada, 905-796-3606). Emergency service is available 24 hours a day, 7 days a week. We'll answer your call, ship the parts, or build a unit and have it shipped directly to you to provide what you need, when you need it.

Manufacturing

NORD continually invests in research, manufacturing and automation technology. This is to ensure the highest possible quality at affordable prices. NORD invests heavily in our North American facilities as well as our factories around the world. Recent examples include expanding our Waunakee factory and adding numerous new large gear unit assembly cells. In our Glinde, Germany gear factory we added a state-of-the-art multi-chamber vacuum carburization system.

Global Availability

From Shanghai to Charlotte, and everywhere in-between, NORD reaches customers around the world. Deliveries, service, and product support are close at hand, regardless of your location.

Worldwide Standards

NORD products are designed and manufactured based on the latest North American and global standards.

Increased North American Presence

NORD covers North America with over 30 district offices and over 500 distributor branches. NORD operates manufacturing and assembly facilities in Waunakee, WI, Charlotte, NC, Corona, CA, Brampton, ON, and Monterrey, Mexico, resulting in an ever-increasing capacity in North America and giving our customers the shortest lead times in the industry.

Energy Efficiency

Lowering your operating costs is one of our greatest goals! NORD research and development focuses on energy efficiency, with gearboxes, motors, and frequency inverters designed for lower energy consumption. Our fully diverse line of in-line or right-angle units and motors has been developed to suit your needs.

Modular Design

NORD's modular design philosophy provides you with a competitive edge by allowing you to configure drive systems to exactly fit your applications.

More than 20,000,000 combinations of totally unique gearmotors and speed reducers are possible – assembled in-line or right-angle, mounted by foot or flange, featuring solid or hollow shafts with either metric or inch shaft extensions – to give you complete freedom to specify a drive solution that's perfect for you.

Benefits

- More output speeds
- More mounting arrangements/Greater flexibility
- Fewer gear stages/Lower cost
- Metric and inch products

NORD engineers stand ready to assist you with your custom applications. Most standard drives can be modified to your purposes, and custom designs can be developed for special applications.

Key Features

Standard NORD features

Modular Design

All NORD products including the SCP units are modular in design and provide extraordinary flexibility.The SCP unit may also be provided with a number of different input components including:

- Integral motor (Gearmotor)
- NEMA C-face motor adapter
- IEC B5 motor adapter
- Solid input shaft
- Custom motor adapter
  (servo, hydraulic motors, and more)

Large Ratio Per Gear Stage

NORD gear cutting technology allows for the production of gear sets with a higher maximum ratio per stage than many other speed reducer manufacturers. NORD commonly produces gear sets with a maximum ratio of between 9:1 and 10:1 per stage. This allows for double reduction gear units with a maximum ratio between 72:1 and 100:1. Most speed reducer manufacturer's can only produce single-stage reduction of between 5:1 and 6:1. This means a two-stage reducer with a maximum reduction of about 25:1 to 35:1. NORD can often provide a two-stage reducer when most companies must provide three-stage units. The same situation applies to three, four and higher gear stages. This allows NORD to provide superior value and performance in many conditions.

Benefits

- Better value
- Higher efficiency
- Quieter operation
- Lower weight
- Longer life

AUTOVENT™

The AUTOVENT™ prevents bearing damage by blocking entry of foreign material (water, dust, corrosives, etc.) through the breather. A ball and spring check valve opens at approximately 2 psi during operation and closes tightly when the gearbox cools, producing a slightly negative pressure that ensures the valve seals tight. This keeps contaminants out of the oil to maintain proper oil cleanliness reducing contamination, foaming and oxidation. The AUTOVENT™ is perfect for humid conditions, washdown applications, and dusty environments.

Benefits

- Cleaner gearbox oil
- Extended lubrication life
- Longer-lasting seals, gears, and bearings

High-Quality Gearing (Infinite Life Design)

NORD continually invests in state-of-the-art gear production equipment and in gear research. This allows us to produce exceptionally high quality gears.

Benefits

- Designed & manufactured up to AGMA CLASS 13
- Infinite design life
- Case-hardened steel
- Exceptional hardness: 58 Rc minimum
- High-speed gears are ground;
  low speed gears are skive hobbed
- 275% momentary overload capacity
- Low noise
- Low maintenance

Factory Oil Filled

All SCP units are filled at the factory with the proper quantity and type of lubrication. Oil fill before shipping prevents damage from dry start-ups.

Benefits

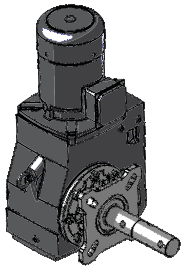
- No need for filling on-site
- Ensures proper oil grade and fill level

NORD High-Performance Motors & Options

NORD motors are designed to run cool for producing longer service life. Low rotor inertia and high starting torque allow peak performance in the most difficult applications for inverter and vector duty per NEMA MG 1-2006 Section 31.4.4.2 voltage spikes. Our motors are internationally accepted, conforming to North American NEMA MG 1 and international IEC electrical specifications. High performance options include brakes, encoders, and forced cooling fans.

Screw Conveyor Package Overview

NORD has developed a unique class of high performance right-angle speed reducers. The SCP are available as gearmotors and speed reducers with many mounting options. The SCP units provide high performance right-angle helical-bevel gear units at the cost effectiveness of a single worm system.



SCP Clincher™ Gear Units (76 - 113)

SK 1282 SCP	SK 1382 SCP
SK 2282 SCP	SK 2382 SCP
SK 3282 SCP	SK 3382 SCP
SK 4282 SCP	SK 4382 SCP
SK 5282 SCP	SK 5382 SCP
SK 6282 SCP	SK 6382 SCP

SCP Bevel Gear Units (118)

SK 9012.1 SCP	SK 9013.1 SCP
SK 9022.1 SCP	SK 9023.1 SCP
SK 9032.1 SCP	SK 9033.1 SCP
SK 9042.1 SCP	SK 9043.1 SCP
SK 9052.1 SCP	SK 9053.1 SCP

Please note that when ordering an SCP unit with a bevel gearbox that the lead times are slightly longer due to the extra manufacturing involved on this specialty product.

Customer Benefits

Simplicity - The NORD SCP screw conveyor package eliminates the need for costly separate v-belt drives by directly coupling their motors to the C-face reducer. More space savings is also possible using an integral gearmotor with the SCP package.

- Reduced cost
- Reduced installation time
- No belt maintenance or guarding
- Space savings
- Higher efficiency
- More transferred torque

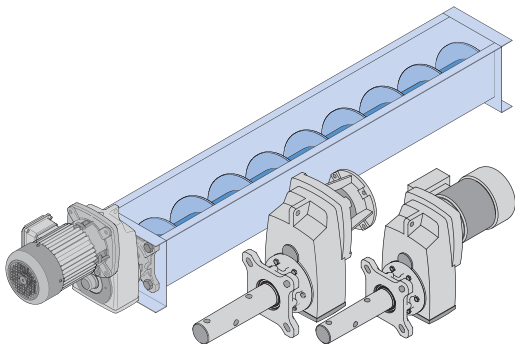
UNICASE™ Design

NORD heavy-duty, one-piece housings are precisely machined to meticulous standards. Internal reinforcements further increase strength and rigidity. All bearings and seal seats are contained within the casting, eliminating splits or bolt-on carriers that can weaken the housing and allow oil leakage. Bores and mounting faces are machined in one step, producing extrememly precise tolerances – thus ensuring accurate positioning of gear teeth, bearings and seals, and longer life for all components.

High-Quality Gearing (Infinite Life Design)

NORD continually invests in state-of-the-art gear production equipment and in gear research. This allows us to produce exceptionally high quality gears.

Benefits



- Designed and manufactured up to AGMA CLASS 13
- Infinite design life
- Case-hardened steel
- Exceptional hardness: 58 Rc minimum
- High-speed gears are ground; low speed gears are skive hobbed
- 275% momentary overload capacity
- Low noise
- Low maintenance

QUADRILIP™ Sealing

The QUADRILIP™ system has four components for sealing lubricant inside, and contaminants outside, the speed reducer. The system includes a double lip seal, single lip seal and greasepack barrier (grease lip). Furthermore, the shaft seal area is super-finished.

Benefits

- Superior protection against leaks
- Long seal life
- Improved protection against contaminants
- Improved speed reducer life
- Reduced maintenance requirements & costs

Key Features

SCP - Product Features

NORD offers a unique class of high performance screw conveyor drives. The NORD SCP line is based upon the premium efficient CLINCHER™ gear units. The SCP series of screw conveyor drives offers superior durability in the most severe load and service conditions. The SCP system may also be provided as right-angle helical-bevel gear drives.

Optimized Sealing System

- **❶ Dual Fluropolymer lip seals**
  The SCP mounting flanges contains dual Fluropolymer seals to provide improved sealing. The Fluropolymer seals provide a high degree of chemical and mechanical protection.
- **❷ Dual gap seals (excludes particles) – 0.03" gap**
  The SCP mounting flange and CEMA drive shaft are designed to provide a mechanical sealing device referred to as a gap seal. The flange owns a clearance of 0.03" at two locations on the shaft. This forms a mechanical block to large particles and prevents their entrance into the gear unit.
- **❸ Shaft material ditch**
  Should any material penetrate the fluoropolymer seals, gap seals and greased packing felt seals, the shaft material ditch provides a material gravity break to divert anything that is working its way down the shaft towards the inside of the gearbox.
- **❹ Greased packing felt seal**
  Provides protection for small objects. If materials work their way past the first fluropolymer lip seal and gap seal it will be trapped within the grease felt sealing ring.
- **❺ Material evacuation ports**
  Provides an exit for any foreign material that infiltrates the external sealing system. Also provides a way to clean out the sealing system.
- **❻ QUADRILIP™ sealing**
  Please see page 5 for details

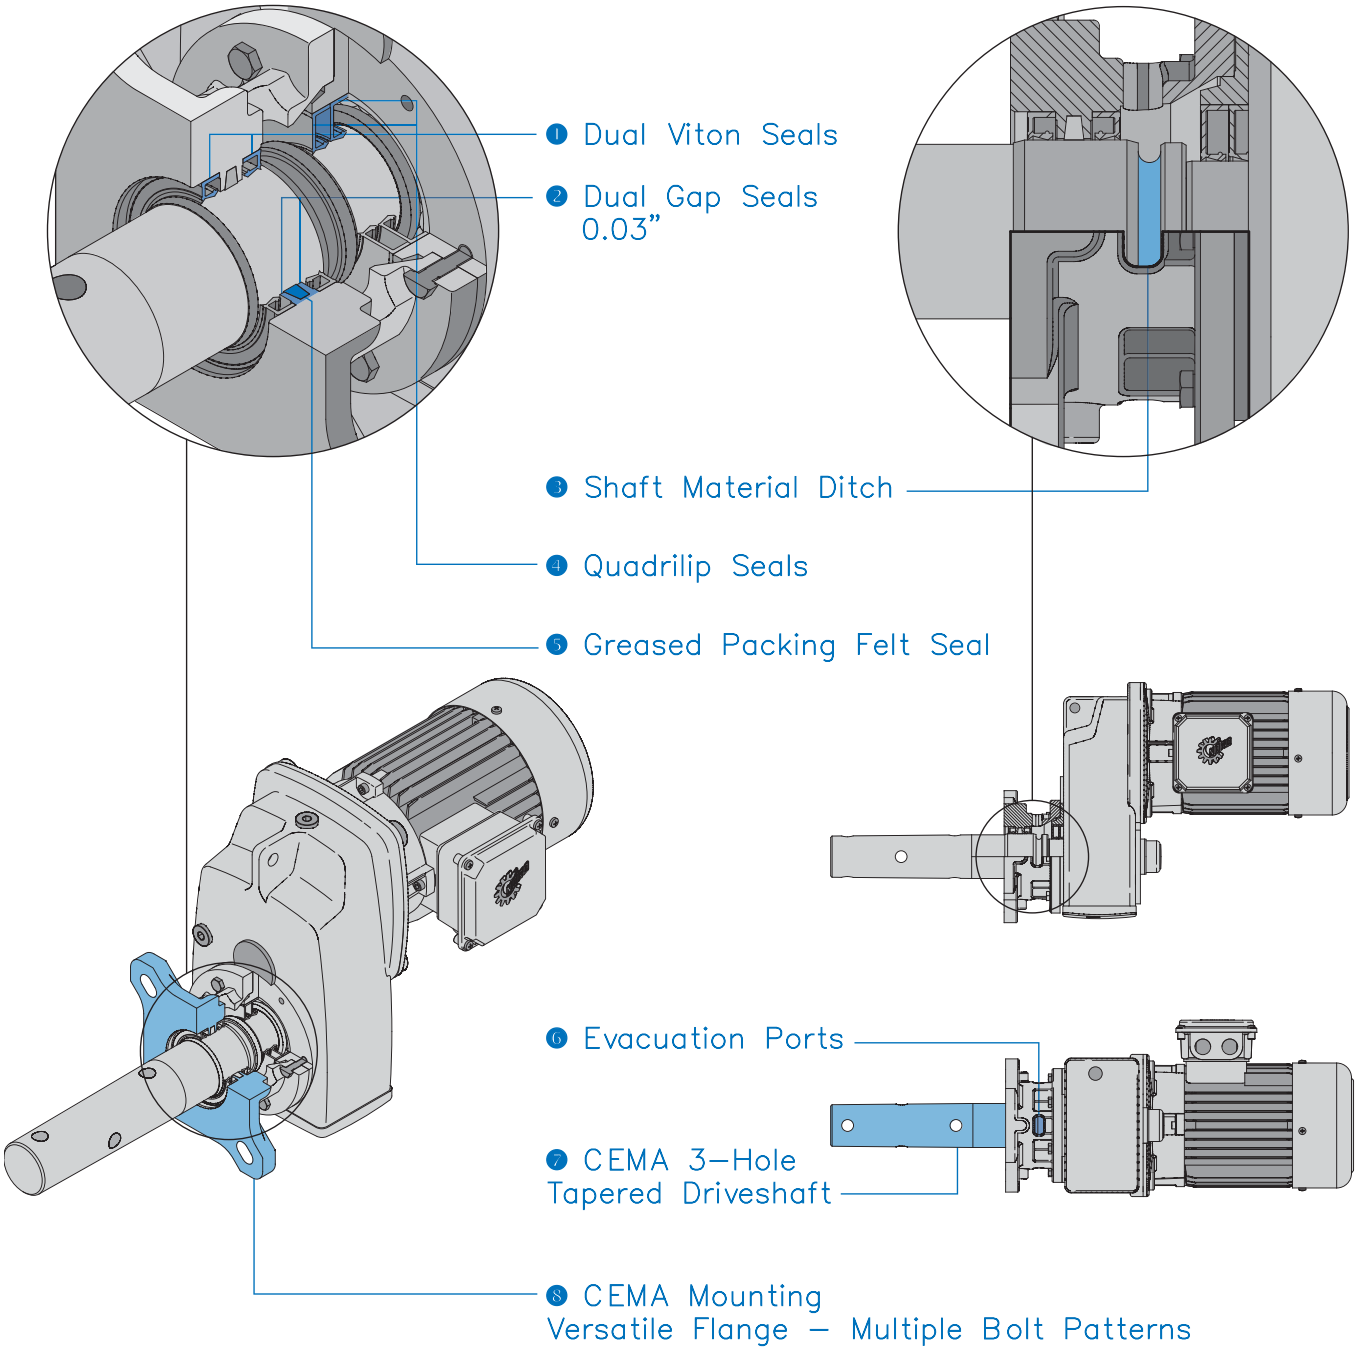
Mounting

- **Standard CEMA mounting**
  The NORD SCP drives adhere to the CEMA standard mounting dimensions.
- **❼ 3-Hole tapered CEMA drive shaft**
  The NORD SCP CEMA drive shaft is a standard three hole shaft. This allows for mounting to either 2-bolt or 3-bolt connections. The drive shaft is tapered for easier mounting and removal. The taper also reduces shaft loading due to misalignments.
- **Easy mounting**
  The NORD SCP drive is easily mounted into the screw pipe. The taper shaft acts as a guide in assembling the drive shaft into the screw pipe.
- **Easy Removal** -
  There is less fretting due to less material contact.
- **Reduced bearing loads**
  Taper allows for screw pipe misalignment.
- **Quick external removal feature** -
  The SCP drive can be easily removed from the screw pipe in two ways. First is the conventional removal of the complete drive and shaft. Unbolt the mounting flange from the trough and remove the cross bolts from the pipe and shaft. After this is done the drive may be removed. This requires access to inside of the screw pipe which is not always possible.

  The Second way to remove the drive without screw pipe access by unbolting the SCP mounting flange from the drive and removing the drive, leaving the flange and drive shaft attached to the screw pipe.

Flange

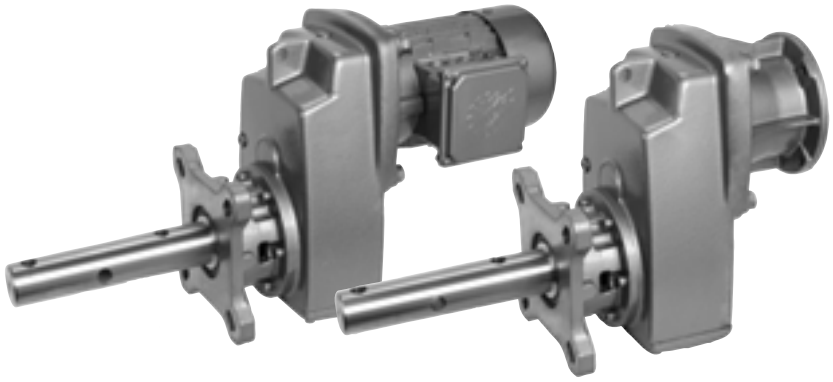
- **Standard CEMA mounting**
  The NORD SCP drives adhere to the CEMA standard mounting dimensions.
- **High strength class 35 gray cast iron**
  The SCP drives and screw conveyor flanges are made form high strength class 35 gray cast iron with a minimum tensile strength of 35,000psi.
- **❽ Versatile flange – multiple bolt patterns**
  The SCP mounting flanges often accommodate more that one CEMA bolt pattern. This allows one drive to be used on different screw sizes simply by switching out the drive shaft.



High Efficiency

The NORD SCP design is extremely efficient due to the direct coupled gearmotor or NEMA C-face input design. Belted input systems have scientifically lower total drive efficiency. Efficiency may be further increased by using the NORD "H" line of energy efficient motors.

Options



- Grease purge-able seal (PC) - see page 16
- Stainless steel CEMA drive shaft (SM5) - See page 16

Gearbox Selection

A number of factors are considered when selecting a gear unit, including gearbox rating, service factor, speed and speed variation, horsepower, thermal capacity, ratio, physical size, ambient conditions and cost. Below are some guideline steps to help aid in the gear unit selection.

1. Determine the speed and/or gear ratio
2. Determine the required power or torque
3. Determine Service Factor
4. Determine CEMA Shaft Diameter
5. Select the basic gearbox type and input
6. Determine the required mounting position
7. Select options
8. Checks – thrust load, NEMA moto weight, thermal considerations, & other application considerations

1. Speed and Gear Ratio

The first step in selecting a gear unit is determining the final output speed or speeds you need. This speed is normally described in revolutions per minute (rpm). This output speed or speeds is determined by the input speed to the gear unit divided by its gear ratio. Their relationship is described by the following formulas.

$$\text{i (gear ratio)} = \frac{\text{Input speed [rpm]}}{\text{Output speed [rpm]}}$$

$$\text{Output speed [rpm]} = \frac{\text{Input speed [rpm]}}{\text{i (gear ratio)}}$$

To specify a gear unit, you can identify either gear ratio needed or the output speed (rpm) if the input speed is known.

2. Power and Torque

The second step for selecting a gear unit is the required power or torque needed to power the load. Torque in this catalog is normally expressed in pound-inches [lb-in].

$$\text{Power [hp]} = \frac{\text{Torque [lb-in] x speed [rpm]}}{63025}$$

$$\text{Torque [lb-in]} = \frac{\text{Power [hp] x 63025}}{\text{speed [rpm]}}$$

For a proper selection you must ensure that the motor or other prime mover can produce enough torque or power and that the gear unit has adequate torque or power capacity.

To specify a gear unit you can identify either torque or power.

3. Service Factor or Service Class

In addition to power or torque, service factor must also be considered. A service factor is essentially the ratio of extra capacity in a gear unit compared to the power or torque that is needed to run that application. The goal of selecting a gear unit with extra capacity (service factor) is to provide adequate service life in operation.

One reason to apply a larger service factor is if a unit operates more hours per day. If a unit runs 24 hours per day it should normally have a higher service factor than a unit that runs 8 hours per day if you expect the same calendar life.

A second reason for applying a larger service factor is to cope with a more difficult application. Even if it takes the same power and speed to operate a rock crusher as a fan, the rock crusher needs a stronger gearbox (higher service factor) to give the same calendar operating life as the gear unit powering the fan.

The real question is how to determine the proper service factor for a gear unit in an application. Following are four possible methods.

Customer or User Specification

Many customers will have their own service factor guidelines or specifications.

AGMA Service Factoring

American Gear Manufacturers Association (AGMA) publishes lists of recommended service factors for different applications. These service factor recommendations have been determined from the experience of many gear manufactures and are in AGMA standard 6010.

AGMA Service Classes

American Gear Manufactures Association (AGMA) has another method for selecting gear units service factors. AGMA standard 6009 lists many applications by a service class (I, II, III) with class I being the simplest applications and class III being the hardest. These application service classes are associated with a range of service factors by the following table.

AGMA Service Class	Service Factor
I	1.00 to 1.39
II	1.40 to 1.99
III	2.00 and above

In the gearmotors selection table each unit is also classified by an AGMA service class.

NORD Mass Acceleration Service Factoring

NORD often uses a calculation based system to properly assign a service factor. This system considers hours of operation per day, the severity of the application and the number of times the equipment is cycled.

AGMA Class of Service

This table has been developed from the collective experience of gearbox and screw conveyor manufacturers and users of speed reducers in typical applications. Maintaining speed reducer Service Factor (S.F.) provides compensation for non-measurable operating loads and daily length of time in service.

The speed reducer selected should have a service factor greater than or equal to service factor suggested for the particular application. This will result in trouble free operation for a reasonable period of time. Insufficient service factor inevitably ends with premature failure of the speed reducer. Note: Each screw conveyor manufacturer determines the proper "margin of safety" for their type of application and equipment.

Operating conditions	Service Factor		
	up to 3 hrs/day	3-10 hrs/day	10-24 hrs/day
Uniformly loaded or fed	I	I	II
Heavy duty	I	II	II

from AGMA Standard 6009-A00

4. CEMA Drive Shaft Size

Available CEMA Shaft Sizes

- 1 - 1/2"
- 2"
- 2 - 7/16"
- 3"
- 3 - 7/16"

CEMA Drive Shaft Connection Strength

For some selections the torque is limited by the CEMA drive shaft connection. It is important to consider the torque limits following when making a selection.

Torque limits - CEMA 350-2003 (Table 3-5) excerpts

Shaft size [in]	2-Bolt [lb-in]	3-Bolt [lb-in]
1 - 1/2	3,070	3,070
2	7,600	7,600
2 - 7/16	9,270	13,900
3	15,400	23,310
3 - 7/16	21,800	32,700

5. Gearbox Input

NORD's modular design allows for a number of different inputs to be added to NORD reducers including:

- Integral motor
- NEMA-C and IEC motor adapter
- Solid input shaft

6. Mounting Position

The gearbox mounting position is an important and often overlooked specification. The mounting position determines how much oil the gear reducer requires, in addition to determining the position of the oil drain, oil fill and vent on the gear drive. NORD offers six basic mounting positions. If your application requires a variation from the six basic mounting positions, please contact NORD.

7. Options

NORD offers a number of mechanical, protective, paint and lubrication options for gear reducers and motors. Please see page 16 for gear unit options and refer to the motor section for motor options.

8. Checks

Thrust Loads (Axial)

Loads that are directed towards or away from the gearbox along the axis of the shaft are called thrust or axial loads. Output shaft thrust capacity [F_A] can be found in the gearmotor rating tables. Thrust load capacities should not exceed the values listed in the tables to ensure long bearing life. Contact NORD for combination loads or a more exact examination of the application.

NEMA C-face Motor Weight Limits

When mounting a motor to a NORD NEMA C-face motor adapter it is important to consider the motor's weight. Following is a table that includes the maximum motor weight the NEMA adapter can support. If the motor exceeds the listed weight it must be externally supported. When a C-face mounted motor is externally supported care must be taken to ensure that the support system does not impose additional pre-loads on the NEMA motor adapter.

NEMA Weights

Motor FRAME	56C	143TC	145TC	182TC
Max Weight [lb]	66	88	110	130
Motor FRAME	**184TC**	**210TC**		
Max Weight [lb]	175	220		

⚠ GENERAL WARNINGS & CAUTIONS ⚠

Applications with risk of personal injury should be reviewed together with NORD. Examples of these are hoist, lifts or other applications where people may be at risk.

NEMA and IEC Adapters

NEMA/IEC adapter have additional shaft coupling and additional bearing seats compared to integral motors so there are higher no-load losses with NEMA or IEC adapters. We recommend mounting the motor directly, since it offers both technical and cost advantages.

NEMA and IEC adapters used in hoist, lifts and other applications with danger of personal injury should be reviewed together with NORD.

NEMA C-Face Adapter Capacity

The NEMA adapters are designed to handle the torques produced by the standard NEMA power assignment at 4-pole (1800 rpm) motor speeds. If a larger motor power than the power listed below is used, NORD should be consulted. Also if a NEMA adapter is being used for other than an AC induction motor NORD should be consulted.

Adapter	Max Power [hp]
56C	1
140TC	2
180TC	5
210TC	10

External Installation, Tropical Use

Gearboxes installed outside, in damp rooms, or used in the tropics may require special seals and anti-corrosion options. Please contact NORD for application assistance.

Special conditions

If special environmental or other conditions exist in transit, storage or operation these need to be considered in the unit selection. Special conditions may include (but are not limited to):

- Exposure to aggressive corrosive materials (contaminated air, gasses, acids, bases, salts, etc.)
- Very high relative humidity
- Direct contact between the motor and liquid
- Material build-up on the gear unit or motor (dirt, dust, sand, etc.)
- High atmospheric pressure
- Radiation
- Extreme temperatures, high, low or large temperature changes
- High vibration, acceleration, shocks or impacts
- Other abnormal conditions

Gear Reducer Ratings

The permissible continuous power limit of gear reducers is limited by both the mechanical rating and the thermal rating. The mechanical rating depends upon the material strength of the gear reducer's gears, bearings, housing, shafts, etc. The mechanical input power limit to the reducer is also a function of the mechanical power rating divided by the relevant reducer service factor.

The thermal rating or thermal limit depends upon the amount of heat generated within the reducer and is influenced by a variety of factors including:

- Churning or splashing losses in the lubricant which depend upon reducer type, ratio, input style, mounting position or oil fill-level, and the circumferential travel velocities of the gear wheels.
- The actual speed and load conditions. These factors determine load-depedent losses in the gear areas and frictional losses in the gear, bearing & seal areas.
- Ambient Conditions:
  - Ambient Temperature.
  - Amount of free air circulation around the drive.
  - Possible near-by heat sources.
  - Heat dissipation or the ability of the reducer to transfer heat through the housing, shafts, and the mating sub-structure or mounting surface.

Storage Before Installation

The gear units and motors should be stored in a dry area before they are to be installed. Special measures are required for longer storage. Please request long term storage instructions from NORD Gear or see page 17.

Observing the Reducer's Thermal Limit

When to Contact NORD

Through computer program analysis NORD can evaluate application conditions and the impact they have on a reducer's thermal capacity.

When applying SCP gear units of case size SK 6282 & larger, consult NORD if any two or more of the following conditions apply:

- Gear ratio, $i_{total} \leq 24:1$
- Input speed, $n_1 > 1800$
- Vertical positioning (mounting position M2 or M4)
- Input configuration: NEMA C-face, IEC, servo adapter or solid-shaft input (Type-W)
- An elevated ambient temperature ≥ 86° F (30 °C)

Dangers of Reducer Overheating

The following problems may result when the reducer's thermal capacity or maximum oil sump temperatures are exceeded:

- Lubrication oxidation, breakdown & deterioration.
- A decrease in lubrication viscosity & film thickness.
- Loss of critical bearing and gear clearances required for proper lubrication.
- Increased contact pressures and increased operating temperatures in the critical load zones of the gearing and bearings.
- An increased possibility for metal-to-metal contact and premature component wear.
- A significant reduction in the lubricant's ability to prevent scuffing, pitting, and in extreme cases galling or welding.

Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation, depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85 °C (176-185 °F)	95 °C (203 °F)
Synthetic	105 °C (220 ° F)	107 ° C (225 ° F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

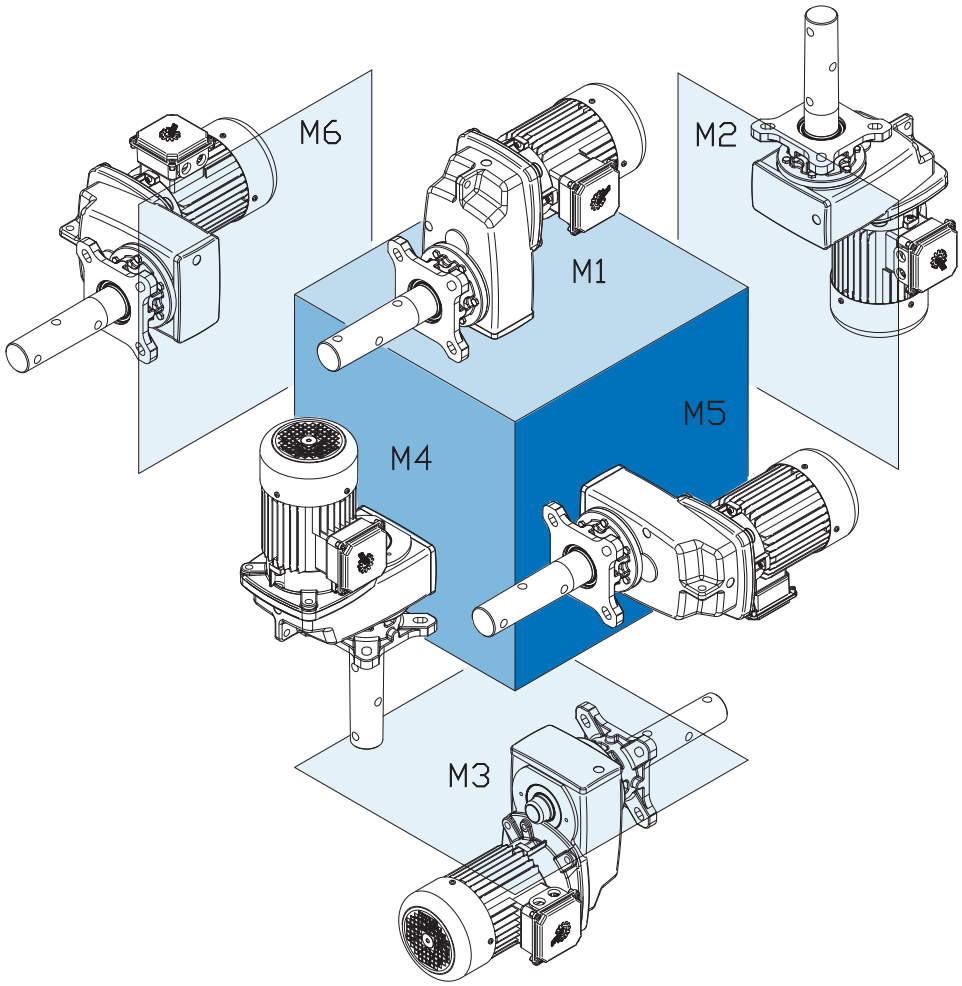
Measures to Expand the Application Range

There are a variety of measures that may be taken in order to protect against thermal overload and expand the application range of the gear reducer. Common examples include the following:

- Recommending a change in lubrication viscosity and/or a specific synthetic lubricant type.
- Applying high-temperature seals.
- Increasing air flow around the gear unit.
- Shielding or protecting the reducer from high heat sources.
- Considering an integral motor instead of the bolt-on input assembly covers. In many cases the motor fan will substantially increase air-flow around the gear unit.

Mounting Positions

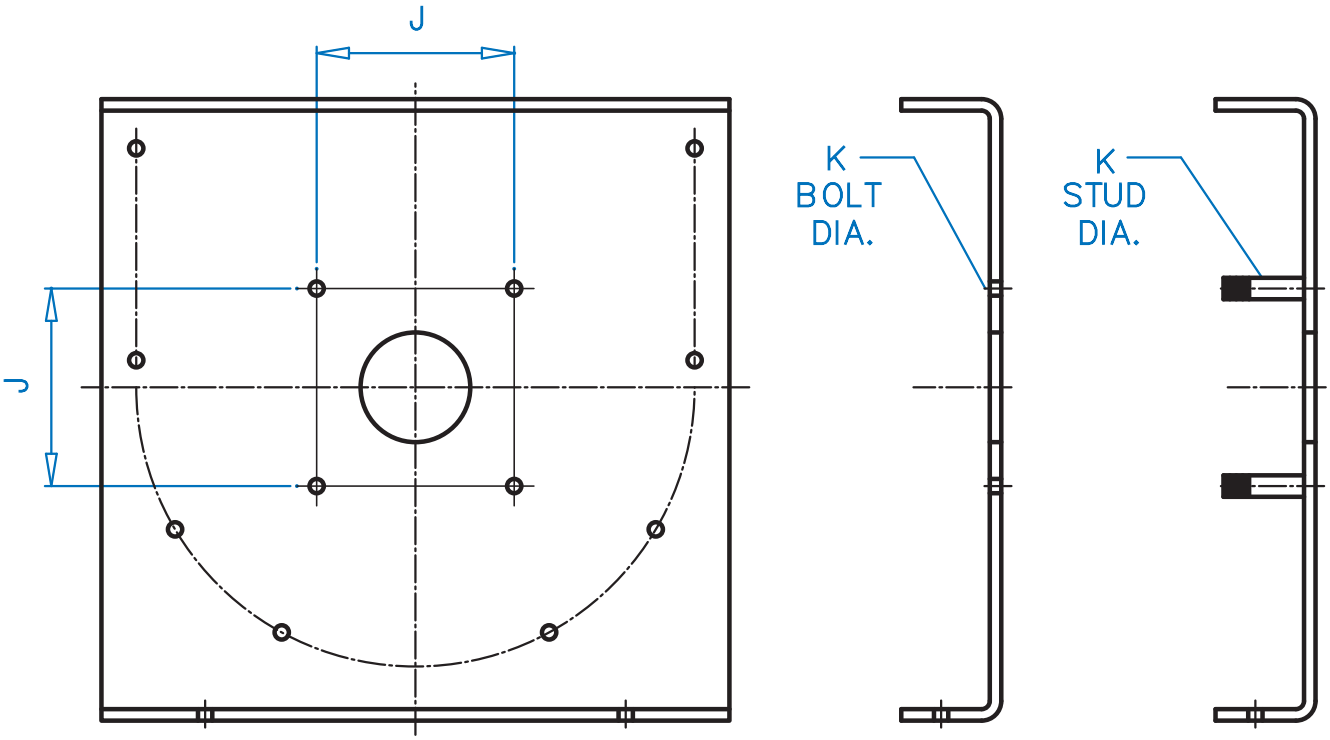
The reducer mounting position determines the approximate oil fill level and the appropriate vent location. In some cases the mounting position may dictate possible variation in final reducer assembly. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering.



New Mounting Position System

NORD is in the processes of incorporating a new mounting position systems. Historically the NORD mounting position system was based on international motor standards. NORD is changing in an effort to simplify the system. The new system is based on the six sides of a cube. Below is a cross reference between the old and new mounting position codes.

Mounting Position Cross Reference Table



New	M1	M2	M3	M4	M5	M6
Old	B3, B5	V3, V6	B8, B5I	V1, V5	B5II, B6	B7, B5III

Screw Conveyor Package

Screw Conveyor Mounting

Heavy Duty Output Bearings (VL)

Replacing standard output bearings with heavy-duty versions will increase the external load carrying capacity of the speed reducer. Increased capacity in either or both overhung (radial) or thrust (axial) loading insures that premature bearing failure will not occur due to high stresses in the bearing elements. The increased bearing capacity will also keep the speed reducer as small as possible by not having to select the next larger case size in order to handle the bearing loads. If increased bearing life is desired, larger bearings will reduce the relative stress on the bearings and increase B10 bearing life.

Standard Bearing

Heavy Duty Bearings (VL)-option

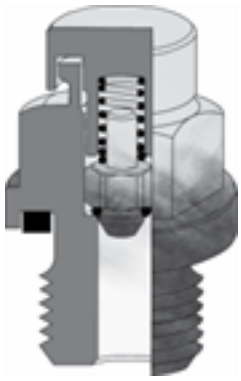
Grease Purge Seal (PC)

The SCP screw conveyor package has an optional grease purgeable sealing system. The design replaces the greased packed felt packing seal with a grease filled cavity. The system also includes a grease nipple and relief to allow the seal to be flushed with fresh grease.

Stainless Steel Output Shaft (SM5)

Output shafts made from stainless steel are available and are frequently used in food, pharmaceutical, and washdown applications. In some cases stainless steel solid input shafts may also be provided.

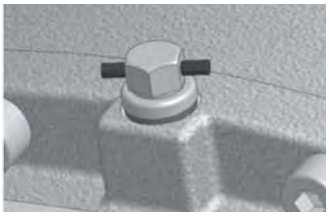
Oil Expansion Chamber (OA)



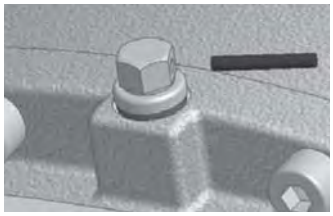
Oil expansion chambers are available for most reducers. These chambers allow for expansion of the oil-air mix in the reducer that can occur during operation. This expansion chamber is similar to a car radiator over-flow chamber.

Oil Sight Glass (OSG)

The oil sight glass provides a visible oil level indication on the reducer. The sight glass replaces the standard steel fill plug and consists of a sealed clear porthole centered in the middle of a brass plug. The sight glass allows for quick oil level and color inspection.



Autovent™ (DR)



The Autovent™ prevents entry of foreign material, such as water, dust, corrosives, etc… and is perfect for washdown and dusty environments. The Autovent™ is a ball and spring check valve that opens at 2 psi and during operation and closes tightly when the gearbox cools. The Autovent™ is standard on all vented NORD reducers. Some of the benefits are cleaner gearbox oil, extended lubrication life and longer lasting seals, gears, and bearings.

Open Vent (OV)

An open vent may be optionally supplied on NORD reducers. The open vent allows for air pressure differences between the inner space of the reducer and the atmosphere. This open vent will be closed upon delivery to prevent oil leakage. Before the reducer is put in service the open vent should be activated by removing the sealing plug.

Sealed vent

Activated vent

Filtered Vent (FV)

NORD offers a filtered vent, which allows gases to permeate, but does not allow dust and debris to pass through the vent.

Magnetic Drain Plug (MDP)

Magnetic drain plugs attract and hold ferrous metal particles that may circulate inside the reducer's lubrication system. These potentially abrasive particles may cause excessive wear in the reducer if they remain circulating. An increase of collected material may be a warning sign of future problems.

Special Drain Plugs

NORD oil drain valves are offered to make draining the oil from the gearbox clean and easy. The drain hose needs to be supplied by the customer. The hose fittings are offered in either 90° or straight to accommodate the user.

A brass drain valve is threaded into the existing oil drain port of the gearbox. The spring valve is closed using a rubber o-ring. When the hose fitting is threaded into the drain valve, the spring valve is pushed open and allows oil to drain. When the hose fitting is removed, the drain valve closes. A brass, threaded cap is supplied to cover the drain valve when not in use.

Additional Drain Plug Hole (ADP)

NORD can add an additional drain hole to the reducer housing for a small surcharge if required for special oil plumbing needs.

Long Term Storage (LL)

Speed reducers are frequently put in storage prior to installation for long periods of time and in some cases exposed to the elements. NORD's long term storage option protects the unit from moisture or corrosion by coating all unpainted surfaces with a dry, transparent, durable waxy film. Once installation is necessary this waxy film can be easily removed with a commercial de-greaser or petroleum solvent. If possible the store room should be vented and dry, with room temperatures between 23°F and 104 °F (-5 °C and 40 °C).

Paint Coatings

NORD's standard paint coating is a two component, aliphatic polyurethane finish contaning 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications.

Advantages of NORD's stainless steel two component polyurethane:

- Excellent adhesion to cast iron, aluminum, steel, and plastics
- Excellent corrosion resistance
- Excellent chemical resistance
- Excellent gloss and color retention
- Suitable for indoor and outdoor exposure
- Nonporous and excellent abrasion resistance
- USDA compliant

NORD also offers a variety of severe duty paint coatings that provide a high level of protection against water and severe environments both indoors and outdoors. NSD+ (NORD Severe Duty) consists of a primer undercoat and a stainless steel polyurethane topcoat. For the most demanding environments, NORD offers NSD-X3 (NORD Severe Duty triple coated) which consists of a primer undercoat, stainless steel polyurethane coating, and a clear topcoat. Paint coatings are also available in alternate colors as seen in the table below.

Finish	Color	Coating	Use
Standard (stainless steel paint)	Stainless steel silver (Gray)	1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment
Alternate color	Black, Blue, Red, Orange	1 x Color top coat (polyurethane)	Indoor or outdoor protected
NSD+			
NORD Severe Duty + NSD+	Stainless steel silver (Gray)	1 x Primer high solid alkyd system 1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment
NORD Severe Duty +W NSD+W	White	1 x Primer high solid alkyd system 1 x White top coat (polyurethane)	Indoor or outdoor moderate environment
Alternate color NSD+	Black, Blue, Red, Orange	1 x Primer high solid alkyd system 1 x Color top coat (polyurethane)	Indoor or outdoor moderate environment
NSD X3			
NORD Severe Duty Extreme NSD-X3	Stainless steel silver (Gray)	1 x Primer high solid alkyd system 1 x Stainless steel (316) (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment
NORD Severe Duty Extreme NSD-X3W	White	1 x Primer high solid alkyd system 1 x White (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment
Alternate color NSD-X3	Black, Blue, Red, Orange	1 x Primer high solid alkyd system 1 x Color (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment

Special colors and paints possible please contact NORD with your specific requirements.

Input

NORD's modular design allows for many different types of inputs to be added to gear reducers. All inputs are bolt on and include machined pilots to ensure simple and accurate assembly. NORD offers the following different input types:

- Integral motor
- NEMA C-face motor adapter
- IEC B5 motor adapter
- Solid input shaft
- Servo motor adapter
- Top mount motor platform
- Custom mounting interface

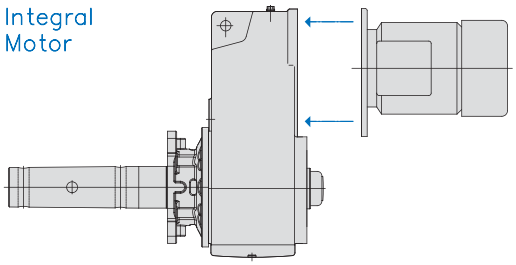
Example Nomenclature

SK3282SCP - W

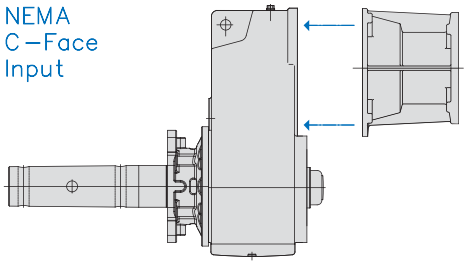
- **W** — Solid Input Shaft
- **SK3282SCP** — Gear unit

SCP Gear unit with solid input shaft.

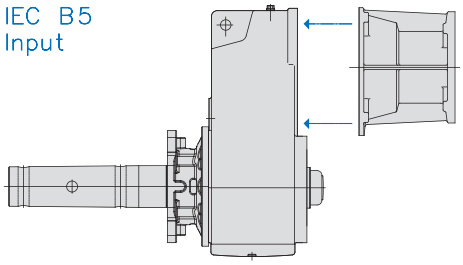
SK3282SCP -140TC



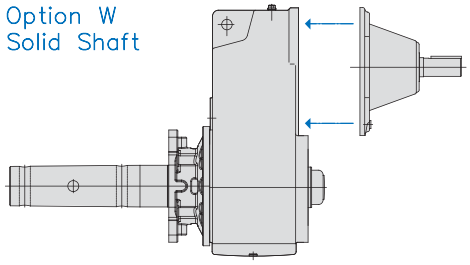
- **140TC** — NEMA 140 TC Motor Adaptor
- **SK3282SCP** — Gear unit



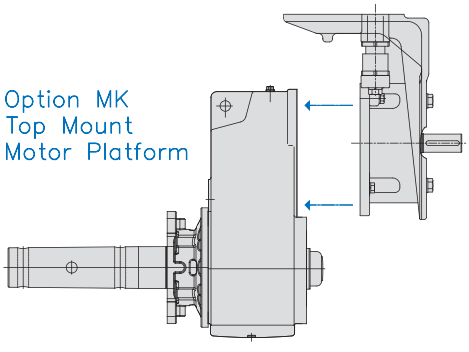
SCP Gear unit to recieve standard NEMA C-Face motor adaptor.



SK3282SCP - IEC80



- **IEC80** — IEC 80 B5 Motor Adaptor
- **SK3282SCP** — Gear unit



SCP Gear unit to recieve standard metric IEC B5 flange mount motor adaptor.

Integral Motors

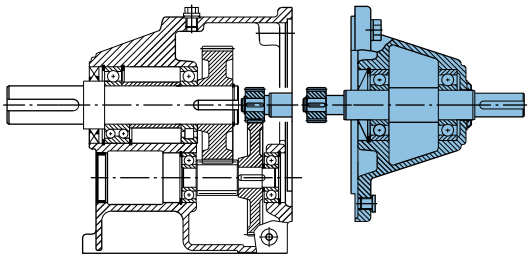
NORD provides integral motors that mount directly to the gearbox. Integral motor mounting eliminates the need for costly v-belts or sheaves and directly couples the motor to the reducer. This also results in a dimensionally compact one-piece package.

NORD high performance integral motors are available in many operational voltages, are inverter duty rated, and offer many valuable options including energy efficient motors and power off brakes. For more information on integral motors, see the motor section found on page 119.

NEMA C-Face Motor Adapter

NEMA C-face motor adapters allow for easy installation and removal of industry standard C-face motors. NEMA C-face motor adapters consist of a coupling and an adapter housing that connects the motor to the gear reducer. Gear units with NEMA C-face adapters are commonly used where applications require specialized motors or the user wants to easily find a replacement motor if failure occurs. NORD also offers high performance NEMA C-face motors and brakemotors, that can be factory installed to the motor adapter.

NORD motor adapters deliver nearly 100% of the torque generated by the motor and can be used from -13°F (-25°C) to 212°F (100°C). Most motor adapters have specially sealed bearings that are lubricated for life.



The maximum input power of a gear unit with a NEMA C-face adapter is generally limited by the power rating of the standard NEMA C-face motor size. The power limit is indicated in the ratings table for a standard 4-pole 1750 rpm motor. In some cases the gearbox limit ($T2_{max}$) will be the limiting capacity. Both the NEMA adapter limit and the gearbox torque limit must be considered. If the speeds required exceed those included in the performance and speed reduction tables please contact NORD.

IEC Motor Adapter

IEC motor adapters allow for easy installation and removal of industry standard IEC motors according to DIN 42677. The IEC adapter is very similar to the NEMA C-face adapter in construction. The maximum input power is generally limited by the IEC motor size. For ratings and dimensions, please consult NORDS metric catalogs that may be found online at www.nord.com under the document section.

Solid Input Shaft

Designed to mount couplings, sheaves or sprockets, which transfer torque from the prime mover. The input shaft is made from ANSI 1045 or stronger material and is dimensioned with long keys according to ANSI B17 standards. The maximum gearbox input power rating is indicated in the speed reducer performance tables.

Servo Motor Adapter

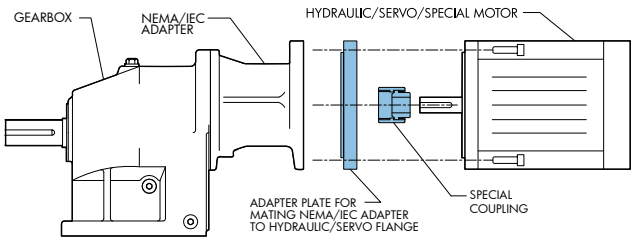
Servo motor adapters are designed to handle the highly dynamic capabilities of servo motors. NORD servo motor adapters have a square mounting flange and are available with either a keyed (SEP) or a key-less (SEK) coupling. They are suitable for speeds up to 3000 rpm and the high torques produced by servo motors. Higher input speeds can be handled for a short duration and the bearings and input shaft are designed to cope with the high torque loads.

Top Motor Mount Platform

Some applications require the motor to be mounted on top of the reducer with a belt drive connection from the motor to the reducer. MK platforms can be bolted-on to all UNICASE™ gearboxes in any mounting position and offer the following advantages:

- Light, vibration inhibiting aluminum construction
- Corrosion resistant, easily adjustable mechanism for belt tensioning
- Corrosion resistant fasteners
- Available in all mounting positions
- Can be swung 90° to the right or left
- Platform has multiple bolt patterns for various motors

Motor platforms are pre-drilled and tapped to bolt on a standard NEMA footed motor. Each platform has belt tension adjusters. Motor, belts, sheaves and guard are supplied by the customer.



Custom Mounting Interface

NORD can provide custom input adapters typically consisting of a special adapter plate and special coupling to mount non-standard dimensioned motors or other devices.

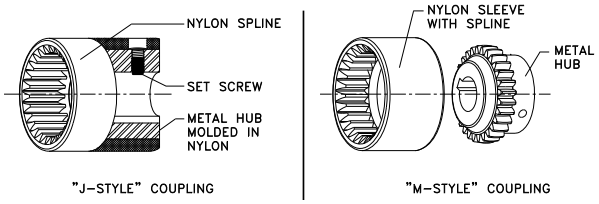
When a custom input adapter is required, special attention needs to be given for each application to be sure the customer receives the performance that is necessary. The following information is required:

- Motor Dimensional Drawing
- Motor Weight
- Motor performance specifications, including torque, horsepower and operating speed ranges.

NORD engineers will review the performance requirements and make a unit selection based on given parameters.

Vertical Motor Adapter Applications

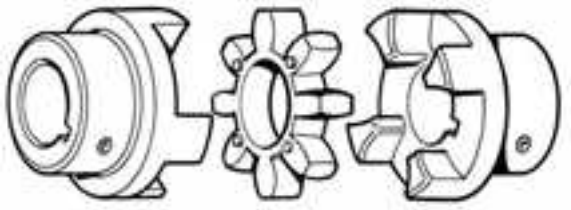
Gear units with motors frame sizes 250TC (IEC160) and larger, in a vertical up motor mounting position, NORD recommends using an integral gearmotor instead of a NEMA or IEC input adapter. If your application requires this mounting position and a NEMA or IEC input, please consult NORD. In vertical down motor mounted applications it is recommended to shorten the maintenance interval.



Couplings

Couplings are made with tough abrasion resistant materials, which resist most chemicals and petroleum products. They are electrically isolated (prevent metal to metal contact) and require no lubrication or maintenance. Depending on the size of the C-face input, NORD provides either a gear or jaw type coupling.

Gear Couplings



Gear couplings are used with 56C to 280TC adapters and provide a compact space saving design. C-face adapter input shafts have a machined male spline that meshes with a molded nylon spline on the coupling. This specially designed molded nylon sleeve that exhibits high torsional stiffness, resulting in minimum fit-up backlash and reduced internal frictional losses. Gear couplings lightweight design yields low inertia and use blind assembly and slip together components to make inspection easy without disassembly.

NORD incorporates two styles of gear couplings, the “J” and “M” styles. The “J” style is one-piece couplings consisting of a nylon sleeve and metal hub that are fused together. The “M” style is a two-piece coupling consisting of a separate nylon sleeve and metal hub.

Jaw Couplings

Jaw couplings are used with 320TC and larger adapters. The cast iron jaw type couplings have a urethane “spider” that provides smooth transmission of the motor torque and has excellent shock and vibration dampening characteristics. A set screw on the coupling prohibits axial movement along the motor shaft.

The Importance of Proper Lubrication

Proper gearbox lubrication is essential in order to reduce friction and component wear, and protect against corrosion and rust. Gear lubricants reduce heat and wear by inserting a load-sharing "protective fluid film" between mating parts and preventing direct metal to metal contact. Properly selected lubricants will operate under various film conditions, improve heat transfer, optimize reducer efficiency, absorb shock loads, reduce noise, inhibit foaming, and separate water readily.

Design Considerations

Along with many other factors, the gear designer must consider the gear load and speed conditions, and the expected operating oil temperatures. These factors help determine a generally suitable oil category, a desired additive package, preferred base-oil type, and oil viscosity.

It is important that the consumer be aware of these many design factors before making any changes in the critical areas (oil category, base-oil type, viscosity, etc.) One should consult their preferred lubrication supplier or NORD Gear when questions arise.

Gear Oil Types, Categorized by Base Oil

Mineral Oil with an EP Additive (DIN 51517, Type CLP)

High performance mineral gear oils are carefully engineered and manufactured to improve aging characteristics, minimize friction, offer good wear protection, provide corrosion and oxidation resistance, minimize foam, and separate water. Mineral gear oils are classified as API Group I or II oils, depending upon viscosity.

The standard NORD mineral gear oil has an extreme pressure (EP) additive ISO Viscosity Grade EP220 (AGMA 5 EP) and is generally acceptable for helical gear units. Good quality mineral oil should have the ability to operate at moderate sump temperatures (up to 80-85 °C) without losing viscosity or thickness. A minimum viscosity index (VI) of 93 or higher is suggested. The oil must also have good film strength to handle shock loads, high torque, and start-up conditions. A minimum FZG Scuffing Load Stage 12 is desirable.

Advantages:

- Most economical of all the gear oil types.
- Generally offers good compatibility with shaft seals, gaskets, paint finishes, etc.
- Offers good corrosion and oxidation protection.
- Effectively reduces internal friction and wear.

When Synthetic Oils Are Used

Synthetic gear oils are suggested when mineral gear oils have reached their performance limit or when they no longer meet certain application requirements. NORD may recommend synthetic oil for any one of the following conditions:

- Severe duty applications or when gears are exposed to frequent starts and stops, high-load or shock.
- For applications in low or high temperature service.
- To extend oil service interval requirements.
- To eliminate the necessity for seasonal oil changes.
- To extend service life of factory-sealed or maintenance-free gear units.
- To take advantage of performance benefits: shear resistance, low traction coefficient, reduced internal friction, improved lubricity, reduced operating temperatures, improved gear efficiency, etc.

Performance Advantages of Synthetic Oil

Compared to mineral oils, synthetic oils provide a number of performance advantages including:

- Ability to operate at higher temperatures without losing viscosity or thickness, due to a much improved viscosity index.
- Improved low-temperature stability due to a lower pour point
- Increased oil change intervals due to superior oxidative & wear resistance
- Lower tendency to form residues and increased resistance to foaming.
- Other benefits may include: very good shear resistance, low traction coefficient, reduced internal friction, improved lubricity, reduced operating temperatures, improved gear efficiency, extended component life and wear protection.

When application conditions warrant the use of synthetic oil, NORD may suggest a particular type of synthetic oil, depending upon the gear unit type and the application.

Synthetic Hydrocarbon/Polyalphaolefin (SHC/PAO) Oil (DIN 51517, Type CLP-HC)

Synthetic Hydrocarbons (SHC) or Polyalphaolefin (PAO) synthetic base oils offer good miscibility with mineral base oils and are very readily available. SHC/PAO oils are classified as API Group IV oils. The can be formulated with or without anti-wear (AW) or extreme pressure (EP) additives. They can also be formulated for acceptance in food-grade applications.

Advantages:

- Higher viscosity index and therefore greater high-temperature stability than mineral oil.
- Better low-temperature stability and lower pour point than mineral type gear oils
- High surface tension and lower tendency to foam compared to mineral oil, and water-soluble polyglycol gear oils.
- Compatible (miscible) with mineral oil.
- Better water seperability (demulsibility) than PG oils.

Polyalkylene Glycol or Polyglycol Synthetic Oil (DIN 51517, Type CLP-PG)

Polyalkylene glycol or polyglycol (PAG or PG) synthetic gear oils are made readily available through many lubrication suppliers. PG oils are classified as API Group V gear oils. They can also be formulated for acceptance in food-grade applications.

PG gear oils possess extremely low traction coefficients and a viscosity index higher than any of the other synthetics (often greater than 220 VI), resulting in excellent heat resistant, shear stability, and natural anti-wear properties.

Typical PG gear oils are formulated with a 1:1 or higher ratio of ethylene oxide to propylene oxide (50:50 or 60:40 is common); this makes PG gear oils water soluble, providing them with very good corrosion resistance even when water is present in concentrations that are higher then what is normally allowed.

Advantages:

- PG oils offer the highest viscosity index of any other synthetic resulting in excellent heat resistant, shear stability, and superior natural anti-wear properties without requiring EP-additives.
- PG gears oils minimize internal friction and often result in improved gear efficiency.
- PG oils have significantly higher film strength than mineral and SHC/PAO oils and out perform these oils at higher operating oil temperatures (approaching 80°C or higher).

IMPORTANT NOTE

Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil, hydrosynthesized synthetic or PAO synthetic oils.

Food-Grade Lubricants

Food-grade lubricants should be manufactured in compliance with FDA 212 CFR 178.3570 and should either satisfy the former 1998 USDA Guidelines as an H1 lubricant or currently qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturers for more information or visit www.nsf.org

H1 food grade oil can only contain additives which appear on the FDA "approved list" for food safe compounds. H1 oils are generally absent of common zinc-based AW additives, and sulfur-phosphorus based, EP chemistries, commonly found in many industrial gear oils.

Food manufacturers control risk and liability by following detailed guidelines outlined by the HACCP (Hazard Analysis and Critical Control Point) program, which includes food-grade H1 lubricants.

Food grade H1 lubricants may be formulated as highly refined mineral oils (white oils), SHC/PAO synthetic oils or PG synthetic oils.

The highly refined nature of good-quality food-grade white-oils provides good long-term oxidative stability and in most cases adequate lubrication under high-load (boundary) conditions. So long as food-grade white oils meet the minimum anti-wear requirements of the normally specified non-food grade oil, they are often acceptable.

Both food-grade white oils and PAO's have an inherent "purity" and absence of polar compounds, making them better than the average mineral oil or even PG oil in terms of demulsibility (water seperability).

Compared to food-grade white-oils, food-grade synthetic PAO or PG oils typically provide:

- Better wear and oxidation resistance.
- Improved high-temperature characteristics.
- Better cold-temperature behavior.

The Importance of Oil Viscosity

Viscosity or the oil's resistance to shear under load, is often considered the single most important property of any gear oil.

NORD Gear Designers have selected the most appropriate ISO viscosity grade of oil, for each type or class of gear reducer. Gear oil viscosity is selected by assuming typical ambient conditions, at rated speed and load conditions.

Important Considerations:

- The correct viscosity selection helps provide proper lubrication and assures that a minimum film thickness is maintained between interacting surfaces.
- The degree to which viscosity changes with temperature or the viscosity index, varies from oil to oil, and depends upon the type of lubricant & additive agents used.
- Selecting too low of a viscosity can result in mixed boundary (partial metal-to metal contact) or boundary lubrication (full metal-to-metal contact) conditions, increasing internal friction heat build-up and wear.
- Selecting too high of a viscosity results in increased churning and squeezing losses in the load zone and excessive heat (especially when peripheral gear speeds are high); Ultimately, this causes the oil temperature to rise and the viscosity to go down, decreasing the effectiveness of the lubricant.

Considering an Oil Viscosity Change

There are three primary reasons to consider a lubrication viscosity change as follows:

1. Low temperature gear oils should be selected so that the pour point is at least 9°F (5°C) lower than the expected minimum ambient temperature. In extreme cases, consider a lower ISO Viscosity rating and test the critical performance of the gear box under cold start-up.

2. High temperature applications may require an increase in the lubricants viscosity to assure proper lubrication conditions in the critical load zones of the gear unit. NORD also recommends switching to synthetic oil if oil sump temperatures exceed 176-185 °F (80-85 °C).

3. In cases of extreme load conditions, gear pairs and antifriction bearings may be more susceptible to scuffing wear. In these operating conditions, it may be beneficial to consider an increased lubrication viscosity and/or lubrication with improved antiwear additive packages.

IMPORTANT NOTE

NORD recommends that the user consult with their primary lubrication supplier when considering changes in oil viscosity.

Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation, depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85 °C (176-185 °F)	95 °C (203 °F)
Synthetic	105 °C (220 ° F)	107 ° C (225 ° F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

Ventilation

Most gear reducers are equipped with a vent which helps compensate for air pressure differences between the inner space of the gear unit and the atmosphere.

The spring-pressure vent (Autovent™) is commonly supplied and factory-installed. Normally open vents may also be supplied as an option; normally-open vents are closed upon delivery in order to prevent oil leakage during transport. When normally open vents are supplied, the sealing plugs must be removed prior to commissioning the reducer.

Prior to reducer start-up, it is important to check the maintenance manual to verify that the vent is properly located with respect to mounting position.

Mounting Position

The reducer mounting position determines the approximate oil fill-level and the appropriate vent location. In some cases mounting position may dictate possible variation in final reducer assembly.

If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering.

Oil Fill Quantities

Oil fill quantities shown in the catalog or maintenance instructions are approximate amounts. The actual oil volume varies depending upon the gear ratio. Prior to commissioning the reducer, the oil-fill level should be checked using the reducer's oil-level plug. It may be necessary to drain excess oil or add additional oil.

Unless otherwise specified, NORD supplies most all gear units factory-filled with the standard lubrication type per the specified mounting position.

Lubrication Replacement

If the gear unit is filled with mineral oil, the lubricant should be replaced at least after every 10,000 operating hours or after every two years. If the gear unit is filled with synthetic oil, the lubricant should be replaced at least after every 20,000 operating hours or after every four years. Often gear reducers are exposed to extreme ambient conditions, hostile environments, wet conditions, or dirty and dusty operating areas. Especially in these situations, it is important to establish a condition-based oil service interval.

The Importance of Routine Oil Analysis

Routine oil analysis, sound lubrication practices, and good tracking of oil performance trends will help establish proper lubrication maintenance and change-out intervals. To maximize equipment reliability, NORD Gear generally recommends a condition-based lubrication maintenance program. One may take exceptions to this general recommendation on sealed-for-life or maintenance-free gear units or smaller and less costly gear units. In these instances, the replacement cost of the gear unit is often small compared to the costs associated with this type of oil analysis program.

NORD suggests replacing the gear oil if oil analysis indicates any of the following:

- Viscosity has changed by approximately 10% or more.
- Debris particles (silicon, dust, dirt or sand) exceed 25 ppm.
- Iron content exceeds 150-200 ppm.
- Water content is greater than 0.05% (500 ppm).
- The total acid number (TAN) tests indicate a significant level of oxidative break-down of the oil, and a critical reduction in performance; If the TAN number measured changes by more than 5% over the new oil, then an oil change would be recommended.

Lubrication Types

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

Mounting position not only determines the proper fill-level but may also have some effect on final reducer assembly. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering. Unless otherwise specified, NORD supplies all Screw conveyor gear units factory-filled with the standard mineral lubrication type and the appropriate quantity.

Standard Oil Lubricants

Gear Unit Type	ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
Clincher™ SCP	VG220	MIN-EP	0 to 40°C (32 to 104°)	Mobilgear 600XP220	♦❶
	VG220	PAO	-35 to 60°C (-31 to 140°F)	Mobil SHC630	♦

❶ Standard product on serviceable gear units

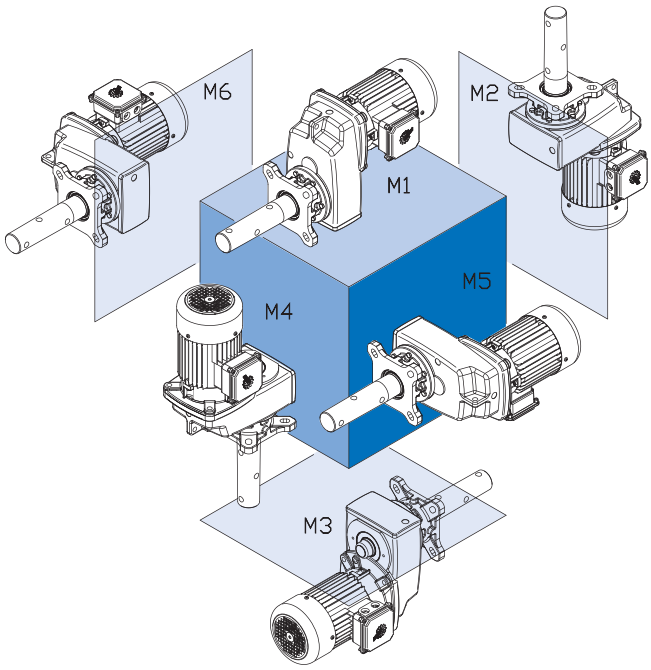
IMPORTANT NOTES

- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol(PG) oils are not miscible with other oil types and should never be mixed with mineral oil.
- Consult NORD if considering oils of ISO Viscosity VG100 or lower.

Oil Formulation Codes

MIN-EP	Mineral Oil with EP Additive
PAO	Synthetic Polyalphaolefin Oil
FG	Food-Grade Oil
FG-PAO	Food-Grade, Synthetic Polyalphaolefin Oil

SCP Mounting Positions & Oil Fill Quantities



Screw Conveyor Package lubrication

Unless otherwise noted below, the following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

STOP ***HARMFUL SITUATION*** **STOP**

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add additional oil as needed.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

Screw Conveyor Package Ratings & Combinations

Explanation of Selection Tables

GEARBOX TYPE – Nomenclature for specified gear unit.

TOTAL GEAR RATIO

OUTPUT SPEED – Based on 1750 rpm input speed

MAXIMUM TORQUE RATINGS

MAX POWER RATING – Based on 1750 rpm input speed

NEMA C-FACE INPUT POSSIBLE COMBINATIONS

INTEGRAL MOTOR POSSIBLE COMBINATIONS

◈ The maximum input power limit shown is the largest motor power typically combined with the gear unit. *The Italicized power values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.*

* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available Combinations and based on a 1750 rpm motor.

◈ The maximum input power limit shown is the largest motor power typically combined with the gear unit. *The Italicized power values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.*

* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available Combinations and based on a 1750 rpm motor.

MOTORS

Motor Options & Construction

NORD motors are stocked in one of two ways. The first method is to stock a complete motor that is ready to be assembled to a gear reducer or shipped as a stand alone motor. The second method, the motor is assembled from component parts. The Mod next to a motor option designates that the option can be added to a complete motor by simple modification. The Build next to a motor option indicates that the motor will need to be built from component parts in order to incorporate the motor option.

Motor Options

Abbreviation	Description	Mod	Build	Page
AG	Absolute Encoder		✓	137
AICM	Additional Insulation		✓	131

Stocked NEMA C-Face Motors

NEMA C-Face Motors

The National Electrical Manufacturers Association (NEMA) provides standardization of electrical equipment, enabling customers to select from a range of safe, effective and compatible products. A NEMA C-face motor has a machined face with a pilot and threaded holes for direct mounting onto a NORD reducer or other industrial equipment. NORD offers NEMA C-face motors stocked as finished goods and will also assemble NEMA C-face motors to your specifications. For ratings, see page 142.

Stocked NEMA C-Face Motors

Stocked NEMA C-face motors are offered in standard efficiency, energy efficient and in a brakemotor design. They are available in 230/460V-60Hz and 575V-60Hz up to 10 hp. Part numbers for stocked NEMA C-face motors are in the table below.

Assembled per Order NEMA C-Face Motors

NORD will assemble a NEMA C-face motor to your specifications based upon the available motor options from this catalog.

Motor Type	Power	Part Number 230/460V-60Hz	Part Number 575V-60Hz	Weight [lb]

Standards

All motors are in accordance with existing standards and regulations:

NEMA MG 1 - Motors and Generators:

- Electrical performance
- Motors for operation on variable AC vector drive

UL 1004 – Electric Motors

CSA C22.2 No. 100-04 - Motors and Generators:

Industrial Products
IEC 60034 parts 1, 5, 6, 8, 9, 11 and 14.

- Part 1 – General rules
- Part 5 – Types of enclosures
- Part 6 – Types of cooling
- Part 8 – Terminal lead designations and sense of rotation
- Part 9 – Noise limits
- Part 11 – Integrated thermal protection
- Part 14 – Mechanical vibration

IEC 60038 – Standard voltages

CE	NORD motors carry the CE mark in accordance with the Low Voltage Directive and, if installed properly, the Electromagnetic Compatibility Directive (EMC). The CE mark is required for installation in European Union (EU) states.
®	Many NORD motors from frame size 63 to 315 are an Underwriters Laboratories Recognized component per UL standard 1004. Frames 63-132 File number E191510 Frames 160+ File number E227215
C SP® US	The Canadian Standards Association CUS mark indicates that CSA has tested and approved NORD motors according to both US and Canadian standards. It is equivalent to the Underwriters Laboratories RU recognition mark (UL standard 1004) and the CSA mark according to CSA Standard C22.2 No. 100-04 Frames 63-132 File number LR112560 Frame 160+ File number LR13494
ee	NORD Energy Efficient motors up to frame 160 have been evaluated by the United States Department of Energy and recieved a Certificate of Compliance to certify the efficiency ratings. The certificate of compliance is CC 092B.
CSA E	NORD energy efficient motors carry the CSA energy efficiency verification mark. This mark ensures that CSA has verified that NORD motors are designed and manufactured to meet energy efficiency requirements number EEV112560.

EPAct – US Energy Efficiency

The Energy Policy Act of 1992 (EPAct) covers efficiency levels of general purpose industrial electric motors and became effective October 24, 1997. The basic goal of the law is to promote energy conservation. This law mandated energy efficiency requirements for many devices including some types of industrial electric motors. The efficiency levels are defined in NEMA MG-1 table 12-10. The regulations to implement this law have been developed by the Department of Energy (DOE).

The law covers minimum efficiency levels for general purpose motors including:

- Single-speed, polyphase NEMA T frame (and IEC equivalents)
- 1 to 200 hp (0.75 to 150 kW)
- 1200, 1800 or 3600 rpm
- NEMA design A and B
- Continuous rated
- Foot-mounted
- 230/460V-60Hz

The law excludes the following motor types from minimum efficiency levels:

- Integral gearmotors
- Brake motors

The NORD "H" line of energy efficient motors are designed to meet the efficiency levels defined by EPAct. NORD offers these motors as an option in combination with our high efficiency gear units for superior energy savings.

Efficiency levels for enclosed 4-pole motors per EPAct and NEMA MG 1 - in percent efficiency [%]

Efficiency for EPACT & NEMA MG1 4-Pole Motors

hp	1	1.5	2	3	5	7.5	10
kW	0.75	1.1	1.5	2.2	3.7	5.5	7.5
Eff%	82.5	84.0	84.0	87.5	87.5	89.5	89.5

kW	11	15	18.5	22	30	37	45
Eff%	91.0	91.0	92.4	92.4	93.0	93.0	93.6

hp	75	100	125	150	200
kW	55	75	90	110	150
Eff%	94.1	94.5	94.5	95.0	95.0

Canadian Energy Efficiency

The Energy Efficiency Act and the Energy Efficiency Regulations establish minimum energy performance levels for electric motors from 1 to 200 HP (0.75 to 150 kW) for sale or lease in Canada. The Energy Efficiency Regulations were developed by Natural Resources Canada (NRCan).

Certain National Electrical Manufacturers Association (NEMA) motors have been regulated since Feb. 3,1995. Effective Nov. 27, 1997, the Energy Efficiency Regulations were amended to include International Electrotechnical Commission (IEC) motors. This amendment also increased the minimum energy performance levels that motors must meet. For explosion-proof motors and motors contained within an integral gear assembly, the effective date of the Regulations is Nov. 27, 1999.

The regulations mandate that motors carry an energy efficiency verification mark that is authorized by Standards Council of Canada (SCC) accredited certification organization such as Canadian Standards Association (CSA).

CEMEP Agreement
European Efficiency Categories

CEMEP, the association of European Electric Motor Manufacturers, has reached an agreement with the European Commission's General Directorate for Energy so that in the future all 2 and 4-pole low voltage motors from 1 to 100kW will be categorized on the basis of their efficiency. The classification will be displayed on the nameplate and in catalogs. The following categories will be used: EFF1, EFF2 and EFF3.

EFF 1	EFF1-indicates a high efficiency factor.
EFF 2	EFF2-indicates an improved efficiency factor.
EFF 3	EFF3-Indicates a standard efficiency motor.

NORD supplies both motors of EFF1 and EFF2 categories in its 4-pole motors. The category EFF2 motors are the standard efficiency motors and the EFF1 motors are the "H" line of energy efficient motors.

In the future NORD will mark all of its 50-Hz motor with the CEMEP efficiency symbols.

kW	1.1	1.5	2.2	3	4	5.5
hp	1.5	2	3	4	5.4	7.5
EFF1 [%]	83.3	85.0	86.4	87.4	88.3	89.2
EFF2 [%]	76.2	78.5	81.0	82.6	84.2	85.7

INVERTER DUTY MOTOR

Inverter/Vector Duty

NORD single–speed motors are Inverter/Vector Duty. The construction of the NORD motors insulating system takes into account the non-sinusoidal wave forms produced by variable frequency drives. NORD uses high grade insulating components and extra first turn protection as well as double coated wire to ensure long service life when connected to AC vector drives. NORD motors can produce full torque at zero speed if properly sized, selected and controlled.

Voltage and Frequency

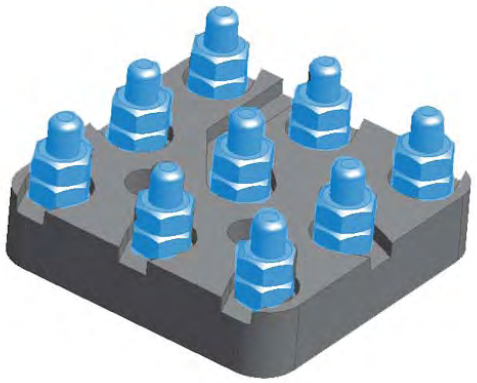
NORD motors are available in a wide range of voltages and frequencies for use in North America and around the world. For a more detailed list of choices see page 128.

NORD motors designed for North American voltages (208V, 230V, 460V and 575V) conform to the voltage and frequency tolerances in NEMA MG-1. The voltage tolerance is +/-10%, the frequency tolerance is +/- 5% or a combined voltage and frequency tolerance of +/-10%.

Low Inertia

The motor inertia in all NORD motors is extremely low which allows for a much more dynamic motor control capability. Low motor inertia is a significant advantage when using NORD motors with AC vector drives or vector controllers. NORD motors can cycle more frequently and require less mechanical energy to start than standard NEMA frame motors. This leaves more energy to start the load.

High Torque



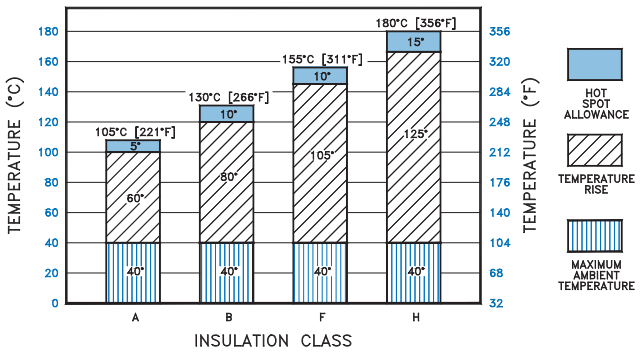
The NORD motors produce higher starting torque than required by NEMA standards. This is achieved through improved motor winding, rotor design and construction.

Non-Sparking Fan

The standard NORD motor fan is a non-sparking design. The fan will also provide proper airflow in either direction of rotation.

Terminal Block

Each NORD motor uses a terminal block, which is a superior method of wire termination when compared to pigtail leads. A terminal block ensures long-term reliability of the power connections.



Tropical Protection (Anti-fungal)

As a standard the NORD motor insulation system is tropically protected. The insulating and construction components are inorganic materials that resist fungal growth.

Insulation Class

NORD motors are constructed with a thermal class F insulating system. The motors are also designed for a class B temperature rise (80°C). The use of class F insulation with a class B temperature rise provides increased operating life. Motors constructed with class H insulation are also available as an option.

Insulation System

NORD motor insulation system is designed to provide a superior degree of protection. NORD utilizes the following insulation components:

- Magnet wire – double coated insulation
- Varnish dip impregnation
- Slot liners
- Phase paper
- Phase separators
- Top sticks
- Connecting wire sleeves

Other motor manufacturers eliminate some of these insulating components for cost reduction.

Inverter/Vector Duty – Voltage Spikes

All NORD motors are constructed with an insulating system designed to withstand the repeated voltage spikes generated by modern AC vector drives. The insulation system withstands the ratings in conformance with NEMA MG 1-2006 Section 31.4.4.2 Voltage Spikes.

$V_{peak} = 3.1 \times V_{rated}$ with a Rise time ≤ 0.1µs.

Ambient Temperature

NORD motors are designed to operate with a maximum ambient temperature of 40°C (104°F). If the motor's operating environment exceeds 40°C, the motor's nominal power P_n either needs to be de-rated (see table below) or use upgraded insulation.

Ambient temp [°F]	113	122	131	140
Ambient temp [°C]	45	50	55	60
De-rate factor	0.96	0.92	0.87	0.82

Motor Rated Power = [P_n x De-rate factor]

Elevation

NORD motors are designed to operate at an elevation of up to 3300 ft (1000 m) above sea level. At higher elevations the air is thinner resulting in less cooling capacity. If the motor's nominal power P_n installation elevation exceeds 3300 ft (1000 m), the motor either needs to be de-rated (see table below) or requires upgraded insulation.

Altitude [ft]	5000	6500	8200	10000	11500	13000
Altitude [m]	1500	2000	2500	3000	3500	4000
De-rate Factor	0.97	0.94	0.90	0.86	0.83	0.80

Motor Rated Power = [P_n x De-rate factor]

Service Factor

Motors rated 230/460V-60Hz and 332/575V-60Hz have a service factor of 1.15. Almost all other motors have a service factor of 1.1 or 1.0.

Duty Classes

The following duty types are defined in IEC 60034-1.

Duty Type	Explanation Excerpts
S1	Continuous operation at a constant load, the motor reaches thermal equilibrium
S2	Short-time operation at a constant load for a given time followed by a time of rest until the motor is completely cooled down to ambient temperature. Example: S2-10 minutes Recommended values for determination: 10, 30 min.
S3	Intermittent operation sequential, identical run and rest cycles with constant load. Temperature equilibrium is never reached. Starting current has little effect on temperature rise. The cyclic duration factor (cdf) indicates the portion of operation time in relation to a complete duty cycle. The typical duty cycle time is 10 minutes, unless otherwise specified. Example: S3-40% Recommended values for determination: 25, 40, 60%
S6	Continuous operation with intermittent load sequential, identical cycles of running with constant load and running with no load. No rest periods. Example: S6-40% Recommended values for determination: 25, 40, 60%

Power Increasing Factor for Short-term & Intermittent Operation

Motor ratings in this catalog are based on continuous duty operation (S1). If a motor is designed for S1 duty, but is to be operated for short-time or intermittent operation it can be subjected to higher loads. The available motor power can be raised above the motor rated power by the "increasing factor" in the table below.

Duty Type			Increasing factor
S2	Operating time	10 min	1.40
		30 min	1.15
S3	Cyclic duration factor (cdf)	25%	1.33
		40%	1.18
		60%	1.08
S6	Cyclic duration factor (cdf)	25%	1.45
		40%	1.35
		60%	1.15

Motor Rated Power = [P_n x Increasing factor]

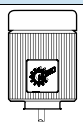
Enclosure

The NORD standard motors are provided with Totally Enclosed Fan-Cooled (TEFC) with an IP55 enclosure rating. Other enclosures are available, including Totally Enclosed Non-Ventilated (TENV), Totally Enclosed Blower-Cooled (TEBC), and IP66.

The motor integral cooling fan provides proper air flow in either direction of rotation. The IEC cooling classification is IC 411 according to IEC 60034-6.

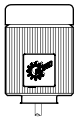
IP Enclosures per IEC 60034-5 - Simplified

	1st digit Foreign body protection		2nd digit Water protection
0	No protection	0	No Protection
1	Protected against solid objects 50mm (2 in) in diameter and larger	1	Protected against dripping water
2	Protected against solid objects 12 mm (1/2 in) in diameter and larger	2	Protected against dripping water up to a 15 degree angle
3	Protected against solid objects 2.5 mm (0.1 in) in diameter and larger	3	Protection against sprayed water
4	Protected against solid objects 1 mm (0.04 in) in diameter and larger	4	Protection against splashed water
5	Protected against dust	5	Protection against water jets
6	Dust tight	6	Protection against high pressure water jets
7	--	7	Protection against intermittent submersion in water
8	--	8	Protection against continuous submersion in water



Protective Features

All NORD Motors and Speed Reducers are constructed to provide a high degree of protection against wet and severe environments. NORD Motors and Speed Reducers are extremely well sealed against moisture ingress and use corrosion and moisture resistant components. NORD has recently made many enhancements in the motor and gear units standard construction to provide improved environmental protection. Many of the standard protection features of the NORD units are only available at an additional cost from other motor and gear drive suppliers. NORD designs all gearmotors, speed reducers and motors for installation in harsh industrial, commercial and municipal installation environments.



Standard Construction

- Shaft lip seals on both ends of the motor shafts
- Stator to endbell connections sealed to exclude moisture
- Double coated magnetic wire insulation
- Inverter/vector duty insulation system conforms to NEMA MG1-1998, section 31.4.4.2 voltage spikes
- Moisture resistant varnish dipped windings improved varnish materials
- Inorganic insulating components for tropical protection
- Moisture resistant motor windings
- Conduit box sealed with gaskets
- Corrosion resistant alloy materials
- Threaded cable entry holes

General Options

Voltage and Frequency

NORD motors are available in a number of voltages and frequencies. The standard voltages are commonly available. Optional voltages can be provided, but may include an increase in price and additional lead time. It also may be possible to provide motors with special voltages and frequency operation points.

Standard Voltages

Single speed motors	Two speed motors
230/460V-60Hz (up to 30 hp)	460V-60Hz
460V-60Hz (40 hp and larger)	230V-60Hz
575V-60Hz	575V-60Hz
400V-50Hz	400V-50Hz

Optional Voltages

Single speed motors	Two speed motors
208V-60Hz (up to 10 hp, not available in energy efficient design)	Other voltages & frequencies available upon request
380V-50Hz	
415V-50Hz	
380V-60Hz	
Other voltages & frequencies available upon request	

Poles / speeds

NORD offers a variety of single speed and two speed motors in addition to the standard 4 pole motor. NORD single speed motors are inverter/vector duty rated, however, it is not recommended to run a NORD two speed motor with an AC vector drive.

Number of Poles	Synchronous Speed at 60Hz	Synchronous Speed at 50Hz	Notes:
Single Speed Motors			
4	1800 rpm	1500 rpm	–
2	3600 rpm	3000 rpm	–
6	1200 rpm	1000 rpm	–
Two Speed Motors			
4-2	1800/3600 rpm	1500/3000 rpm	Single winding
8-2	900/3600 rpm	750/3000 rpm	Two winding
8-4	900/1800 rpm	750/1500 rpm	Single winding

Other speeds available upon request.

US Canadian Standard (CUS)

CUS motor construction defines that NORD motors are constructed in accordance to UL 1004 (electric motors) and CSA C22.2 No. 100-04 (motors and generators) guidelines. This option is standard for 208, 230, 460, and 575 Volt operation at 60 Hz.

Motors nameplated with the CUS option will be marked and indicating that the Underwriters Laboratories and CSA have tested and approved NORD motors according to both US and Canadian standards.

Motor Protection

Selecting the appropriate motor protective system is a key factor in reliable motor operation. There are two common classes of motor protection; current based and motor temperature based. Electrical installation codes require at least two types of protection in the motors circuit, both of which are normally current based. First is short-circuit protection normally accomplished by fuses or circuit breakers. Second is "motor overload protection" this is normally a device called a "motor overload" or a "heater." Current based protection is effective in some conditions. NORD can provide two different types of motor temperature based protection, a PTC thermistor (TF) or a bi-metallic thermostat (TW). Temperature based protection is more effective motor protection in many situations, see the table below.

⬆ = Good protection ⬌= Limited protection ⬇ = No protection	Fuses	Motor Overloads	PTC Thermistor (TF)	Bi-metallic Switch (TW)
Over current up to 200%	⬇	⬆	⬆	⬆
High inertia starting	⬇	⬌	⬆	⬌
Frequent motor starts	⬇	⬌	⬆	⬆
Stalling	⬌	⬌	⬌	⬌
Single phasing	⬇	⬌	⬆	⬆
Supply voltage deviations	⬇	⬆	⬆	⬆
Supply frequency deviations	⬇	⬆	⬆	⬆
Inadequate motor cooling	⬇	⬇	⬆	⬆
Bearing Damage	⬇	⬇	⬆	⬆

Thermostat (TW)

Build

Three bimetallic switches are connected in series in the motor windings, one per motor phase. Upon reaching the limit temperature, this device automatically opens circuits. The installer is responsible to wire the thermostat into the motor control circuit. After the temperature has fallen below the trip limit, the thermostat switch re-sets automatically. The auto resetting property must be considered when designing the safety aspects of the control scheme.

TW Ratings	
NC (Normally Closed)	auto resetting
Voltage	6 to 500VAC
Current	1.6 A
Resistance	less than 50 mΩ

Thermistor (TF)

Build

Three positive temperature coefficient (PTC) thermistors are connected in series in the motor windings, one per motor phase. Thermistors require an external tripping device. Upon reaching the limit temperature, the thermistors change their resistance suddenly. In connection with a tripping device, this property is employed to monitor the motor temperature. The relay built into the tripping device has a make-and-break-contact, which is used in the control wiring. NORD does not provide the external tripping device with the TF thermistor option. You must request a thermistor tripping device separately. Many AC vecotor drives and PLCs include a built in PTC thermistor evaluation input.

TF Ratings	
Transition Temperature	150 °C +/- 5°C
Resistance < Transition	20 ... 500 . Ω
Resistance > Transition	> 4k Ω.
Reed Voltage	< 7,5 V
Rated Current	< 1 mA
Motor Ambient Temp.	40°C

General Options

Space Heater (SH)

Build

Motors subjected to extreme temperature fluctuations or severe climatic conditions can be damaged by the formation of condensation. NORD can provide motor anti-condensation space heaters inside the motor to heat up the windings when the motor is not operating. This will prevent moisture from condensing inside the motor. The space heaters must not be switched on while the motor is running.

Space Heater Voltage Must be specified

Voltages available
❍ 115V – 50/60Hz
❍ 230V – 50/60Hz
❍ 460V – 50/60Hz
❍ other voltages available on request

Class H Insulation (ISO H)

Build

NORD motors can be manufactured with class H insulation system. Standard NORD motors include double coated magnetic wire windings. When these windings are paired with a class H insulation it provides extra temperature capacity for the motor and will lengthen the motor's life. Class H insulation rated motors are also an advantage in some severe applications:

- Increased ambient temperature installations above 40°C (104°F)
- Increased elevation installations – above 3300 ft (1000 m)
- Applications with a high number of starts per hour.
- Meets class H insulation motor specifications
- Lower operating frequency when used with AC vector drive systems
- For additional information on insulation class see page 125.

High Resistance Rotor (WU)

Build

Using Silumin rotor material, NORD offers a high resistance rotor to soften the motors operation and allow higher overload torques.

Single Phase Motors, 60Hz (ECR)

Build

The ECR series of single phase motors is intended for demanding operation at 60Hz with a supply voltage of 115V or 230V. The permissible voltage range is 115/230V +/- 10%. The ECR motors have a 1.15 service factor and are available from 0.16 - 2 hp.

Paint Coatings

Mod

NORD's standard paint coating is a two component, aliphatic polyurethane finish contaning 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications. For more information and an explanation of all of our paint options please see page 18

Condensation Drain Holes

NORD motors can be equipped with condensation drain holes. These drain holes are placed in the motor endbells at the lowest possible point. The drain holes are closed at the factory with plastic snap in plugs. They allow for condensation accumulation in the motor to drain after the closing plugs are removed.

The motor drain holes can be provided by NORD either open (KBO) or sealed with a closing plug (KB).

IMPORTANT NOTE

The motor must be installed in the mounting orientation specified on the nameplate or the drain holes will not function properly and may result with the motor filling with water.

Condensation Drain Holes, Plugged (KB)

Build

KB drain holes are plugged for shipment. In order for the holes to effectively drain moisture, the plugs must be removed before using the motor.

Condensation Drain Holes, Open (KBO)

Build

KBO drain holes are shipped open (not plugged).

IP65 Enclosure Protection

Mod

NORD motors can be provided with an IP65 enclosure protection. IP65 protection is suitable for wet, low-pressure wash down and extremely dusty environments.

IP	1st digit Foreign body protection	IP	2nd digit Water protection
6	Dust tight	5	Protection against water jets

IP66 Enclosure Protection

Mod

NORD motors can be provided with an IP66 enclosure protection. IP66 protection is suitable for wet, high-pressure wash down and extremely dusty environments, and includes all requirements included in IP65 enclosure protection.

IP	1st digit Foreign body protection	IP	2nd digit Water protection
6	Dust tight	6	Protection against high pressure water jets

Terminal Box Sealed with Resin (KKV)

Mod

Terminal boxes can be sealed with a flexible, electrically safe resin to ensure that contaminants, water, and moisture cannot pass through the terminal box into the stator body. This option is helpful in extremely dusty, wet and humid environments. Another environment where this option is helpful is in installations that have frequent large temperature swings where condensation may form.

Additional Insulation (AICM)

Build

NORD can provide additional insulation inside the motor to provide additional electrical protection in extremely wet or corrosive environments. An electrically safe insulating material is coated internally in the stator windings and on the rotor body

Epoxy Dipped Windings (EP)

Build

In extremely wet environments, the motor windings are dipped in epoxy for improved moisture protection. The motor can also be treated with the standard NORD Severe Duty + (NSD+) package for an even higher degree of protection.

Canopy Drip Cover (RD)

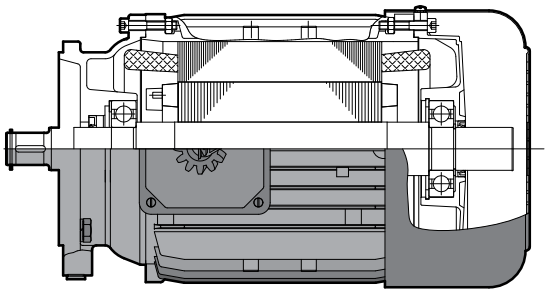
Mod

For wet or dirty installations where the fan end of the motor is mounted up, thus allowing water or debris to fall into the motor's fan guard, NORD offers a canopy drip cover to block this falling water or debris.

Double Fan Cover (RDD)

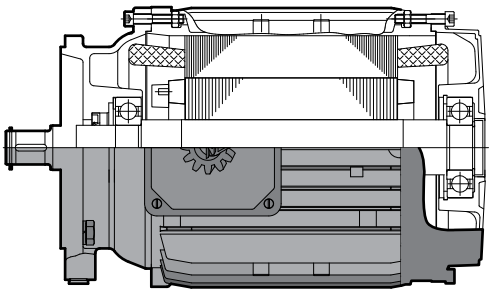
Mod

For wet or dirty installations where the fan end of the motor is mounted up, the NORD Double Fan Cover provides protection against falling or wind blown water, snow, dirt or debris from entering the back of the motor.



Additional Options

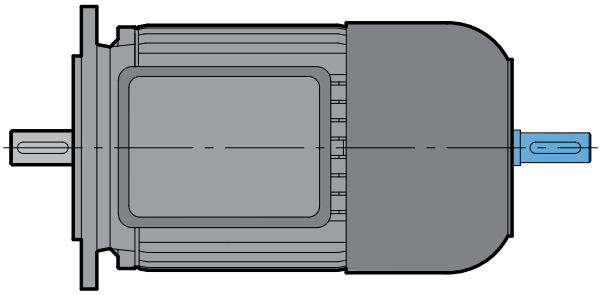
Totally Enclosed Non-Ventilated (OL) Mod



NORD can provide totally enclosed non-ventilated (TENV) motor enclosure. TENV motors provide benefits in certain operating environments; such as extremely dusty or dirty applications, where cooling fans may have material accumulation, which can be detrimental to the motor and the application. The OL series of motors are the standard fan cooled motor construction including the fan cover, but provided without the fan. TENV motors can also be used to reduce cooling fan noise on a standard motor.

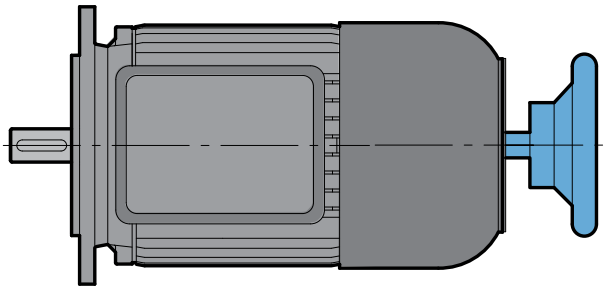
A TENV motor's frame size is larger then a totally enclosed fan cooled (TEFC) motor. For intermittent operation, a TENV motor can be operated at a 50% duty cycle at full rated power.

Totally Enclosed Non-Ventilated, without Fan Cover (OL/H) Build



The OL/H series of TENV motors are more compact in space than the OL series. They do not include the rotor shaft extension through the back bearing end bell or the fan cover.

2nd Shaft Extension on Fan Side (WE) Build



NORD can provide a second shaft extension on the fan side of the motor that protrudes through the fan cover. This extension can be used as a power take-off or to mount customer supplied devices such as encoders and tachometers.

The shaft extension can be provided on both motors with and without brakes. The shaft extension can not be used on motors with blower fans (F) or (FC). For dimensions see pages 148 - 152.

Hand Wheel (HR) Build

Motors can be supplied with a hand wheel provided on the second shaft extension. The hand wheel can be used for manual operation during power outages, or for machine positioning setup. For dimensions see pages 148 - 152.

WARNING

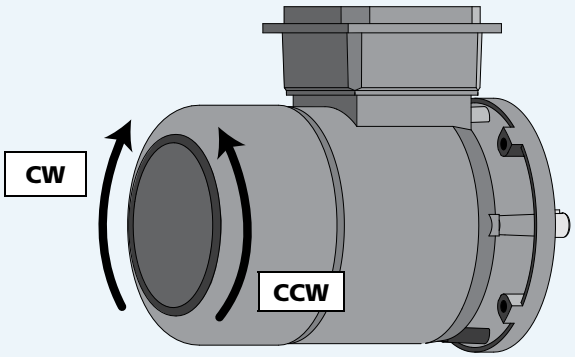
The customer is required to provide appropriate safety guarding of the rotating hand wheel.

High Inertia Cast Iron Fan (Z)

Build

An optional cast iron motor cooling fan is available. This fan is used as a mechanical soft start and/or soft stop. This fan adds inertia to the motor. The high inertia fan can also be used for a flywheel effect to store mechanical energy. This can be helpful in smoothing rapid load changes. The cast iron fan replaces the standard plastic motor fan. The motor length is the same as a brakemotor.

Motor Frame	Fan Inertia J_z[lb-ft²]
71	0.0475
80	0.1140
90	0.2375
100	0.2684
112	0.5653
132	0.9500



Motor Backstop (RLS)

Build

NORD can provide backstops on many motor frames. A backstop will prevent the motor from rotating in one direction. A common use is to prevent a motor from allowing a load to move backwards when power is removed. A motor brake can also be used for this same purpose. A backstop adds length to the motor. For the motor length extension, see the table below.

The allowable direction of rotation must be specified in the order.

Allowable Shaft Rotation
❍ Clockwise - Back of Motor
❍ Counter Clockwise - Back of Motor

Motor Size	Backstop Torque [lb-in]	Minimum Speed [rpm]	Motor Extension [in]
80S/L	1150	860	2.52
90S/L	1150	860	2.95
100L	1150	860	3.58
112M	3270	750	3.66
132S/M	3270	750	4.21
160M/L	7880	670	6.57
180MX/LX	7880	670	6.73
200L	9120	630	6.57
225S/M	9120	630	6.57
250M	22130	400	9.84
280S/M	51330	320	11.02

Additional Options

Quick Power Plug Connector (MS)

Mod

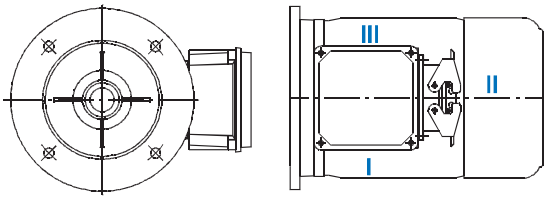
The quick power plug connector (MS) is a simple and fast way to connect and disconnect a motor or brake motor. The MS connector is available on NORD three-phase motors from frame size 63 to 132. The motor connections are made by a modular power plug manfacturer by Harting. After the first installation, the motor can be quickly changed by simply plugging and unplugging the electrical connections. This will ensure the new motor is properly wired. This is a significant advantage to equipment builders who fabricate machinery on site and then ship to another location. The motor with the MS connector can simply be plugged in during final installation.

NORD supplies the male connector half mounted on the motor conduit box. The customer must supply the female connector half mounted on the power wiring. NORD supplies a protective plastic cover on the motor male connector half to protect from dirt and damage prior to installation.

Advantages:

- Simple motor wiring
- Accurate wiring of motor at final job site
- Fast motor replacement
- Accurate wiring of replacement motor
- Ideal for portable equipment
- Reduces the required personnel for motor replacement
- Faster motor changes reduce down time

Plug ratings:



Manufacturer	Harting
Connector	HAN 10 ES/HAN 10ESS Cage Clamp Connectors
Number of Pins	10-Male
Voltage	600VAC per UL/CSA
Current	16A - Continuous

Motor Power Plug Kits:

Includes conduit box, mounting hardware & Male Harting Motor Plug

P/N	Motor size
11035350	63 + 71
13035350	80 + 90 + 100
16035350	112

132	6.85	4.13	4.13	2x M25 x 1.5

Blower Cooling Fan (F & FC)

Mod

NORD offers continuous running motor mounted cooling fans that provide motor cooling at low motor speeds. When a motor is operated on an AC vector drive at low frequency, standard rotor fans do not provide adequate airflow for cooling. NORD's separate powered motor cooling fans provide that necessary airflow. These separately powered fans replace the standard motor fan cover and fan.

Blower Cooling Fan

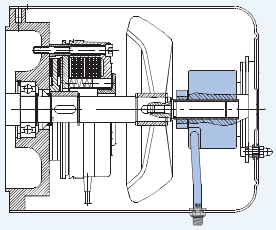
Incremental Encoder (IG..P)

Build



NORD can provide an incremental encoder mounted on the back of a motor or brake motor. Commonly encoders are used as speed or position feedback devices for use with AC drives, motion controllers or PLC's. Below are standard encoders; however, others can be supplied on request.

? **Encoder nomenclature must be specified.**

Encoders for NORD AC Drives

NORD AC vector drives with encoder inputs are designed to use TTL/RS422 encoders. There are also advantages in using an encoder with the 10-30VDC power supply system. The NORD AC vector drives can use a wide range of pulse counts, however the 1024PPR version provides good performance with minimal interference issues. A 4096 PPR encoder can also be used and will provide increased precision in some application but has some increased concerns with noise interference.

Recommended encoder: IG11P – 1024PPR/TTL/10-30VDC
Alternate encoder: IG41P – 4096PPR/TTL/10-30VDC

Absolute Encoder (AG)

Build

Absolute encoders offer a unique value (voltage, binary count, etc.) for each mechanical position. When an absolute encoder is powered up, the position of the encoder is known. Absolute encoders are available in single or multi-turn versions. The encoder is attached under the fan cover with field bus connection outside the fan cover.

Absolute encoders can be provided to meet a variety of specifications:

- Resolution: up to 17 bits of resolution per turn (131,072 steps) with 4096 turns (12 bits of turns)
- Interfaces: Synchronous serial interface (SSI), SSI with incremental track, ProfiBus, DeviceNet, CANopen, CANlift, and other interfaces

AC Vector Drive
SK 300E Trio

NORDAC SK 300E
Motor Mounted Frequency AC Vector Drive

For select HP ratings, NORD can provide a fully programmable, high performance AC vector drive mounted on the motor. This motor mounted AC vector drives:

- Eliminates the need to separately mount & wire the AC drive
- Insures AC vector drive/motor compatibility
- Has an IP 55 washdown duty enclosure
- Provides Electronic Motor Overload protection
- Insures smooth constant torque operation down to 2 Hz (check motor thermal limitations)
- Features a unique plug-in construction where the program stays with the motor, minimizing return to service time in the event of AC vector drive replacement

SK 300E AC Vector Drive Ratings

- 200-240 VAC 3 phase 50/60 Hz input, ½ through 3 HP
- 380-480 VAC 3 phase 50/60 Hz input, 3/4 through 5 HP
- Full range of built-in pre-engineered options available
- For dimensions see page 154

Selection Steps

1) Choose the SK300E-trio AC vector drive based on motor ratings and input line voltage
2) Select the required Trio Interface (TI)
3) Select the braking resistor if required
4) Select additional customer based I/O if required (SK CU2-STD)
5) Select cover mounted technology unit if required
6) If remote wall mounting is required
7) Select any needed programming tools

Step 1: AC vector drive Selection

Basic NORD Motor Description	Power Rating HP/kW	P [in]	240 VAC Input Inverter Type SK 300E	480 VAC Input Inverter Type SK 300E
63 S/4	0.16 / 0.12	5.12	-370-323-B	-550-340-B
63 L/4	0.25 / 0.18	5.12	-370-323-B	-550-340-B

100 L/40	5.00/ 3.7	7.91	Not Available	-401-340-B

AC Vector Drive Ratings

Type designation SK 300E	-370-323-B	-550-323-B	-750-323-B	-111-323B	-151-323-B	-221-323-B	-550-340-B	-750-340-B	-111-340-B	-151-340-B	-221-340-B	-301-340-B	-401-340-B
Supply Voltage	3 Phase 200-240 VAC +/- 10%, 47-63 Hz						3 Phase 380-480 VAC, -20%/+10%, 47-63 Hz						
Motor Rating	1/2 HP	3/4	1 HP	1 1/2 HP	2 HP	3 HP	3/4 HP	1 HP	1 1/2 HP	2 HP	3 HP	4 HP	5 HP
Rated Output Current Amps [RMS]	2.2	3	4	5.5	7	9.5	1.6	2.2	3	3.7	5.5	7	9.2
Typical Output Current Amps [RMS]	3.1	4.2	5.6	7.7	9.8	13.3	2.5	3.1	4.2	5.2	7.7	9.8	12.9

Step 2: Selection of Trio Interface (TI)

Following selection of the appropriate SK 300E AC vector drive rating from the preceding chart, an appropriate Trio Interface (TI) must be specified. The Trio Interface (TI) is an adapter that replaces the motor conduit box and contains a circuit board that the SK 300E plugs into.

A typical TI is shown below

SK 300E Trio Interface (TI) Types

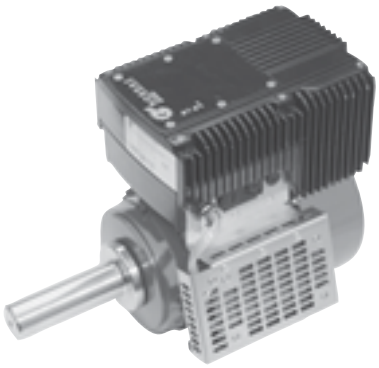
SK TI 0/1	For standard 380-480 VAC units
SK TI 0/1 - 230	For standard 200-240 VAC units
SK TI 0/2	For 380-480 VAC units using Harting connectors
SK TI 0/2 – 230	200-240 VAC units using Harting connectors

Harding H10E series connector options for side 1(CE1) of SK TI 0/2 (and -230) Interfaces

LE H10E	Socket for AC supply input
MA H10E	Plug for motor output

Conduit plate options for side 3(CE3) of SK TI 0/2 (and -230) Interfaces

SK DA4	Plate with 4 x M16
SK DA2	Plate with 2 x M20 and 1 x M16 (Provided as standard with SK TI 0/2)
SK DA1	Plate with 1 x M25 and 2 x M16
SK DA0	Plate with no entries



Added related components for Trio Interfaces

P/N 018524200	M20 x ½ adapter (Qty 2 provided as standard on assembled trios)
P/N 011015410	Adapter to mount Trio Interface on 63 & 71 frame motors
P/N 013097000	Gasket to mount Trio Interface on 63 & 71 frame motors

SK 300E Options & Related Information

Step 3: Braking Resistors

Braking Resistor Options for SK 300E for mounting on Trio Interface

During dynamic braking, energy is delivered from the load through the motor (acting as a generator) to the AC vector drive. The AC vector drive dissipates this energy as heat via the integral brake chopper to the optional external braking resistors.

For use with SK TI 0/1 adapters

SK BR3-120/100-TI 0/1	120 ohm/100 W for all ratings except 5 HP
SK BR3-82/200-TI 0/1	82 ohm/200 W for 5 HP only

For use with SK TI 0/2 adapters

SK BR3-120/100-TI 0/2	120 ohm/100 W for all ratings except 5 HP
SK BR3-82/200-TI 0/2	82 ohm/200 W for 5 HP only

Step 4: Customer I/O Based Control Interface Option - SK CU2-STD

The standard I/O based control available via the Trio Interface can be expanded via selection of an optional Customer Unit, **SK CU2-STD**, that plugs into the Trio Interface. Interface I/O points are listed on the following chart:

I/O on standard Trio Interface	Additional I/O on SK CU2-STD Option
1 X programmable digital input	4 X programmable digital input
5 VDC and 15 VDC power supplies	2 X single-ended analog inputs
RS 485 interface via M-12 connector and terminals	+10 VDC reference supply
1 X programmable relay output	1 X selectable/programmable analog/digital output
	PID control access

Step 5: Cover Mounted Technology Unit (TU) Options

A variety of pre-engineered plug in Technology Unit (TU) options can be ordered to replace the standard blank cover of the SK 300E AC vector drive. Only a single TU can be installed on the AC vector drive at a given time. Available units include operator and field bus interfaces:

Technology Unit (TU) Name	Description
SK TU2-POT	Analog reference potentiometer box with L/Off/R control switch
SK TU2-CTR	Digital control/programmer with 4 digit, 7 segment LED display
SK TU2-PBR	Profibus field bus interface
SK TU2-PBR-24V	Profibus field bus interface powered by customer 24 VDC supply
SK TU2-PBR-KL	Profibus field bus interface with clamp on connectors
SK TU2-AS1	AS (Actuator/Sensor) Interface
SK TU2-CAO	CANopen field bus interface
SK TU2-DEV	DeviceNet field bus interface
SK TU2-IBS	InterBus field bus interface
SK TU2-DECKEL	Original blank cover for TU slot (in case TU option is removed)

Step 6: Wall Mounting Option Kit, SK WMK-DA1

The wall mounting kit enables placing the SK 300E AC vector drive on a nearby wall or the machine instead of directly on the NORD motor or gearmotor. The Trio Interface (TI) is still required and all other options can be used.

Step 7 : Additional Tools & Related Interface Options

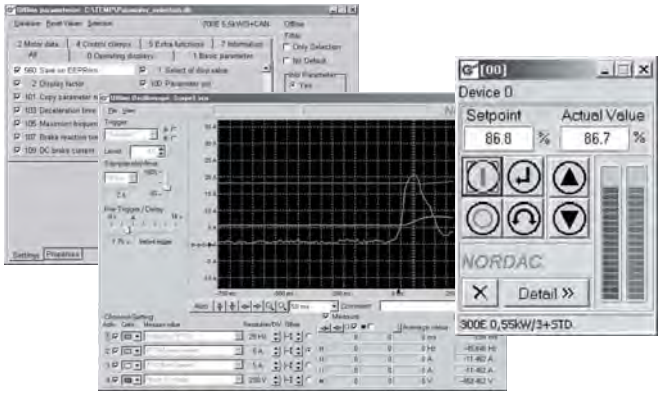
In addition to the cover mounted SK TU2-CTR option, there are several additional options that enable simple programming and control of the SK 300E:

Handheld Parameter Box (P-Box) with 10 foot cable, SK PAR-2H

Detachable external add-on unit that can be used to program and display parameters and control the operation of the connected SK 300E. Features multi-line plain text display selectable in six languages. Manages and stores up to five unique AC vector drive programs. Cable plugs into M-12 connector in side of Trio Interface.

Panel Mount Parameter Box (P-Box), SK PAR-2E

Panel Mount version of Parameter Box with same functionality as SK PAR-2H. Installs in cut-out in front of customer supplied operator panel. Interface connection is performed by customer with their shielded cable via terminals on SK PAR-2E and SK 300E.



NORD CON Software – Available free at NORD Website

NORD CON Software is a Windows-based PC program that enables the control and programming of NORDAC AC vector drives. It provides for accessing up to 31 AC vector drives simultaneously via the RS485 interface. It features both off-line and on-line programming and data management modes.

NORD CON allows user to:

- Program AC vector drives and upload/download parameter files
- Control connected AC vector drives for test/troubleshooting
- Monitor connected AC vector drives and examine up to four variables versus time with built-in oscilloscope feature
- Display parameter information in six languages

Optional accessories required to interface user PC to SK 300E via NORD CON are:

SK IC1 – RS 485 to RS 232 interface converter
Enables communication between RS 232 port on computer and RS 485 port on SK 300E

Cable SK 300E –
10 foot cable that connects between the 9-Pin D shell connector on the SK IC1 and the M-12 connector on the side of the SK 300E Trio Interface.

Electromechanical Brake Interface & Coil Voltage Selection

As standard, the SK 300E provides a dedicated high voltage DC power supply and coordination software to directly control an Electromechanical Brake. This is equivalent to using a half wave rectifier, so the brake coil voltage must be specified per the following chart:

Nominal Inverter AC Input Voltage	Brake Coil Voltage
440 – 480 VAC	205 VDC
200 – 240 VAC	105 VDC
380 – 415 VAC	180 VDC

The brake gets connected to terminals +Br and –Br on the Trio Interface

Motor overload protection

Electronic motor overload protection is provided as standard on the SK 300E AC vector drive. If required, more precise protection can be achieved via the use of motor thermostats (TW) or thermistor sensors (TF). These devices can be interfaced to the SK 300E via the programmable digital input to indicate a motor over temperature error.

Performance Data

NORD GEAR CORPORATION

Conditions of Sale

1. CONTRACT

Any contract between Nord Gear Corporation, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller. Accordingly, the Buyer and Seller acknowledge and agree that the terms and conditions set forth below and on the face hereof shall govern Buyer's purchase of the goods described on the face hereof and shall take precedence over and represents the final agreement between Buyer and Seller, notwithstanding any inconsistent, contradictory or other prior or further conditions contained in any oral or written request or purchase order issued by Buyer or any other document furnished by Buyer in connection with its purchase of the Goods, regardless of whether such document or documents are exchanged simultaneously with this Invoice or prior or subsequent thereto. Any additional or different terms or conditions which may appear in any communicaiton, oral or written, from Seller, its officers, employees, agents or representatives, are hereby expressly rejected and shall not be effective or binding upon the Seller, unless specifically hereafter agreed to in writing by Seller and no such additional or different terms or conditions in any document submitted to Seller by Buyer shall become part of the contract between Buyer and Seller, unless such written acceptance by Seller specifically recognizes and assents to their inclusion. Any objection by Buyer to the terms and conditions hereof shall be ineffective unless Seller is advised in writing thereof within two (2) days of the date of this Invoice.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Corporation's home office in Waunakee, Wisconsin, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Waunakee, Wisconsin. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by the Buyer, its agents, servants, employees, or by carriers. Such obligations under this warranty are limited to remedying any deficiencies in the goods at Waunakee, Wisconsin, or at such place or places in the United States of America as may be designated by Seller. THIS WARRANTY SHALL PERTAIN TO ANY PART OR PARTS OF ANY GOODS TO WHICH BUYER OR ITS ASSIGNS HAS GIVEN WRITTEN NOTICE OF CLAIMED DEFECTS TO SELLER. NORD GEAR CORP. WARRANTS ITS PRODUCTS AGAINST DEFECTS IN MATERIAL AND WORKMANSHIP FOR A PERIOD OF 12 MONTHS FROM DATE OF INSTALLATION OR 18 MONTHS FROM DATE OF SHIPMENT WHICHEVER COMES FIRST ON ALL COMPONENTS. 36 MONTHS FROM DATE OF INVOICE OR 24 MONTHS FROM DATE OF INSTALLATION WHICHEVER COMES FIRST ON GEARS AND HOUSINGS ONLY. PARTS WHICH ARE SUBJECT TO OPERATIONAL WEAR AND TEAR, SUCH AS BELTS & TRACTION DISCS, ARE NOT COVERED BY THE LIMITED WARRANTY. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. THE LIMITED WARRANTY SET FORTH HEREIN IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH HEREIN, SELLER HAS MADE AND MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO, THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE ANY WARRANTY, EXPRESS OR IMPLIED. SELLER MAKES NO REPRESENTATIONS AS TO THE CAPACITY OR PERFORMANCE OF THE GOODS SOLD HEREUNDER, EXCEPT AS SET FORTH IN THE INVOICE'S SPECIFICATIONS OR OTHER VALID AGREEMENT OR CONDITION AGREED TO BETWEEN THE PARTIES, AND ANY SUCH REPRESENTATIONS ARE EXPRESSLY CONDITIONED UPON THE CORRECTNESS OF THE DATA AND INFORMATION FURNISHED BY THE BUYER AND UPON THE GOODS BEING PROPERLY INSTALLED AND MAINTAINED. THE REMEDIES OF THE BUYER PROVIDED HEREUNDER ARE EXCLUSIVE. In no event shall the Seller be liable to the Buyer or to any other person for any loss or damage, direct or indirect, arising out of or caused by the use or operation of the goods, or for the loss of profits, business, or good will, or for any incidental, special or consequential damages. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any and all costs of the return to the Seller of such goods and all related costs to remove and re-install such goods, shall be borne by Buyer. Goods sold but not manufactured by the Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provision of the preceding paragraph of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gearmotors are in conformity with Seller's tests.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. Buyer may not return any goods claimed to be in non-conformity without Seller's prior written authorization. Goods returned without permission will not be accepted, including for credit, and will be returned to Buyer, F.O.B. Sellter's plant. Any claim based on the receipt of damaged Goods must be filed with the carrier which delivered the goods. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any change which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries, In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. The liability of the Seller to Buyer, if any hereunder, for breach of warranty, contract, negligence or otherwise, shall in no event exceed the amount of the purchase price of the goods sold with respect to which any damages are claimed. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer: provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchases at public or private sale, and hold the Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for a state court receivership is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order of judgement entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganizing or if a state court receivership is filed against Buyer, then, at its option Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(a) Any indicated dates of delivery are approximate only, but NORD Gear will attempt to meet them whenever possible. (b) NORD Gear will not be liable for any penalty clausess contained in any specifications or order submitted unless agreed to in writing by an authorized officer of NORD Gear Corporation. (c) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (d) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Unless otherwise provided, terms of payment are 30 days net from the date of invoice with a 1% discount if paid within 10 days of date of invoice. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for a state court receivership is filed against Buyer, or if the Buyer makes any assignment for the benefit of it's creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable attorney's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such forthwith, together with reasonable attorney's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable attorney's fees, shall forthwith be due and payable from Buyer to Seller. Buyer agrees to pay all reasonable costs and reasonable attorneys' fees incurred by Seller in enforcing Seller's rights against Buyer, including Seller's right to payment of the purchase price of the goods and Buyer's payment of all other amounts owing to Seller required under this Invoice and Conditions of Sale.

13. SECURITY INTEREST AND TITLE

In states and localities which are governed by the Uniform Commercial Code, this contract shall serve as security agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Uniform Commercial Code regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale. In states and localities where the Uniform Commercial Code does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under the Uniform Commercial Code with the proper registers or offices, or for filing or recording the conditional sales contract.

14. SALES AND USE TAX

Buyer agrees to bear and pay any sales or use tax in connection with the purchase herein, and to hold the Seller harmless from payment. At the option the Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

The Buyer will be charged for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. CHANGES/CANCELLATION

NORD Gear will not accept changes in specifications to a confirmed order unless such changes are requested in writing and confirmed back in writing. In addition, the purchaser must to agree to any additional charges that may arise from the change. Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

20. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operation procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to defend, indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to defend, indemnify and save Seller harmless from any such claims arising from such accident.

21. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and affect, except that the parties shall try to replace such invalid provision closest to their original mutual intentions. (b) This Invoice and these Conditions of Sale constitute the entire agreement between the parties regarding the subject matter hereof and supercedes all prior agreements, understandings and statements, whether oral or written, regarding such subject matter. No modification to, change in or departure from, the provisions of this Invoice and Conditions of Sale shall be valid or binding on Seller, unless approved in writing by Seller. No course of dealing or usage of trade shall be applicable unless expressly incorporated into this Invoice and Conditions of Sale. Any amendments to any contract or contracts between the parties shall be valid only upon the written consent of both parties.

22. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

23. APPLICABLE LAW AND VENUE

All contracts and their interpretation are governed by the applicable, substantive laws of the State of Wisconsin. Any litigation brought by the Buyer regarding this Invoice or goods purchased hereunder may only be brought in the Circuit Court for Dane County, Wisconsin.

NORD GEAR LIMITED

Terms and Conditions of Sale

1. CONTRACT

Any contract between Nord Gear Limited, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Limited's home office in Brampton, Ontario, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Braenton, Ontario. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by the Buyer, its agents, servants, employees, or by carriers. Such obligations under this warranty are limited to remedying any deficiencies in the goods at Brampton, Ontario, or at such place or places in Canada as may be designated by Seller. This warranty shall pertain to any part or parts of any goods to which Buyer or its assigns has, within one year from date of original factory invoice, given written notice of claimed defects to Seller. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH ABOVE, SELLER HAS MADE NO WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE AN EXPRESS WARRANTY. THE REMEDIES OF THE BUYER SET FORTH IN THIS SECTION ARE EXCLUSIVE. In no event shall the Seller be liable to the Buyer or to any other person for any loss or damage, direct or indirect, arising out of or caused by the use or operation of the goods, or for the loss of profits, business, or good will, or for any incidental, special or consequential damages. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any costs of the return of such goods to Seller shall be borne by Buyer. Goods sold but not manufactured by the Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provisions of the preceding paragraph of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gearmotors are in conformity with Seller's test. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE THE SELLER DOES NOT ASSUME, NOR DOES IT AUTHORIZE ANY PERSON TO ASSUME, ON ITS BEHALF, ANY OTHER OBLIGATION OR LIABILITY.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any changes which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other course beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer; provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installment thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days' written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for Buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchaser at public or private sale, and hold Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for appointment of a receiver is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order or judgment entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganization or if a state court receivership is filed against Buyer, then, at its option, Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(a) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (b) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or on any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for appointment of a receiver is filed against Buyer, or if the Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable solicitor's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such forthwith, together with reasonable solicitor's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable solicitor's fees, shall forthwith be due and payable from Buyer to Seller.

13. SECURITY INTEREST AND TITLE

In provinces which are governed by a Personal Property Security Act, this contract shall serve as Security Agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Personal Property Security Act regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale herein. In provinces where a Personal Property Security Act does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under a Personal Property Security Act with the proper registers or offices, or for filing or recording the Conditional Sales Contract herein.

14. SALES AND USE TAX

The Seller's prices do not include sales, use, excise or other taxes payable to any governmental authority in respect of the sale of Seller's goods. The Buyer shall pay, in addition to the Seller's price the amount of any such taxes or shall reimburse the Seller for the amount thereof that the Seller may be required to pay. At the option of the Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

The Seller does not charge for standard packaging for domestic shipment. The Buyer will be charged, however, for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. EXPORT ORDER

Export orders are to be accompanied by a confirmed irrevocable Letter of Credit in Seller's favour, in Canadian currency, with an accredited Canadian bank, subject to Seller's draft, with shipping documents attached.

20. CANCELLATION

Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

21. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operating procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to indemnify and save Seller harmless from any such claims arising from such accident.

22. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and effect; except that the parties shall try to replace such invalid provision with a provision closest to their original mutual intentions. (b) Any amendments to any contract or contracts require the consent in writing by both parties.

23. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

24. APPLICABLE LAW

All contracts are governed by the applicable laws of Ontario.

25. This instrument sets forth the entire understanding and agreement of the parties hereto in respect of the subject matter hereof, and all prior undertakings between the parties hereto, together with all representations and obligations of such parties in respect of such subject matter, shall be superceded by and merged into this instrument.

26. The provisions of this agreement shall bind and ensure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and (subject to any restrictions or assignment herein above set forth) assigns, as the case may be.

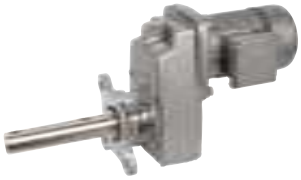
27. The parties acknowledge that they have requested this Contract and all notices or other documents relating thereto be drafted in the English language.

Les parties reconnaissent qu'ils ont requis que ce contrat et tous les avis ou autres documents qui s'y rapportent soient rédigés en langue anglaise.

"Terms and Conditions in French available upon request."

Product Overview

UNICASE™ SPEED REDUCERS



HELICAL IN-LINE
- Foot or Flange Mount
- Torque up to 205,000 lb-in
- Gear ratios – 1.82:1 to over 300,000:1

NORDBLOC®.1 HELICAL IN-LINE
- Foot or Flange Mount
- Torque up to 26,550 lb-in
- Gear ratios – 1.88:1 to over 370:1

PARALLEL HELICAL CLINCHER™
- Shaft, Flange or Foot Mount
- Torque up to 797,000 lb-in
- Gear ratios – 4.26:1 to over 300,000:1

SCP SCREW CONVEYOR PACKAGE
- Shaft, or Flange Mount
- Torque up to 53,100 lb-in
- Gear ratios – 4.32:1 to over 1500:1

RIGHT ANGLE HELICAL-BEVEL 2-STAGE
- Foot, Flange or Shaft Mount
- Torque up to 5,840 lb-in
- Gear ratios – 4.1:1 to 72:1

RIGHT ANGLE HELICAL-BEVEL
- Foot, Flange or Shaft Mount
- Torque up to 283,000 lb-in
- Gear ratios – 8.04:1 to over 300,000:1

RIGHT ANGLE HELICAL-WORM
- Foot, Flange or Shaft Mount
- Torque up to 27,585 lb-in
- Gear ratios – 4.40:1 to over 300,000:1

HIGH PERFORMANCE MOTORS & BRAKEMOTORS

INVERTER/VECTOR DUTY
- Standard or Energy Efficient
- Integral, NEMA or Metric IEC
- 1/6 to 250 hp

UNICASE™ SPEED REDUCERS

MINICASE™ RIGHT ANGLE WORM
- Foot, Flange or Shaft Mount
- Torque up to 3,540 lb-in
- Gear ratios – 5:1 to 500:1

FLEXBLOC™ WORM
- Modular bolt-on options
- Torque up to 4,683 lb-in
- Gear ratios – 5:1 to 3,000:1

MAXXDRIVE™ LARGE INDUSTRIAL GEAR UNITS PARALLEL HELICAL
- Modular bolt-on options
- Torque up to 2,027,000 lb-in
- Gear ratios – 5:1 to 1,600:1

MAXXDRIVE™ LARGE INDUSTRIAL GEAR UNITS HELICAL-BEVEL
- Modular bolt-on options
- Torque up to 2,027,000 lb-in
- Gear ratios – 5:1 to 1,600:1

NORDAC AC VECTOR DRIVES

SK200E
- Decentralized, high performance
- 380-480V, 3-phase to 10 hp
- 200-240V, 3-phase to 5 hp
- 200-240V, 1-phase to 1.5 hp
- 100-120V, 1-phase to 1 hp

SK500/520/530E
- Compact, high performance
- 380-480V, 3-phase, to 30hp
- 200-240V, 3-phase, to 15hp
- 200-240V, 1-phase, to 3hp
- 110-120V, 1-phase, to 1.5hp

SK700E
- Flexible high performance
- 380-460V, 3-phase, to 200hp

TC & FC SERIES CENTRIFUGAL PUMPS

Pro-Stainless Steel Series Centrifugal Pumps

The **Webtrol Pro-Stainless Steel Series Centrifugal** are designed for dependable performance and rugged continuous duty service.

When you need a corrosion and erosion resistant pump, the Pro-Stainless Steel Centrifugal line of pumps from Webtrol is your logical choice.

These pumps are guaranteed tough, engineered for the professional and built for lasting performance and value.

Features And Benefits

- **Close Coupled** design saves space and simplifies maintenance and installation.
- **Centerline Discharge** ensures maximum resistance to misalignment and distortion caused by the piping connections.
- **Back Pullout** design allows for maintenance of impeller and mechanical seal without removal of suction/discharge piping.
- **High Operating Efficiencies** over a wide range of capacities which lowers operating cost.
- **Mechanical Seals** and case o-rings are of high quality materials for standard pumping requirements. Optional high temperature and chemical resistant are available.

Performance

Capacities to 600 GPM
Pressures to 120 PSI

Typical Services

- Pressure Boosting
- Ultrapure Water Systems
- Deionized Systems
- Distribution Systems
- Pharmaceutical Services
- Water Reclamation
- Sprinkler And Irrigation
- General Pump Applications
- Beverage Processing
- Parts Washers
- Cooling Towers
- Jockey Pump
- Liquid Transfer
- Heat Exchangers
- Car Wash
- Spray systems
- Scrubbers
- Poultry

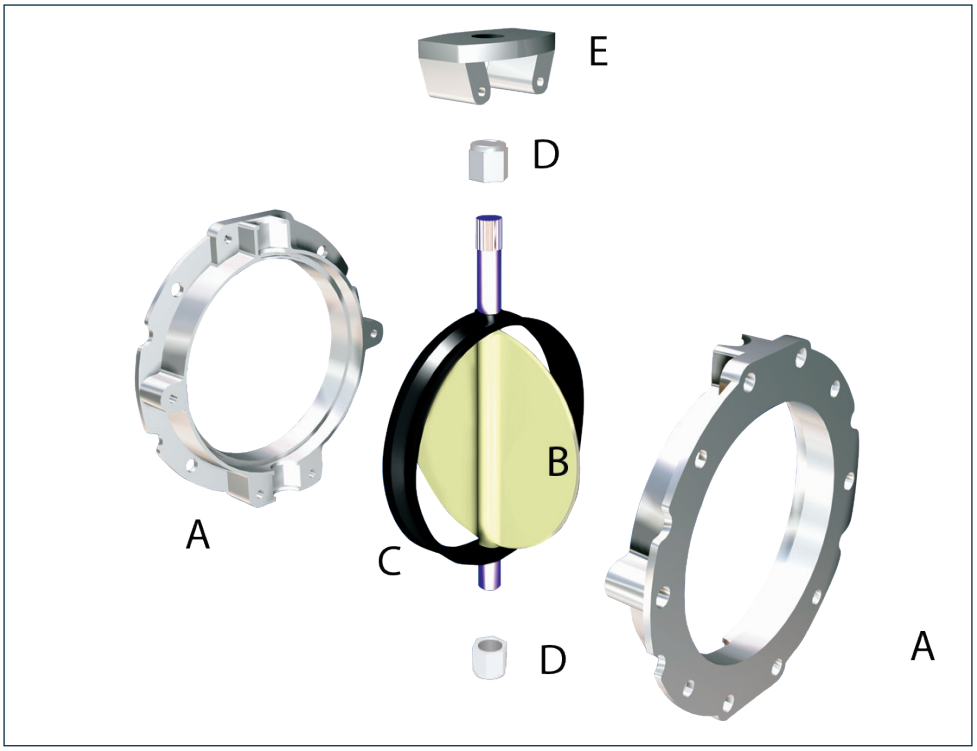
1.0 DESCRIPTION + FUNCTION

VFS Butterfly Valves consist of two high-pressure die-cast semi-bodies manufactured from aluminium alloy, a disc and a seal which is made from materials and shaped to be chosen on the basis of the application type.

VFS Butterfly Valves are used in all types of powder and granular material processing plants where interception of gravity-fed or pneumatically conveyed dry materials is required. They are fitted beneath hoppers, bins, silos, screw or other type conveyors, or to intercept pneumatic conveying ducts. Due to their special design and to the engineering materials used, they represent a particularly cost-effective yet most efficient solution

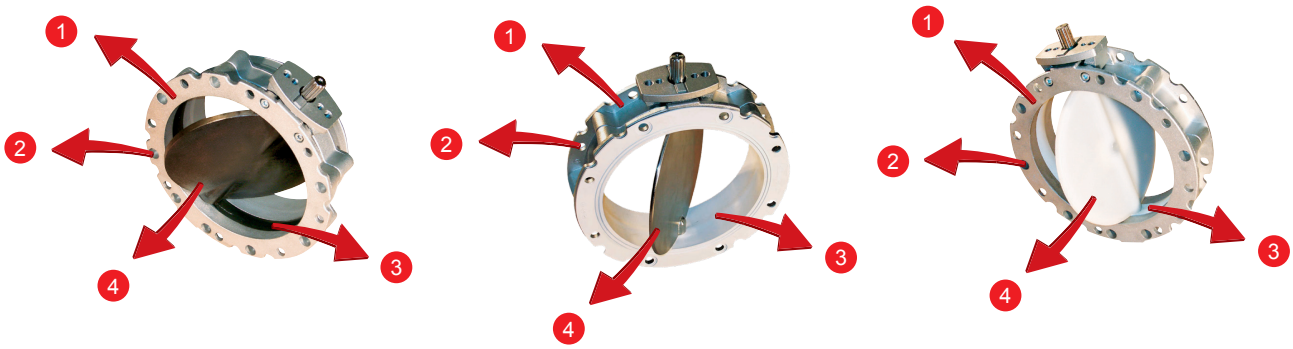


2.0 APPLICATIONS

The **VFS** Butterfly Valve it closes hoppers, bins, silos that contain powder or granular material.

What used to be custom-built items for specific applications, have been turned by **WAM®** into a mass-produced industrial product with features that allow extremely versatile use.

3.1 Description of the standard valve version



The standard supply of the **VFS** Butterfly Valve is not provided with an actuator.
The **VFS** Butterfly Valve consist of two high-pressure die-cast semi-bodies manufactured from aluminium alloy, a swivel disc made from cast iron or stainless steel and **SINT**® engineering polymer coating and an elastomer seal.
For the food industry a version with stainless steel disc and an FDA-approved integral seal is available.
While V1FS comes with a top flange and a bottom section suitable for the attachment of a flexible sleeve, V2FS has an identical top and bottom flange.

A) 2 semi bodies manufactured from aluminium alloy;
B) Disc;
C) Disc seal;
D) 2 antifriction bushes;
E) Support bracket.

3.2 Range

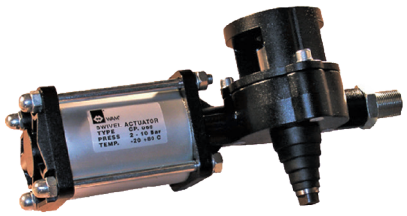
Butterfly valve elements:

1) Aluminium alloy half-bodies
2) DN: 100, 150, 200, 250, 300, 350, 400
3) NBR seal
4) Discs: cast iron (GB), engineering polymer **SINT®** (S), SS 304 (Z)

The standard supply includes: two flanges aluminium alloy butterfly valve, a NBR white seal with an engineering polymer dustproof disc (for gravity flow applications).

3.3 Options

	Version	Ø 100÷300 mm	Ø 350÷400 mm
Double flange	V2	O	O
Single flange	V1	O	O
White NBR seal	B	O	O
Black NBR seal	N	O	O
Food industry FDA approved White NBR seal	I	O	
SINT® engineering polymer disc	S	O	O
SS disc	Z	O	O
Cast iron disc	GB	O	O
Pressure-proof seal up to 0.2 bar	T	O	O



It is available the version for operation in potentially explosive atmosphere (Directive 94/9/EC) that matches the requirements for the II group, 3D T4 (135°C) category.

3.4 Actuators and accessories

On all valves there can be applied several actuators:

1 - Manual actuator **(CM version)**

2 - Pneumatic actuator **(CP version)**

3 - Electromechanical actuator **(AE version)**

All these systems are perfectly interchangeable (see cat.040)

The valves don't envisage specific accessories but the actuators do.
The different actuators and accessories are supplied unfitted and separately from the device.

	Type	Pneumatic	Electromechanical	Manual
Microswitch box	MIC	O	O

The choice of the actuator type depends on the material type and the application.

- Environmental
  - environment temperature: -20°C/ + 40°C
  - material temperature: according to the disc type chosen +80 °C with a engineering polymer, +110°C with a stainless steel or cast iron disc
  - operation pressure: differential pressure up to 0.2 bar
  - the empty run noise level values is 20 db(A) at 1 m distance; this can vary on the basis of the material handled or of the actuator fitted
  - hazards: for possible chemical and physical compatibility tests between the powder and the material the valve is made from, please contact WAMGROUP®
- Application limits: these valves are specifically designed for dry powders
- ATEX
  - the valve was designed and tested to operate in potentially explosive atmosphere classified as zone 22 and with explosion class powders that doesn't exceed St2 (see chapter 7.0 CERTIFICATES AND PATENTS)

All dimensions are expressed in mm unless otherwise specified.

Dimensions tolerance: ± 3 mm on main dimensions, ± 2 mm on detailed dimensions.

Dimensions in mm

6.1 Electrical requirements

The standard device doesn't require electrical connections.
For actuators and accessories please refer to the actuator's manual.

6.2 Pneumatic requirements

The standard device doesn't require pneumatic connections.
For actuators and accessories please refer to the actuator's manual.

6.3 Mechanical requirements

These devices shall not be used as an external support for the machines placed beneath them. It is recommended to fit the valve using screws or stud bolts long enough to ensure a "sandwich" fixing of the valve between the upper and the bottom flanges. Tighten the external screws. The inner screws are used exclusively to secure the valve from the risk of falling in case the conveying machine detaches.
The actuator supplied separately shall be fitted on the valve using screws.

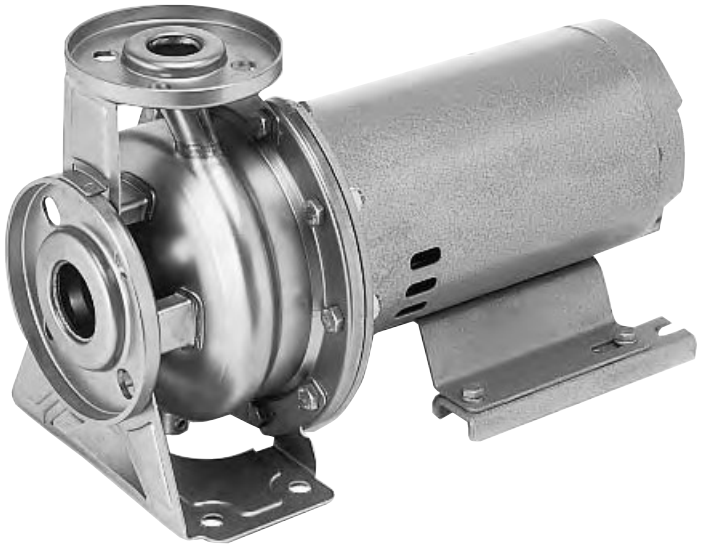
2	XKF381	408	470	530	8	14	6	400	5.0

7.0 CERTIFICATES AND PATENTS



It is available the version for operation in potentially explosive atmosphere (Directive 94/9/EC) that matches the requirements for the II group, 3D T4 (135°C) category.

The valve suits the EN1935/2004 standards.

FC Series Kit Instructions

12/08 Edition

WEBTROL
Quality Pumps

FC Series
CENTRIFUGAL

Congratulations On Your Choice In Purchasing This Webtrol Pump

Its Quality is unsurpassed in material and workmanship. If properly installed, it will give many years of trouble free service.

Kit Inspection And Handling

After receiving your FC Kit, inspect the contents and report to the carrier any items that are damaged or missing. See parts list. Keep all packaging materials until the claim is resolved.

Parts List

Description	Qty.
Casing with drain plug	1
Cover	1
Bracket	1
Impeller	1
O-ring	1
Motor support	2
Suction seal	1
Discharge seal	1
Mechanical seal - (Pt. # 70X118-M purchased separately)	1
Hardware kit bag	1
1) Bolts used to fasten bracket to motor. Size will vary according to pump model.	
A) Hex head bolt 3/8" - 16 X 1"	4
Lock washer external serrated 3/8"	4
B) Allen head cap screw 3/8" - 16 x 1"	4
Lock washer external serrated 3/8"	4
C) Hex head bolt 1/2" - 13 x 1 1/2"	4
Lock washer external serrated 1/2"	4
2) Bolts /nuts used to fasten casing to bracket. Quantity/size will vary according to pump model.	
A) Hex head bolt M8 x 30mm (1 3/16")	8
Hex nut M8	8
Lock washer external serrated M8	8
B) Hex head bolt M10 x 35mm (1 3/8")	10/12
Hex nut M10	10/12
Lock washer external serrated M10	10/12
3) Bolt used to fasten motor support to pump. Allen head cap screw 3/8" - 16 x 1"	4
4) Impeller bolt with teflon gasket 3/8" - 16 x 5/8"	1
5) Teflon gasket - see Motor Installation #1	1
6) Black nylon gasket - see mechanical seal installation Installation #6	1
7) Stainless steel shaft sleeve	1
8) Key	1

Additional Parts Required for Assembly:

Motor - NEMA JM frame / 60Hz / 3450 RPM

Mechanical seal - Pt. # 70X118-M / Type 21, 1 1/8" Ø, 150 PSI

Lubricants & Sealants Required:

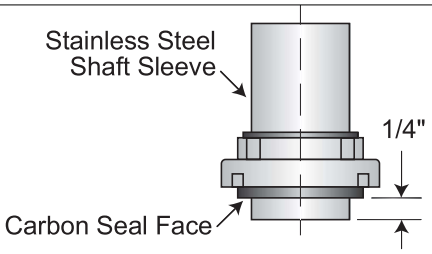
3-in-1 Oil

Loctite thread locker 242

Silicon Grease

Motor Installation

Make certain the motor is not connected to a power source. Do not assemble the pump on a motor connected to a power source. Serious injury could occur if the motor starts during pump assembly.



Position the motor on its end with the shaft up. The work surface should be level and capable of supporting the motor.

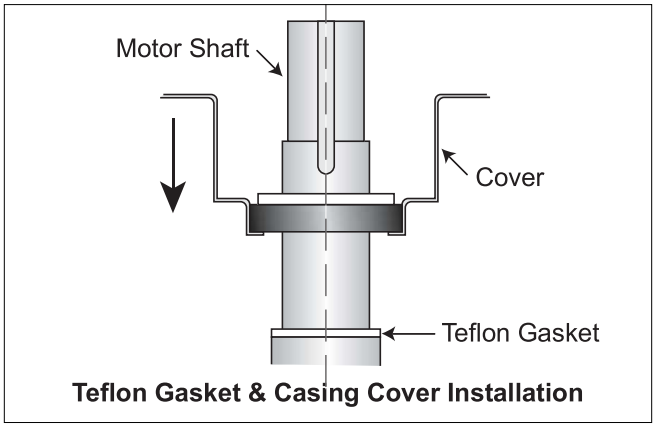
> **Note:** Prior to installation review Exploded view of FC pump on page 4.

1. Position the teflon gasket against the shoulder on the motor shaft. The inside diameter of the teflon gasket will easily slide over the motor shaft.

Mechanical Seal Installation

1. A) For ease of assembly lubricate the driving ring on the mechanical seal with water. Carefully press the rotating seal assembly less spring and cup onto the stainless steel shaft sleeve. Locate as shown.

Rotating Seal Assembly



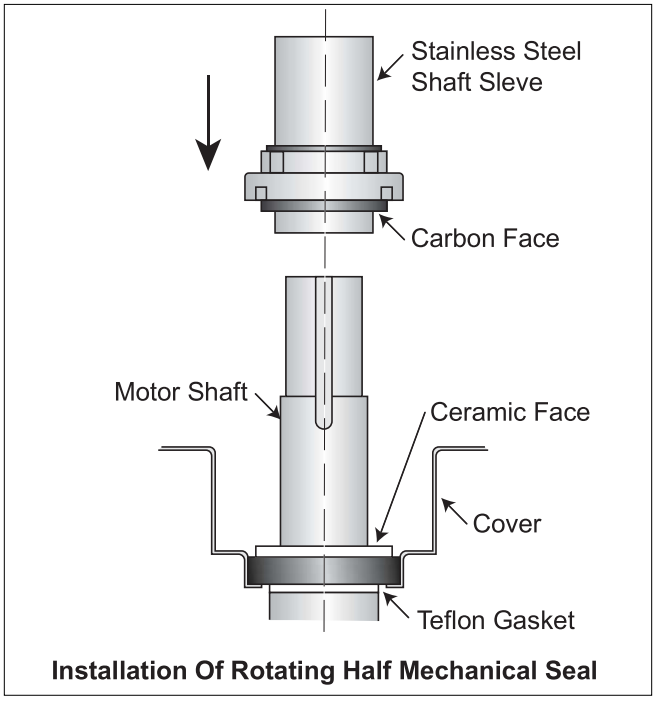
B) Clean seal cavity in the cover.

C) Lubricate the rubber seat ring with mineral oil. Using finger pressure only, press ceramic seat firmly and squarely into the casing cover.

D) Clean polished surface of ceramic seal with a soft cloth or tissue to remove all dust and grit.

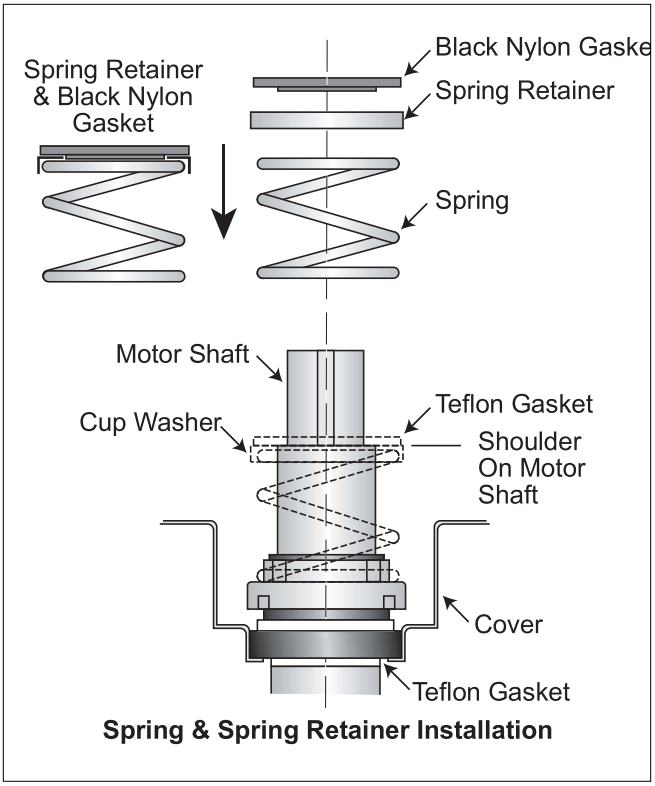
2. Position the bracket over the motor shaft. Fasten the bracket to the motor, tightening the (4) bolts using a cross - tightening pattern. (Tighten the bolts to the factory recommended torque specifications of 3.4 Ft. Lbs.) Overtightening may cause stripping of threads.

3. Carefully position the cover containing the ceramic seat over the motor shaft. Be sure the seat face is not damaged during assembly (cracked, scratched, or chipped) or the seal will leak.



Teflon Gasket & Casing Cover Installation

4. To Prevent slip-stick lubricate both the ceramic and carbon seal face with mineral oil.



Caution: Do not let oil get on the motor shaft.

5. Slide the stainless steel shaft sleeve, with the carbon seal face over the motor shaft until the sleeve contacts the teflon gasket.

Installation Of Rotating Half Mechanical Seal

6. Place the spring and spring retainer over the stainless steel shaft sleeve. Then, snap the black nylon gasket into the spring retainer.

Spring & Spring Retainer Installation

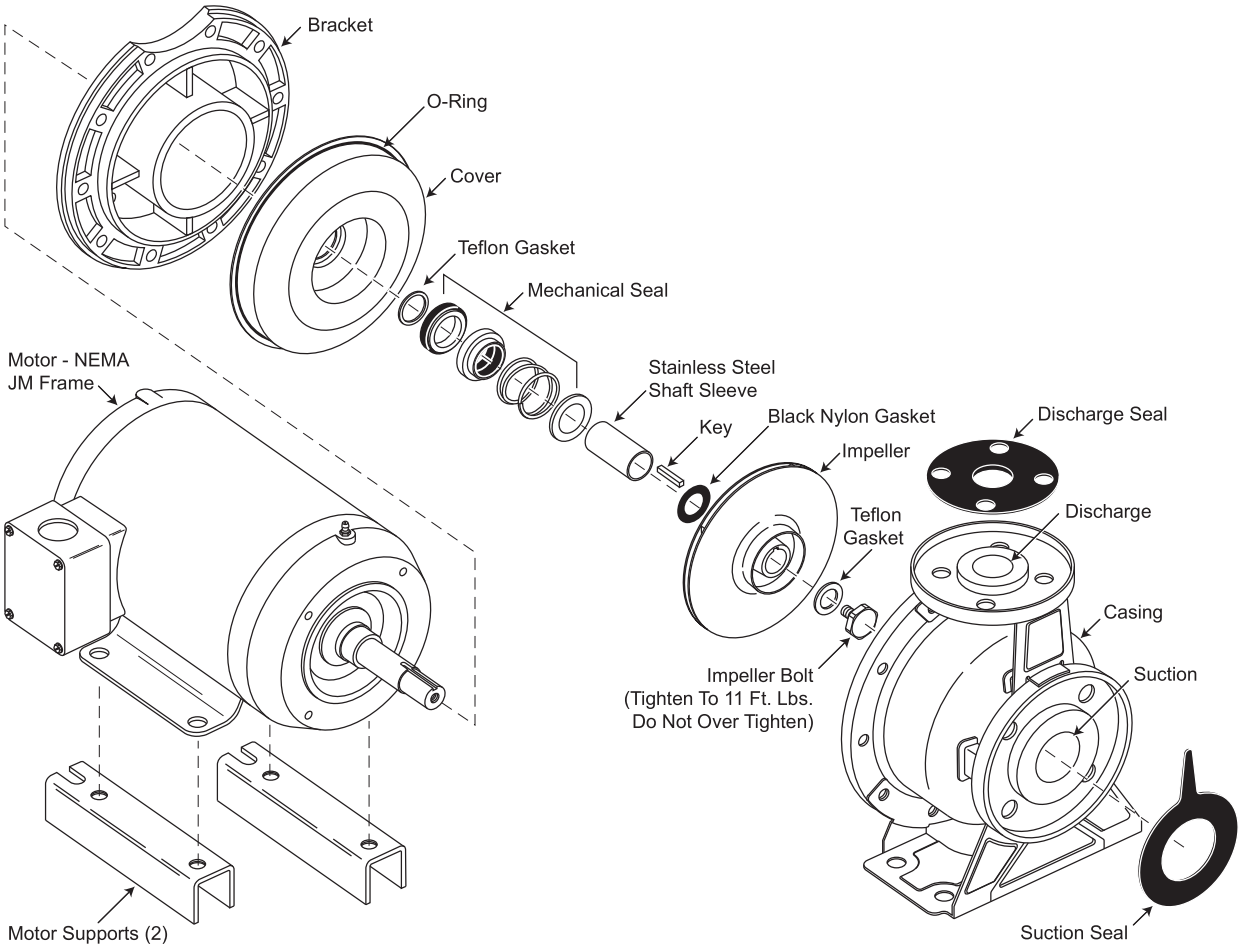
7. Position the viton o-ring around the cover and lubricate the o-ring with silicon grease. Do not cut, nick, or damage the o-ring during the installation.

Impeller & Casing Installation

1. Install the shaft key in the impeller hub keyway.

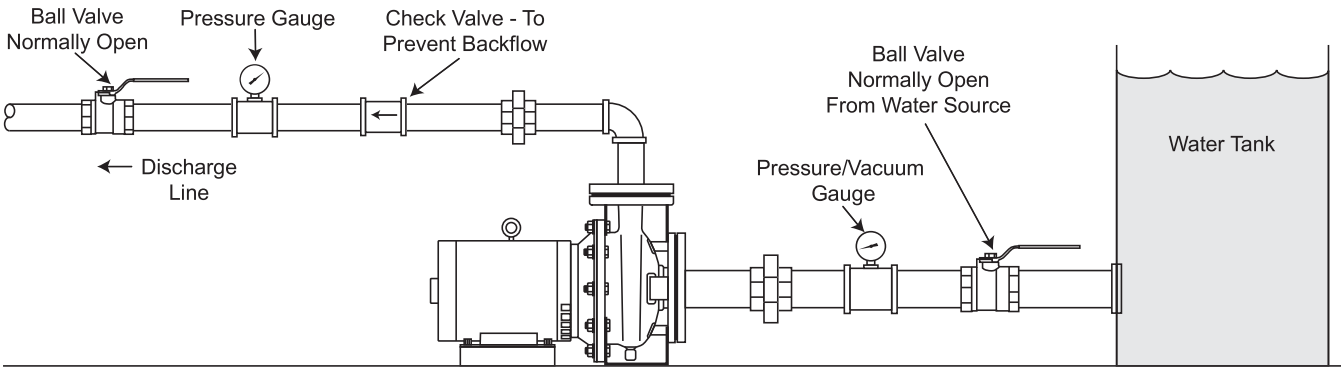
2. Firmly press the impeller into position by aligning the slot over the shaft key. Press the impeller down the motor shaft until it bottoms and sits squarely against the black nylon gasket and stainless steel shaft sleeve.

3. Prior to placing the teflon gasket on the impeller bolt, coat the gasket with silicon grease. This will cause the gasket to stick to the bolt. Install the impeller bolt to secure the impeller to the shaft. Torque bolt to 11 Ft. Lbs. Max. Do not over tighten the bolt, otherwise, the pump may leak. (Use a thread locker - Loctite 242, removable strength, to secure the bolt and prevent it from working loose).



4. Install the motor supports, using (4) allen head cap screws.

5. Install the casing over the cover. Rotate the casing to align the bolt holes and secure it with bolts, washers, and nuts. Cross tighten the bolts to a maximum torque of 3.4 Ft. Lbs.



Final Inspection

After assembly, reposition the pump horizontally. Rotate the impeller. If you can turn the impeller with minimum effort and no drag, the pump is operable. If not repeat Impeller and Casing Installation.

1.1 Description

SBB-type **FIBC** Dischargers consist of a steel frame complete with a material discharge hopper and an upper mobile cross bar for lifting of the filled up bag by forklift truck into the Discharger.

1.2 Function

SBB is a modular system for discharging **Flexible Intermediate Bulk Containers** (Big Bags) in different configurations depending on the application. Easy introduction of the **FIBC** into the support frame and dust-free discharging along with a variety of options make **SBB** extremely user-friendly.

The four loops of the **FIBC** are attached to the hooks of the detached cross bar that has previously been laid on top of the **FIBC**. The cross bar with the attached **FIBC** is then picked up by a forklift truck and introduced into the frame of the **SBB** Discharger. Once the **FIBC** has settled on the rubber seal of the discharge hopper the outlet closing rope of the **FIBC** can be pulled open through the inspection hatch of the discharge hopper.

2.1 Main features

The **FIBC**s, (code **SBB**) are devices suitable for discharging bulk bags of different shapes and sizes.

They are manufactured from shot-blasted, painted carbon steel; on request, they may be supplied in 304 stainless steel, entirely or only the parts in contact (304L SS) with the product to prevent its contamination.

The numerous models and sizes of **SBB** available, together with the complete range of accessories make these machines suitable for use in virtually all applications in various industrial sectors and with different types of **FIBC**s: in fact, the hopper, which can also be supplied alone, is specially designed for optimising the bulk material flow.

MACHINE CODE

- **SBB**

MACHINE TYPE

- FLEXIBLE INTERMEDIATE BULK CONTAINER UNLOADER

USE

- Emptying **FIBC**s of various sizes containing product in powder or granular form.

ADVANTAGES

- Equipment which can be assembled according to requirements.
- The model with hoist does not require the use of a forklift truck.
- The removable frame makes it possible to empty **FIBC**s 600 to 1800 mm in height.
- The operator is protected from falling **FIBC**s by the four posts of the frame.
- The **FIBC** valve can be accessed through the hatch.
- The pneumatic activators optimise the emptying of **FIBC**s.
- Product storage capacity in the hopper up to 330 l (model 125 and 510 l model 150).

2.2 Indications for use

The **FIBC** discharger is NOT designed for operating in potentially explosive atmospheres or with materials that could be hazardous by contact and/or inhalation, or else dangerous from a bacteriological or viral viewpoint.

Danger - Warning

If the machine has to match similar requirements, please contact the Manufacturer.

3.1 Models available

MODEL T:

UNLOADING HOPPER

- **SBB._.125.T**
- **SBB._.150.T**

Supplied separately, in two sizes, it is carefully designed to optimize the flowability of materials.

It comprises:
- seals made of material suitable for the type of use.
- adjustable weight motovibrator.
- vent pipe with filter bag.
- finger mesh.
- inspection hatch with seal.
- damper supports.

MODEL C:

HOPPER WITH FEET

- **SBB._.125.C**
- **SBB._.150.C**

Thanks to its structure, there is plenty of space for using different systems for loading the **FIBC**s.

It comprises:
- a unloading hopper.
- supporting frame made of tubular elements having suitable size and thickness to ensure sturdiness and solidity.
- cross with pegs for hooking **FIBC** harness, lifting hooks and tubular elements for lift truck forks. (for frame in Stainless Steel 304, the lifting cross is in Carbon Steel galvanized)

MODEL S:

HOPPER WITH REMOVABLE FRAME

- **SBB._.125.S**
- **SBB._.150.S**

Athough it is identical as regards design and use, the difference lies in the size of the **FIBC**s which can be accepted.

These comprise:
- an unloading hopper.
- a supporting tubular frame having size and thickness suitable to ensure sturdiness and solidity.
- a removable frame which makes it possible to adapt the Unloader for use with **FIBC**s of different heights.
- cross with pegs for hooking **FIBC** harness and tubular elements for lift truck forks. (for frame in Stainless Steel 304, the lifting cross is in Carbon Steel galvanized).

MODEL M:

FRAME WITH MONORAIL

- **SBB._.125.M**

The special feature of this equipment lies in the fact that it does not require the use of a fork lift truck for external loading of **FIBC**s, as it is designed for use with its own hoist (not supplied) which makes it possible to operate independently during the various phases.

The equipment comprises:

- an unloading hopper.
- a supporting frame made of suitably sized tubular elements thick enough to ensure the required sturdiness and solidity.
- a monorail for the hoist (hoist excluded) with frame in Stainless Steel 304, monorail for the hoist and hoist frame in Carbon Steel galvanized.
- cross with pegs for hooking the **FIBC** harness, lifting hooks and tubular elements for using a lift truck if necessary for handling **FIBC**s. (for frame in Stainless Steel 304, the lifting cross is in Carbon Steel galvanized)

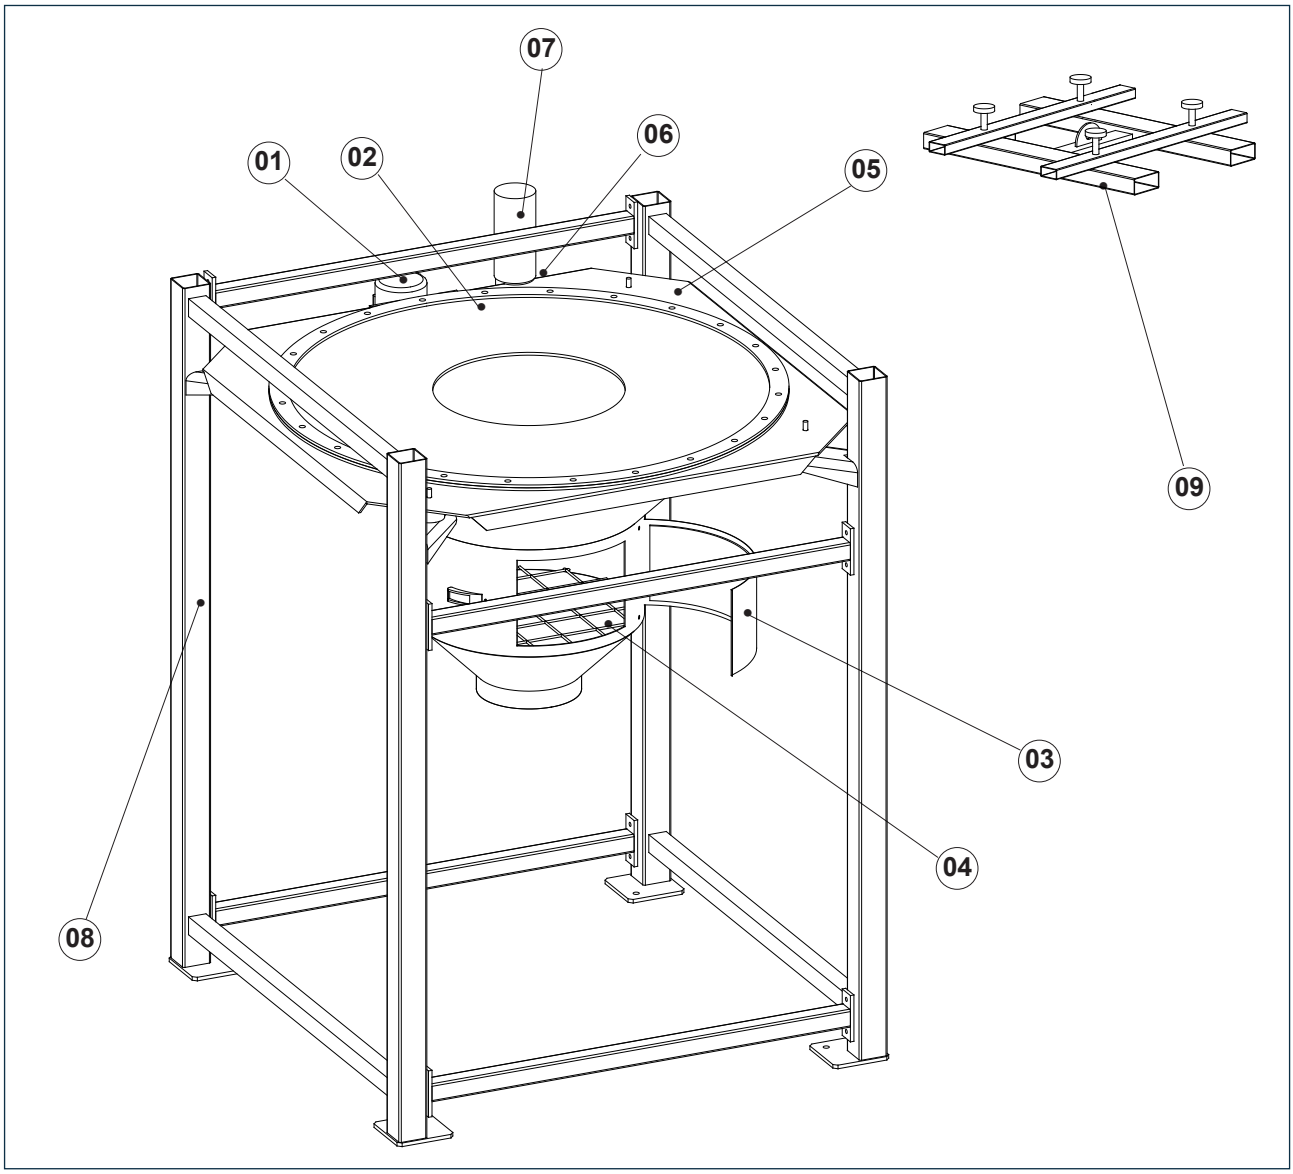
ACCESSORIES

- Hopper seal made of food- grade material.
- Pneumatic activators.

Materials featuring poor flowability do not flow out of the **FIBC** easily. It is therefore necessary to use pneumatic activators. These devices act directly at the bottom of the **FIBC**, causing lifting and lowering of the opposite corners to stimulate the flow of material compacted at the bottom.

The gradual movement of the activators makes the **FIBC** assume a “V” shape, to eliminate the deadlock points.

For more information, see Technical Catalogue - Maintenance KSC.



- Cutting device.

It is used for cutting **FIBC**s without valves which cannot be recycled after emptying.

- Hose connector kit available in black or white food- grade rubber.
- Round or square flange for hopper.
- Raised feet for lifting the entire structure.
- Mechanical limit stop for signalling door open status.
- Manual gate valve at outlet.

B = Black Rubber
W = White Food Rubber

FLEXIBLE ATTACHMENT KIT

CODE BLACK RUBBER	CODE WHITE RUBBER	0	L
XJN 273236	XJN 273136	273	300

10

SEAL TYPE

In field 8 of the order code it is possible to select the type of hopper gasket required, depending on the product to be handled; the following options are possible:

N: gasket made of black SBR.

B: gasket made of white NBR for food-grade use.

11

ELECTRIC VIBRATOR

Each **SBB** model is provided with an electric vibrator to activate and facilitate descent of the product; the vibrating mass on each vibrator can be adjusted in a simple manner (see use and maintenance catalogue) to increase or decrease the centrifugal force.

For the **SBB._.125** model it is possible to mount a bigger electrical vibrator, as shown in the Table below.

In field 7 of the order code it is possible to select from the following options:

+ + = without vibrator

10 = electrical vibrator 0.10 kW (std for **SBB 125**)

18 = electrical vibrator 0.18 kW (std for **SBB 150**)

SBB	TYPE	VIBRATOR MECHANICAL FEATURES				ELECTRICAL FEATURES					
		rpm/min		CENTRIFUGAL FORCE kg		kW		A max. 50 Hz		A max. 60 Hz	
		50Hz	60Hz	50Hz	60Hz	50Hz	60Hz	230V	400V	267V	460V
125	MVE 100/3	3000	3600	99	107	0.1	0.11	0.33	0.19	0.32	0.18
125-150	MVE 200/3	3000	3600	198	190	0.18	0.21	0.6	0.35	0.62	0.35

TECHNICAL DATA:

- Standard power supply:
  - 230/400 V 50 Hz
  - 264/470 V 60 Hz
- Protection degree IP 65.
- Standard tropicalization.
- Continuous running.
- Operating temperature:
  - from -30° to +40°C
- Standard applicable:
  - IEC 34.1 - CEI 2/3 ; 73/72/CEE - EN 292-89/CCE - EMC 89/336/CE
- Electric vibrators with voltages and frequencies different from the standard production can be supplied on request.

12

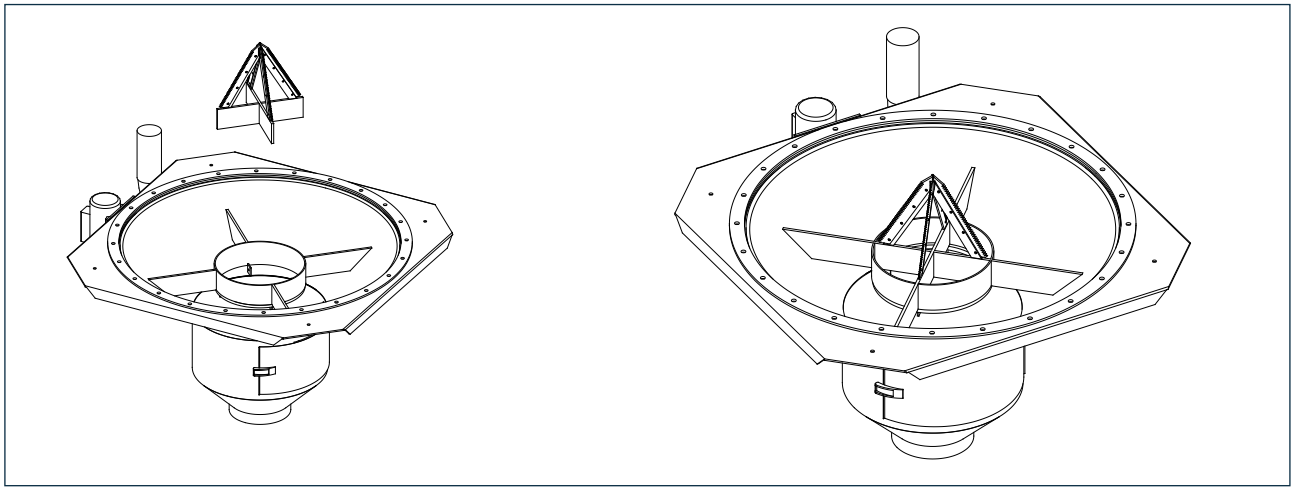
VIBRATOR VOLTAGES

In field 9 of the order code it is possible to select the voltage and frequency of the electric electric vibrator from the following options:

+: without vibrator

1: 220-240/380 - 415V 50Hz (STD)

0: 220 - 277/380 - 480V 60Hz



Electric vibrator with special voltages and frequencies are available on request.

SAFETY CABLE

Each vibrator is provided with a safety cable, which connects the vibrator to the **FIBC** cone in order to prevent accidental falling in the event of breakage of the fixing feet.

13

CUTTING KIT

Its function is to cut valveless **FIBC**s which cannot be recycled.

N.B.: The blades can be removed so as to enable use also with **FIBC**s having valves.
Accessory applicable on all **SBB** models.The knife blade is always made of AISI 420 stainless steel, while the supporting frame is made of the same material as the **FIBC**.

14

KIT PNEUMATIC ACTIVATORS

Materials featuring poor flowability do not flow out of the **FIBC** easily. It is therefore necessary to use pneumatic activators. These devices act directly at the bottom of the **FIBC**, causing lifting and lowering of the opposite corners to stimulate the flow of material compacted at the bottom. The gradual movement of the activators makes the **FIBC** assume a “V” shape, to eliminate the deadlock points.

In field 6 of the order code, select from the following options:

+ + + = **SBB** without actuators

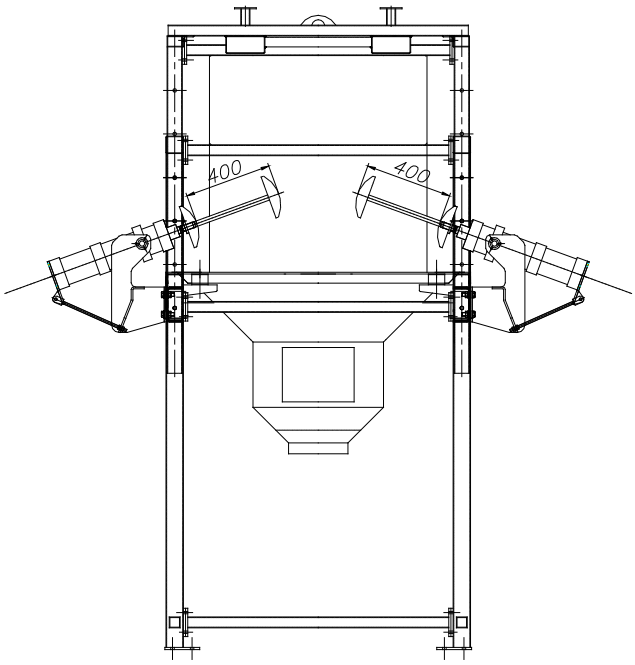
KSC = Actuators Kit without control panel

KSQ = Actuators Kit with electro-pneumatic control panel

KSP = provision for actuators kit (in the latter case, the activators are not supplied)

N.B.: The pneumatic activators can be installed on **SSB** ONLY if provision has been made on the latter during the order phase.The weight of the pneumatic actuators is approximately 80 kg.

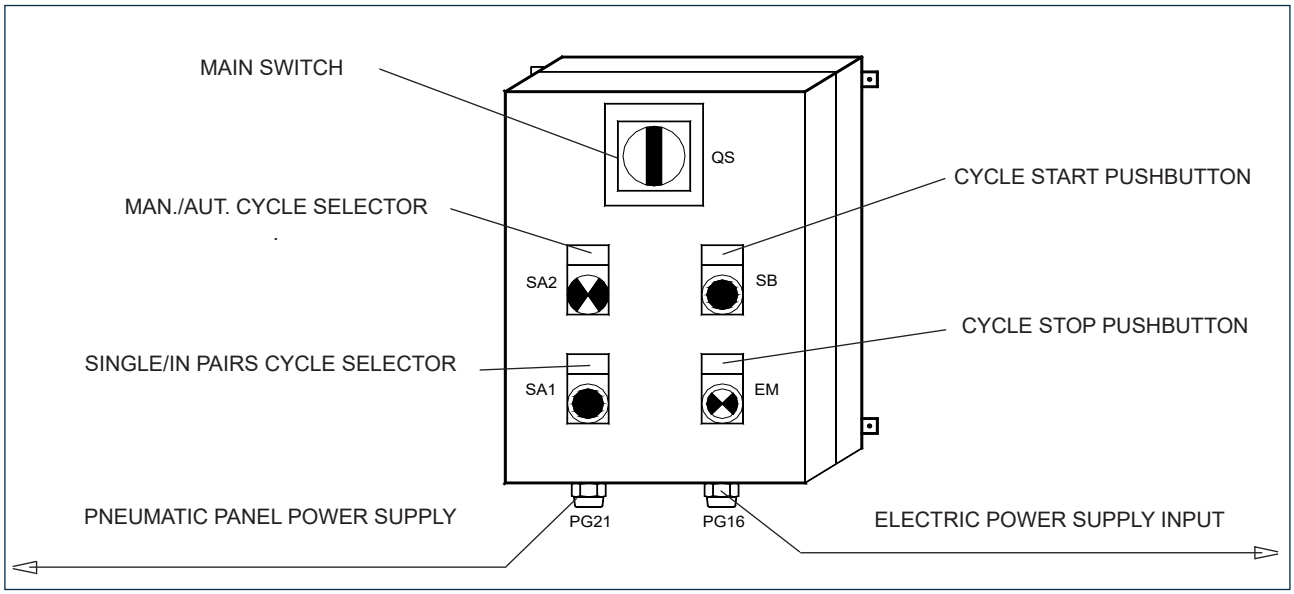
ADVANTAGES:



1) System functional and easy to install.

2) Possibility of adjustment to optimize operation.

EXECUTION:

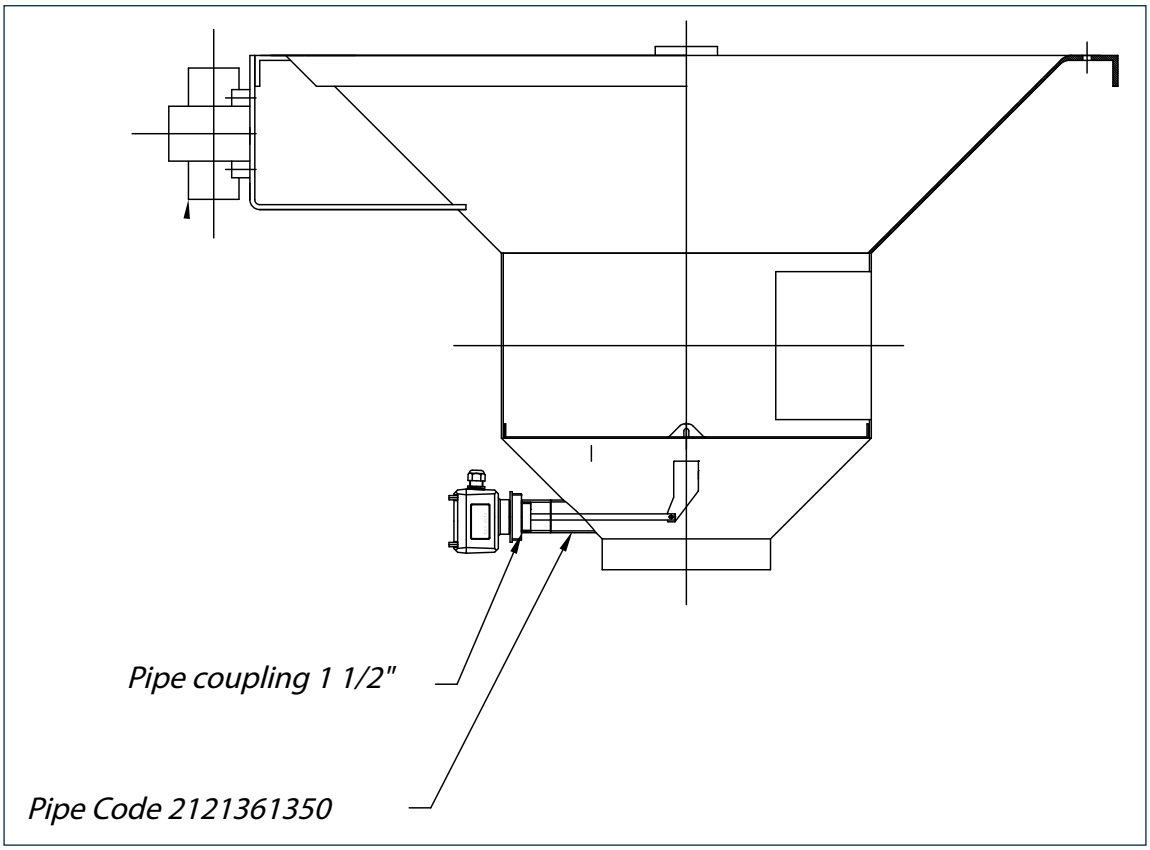


1) Carbon steel

2) 304L SS depending on the material used for constructing the **SBB** frame.

NOTE: For more information, see specific Catalogue **KSC**. Accessory applicable on all **SBB** models.

ELECTRIC CONTROL PANEL



ITEM	DESCRIPTION	COLOUR
QS	MAIN SWITCH	RED - YELLOW
SB	CYCLE START PUSHBUTTON	BLACK
EM	CYCLE STOP PUSHBUTTON	RED
SA1	SINGLE/IN PAIRS CYCLE SELECTOR	BLACK
SA2	MAN./AUT. CYCLE SELECTOR	BLACK

The control board comprises a box with front door on which the controls and operation indicators are fitted.
Description of controls and indicators:
SB/EM = PUSHBUTTONS: controls with single operating mode;
SA = SELECTORS: double-function switches;
QS = SWITCHES: controls with two possible positions.

15

LEVEL INDICATOR

FINISHING

Finishing SSB made from carbon steel

The term “finishing” includes the sequence and the operations necessary for machining and finishing a material.

The finishing provided for the internal and external surfaces of the feeders is classified as:

“4” (ACCURATE)

“4” FINISHING (ACCURATE)

MATERIALS
Plates

OPERATION	FEATURES
Plasma/Laser cut	In normal mode, with attention to linearity and precision
Welding	Continuous, on all edges, MAG type, with attention to linearity
Trimming	Removal of rags and sharp edges by grinding and sanding
Cleaning welds	Mechanical cleaning of welding slag by grinding
Sand blasting	Internal and external sand blasting to prepare the surfaces for painting;, there must be no ruffles or projections; extreme care to create continuity
Painting	See treatments and shades of internal and external surfaces page T11

Finishing SSB made from 304L SS

The term “finishing” includes the sequence and the operations necessary for machining and finishing a material.

The finishing provided for the internal and external surfaces of the feeders is classified as:

A (ACCURATE)

MATERIALS
Plates

OPERATION	FEATURES
Plasma/Laser cut	In normal mode, with attention to linearity and precision
Satin finishing	Carried out on the inner surface of the cone after turning, using grinder SA80
Welding	Continuous, on all edges, type: TIG with facing for BA (040-100), MIG with flux cored wire BA (125-300)
Trimming	Removal of rags and sharp edges by grinding and sanding
Cleaning welds	Carried out with micro shot blasting or satin finishing SA240, depending on the selected finish
Micro shoot blasting	Internal and external micro shot blasting, depending the finish selected, there must be no ruffles or projections; extreme care to create continuity
Satin finishing	SA240, in successive passes, passing from SA80 to SA240

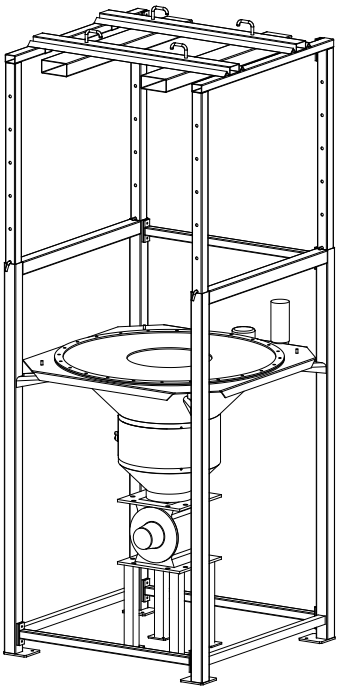
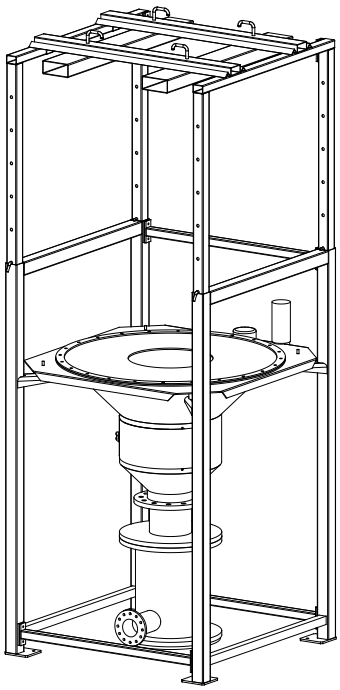
3.5 Applications

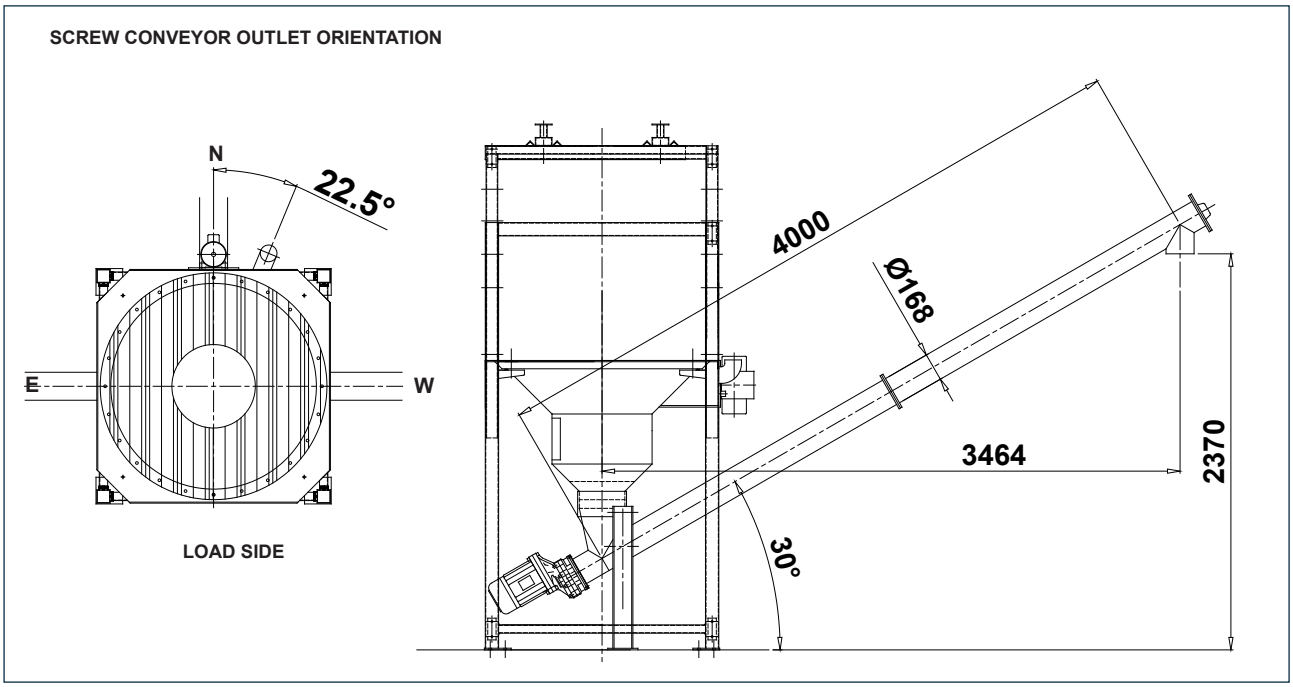


SBB + INCLINED SCREW FEEDER



SBB + FLEXIBLE HELIX CONVEYOR

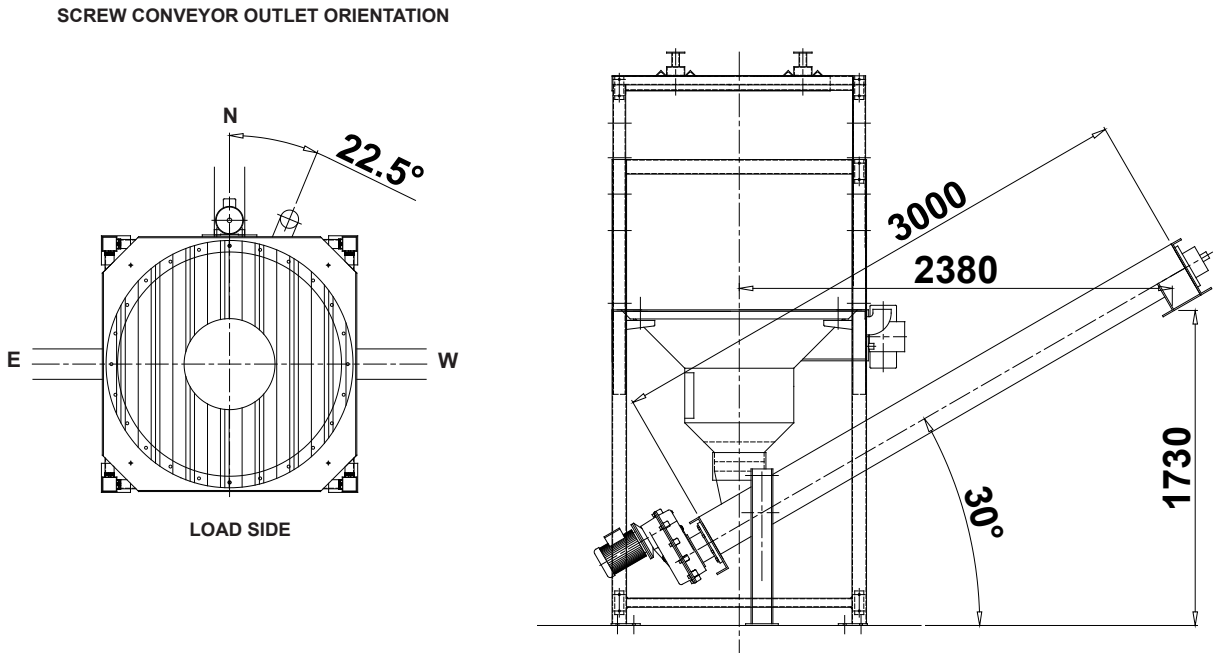
SBB + MICRO-BATCH FEEDER



SBB + ROTARY VALVE

SBB + PNEUMATIC CONVEYING

SBB with Ø 168 tubular screw conveyor



INCLINED SCREW FEEDER

For this application it is advisable to use:
Ø168 tubular screw conveyor complete with:
- tapered inlet spout Ø168/Ø273.
- drive unit at inlet end.
- supporting base XJP168031.
- Ø273 flexible rubber sleeve 300mm long complete with hose clamp.

The length of the screw conveyor must be defined on the basis of the plant requirements, with maximum inclination angle of 30° (to be specified in the order phase).
The drawing represents an example of a 4000mm long screw conveyor.
However, it is the customer's responsibility to fix the final part of the screw conveyor rigidly.

SBB with Ø 150 trough screw conveyor

INCLINED SCREW FEEDER

For this application it is advisable to use:
Ø150 trough screw conveyor complete with:
- tapered inlet spout Ø150/Ø 273.
- drive unit at inlet end.
- supporting base XJP168031.
- Ø 273 flexible rubber sleeve 300 mm long complete with hose clamps.

The length of the screw must be defined on the basis of the plant requirements, with maximum inclination angle of 30° (to be specified in the order phase).
The drawing represents an example of a 3000mm long screw conveyor, with outlet spout.
However, it is the Customer's responsibility to fix the final part of the screw conveyor rigidly.

The **SBB**-type **FIBC**s are designed and constructed for carrying out their function in compliance with the following limits of use:

Maximum operating temperature:

+40°C in continuous mode.

Minimum operating temperature:

- 20°C.

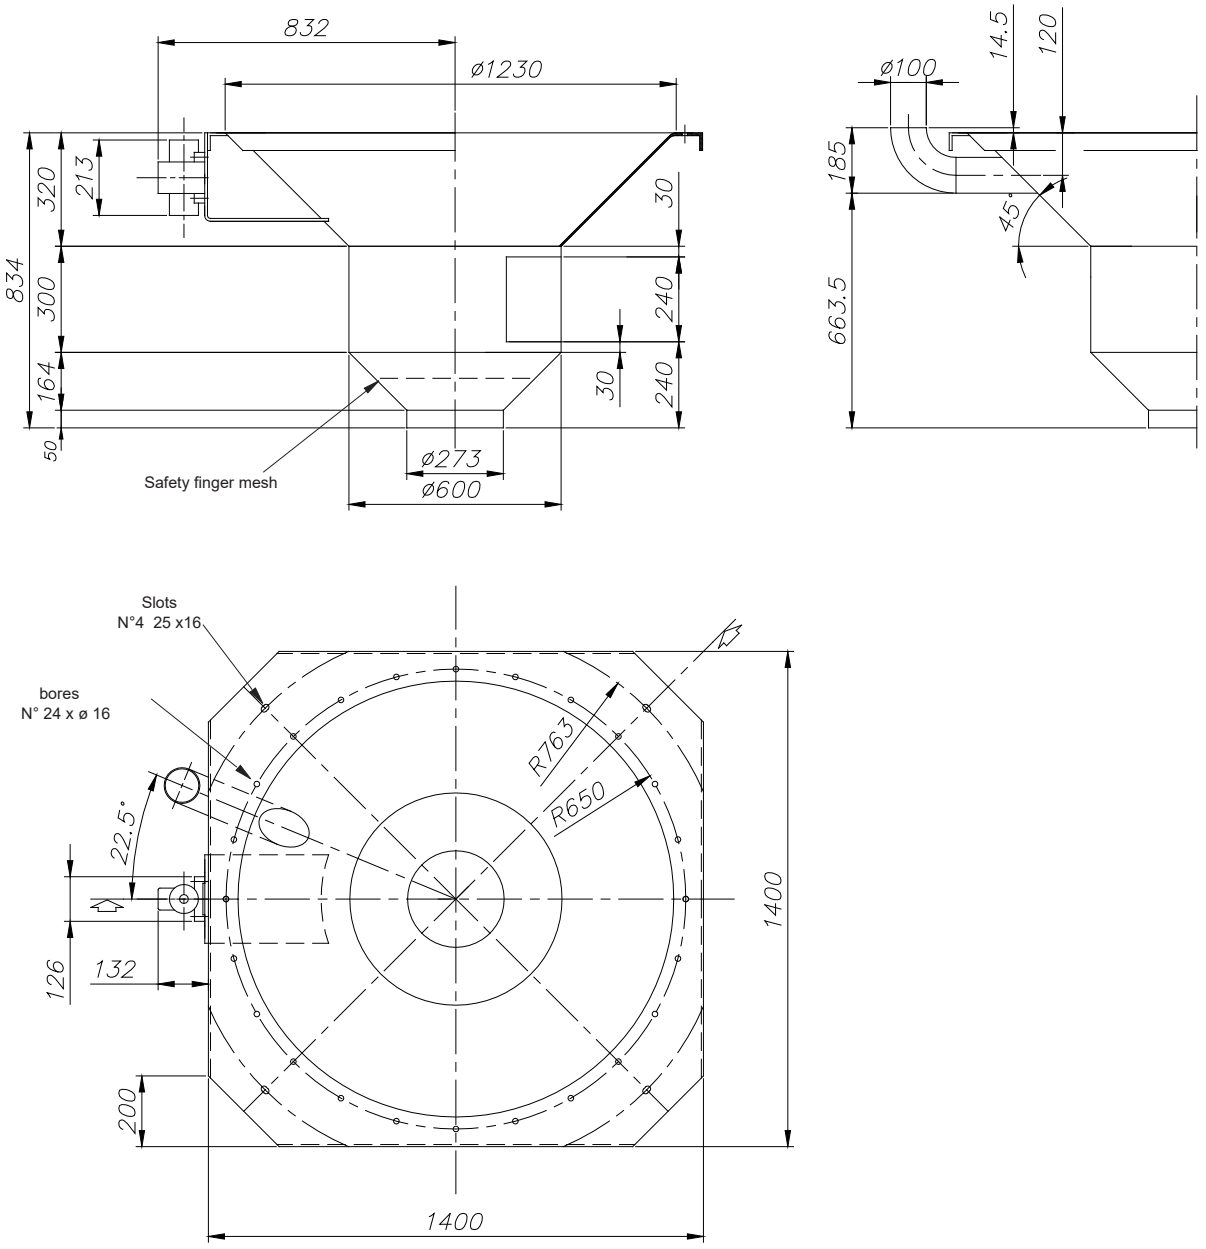
Height of **FIBC**:

- Min. 600mm;
- Max. 1800 mm. (for models S and M)
- Any.(for models T and C)

Hopper maximum capacity:

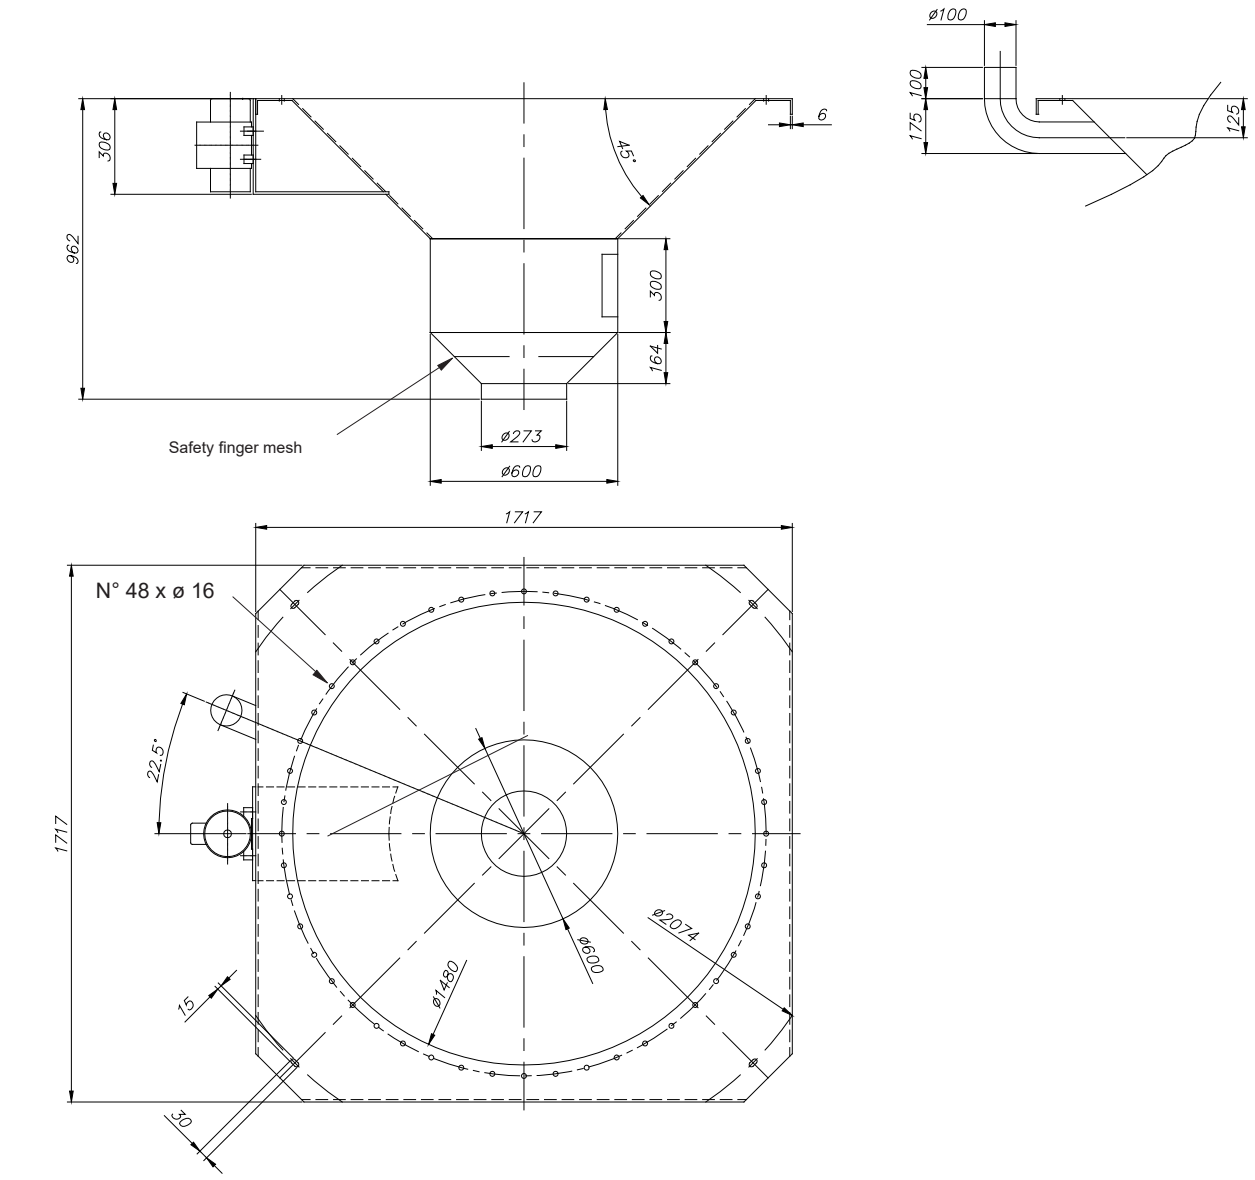
- **SBB125**: 330 l;
- **SBB150**: 510 l. l

Operation noise



The noise levels of the **SBB** with electric vibrator supplied by **WAM®** expressed in dB(A) are obtained by readings in a free field, at maximum performance, at four cardinal points at a distance of 1.5 m from the machine.

The value measured is **75 dB(A).**



The user may obtain values different from those indicated depending on the location.

It shall be the responsibility of the installer to have noise level checkings carried out on the machine applied to a silo filled with material (in operating conditions).

DEMOLIZIONE	22
DICHIARAZIONE DI CONFORMITÀ	23 - 26

This "OPERATING AND MAINTENANCE MANUAL" is an essential and integral part of the machine and must be readily available to operating and servicing personnel.

The owner, operator and maintenance Manager must be familiar with the contents of this Manual.

The description and illustrations used in thus Manual are not binding on Manufacturer.

While the basic characteristics of the machine remain unchanged as described, Manufacturer reserves the right to make any modifications to assemblies, parts and accessories it deems necessary for product improvement on for fabrication or marketing needs and this without prior notice and without being obliged to update this Manual at the time of modifications.

Die "BETRIEBS- UND WARTUNGSANLEITUNG" gehört zur Maschine und muß an einem Ort aufbewahrt werden, der dem Bedienungs- und Wartungspersonal gut zugänglich ist.

Betreiber, Bediener und Wartungspersonal sind verpflichtet, den Inhalt dieses Handbuchs zu kennen.

Unter Beibehaltung der wesentlichen Merkmale der beschriebenen Maschinen behält sich der Hersteller vor, jederzeit an Geräteteilen und/oder am Zubehör Änderungen im Sinne der Produktverbesserung oder aus technisch oder kaufmännisch notwendigen Gründen vorzunehmen.

La présente notice "UTILISATION ET ENTRETIEN" fait partie intégrante de la machine et elle doit être mise à la disposition du personnel préposé à la conduite et à la maintenance de la machine.
L'utilisateur, le conducteur et le technicien de maintenance ont l'obligation de connaître le contenu de cette notice d'instructions.
Les descriptions et les illustrations contenues dans la présente publication sont données sans engagement de la part du constructeur.

Bien que les caractéristiques principales des machines décrites dans les présentes demeurent inchangées, le constructeur se réserve le droit d'apporter, à tout moment et sans obligation, des modifications eventuelles d'organes, pièces et accessoires retenus nécessaires pour l'amélioration du produit ou pour des exigences de fabrication ainsi que commerciales ; et de mettre immédiatement à jour la présente publication.

Il presente libretto " USO E MANUTENZIONE" costituisce parte integrante della macchina e deve essere, facilmente reperibile dal personale addetto alla conduzione ed alla manutenzione.

L'utente, il conduttore e l'addetto alla manutenzione hanno l'obbligo di conoscere il contenuto dei presente libretto.

Le descrizioni e le illustrazioni contenuti nella presente pubblicazione si intendono non impegnative,

Ferme restando le caratteristiche essenziali delle macchine descritte, la ditta costruttrice si riserva il diritto di apportare, le eventuali modifiche di organi, dettagli e, accessori, che riterrà convenienti per il miglioramento del prodotto o per esigenze di carattere costruttivo o commerciale, in qualunque momento e senza impegnarsi ad aggiornare tempestivamente questa pubblicazione.

GENERAL PROHIBITIONS AND REGULATIONS

- This machine must not be used even partially by unauthorised personnel.
- The shop foreman or Department Manager is responsible for Machine operator training and for checking training level achieved.
- The machine must not be used for purposes other than those is was designed for.
- Read carefully the warning notices attached to the machine.
- Do not remove the warning notices attached to the machine,
- When the machine is running, do not service, repair, regulate the machine or carry out any other operation not strictly required by the work cycle. ,Before any of the above listed operations, always disconnect the machine for all electric power supply sources.
- DO not remove the guards and the safety devices on the machine,
- DO not start to work with protections opened or do not open them during the work,
- Always wear safety gloves when working on the machine.
- At the end of the work shift, disconnect the machine from the electric supply.
- Any repair, service or maintenance work, whether electrical or otherwise, must be in compliance with CEI standards in force.

ALLGEMEINE VORSCHRIFTEN

- Jegliche auch teilweise Bedienung der Maschine durch hierzu nicht ausdrücklich autorisiertes Personal ist untersagt.
- Der Betriebsleiter ist dafür verantwortlich, daß das zur Bedienung autorisierte Personal in der Bedienung der Maschine geschult wird.
- Die Maschine darf zu keinem anderen Zweck als zu dem in diesem Handbuch beschriebenen verwendet werden.
- Die Gefahren- und Hinweisschilder an der Maschine müssen beachtet werden.
- Es ist verboten, die Gefahren- und Hinweisschilder an der Maschine zu entfernen.
- Wartungs-, Reparatur-, und/oder vom Hersteller autorisierte Änderungsarbeiten dürfen nicht bei laufender Maschine durchgeführt werden. Vor der Durchführung solcher Arbeiten muß zuerst die Stromversorgung zur Maschine unterbrochen werden.
- Es ist verboten, die an der Maschine angebrachten Schutz- und Sicherheitseinrichtungen zu entfernen.
- Schulzeinrichtungen an der Maschine dürfen bei Kontroll-, Wartungs-, Reparatur- und/oder Anderungsarbeiten weder fehlen noch während dieser Arbeiten entfernt werden.
- Zum Ende der Arbeitsschicht die Stromversorgung der Maschine abschalten.
- Für alle elektrischen und nicht elektrischen Wartungsarbeiten die Vorschriften der geltenden Normen beachten.

PRESCRIPTIONS ET CONSIGNES GENERALES

- L'utilisation, même partielle, de l'équipement de la part du personnel non autorisé est expressément interdit.
- Le chef d'usine et les chefs d'atelier ont l'obligation d'instruire et de contrôler le personnel préposé à l'utilisation de l'équipement.
- L'utilisation de l'équipement pour des usages différents de ceux pour lesquels ils ont été prévus, sont interdits.
- Lire attentivement les plaques signalétiques et de danger apposées sur l'équipement.
- Il est interdit d'enlever de l'équipement les plaques de signalisation et de danger.
- Il est interdit d'effectuer la maintenance, de réparer, de modifier ou de faire tout ce qui n'est pas strictement nécessaire au cycle de travail quand la machine est en marche.
- Il est interdit de démonter les protections et les sécurités présentes sur la machine.
- Il est interdit de commencer le travail avec les protections ouvertes ou de les ouvrir pendant le travail. Le port des gants de protection est obligatoire pour travailler sur la machine.
- A la fin des périodes de travail débrancher toujours la machine des alimentations électriques.
- Toute maintenance électrique et autres doivent être conformes aux normes en vigueur.

PRESCRIZIONI E DIVIETI GENERALI

- E' vietato l'uso, anche parziale, dell'attrezzatura da parte del personale non espressamente autorizzato. L'istruzione del personale preposto all'uso è da realizzare e verificare a cura dei capo officina e dei capi reparto.
- E' vietato l'uso dell'attrezzatura per modalità diverse da quelle per cui è stata prevista.
- Leggere con attenzione le targhe di avvertenza e pericolo poste sulla macchina.
- E' vietato rimuovere le targhe di avvertenza e pericolo sulla macchina.
- E' vietato manutenzionare, eseguire riparazioni, modifiche e quanto non strettamente necessario al ciclo di lavoro con la macchina in movimento. Prima di tutto è obbligatorio disinnestare tutte le alimentazioni elettriche alla macchina.
- E' vietato rimuovere le protezioni e le sicurezze presenti sulla macchina.
- E' vietato iniziare il lavoro con le protezioni aperte o aprirle durante il lavoro.
- Operare sulla macchina solo con i guanti di protezione.
- Al termine dei periodi di lavoro scollegare sempre la macchina dalle alimentazioni elettriche.
- Qualsiasi manutenzione elettrica e non elettrica deve attenersi alle norme vigenti.

TOR.ILT.--.C.A7.0917.4L 5

DESCRIPTION
Bin Level Indicator for point level limit detection in bulk materials

FUNCTION
The device is used for level monitoring in all types of containers and silos.
It can be used with all powdery and granular bulk materials that do not show a strong propensity to form crusts or deposits.
When the material level reaches the measuring paddle the rotation is blocked.
The resulting reaction torque activates a limit switch output signal that stops the motor.
As soon as the material level sinks below the paddle radius, the switch returns to the OFF position and the motor is switched on.

IMPROPER USE
ILT level indicators are not designed to work in dangerous conditions or with dangerous materials. If the machine has to operate in these conditions, the manufacturer must be informed.

Dangerous materials:
- explosives,
- toxic,
- flammable,
- harmful and similar.

BESCHREIBUNG
Füllstandmelder für Behälter zur punktuellen Füllstandbestimmung bei Schüttgütern

FUNKTION
Das Gerät wird verwendet zur Füllstandüberwachung in Behältern und Silos aller Art.
Es ist einsetzbar für alle pulverförmigen Schüttgüter und Granulate, die nicht zu starker Ansatzbildung neigen.
Erreicht der Füllstand des Schüttgutes das Messpaddel, wird dessen Rotationsbewegung unterbrochen. Das entstehende Drehmoment aktiviert ein Ausgangssignal am Begrenzungsschalter, welches den Motor stoppt.
Sinkt der Füllstand unterhalb des Radius des Paddels, der Schalter kehrt in die AUS-Position zurück und der Motor ist eingeschaltet.

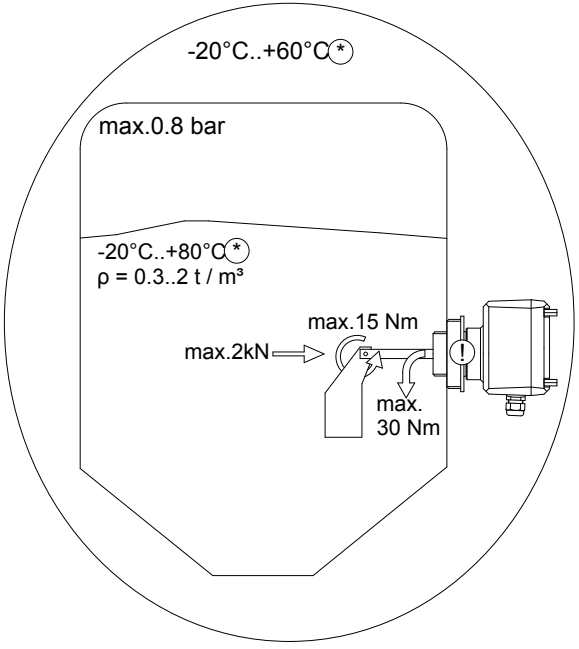
UNZULÄSSIGE VERWENDUNGSZWECKE
Die Füllstandanzeiger der Modellreihe ILT sind weder für gefährliche Anwendungen noch zum Handling von gefährlichen Medien geeignet. Sollte der Betreiber eine ILT - Füllstandanzeiger für gefährliche Medien bzw. Anwendungen einsetzen wollen, so muß er unbedingt vorher den Hersteller um Erlaubnis fragen.

Als gefährliche Medien gelten:
- explosive,
- giftige,
- feuergefährliche,
- in irgendeiner Weise schädliche.

DESCRIPTION
Indicateur de niveau pour le contrôle du niveau des matériaux en vrac

FONCTION
L'appareil sert à surveiller le niveau de remplissage dans les réservoirs et silos de types les plus divers.
Il peut être utilisé pour tous produits pulvérulents et granulés n'ayant pas tendance à former de dépôts importants.
Lorsque le niveau du matériau atteint la palette de mesure, la rotation est bloquée.
Le couple de réaction résultant active un signal de sortie de l'interrupteur de fin de course, qui arrête le moteur.
Dès que le niveau du matériau descend en dessous du rayon d'action de la palette, l'interrupteur revient à la position OFF (ARRÊT) et le moteur est remis en marche.

CONTRE-INDICATION
Les indicateurs de niveau standards de la classe ILT N'ONT pas été projetés pour travailler dans des conditions ou avec des produits dangereux; par conséquent si la, machine ne répond pas à ces exigences, le constructeur doit obligatoirement en être informé



Les produits suivants sont considérés comme dangereux, si ceux-si sont:
- explosifs,
- toxiques,
- inflammables,
- nocifs et/ou similaires.

DESCRIZIONE:
Indicatore di livello a pala rotativa per il controllo di livello di materiale sfuso

FUNZIONE D'USO
Il dispositivo è utilizzato per il monitoraggio del livello all'interno di container e sili di qualsiasi tipo.
Può essere utilizzato in presenza di polveri e granulati con scarsa tendenza alla formazione di incrostazioni o depositi.
Quando il livello del materiale raggiunge la paletta sensore, la rotazione si blocca.
La coppia risultante attiva un finecorsa che invia un segnale per fermare il motore.
Appena il livello del materiale scende al di sotto del raggio di azione della paletta, il finecorsa si disattiva e fa ripartire il motore.

CONTROINDICAZIONI
Gli indicatori di livello standard della ILT NON sono stati progettati per operare in condizioni o con materiali pericolosi pertanto quando la macchina deve assolvere a queste esigenze è d'obbligo informare il costruttore.

Si ritengono materiali pericolosi:
- esplosivi,
- tossici,
- infiammabili,
- nocivi e/o simili.

!

Maximum value of impact energy on connecting bush.

Max. Schlagenenergie auf die Verbindungsbuchse.

Valeur maximum de l'énergie d'impact sur la bague de connexion.

Massimo valore dell'energia di impatto sulla boccola di connessione.

1J

*

Different process and ambient temperatures available as an option.

Verschiedene Prozess- und Umgebungstemperaturen als Option verfügbar.

Différentes températures environnementales et de processus disponibles en option.

Diverse temperatura ambiente e di processo disponibili come opzione.

Restrictions

The bushing is suitable for withstanding sunlight and atmospheric agents. The mechanical features of the material are not guaranteed in case of acidic or basic environments.
These environmental conditions must be checked for each application.
The breaking load of the plastic material gets reduced over a period of time with the following proportions:
- approx. 50% in two years
- approx. 60% in five years

Einschränkungen

Die Buchse ist sonnenlicht- und witterungsbeständig. Die mechanischen Werkstoffeigenschaften werden bei saurer und Basischer umgebung nicht gewährleistet.
Die Umgebungsbedingungen müssen für jede Anwendung gesondert geprüft werden.
Die Bruchlast des Kunststoffs verringert sich im Laufe der Zeit im folgenden Verhält-nis:
- ca 50% in zwei Jahren
- ca 60% in fünf Jahren

Restrictions

La bague est adaptée pour résister à la lumière solaire et aux agents atmosphériques. Les caractéristiques mécaniques du matériau ne sont pas garanties en milieu acide et basique.
Ces conditions ambiantes doivent être vérifiées pour chaque application.
La charge de rupture de la matière plastique diminue dans le temps dans les proportions suivantes :
- 50% au bout de deux ans
- 60% au bout de cinq ans

Restrizioni

La boccola è adatta per resistere alla luce solare ed agenti atmosferici. Non sono garantite le caratteristiche meccaniche del materiale in caso di ambienti acidi e basici.
Tali condizioni ambientali devono essere verificate per ogni applicazione.
Il carico di rottura del materiale plastico si riduce nell'arco del tempo con le seguenti proporzioni:
- circa 50% in due anni
- circa 60% in cinque anni

MECHANICAL DATA	
Enclosure	IP 65
Process connection	Thread G1 1/4", G1 1/2", G2 1/2"
Material process-connection	Plastic and aluminium
Material vane shaft and measuring	Stainless steel
Paddle shaft clutch	Protection of the gearing from impacts on the measuring vane
Pickup delay	Approx. 1.3 sec.
Sensitivity	Adjustable via reset force of spring in three positions
Paddle speed	1 rpm

ELECTRICAL DATA	
Supply voltage (!)*	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (all voltage +/- 10%)
Power	3W
Connection terminal	1 x max. 1.5 mm2
Signal output	Floating microswich max.250V (AC/DC), 2A.
Protection class	I
Over voltage category	II

* Power supply voltage must never come directly from the mains but always obtained by a secondary transformation winding.

MECHANISCHE DATEN	
Gehause	IP 65
Prozessanschluss	Gewinde G1 1/4", G1 1/2", G2 1/2"
Material des Anschlussgewindes	Kunststoff und Aluminium
Material von Welle und Flugel	Rostfreier Stahl
Paddelklaue	Schutz der Messwelle vor Stoften auf das Messpaddel
Signalverzogerung	c.a 1.3 sec.
Empfindlichkeit	Einstellbar durch Ruckholfeder mit drei Stellungen
Umdrehungszahl Paddel	1 Umdrehung/min.

ELEKTRISCHE DATEN	
Versorgungs-spannung (!)*	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (alle Spannungen +/- 10%)
Leistung	3W
Anschluftklemmen	1 x max. 1.5 mm2
Ausgangssignal	Potentialfreier mikroschalter max. 250V (AC/DC) 2A
Schutzart	I
Uberspannung Kategorie	II

* Die Versorgungsspannung darf nie direkt aus der Netzleitung kommen, sondern muss immer über eine Trafospule geleitet werden.

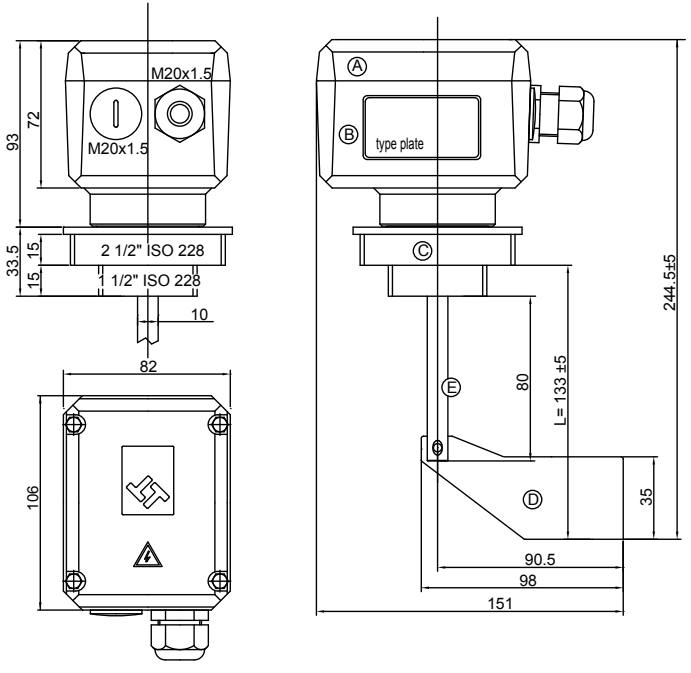
CARACTERISTIQUES MECANIQUES	
Enveloppe	IP 65
Raccordement processus	Filetage G1 1/4", G1 1/2", G2 1/2"
Matiere du filetage de raccord	Plastique et aluminium
Matiere de l'arbre et de la palette	Acier inoxydable
Embrayage de l'arbre de la palette	Protection de l'engrenage contre les impacts sur la palette de mesure
Retard de signal	1.3 s. environ.
Sensibilite	Reglable par le rappel du ressort dans trois positions
Vitesse de la palette	1 tour/min

CARACTERISTIQUES ELECTRIQUES	
Tension d'alimentation (!) *	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (toutes les tensions +/- 10%)
Energie	3W
Borne	1 x 1.5 mm^2 max.
Signal de sortie	Microrupteur flottant max. 250V (AC/DC), 2A
Classe de protection	I
Categorie de surtension	II

* La tension d'alimentation ne doit jamais venir directement du réseau, mais toujours obtenue d'un transformateur secondaire.

DATI MECCANICI	
Protezione	IP 65
Connessioni standard	Filettato G1 1/4", G1 1/2", G2 1/2"
Materiale del mozzo di collegamento	Plastica e Alluminio
Materiale dell' albero e della paletta	Acciaio inossidabile
Frizione albero paletta	Protezione degli ingranaggi dagli impatti della paletta sensore
Ritardo di segnale	1.3 sec. circa
Sensibilità	Regolabile mediante il tensionamento di una molla su 3 diverse posizioni
Velocità paletta	1 giro/min

DATI ELETTRICI	
Tensione d'alimentazione (!)*	AC: 24V / 48V / 115V / 230V 50/60Hz DC: 12V / 24V (tutte le tensioni +/- 10%)
Assorbimento	3W
Morsetto d'attacco	1 x 1.5 mm^2 max.
Segnale di uscita	Microinterruttore flottante max.250V (AC/DC), 2A
Classe di protezione	I
Categoria di sovratensione	II



* La tensione di alimentazione non deve provenire direttamente dalla rete, ma dev'essere sempre ottenuta da un avvolgimento secondario.

TOREX®

ILT
- SAFETY NOCITES
- SICHERHEITSHINWEISE
- INDICATIONS DE SÉCURITÉ
- ISTRUZIONI DI SICUREZZA

WARNING: high voltage!

- Disconnect from all mains before opening the device.
- Start the device up only when the cover is closed.
- Before opening the lid take care that no dust deposits or whirlings are present.
- Do not allow any dust/water to enter the casing when the lid is open.
- Provide protection for relay contacts and output transistors to protect the device against spikes with inductive loads.
- Make sure that max. 8mm of the pigtails are bared (danger of contact with live parts).
- Make sure that the boots for protecting cable terminations are not longer than 8mm (danger of contact with live parts). Make sure that the screwed cable gland safely seals the cable and that it is tight (danger of water intrusion).
- A voltage-disconnecting switch must be provided near the device.
- In the case of inexpert handling or handling malpractice, the electric safety of the device cannot be guaranteed.
- In the case of a defect, the distribution voltage must automatically be cut off by a RCCB protective switch so as to protect the user of the device from indirect contact with dangerous electric tensions.
- Provide protection for relay contacts to protect the device against spikes, if inductive loads are connected.
- Provide a disconnect switch near the device.
- All field wirings must have insulation suitable for at least 250VAC. The temperature rating must be at least 90°C. (194°F).
- Protect the power of the device by means of a fuse.
- The device body has to be earthed to avoid static charges. This is particularly important in pneumatic conveying applications or with non-metallic containers.

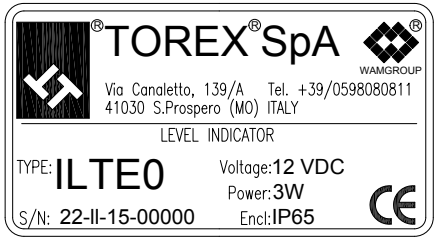
ACHTUNG: Hochspannung!

- Vor der Öffnung des Geräts, dieses von allen Stromnetzen trennen.
- Das Gerät in Betrieb nehmen, nur wenn die Abdeckung geschlossen ist.
- Vor der Öffnung des Deckels sicherstellen, dass keine Staubablagerungen oder - aufwirbelungen vorhanden sind.
- Beim geöffneten Deckel darf kein Staub/Wasser innerhalb des Gehäuses gelangen.
- Zum Schutz vor Spannungsspitzen bei induktiven Lasten einen Schutz für Relaiskontakte / Ausgangstransistoren vorsehen.
- Darauf achten, daß die Anschlußlitzen max. 8 mm abisoliert werden (Gefahr der Berührung spannungs- führender Teile).
- Darauf achten, daß die Aderendhülsen der Anschlußkabel max. 8 mm lang sind (Gefahr der Berührung spannungsführender Teile).
- Darauf achten, daß die Kabelverschraubung das Kabel sicher dichtet u. fest angezogen ist (Wassereintritt).
- Es muß in der Nähe des Gerätes ein Schalter als Trennvorrichtung für die Anschlußspannung vorgesehen werden.
- Bei unsachgemäßem Gebrauch des Gerätes ist die elektr. Sicherheit nicht gewährleistet.
- Zum Schutz gegen indirektes Berühren gefährlicher Spannung muß im Fehlerfall ein automatisches Ausschalten (RCCB - Schutzschalter) der Versorgungsspannung gewährleistet sein.
- Für ein geeignetes System zum Schutz der Relaiskontakte sorgen, um die Vorrichtung vor Spannungsspitzen zu schützen, wenn induktive Lasten angelegt werden.
- Einen Trennschalter in der Nähe des Gerätes vorsehen.
- Alle Anschlusskabel müssen für wenigstens 250V AC Betriebsspannung isoliert sein. Die Temperaturbeständigkeit muss mindestens 90°C (194°F) betragen.
- Die Stromversorgung des Gerätes über eine Sicherung absichern.
- Um eine statische Aufladung zu vermeiden, muss das Gerätegehäuse geerdet sein. Dies ist insbesondere wichtig bei pneumatischer Materialförderung und bei nichtmetallischen Gehäusen.

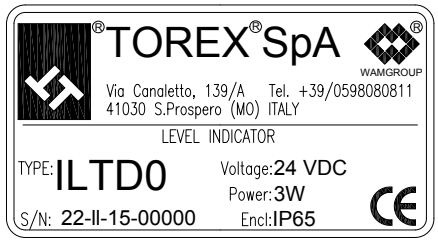
AVERTISSEMENT: haute tension!

- Débranchez toutes alimentations électriques avant d'ouvrir le couvercle.
- Démarrer l'équipement seulement quand le couvercle est fermé.
- Avant d'ouvrir le couvercle assurez-vous qu'il n'y a pas de poussière ou des dépôts présents.
- Ne laissez pas la poussière/l'eau entrer dans le boîtier lorsque le couvercle est ouvert.
- Prévoir une protection pour les contacts de relais/les transistors de sortie afin de les protéger contre les pointes de tension en cas de charges inductives.
- Veiller à ce que les torons de raccordement soient dénudés à 8 mm au maximum (danger de contact avec des pièces sous tension).
- Veiller à ce que les cosses d'adhérence des câbles de connexion aient une longueur maximale de 8 mm (danger de contact avec des pièces sous tension).
- Veiller à ce que le presse étoupe ferme le câble hermétiquement et qu'il soit bien serré (arrivée d'eau).
- Prévoir un interrupteur à proximité de l'appareil.
- La garantie ne s'applique pas en cas de utilisation non conforme.
- En cas de défaut, l'alimentation doit être coupée automatiquement: (disjoncteur RCCB) pour protéger l'utilisateur contre toute tension dangereuse.
- Prévoir un dispositif approprié de protection des relais pour protéger l'équipement contre les pics de tension de courte durée, si les charges inductives sont reliées.
- Prévoir un interrupteur près du dispositif.
- Tous les câbles doivent être pourvus d'isolation appropriée d'au moins 250VAC. Le rapport de température doit être au moins 90°C (194°F).
- Protéger l'alimentation du dispositif avec un fusible.
- Le corps du dispositf doit être mis à la terre pour prévenir la formation de charges électrostatiques. Ceci est particulièrement important pour les applications de transport pneumatique ou dans le cas des conteneurs non-métalliques.

ATTENZIONE: Tensione pericolosa!

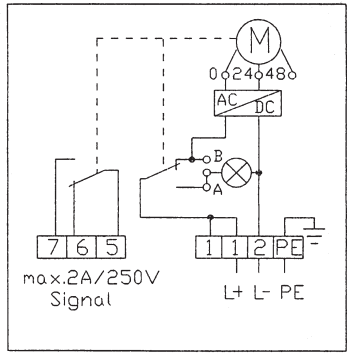


- Scollegare tutte le alimentazioni elettriche al dispositivo prima di aprire il coperchio.
- Avviare il dispositivo solamente con il coperchio del corpo chiuso.
- Prima di aprire il coperchio assicurarsi che non vi siano presenti depositi di polvere.
- Non far entrare la polvere/acqua all'interno della carcassa quando il coperchio viene aperto.
- Fornire una protezione per i contatti dei relè e i transistor d'uscita contro i picchi di tensione con cariche induttive.
- Assicurarsi che la superficie scoperta dei fili connettori non superi gli 8 mm (pericolo di contatto con parti sotto tensione).
- Assicurarsi che le guaine di protezione delle terminazioni dei cavi non superino gli 8 mm di lunghezza (pericolo di contatto con parti sotto tensione).
- Assicurarsi che il pressacavo stringa il cavo in modo sicuro, fissandolo adeguatamente (pericolo di infiltrazione d'acqua).
- Collocare un interruttore di tensione nei pressi del dispositivo.
- Non si garantisce la sicurezza elettrica del dispositivo in caso di impiego improprio o non conforme.
- In caso di guasto, l'alimentazione dovrà essere automaticamente interrotta mediante un interruttore di protezione RCCB al fine di proteggere l'utilizzatore dal contatto indiretto con tensioni elettriche pericolose.
- Predisporre un sistema idoneo di protezione dei contatti relé per proteggere il dispositivo da transitori di breve durata, se sono collegati i carichi induttivi.
- Prevedere un sezionatore vicino al dispositivo.
- Tutti i cavi devono disporre di isolamento idoneo ad almeno 250 VAC. IL rapporto di temperatura deve essere di almeno 90°C. (194°F).
- Proteggere l'alimentazione del dispositivo mediante fusibile.
- Il corpo del dispositivo deve essere collegato a terra per evitare la formazione di cariche elettrostatiche. Questo è particolarmente importante in applicazioni di trasporto pneumatico o con contenitori non metallici.

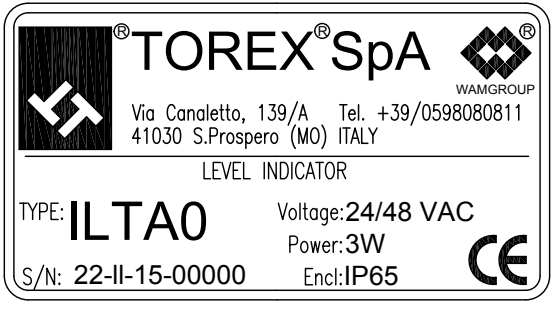


ELECTRICAL CONNECTIONS
The connection has to be carried out on the basis of the voltage indicated on the ID plate and according to the standards in force.
The wiring diagram is indicated on the electronic board (for AC devices) or inside the cover (for DC devices).

ELEKTRISCHE ANSCHLÜSSE
Der Anschluss muss aufgrund der auf dem Typenschild angegebenen Spannung und gemäß den geltenden Normen durchgeführt werden.
Das Schaltschema ist auf der elektronischen Karte (mit Wechselstrom betriebene Geräte) oder innerhalb der Abdeckung (mit Gleichstrom betriebene Geräte).



RACCORDEMENTS ELECTRIQUES
La connexion doit être effectuée conformément à la tension indiquée sur la plaque signalétique et conformément à la réglementation en vigueur. Le schéma de raccordement est montré sur la carte électronique (dispositifs alimentés en courant alternatif) ou à l'intérieur du couvercle (dispositifs alimentés en courant continu).



COLLEGAMENTI ELETTRICI
Il collegamento deve essere eseguito in accordo alla tensione riportata sulla targhetta identificativa ed in accordo alle normative vigenti.
Lo schema di connessione è riportato sulla scheda elettronica (dispositivi alimentati in corrente alternata) o sull'interno del coperchio (dispositivi in corrente continua).

TOR.ILT.--.C.A7.0917.4L 17

Version with rotation control, universal voltage
Version mit Rotationskontrolle, Universalspannung
Version avec contrôle rotation, tension universelle
Versione con controllo rotazione, tensione universale

Checking the rotation
Switching mode
When the unit is switched on and works normally (paddle spinning freely or paddle stopped by material) contact 5-8 is Normally Closed.

In case of:
- missing power supply
- problems on connections
- unit defect

the contact 5-8 will open.

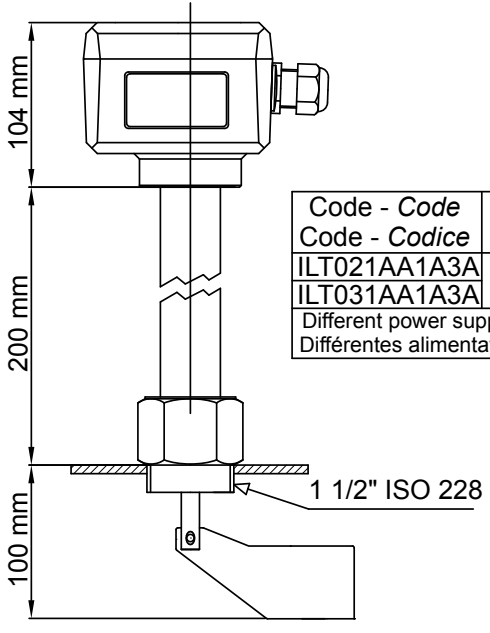
Rotationsprüfung
Einschalt-Modus
Wenn die Einheit eingeschaltet ist und normal funktioniert (das Paddel dreht sich unbehindert oder ist vom Material gestoppt), ist der Kontakt 5-8 ein Öffner.

Im Fall von:
- fehlender Spannungsversorgung,
- Problemen bei den Anschlüssen,
- Fehler der Einheit,

wird der Kontakt 5-8 öffnen.

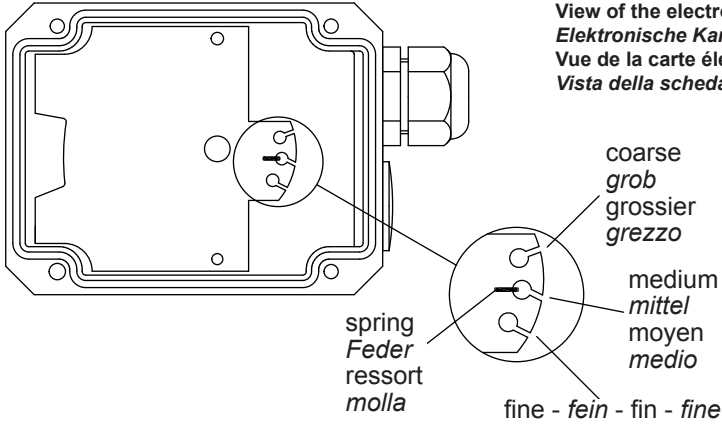
Contrôle de rotation
Mode de commutation
Lorsque l'équipement est mis en marche et fonctionne normalement (avec la palette en rotation libre ou bloquée par le matériau) le contact 5-8 est Normal fermé.

En cas de :
- panne d'électricité
- problèmes de connexion
- appareil défectueux



le contact 5-8 s'ouvre.

Controllo di rotazione
Modalità di commutazione
Quando l'unità é avviata e funziona normalmente (con la paletta in rotazione libera o bloccata dal materiale) il contatto 5-8 é Normale Chiuso.



In caso di:
- blackout
- problemi di connessione
- unità difettosa

il contatto 5-8 si aprirà.

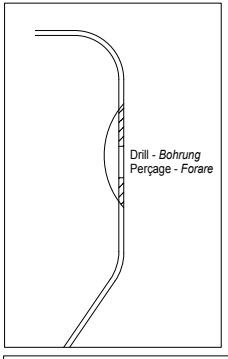
The spring is adjustable in 3 positions. It should be changed only if necessary.
Fine: for light material
Medium: suitable for nearly every material (factory setting)
Coarse: for very sticky material
The sping can be changed via a small plier

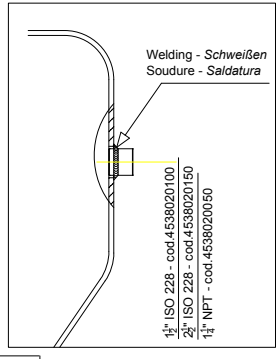
Die Feder ist in 3 Positionen einstellbar. Die Position sollte nur geändert werden, wenn dies erforderlich ist
Fein: für leichte Materialien
Mittel: für fast alle Materialien geeignet (Werkseinstellung)
Grob: für sehr klebriges/pappiges Material
Die Feder kann mit einer kleinen Zange gewechselt werden

Le ressort est réglable en 3 positions. Il ne doit être modifié que si cela est nécessaire
Fin : pour matériaux légers
Moyen : adapté pour presque tous les matériaux (réglage d'usine)
Grossier : pour matériaux très collants
Le ressort peut être modifié à l'aide de petites pinces

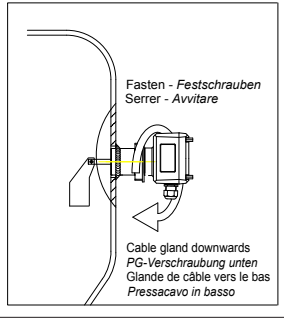
La molla è regolabile in 3 posizioni. Deve essere cambiata solo se necessario
Fine: per materiali leggeri
Medium: adatto per quasi ogni tipo di materiale (impostazione di fabbrica)
Grezzo: per il materiale molto appiccicoso
La posizione della molla può essere modificata tramite una piccola pinza.

Switching logic
Logischer Umschaltplan
Schéma logique de commutation
Schema logico di commutazione





The unit must be mounted with the threaded fitting on the container. It is possible to use a suitable sealing material (teflon tape) to fix and seal the unit: fasten the plastic bush in manually, do not use any tool.
The cable gland must be downwards in order to prevent dust/water from entering the casing.
It is not possible to turn the housing after fastening.
All electrical connections must be made according to the connection diagram: make sure the cable is sealed tightly inside the cable gland.



Die Einheit muss mit dem Gewindestück auf dem Behälter eingebaut werden. Es ist möglich, eine geeignete Dichtmasse zu verwenden (Band aus Teflon), um die Einheit zu befestigen oder abzudichten: die Buchse aus Kunststoff von Hand festschrauben, kein Werzkeug benutzen.
Um das Eintretten von Staub/Wasser innerhalb des Gehäuses zu vermeiden, muss die PG-Verschraubung nach unten zeigen. Es ist nicht möglich, das Gehäuse nach dem Festschrauben zu drehen.
Alle elektrischen Anschlüsse müssen gemäß dem Anschlussschema ausgeführt werden: sicherstellen, dass das Kabel innerhalb der PG-Verschraubung abgedichtet ist.

L'unité doit être installée avec le raccord fileté sur le conteneur. Vous pouvez utiliser un joint d'étanchéité adéquat (téflon) pour la fixation et l'étanchéité de l'unité: serrer la douille en plastique manuellement, n'utilisez pas d'outils. La glande de câble doit être positionnée vers le bas pour empêcher l'entrée d'eau ou de la poussière. ce n'est pas possible de tourner la carcasse après fixation.Toutes les connexions électriques doivent être effectuées selon le schéma de câblage: assurez-vous que le câble est fixé à l'intérieur de la glande de câble.

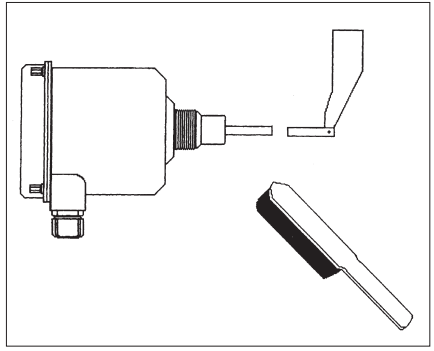
L'unità deve essere montata con il raccordo filettato sul contenitore. È possibile utilizzare un sigillante adatto (nastro teflon) per il fissaggio e la tenuta dell'unità: serrare manualmente la boccola di plastica, non utilizzare attrezzi.
Il pressacavo deve essere posizionato in basso per impedire l'entrata di acqua/polvere.
Non è possibile girare la carcassa dopo il fissaggio.
Tutte le connessioni elettriche devono essere eseguite secondo lo schema elettrico: assicurarsi che il cavo sia ben fissato all'interno del pressacavo.

BEFORE CARRYNG OUT ANY TYPE OF WORK ON THE MACHINE STOP IT AND DISCONNECT IT FROM ALL ELECTRIC SUPPLY SOURCES

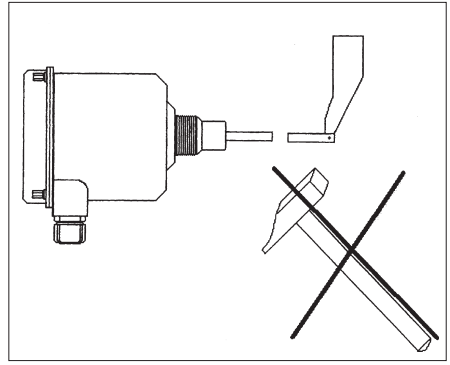
N.B.: Failure to observe these instructions can cause problems and make the warranty null and void.

VOR BEGINN DER WARTUNGSARBEITEN SICHERSTELLEN, DASS DIE MASCHINE UND DER HAUPTSCHALTER AUSGESCHALTET SIND.

N.B.: Die Nichtbeachtung der oben genannten Vorschriften kann zu Betriebsstörungen und zum Verfall der auf die maschine gewährten Garantie führen.



AVANT D' EFFECTUER UNE QUELCONQUE OPERATION SUR LA MACHINE, IL FAUT L' ARRETER ET LA DEBRANCHER DE TOUTES LES ALIMENTATIONS ELECTRIQUES.



N.B.: L' inobservation de ces instructions peut provoquer des problémes et invalider la garantie sur les machines fournies.

PRIMA DI ESEGUIRE QUALSIASI OPERAZIONE SULLA MACCHINA ARRESTARLA E SCOLLEGARE TUTTE LE ALIMENTAZIONI ELETTRICHE.

N.B.: Il non attenersi strettamente alle suddette istruzioni può causare dei problemi ed invalidare la garanzia sulle macchine fornite.

BUILD REMOVAL - *ANBACKUNGEN ENTFERNEN* - ENLEVER LES INCRUSTATIONS - *RIMOZIONE DELLE INCROSTAZIONI*

To scrap:	Verschrottung:	En cas de mise à décharge:	In caso di rottamazione:
When the machine's working life ends, remove the plastic parts (seal rings) and take them to specialised disposal centres. The remaining components can be sent to metal salvage centres.	Nach Ausbau der Maschine, Teile aus Kunststoff (Wellendichtringe) ausbauen und bei der entsprechenden Sammelstelle abgeben. Alle restlichen Teile können als Alteisen verschrottet werden.	A la fin de la vie de la machine; démonter les pièces en matière plastique (anneaux d'étanchéité) et les destiner aux déchetteries spécialisées; les parties restantes sont destinées à la récupération des matériaux ferreux.	A fine vita della macchina, smontare le parti in materiale plastico (anelli di tenuta) e destinarle agli appositi centri di raccolta; le restanti parti sono da destinare al recupero dei materiali ferrosi.
When scrapping the machine, bear in mind the different kinds of material used to fabricated it.	Bei der Entsorgung der Maschine muß die unterschiedliche Beschaffenheit der Werkstoffe berücksichtigt werden,	En cas de mise à la décharge il faut tenir compte de la diversification et de la qualité des matériaux.	In caso di demolizione considerare la diversificazione della qualità dei materiali.

Intelligent Drivesystems

SCREW CONVEYOR GEARMOTORS & SPEED REDUCERS

Durable & Premium Efficient Gear Units

G1129

NORD DRIVESYSTEMS

Screw Conveyor Package
Innovative Design

SCP - PRODUCT FEATURES

OPTIMIZED SEALING SYSTEM

- Dual Viton lip seals
- Grease impregnated packing seal
- Dual gap seals (excludes particles) – 0.03" gap
- Material evacuation ports
- Shaft material ditch
- Quadrilip™ sealing

MOUNTING

- Standard CEMA mounting
- Versatile flange – multiple bolt patterns
- 3-Hole tapered CEMA drive shaft
  - Easy mounting
  - Easy removal (less fretting – due to less material contact)
- Reduced bearing loads – tapered shaft allows for screw pipe misalignment
- Quick external removal feature

FLANGE

- Standard CEMA mounting
- High strength class 35 gray cast iron
- Versatile flange – multiple bolt patterns

HIGH EFFICIENCY

The NORD SCP design is extremely effective due to the direct coupled gearmotor or NEMA C-face input design. Belted input systems have significantly lower total drive performance. You can further increase the overall efficiency by applying the NORD "H" line of energy efficient motors.

UNICASE™

www.nord.com

Company Overview

Since 1965, NORD Gear has grown to global proportions on the strength of product performance, superior customer service, and intelligent solutions to a never ending variety of industrial challenges.

All mechanical and electrical drive components are available from NORD Gear. Our products cover the full range of drive equipment: helical in-line, Clincher™ shaft-mount, helical-bevel, and helical-worm gearboxes, motors and AC drives from 1/6 hp to 250 hp, with torques from 90 lb-in to 900,000 lb-in.

But NORD Gear does far more than manufacture the world's finest drive components. We provide our customers with optimum drive configurations for their specific purposes. NORD provides each and every one of them with truly complete and efficient systems at a price/quality ratio unmatched in today's fast-changing markets.

NORD Gear makes its wide range of products easily available through a global network that provides all customers with prompt delivery and expert support services to consistently exceed customer expectations. We are firmly committed to being totally responsive to the ideas and specifications of every customer, anywhere in the world.

High-Performance Motors & Brakemotors

NORD motors are designed to run cool for longer service life. Low rotor inertia and high starting torque allow peak performance in the most difficult applications for inverter and vector duty per NEMA MG 1-2006 Section 31.4.4.2 voltage spikes. Our motors are internationally accepted, conforming to North American NEMA MG 1 and international IEC electrical specifications. High performance options include brakes, encoders, and forced cooling fans.

Short, On-Time Delivery

As a NORD customer, you can rest assured that your order will be delivered on time. Because NORD has both decentralized assembly and manufacturing operations paired with a globally linked network, we have the ability to offer our customers:

- Fast, reliable responses
- Greater product versatility
- Shorter lead times
- Timely shipping
- Rapid delivery

Quality

Quality is assured at NORD's assembly and manufacturing facilities, based on ISO 9000 standards — from careful inspection of incoming materials to closely monitored machining operations, including gear cutting, turning, hardening & grinding as well as finishing & assembly.

NORD 911

Trouble? Just call 715-NORD-911 (in Canada, 905-796-3606). Emergency service is available 24 hours a day, 7 days a week. We'll answer your call, ship the parts, or build a unit and have it shipped directly to you to provide what you need, when you need it.

Manufacturing

NORD continually invests in research, manufacturing and automation technology. This is to ensure the highest possible quality at affordable prices. NORD invests heavily in our North American facilities as well as our factories around the world. Recent examples include expanding our Waunakee factory and adding numerous new large gear unit assembly cells. In our Glinde, Germany gear factory we added a state-of-the-art multi-chamber vacuum carburization system.

Global Availability

From Shanghai to Charlotte, and everywhere in-between, NORD reaches customers around the world. Deliveries, service, and product support are close at hand, regardless of your location.

Worldwide Standards

NORD products are designed and manufactured based on the latest North American and global standards.

Increased North American Presence

NORD covers North America with over 30 district offices and over 500 distributor branches. NORD operates manufacturing and assembly facilities in Waunakee, WI, Charlotte, NC, Corona, CA, Brampton, ON, and Monterrey, Mexico, resulting in an ever-increasing capacity in North America and giving our customers the shortest lead times in the industry.

Energy Efficiency

Lowering your operating costs is one of our greatest goals! NORD research and development focuses on energy efficiency, with gearboxes, motors, and frequency inverters designed for lower energy consumption. Our fully diverse line of in-line or right-angle units and motors has been developed to suit your needs.

Modular Design

NORD's modular design philosophy provides you with a competitive edge by allowing you to configure drive systems to exactly fit your applications.

More than 20,000,000 combinations of totally unique gearmotors and speed reducers are possible – assembled in-line or right-angle, mounted by foot or flange, featuring solid or hollow shafts with either metric or inch shaft extensions – to give you complete freedom to specify a drive solution that's perfect for you.

Benefits

- More output speeds
- More mounting arrangements/Greater flexibility
- Fewer gear stages/Lower cost
- Metric and inch products

NORD engineers stand ready to assist you with your custom applications. Most standard drives can be modified to your purposes, and custom designs can be developed for special applications.

Key Features

Standard NORD features

Modular Design

All NORD products including the SCP units are modular in design and provide extraordinary flexibility.The SCP unit may also be provided with a number of different input components including:

- Integral motor (Gearmotor)
- NEMA C-face motor adapter
- IEC B5 motor adapter
- Solid input shaft
- Custom motor adapter
  (servo, hydraulic motors, and more)

Large Ratio Per Gear Stage

NORD gear cutting technology allows for the production of gear sets with a higher maximum ratio per stage than many other speed reducer manufacturers. NORD commonly produces gear sets with a maximum ratio of between 9:1 and 10:1 per stage. This allows for double reduction gear units with a maximum ratio between 72:1 and 100:1. Most speed reducer manufacturer's can only produce single-stage reduction of between 5:1 and 6:1. This means a two-stage reducer with a maximum reduction of about 25:1 to 35:1. NORD can often provide a two-stage reducer when most companies must provide three-stage units. The same situation applies to three, four and higher gear stages. This allows NORD to provide superior value and performance in many conditions.

Benefits

- Better value
- Higher efficiency
- Quieter operation
- Lower weight
- Longer life

AUTOVENT™

The AUTOVENT™ prevents bearing damage by blocking entry of foreign material (water, dust, corrosives, etc.) through the breather. A ball and spring check valve opens at approximately 2 psi during operation and closes tightly when the gearbox cools, producing a slightly negative pressure that ensures the valve seals tight. This keeps contaminants out of the oil to maintain proper oil cleanliness reducing contamination, foaming and oxidation. The AUTOVENT™ is perfect for humid conditions, washdown applications, and dusty environments.

Benefits

- Cleaner gearbox oil
- Extended lubrication life
- Longer-lasting seals, gears, and bearings

High-Quality Gearing (Infinite Life Design)

NORD continually invests in state-of-the-art gear production equipment and in gear research. This allows us to produce exceptionally high quality gears.

Benefits

- Designed & manufactured up to AGMA CLASS 13
- Infinite design life
- Case-hardened steel
- Exceptional hardness: 58 Rc minimum
- High-speed gears are ground;
  low speed gears are skive hobbed
- 275% momentary overload capacity
- Low noise
- Low maintenance

Factory Oil Filled

All SCP units are filled at the factory with the proper quantity and type of lubrication. Oil fill before shipping prevents damage from dry start-ups.

Benefits

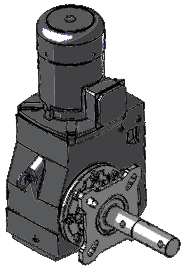
- No need for filling on-site
- Ensures proper oil grade and fill level

NORD High-Performance Motors & Options

NORD motors are designed to run cool for producing longer service life. Low rotor inertia and high starting torque allow peak performance in the most difficult applications for inverter and vector duty per NEMA MG 1-2006 Section 31.4.4.2 voltage spikes. Our motors are internationally accepted, conforming to North American NEMA MG 1 and international IEC electrical specifications. High performance options include brakes, encoders, and forced cooling fans.

Screw Conveyor Package Overview

NORD has developed a unique class of high performance right-angle speed reducers. The SCP are available as gearmotors and speed reducers with many mounting options. The SCP units provide high performance right-angle helical-bevel gear units at the cost effectiveness of a single worm system.



SCP Clincher™ Gear Units (76 - 113)

SK 1282 SCP	SK 1382 SCP
SK 2282 SCP	SK 2382 SCP
SK 3282 SCP	SK 3382 SCP
SK 4282 SCP	SK 4382 SCP

SK 6282 SCP	SK 6382 SCP

SCP Bevel Gear Units (118)

SK 9012.1 SCP	SK 9013.1 SCP
SK 9022.1 SCP	SK 9023.1 SCP
SK 9032.1 SCP	SK 9033.1 SCP
SK 9042.1 SCP	SK 9043.1 SCP
SK 9052.1 SCP	SK 9053.1 SCP

Please note that when ordering an SCP unit with a bevel gearbox that the lead times are slightly longer due to the extra manufacturing involved on this specialty product.

Customer Benefits

Simplicity - The NORD SCP screw conveyor package eliminates the need for costly separate v-belt drives by directly coupling their motors to the C-face reducer. More space savings is also possible using an integral gearmotor with the SCP package.

- Reduced cost
- Reduced installation time
- No belt maintenance or guarding
- Space savings
- Higher efficiency
- More transferred torque

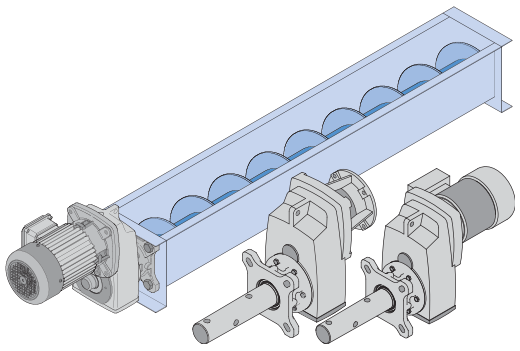
UNICASE™ Design

NORD heavy-duty, one-piece housings are precisely machined to meticulous standards. Internal reinforcements further increase strength and rigidity. All bearings and seal seats are contained within the casting, eliminating splits or bolt-on carriers that can weaken the housing and allow oil leakage. Bores and mounting faces are machined in one step, producing extrememly precise tolerances – thus ensuring accurate positioning of gear teeth, bearings and seals, and longer life for all components.

High-Quality Gearing (Infinite Life Design)

NORD continually invests in state-of-the-art gear production equipment and in gear research. This allows us to produce exceptionally high quality gears.

Benefits



- Designed and manufactured up to AGMA CLASS 13
- Infinite design life
- Case-hardened steel
- Exceptional hardness: 58 Rc minimum
- High-speed gears are ground; low speed gears are skive hobbed
- 275% momentary overload capacity
- Low noise
- Low maintenance

QUADRILIP™ Sealing

The QUADRILIP™ system has four components for sealing lubricant inside, and contaminants outside, the speed reducer. The system includes a double lip seal, single lip seal and greasepack barrier (grease lip). Furthermore, the shaft seal area is super-finished.

Benefits

- Superior protection against leaks
- Long seal life
- Improved protection against contaminants
- Improved speed reducer life
- Reduced maintenance requirements & costs

Key Features

SCP - Product Features

NORD offers a unique class of high performance screw conveyor drives. The NORD SCP line is based upon the premium efficient CLINCHER™ gear units. The SCP series of screw conveyor drives offers superior durability in the most severe load and service conditions. The SCP system may also be provided as right-angle helical-bevel gear drives.

Optimized Sealing System

- **❶ Dual Fluropolymer lip seals**
  The SCP mounting flanges contains dual Fluropolymer seals to provide improved sealing. The Fluropolymer seals provide a high degree of chemical and mechanical protection.
- **❷ Dual gap seals (excludes particles) – 0.03" gap**
  The SCP mounting flange and CEMA drive shaft are designed to provide a mechanical sealing device referred to as a gap seal. The flange owns a clearance of 0.03" at two locations on the shaft. This forms a mechanical block to large particles and prevents their entrance into the gear unit.
- **❸ Shaft material ditch**
  Should any material penetrate the fluoropolymer seals, gap seals and greased packing felt seals, the shaft material ditch provides a material gravity break to divert anything that is working its way down the shaft towards the inside of the gearbox.
- **❹ Greased packing felt seal**
  Provides protection for small objects. If materials work their way past the first fluropolymer lip seal and gap seal it will be trapped within the grease felt sealing ring.
- **❺ Material evacuation ports**
  Provides an exit for any foreign material that infiltrates the external sealing system. Also provides a way to clean out the sealing system.
- **❻ QUADRILIP™ sealing**
  Please see page 5 for details

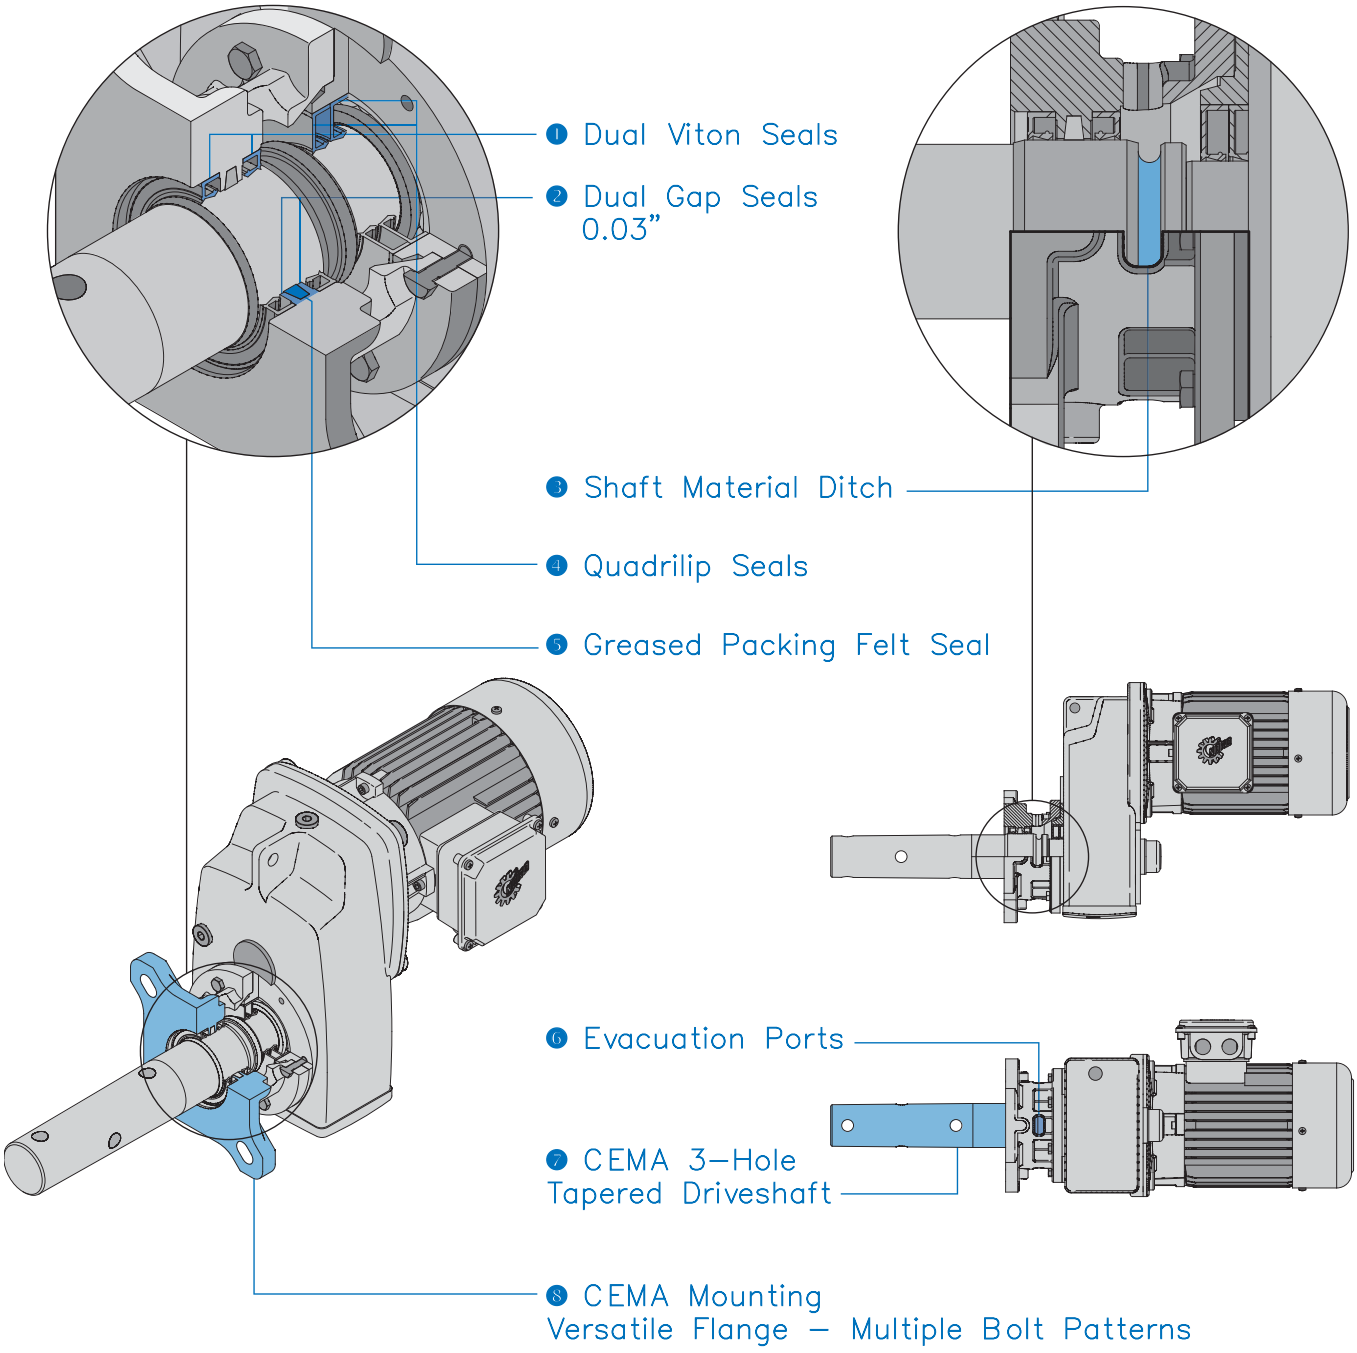
Mounting

- **Standard CEMA mounting**
  The NORD SCP drives adhere to the CEMA standard mounting dimensions.
- **❼ 3-Hole tapered CEMA drive shaft**
  The NORD SCP CEMA drive shaft is a standard three hole shaft. This allows for mounting to either 2-bolt or 3-bolt connections. The drive shaft is tapered for easier mounting and removal. The taper also reduces shaft loading due to misalignments.
- **Easy mounting**
  The NORD SCP drive is easily mounted into the screw pipe. The taper shaft acts as a guide in assembling the drive shaft into the screw pipe.
- **Easy Removal** -
  There is less fretting due to less material contact.
- **Reduced bearing loads**
  Taper allows for screw pipe misalignment.
- **Quick external removal feature** -
  The SCP drive can be easily removed from the screw pipe in two ways. First is the conventional removal of the complete drive and shaft. Unbolt the mounting flange from the trough and remove the cross bolts from the pipe and shaft. After this is done the drive may be removed. This requires access to inside of the screw pipe which is not always possible.

  The Second way to remove the drive without screw pipe access by unbolting the SCP mounting flange from the drive and removing the drive, leaving the flange and drive shaft attached to the screw pipe.

Flange

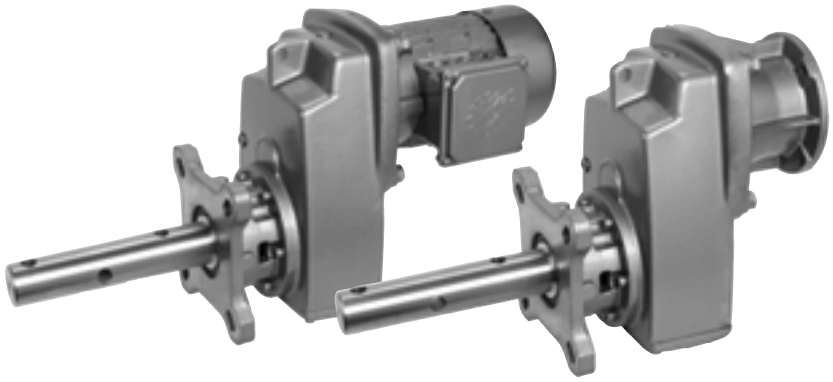
- **Standard CEMA mounting**
  The NORD SCP drives adhere to the CEMA standard mounting dimensions.
- **High strength class 35 gray cast iron**
  The SCP drives and screw conveyor flanges are made form high strength class 35 gray cast iron with a minimum tensile strength of 35,000psi.
- **❽ Versatile flange – multiple bolt patterns**
  The SCP mounting flanges often accommodate more that one CEMA bolt pattern. This allows one drive to be used on different screw sizes simply by switching out the drive shaft.



High Efficiency

The NORD SCP design is extremely efficient due to the direct coupled gearmotor or NEMA C-face input design. Belted input systems have scientifically lower total drive efficiency. Efficiency may be further increased by using the NORD "H" line of energy efficient motors.

Options



- Grease purge-able seal (PC) - see page 16
- Stainless steel CEMA drive shaft (SM5) - See page 16

Gearbox Selection

A number of factors are considered when selecting a gear unit, including gearbox rating, service factor, speed and speed variation, horsepower, thermal capacity, ratio, physical size, ambient conditions and cost. Below are some guideline steps to help aid in the gear unit selection.

1. Determine the speed and/or gear ratio
2. Determine the required power or torque
3. Determine Service Factor
4. Determine CEMA Shaft Diameter
5. Select the basic gearbox type and input
6. Determine the required mounting position
7. Select options
8. Checks – thrust load, NEMA moto weight, thermal considerations, & other application considerations

1. Speed and Gear Ratio

The first step in selecting a gear unit is determining the final output speed or speeds you need. This speed is normally described in revolutions per minute (rpm). This output speed or speeds is determined by the input speed to the gear unit divided by its gear ratio. Their relationship is described by the following formulas.

$$\text{i (gear ratio)} = \frac{\text{Input speed [rpm]}}{\text{Output speed [rpm]}}$$

$$\text{Output speed [rpm]} = \frac{\text{Input speed [rpm]}}{\text{i (gear ratio)}}$$

To specify a gear unit, you can identify either gear ratio needed or the output speed (rpm) if the input speed is known.

2. Power and Torque

The second step for selecting a gear unit is the required power or torque needed to power the load. Torque in this catalog is normally expressed in pound-inches [lb-in].

$$\text{Power [hp]} = \frac{\text{Torque [lb-in] x speed [rpm]}}{63025}$$

$$\text{Torque [lb-in]} = \frac{\text{Power [hp] x 63025}}{\text{speed [rpm]}}$$

For a proper selection you must ensure that the motor or other prime mover can produce enough torque or power and that the gear unit has adequate torque or power capacity.

To specify a gear unit you can identify either torque or power.

3. Service Factor or Service Class

In addition to power or torque, service factor must also be considered. A service factor is essentially the ratio of extra capacity in a gear unit compared to the power or torque that is needed to run that application. The goal of selecting a gear unit with extra capacity (service factor) is to provide adequate service life in operation.

One reason to apply a larger service factor is if a unit operates more hours per day. If a unit runs 24 hours per day it should normally have a higher service factor than a unit that runs 8 hours per day if you expect the same calendar life.

A second reason for applying a larger service factor is to cope with a more difficult application. Even if it takes the same power and speed to operate a rock crusher as a fan, the rock crusher needs a stronger gearbox (higher service factor) to give the same calendar operating life as the gear unit powering the fan.

The real question is how to determine the proper service factor for a gear unit in an application. Following are four possible methods.

Customer or User Specification

Many customers will have their own service factor guidelines or specifications.

AGMA Service Factoring

American Gear Manufacturers Association (AGMA) publishes lists of recommended service factors for different applications. These service factor recommendations have been determined from the experience of many gear manufactures and are in AGMA standard 6010.

AGMA Service Classes

American Gear Manufactures Association (AGMA) has another method for selecting gear units service factors. AGMA standard 6009 lists many applications by a service class (I, II, III) with class I being the simplest applications and class III being the hardest. These application service classes are associated with a range of service factors by the following table.

AGMA Service Class	Service Factor
I	1.00 to 1.39
II	1.40 to 1.99
III	2.00 and above

In the gearmotors selection table each unit is also classified by an AGMA service class.

NORD Mass Acceleration Service Factoring

NORD often uses a calculation based system to properly assign a service factor. This system considers hours of operation per day, the severity of the application and the number of times the equipment is cycled.

AGMA Class of Service

This table has been developed from the collective experience of gearbox and screw conveyor manufacturers and users of speed reducers in typical applications. Maintaining speed reducer Service Factor (S.F.) provides compensation for non-measurable operating loads and daily length of time in service.

The speed reducer selected should have a service factor greater than or equal to service factor suggested for the particular application. This will result in trouble free operation for a reasonable period of time. Insufficient service factor inevitably ends with premature failure of the speed reducer. Note: Each screw conveyor manufacturer determines the proper "margin of safety" for their type of application and equipment.

Operating conditions	Service Factor		
	up to 3 hrs/day	3-10 hrs/day	10-24 hrs/day
Uniformly loaded or fed	I	I	II
Heavy duty	I	II	II

from AGMA Standard 6009-A00

4. CEMA Drive Shaft Size

Available CEMA Shaft Sizes

- 1 - 1/2"
- 2"
- 2 - 7/16"
- 3"
- 3 - 7/16"

CEMA Drive Shaft Connection Strength

For some selections the torque is limited by the CEMA drive shaft connection. It is important to consider the torque limits following when making a selection.

Torque limits - CEMA 350-2003 (Table 3-5) excerpts

Shaft size [in]	2-Bolt [lb-in]	3-Bolt [lb-in]
1 - 1/2	3,070	3,070
2	7,600	7,600
2 - 7/16	9,270	13,900
3	15,400	23,310
3 - 7/16	21,800	32,700

5. Gearbox Input

NORD's modular design allows for a number of different inputs to be added to NORD reducers including:

- Integral motor
- NEMA-C and IEC motor adapter
- Solid input shaft

6. Mounting Position

The gearbox mounting position is an important and often overlooked specification. The mounting position determines how much oil the gear reducer requires, in addition to determining the position of the oil drain, oil fill and vent on the gear drive. NORD offers six basic mounting positions. If your application requires a variation from the six basic mounting positions, please contact NORD.

7. Options

NORD offers a number of mechanical, protective, paint and lubrication options for gear reducers and motors. Please see page 16 for gear unit options and refer to the motor section for motor options.

8. Checks

Thrust Loads (Axial)

Loads that are directed towards or away from the gearbox along the axis of the shaft are called thrust or axial loads. Output shaft thrust capacity [F_A] can be found in the gearmotor rating tables. Thrust load capacities should not exceed the values listed in the tables to ensure long bearing life. Contact NORD for combination loads or a more exact examination of the application.

NEMA C-face Motor Weight Limits

When mounting a motor to a NORD NEMA C-face motor adapter it is important to consider the motor's weight. Following is a table that includes the maximum motor weight the NEMA adapter can support. If the motor exceeds the listed weight it must be externally supported. When a C-face mounted motor is externally supported care must be taken to ensure that the support system does not impose additional pre-loads on the NEMA motor adapter.

NEMA Weights

Motor FRAME	56C	143TC	145TC	182TC
Max Weight [lb]	66	88	110	130
Motor FRAME	**184TC**	**210TC**		
Max Weight [lb]	175	220		

⚠ GENERAL WARNINGS & CAUTIONS ⚠

Applications with risk of personal injury should be reviewed together with NORD. Examples of these are hoist, lifts or other applications where people may be at risk.

NEMA and IEC Adapters

NEMA/IEC adapter have additional shaft coupling and additional bearing seats compared to integral motors so there are higher no-load losses with NEMA or IEC adapters. We recommend mounting the motor directly, since it offers both technical and cost advantages.

NEMA and IEC adapters used in hoist, lifts and other applications with danger of personal injury should be reviewed together with NORD.

NEMA C-Face Adapter Capacity

The NEMA adapters are designed to handle the torques produced by the standard NEMA power assignment at 4-pole (1800 rpm) motor speeds. If a larger motor power than the power listed below is used, NORD should be consulted. Also if a NEMA adapter is being used for other than an AC induction motor NORD should be consulted.

Adapter	Max Power [hp]
56C	1
140TC	2
180TC	5
210TC	10

External Installation, Tropical Use

Gearboxes installed outside, in damp rooms, or used in the tropics may require special seals and anti-corrosion options. Please contact NORD for application assistance.

Special conditions

If special environmental or other conditions exist in transit, storage or operation these need to be considered in the unit selection. Special conditions may include (but are not limited to):

- Exposure to aggressive corrosive materials (contaminated air, gasses, acids, bases, salts, etc.)
- Very high relative humidity
- Direct contact between the motor and liquid
- Material build-up on the gear unit or motor (dirt, dust, sand, etc.)
- High atmospheric pressure
- Radiation
- Extreme temperatures, high, low or large temperature changes
- High vibration, acceleration, shocks or impacts
- Other abnormal conditions

Gear Reducer Ratings

The permissible continuous power limit of gear reducers is limited by both the mechanical rating and the thermal rating. The mechanical rating depends upon the material strength of the gear reducer's gears, bearings, housing, shafts, etc. The mechanical input power limit to the reducer is also a function of the mechanical power rating divided by the relevant reducer service factor.

The thermal rating or thermal limit depends upon the amount of heat generated within the reducer and is influenced by a variety of factors including:

- Churning or splashing losses in the lubricant which depend upon reducer type, ratio, input style, mounting position or oil fill-level, and the circumferential travel velocities of the gear wheels.
- The actual speed and load conditions. These factors determine load-depedent losses in the gear areas and frictional losses in the gear, bearing & seal areas.
- Ambient Conditions:
  - Ambient Temperature.
  - Amount of free air circulation around the drive.
  - Possible near-by heat sources.
  - Heat dissipation or the ability of the reducer to transfer heat through the housing, shafts, and the mating sub-structure or mounting surface.

Storage Before Installation

The gear units and motors should be stored in a dry area before they are to be installed. Special measures are required for longer storage. Please request long term storage instructions from NORD Gear or see page 17.

Observing the Reducer's Thermal Limit

When to Contact NORD

Through computer program analysis NORD can evaluate application conditions and the impact they have on a reducer's thermal capacity.

When applying SCP gear units of case size SK 6282 & larger, consult NORD if any two or more of the following conditions apply:

- Gear ratio, $i_{total} \leq 24:1$
- Input speed, $n_1 > 1800$
- Vertical positioning (mounting position M2 or M4)
- Input configuration: NEMA C-face, IEC, servo adapter or solid-shaft input (Type-W)
- An elevated ambient temperature ≥ 86° F (30 °C)

Dangers of Reducer Overheating

The following problems may result when the reducer's thermal capacity or maximum oil sump temperatures are exceeded:

- Lubrication oxidation, breakdown & deterioration.
- A decrease in lubrication viscosity & film thickness.
- Loss of critical bearing and gear clearances required for proper lubrication.
- Increased contact pressures and increased operating temperatures in the critical load zones of the gearing and bearings.
- An increased possibility for metal-to-metal contact and premature component wear.
- A significant reduction in the lubricant's ability to prevent scuffing, pitting, and in extreme cases galling or welding.

Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation, depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85 °C (176-185 °F)	95 °C (203 °F)
Synthetic	105 °C (220 ° F)	107 ° C (225 ° F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

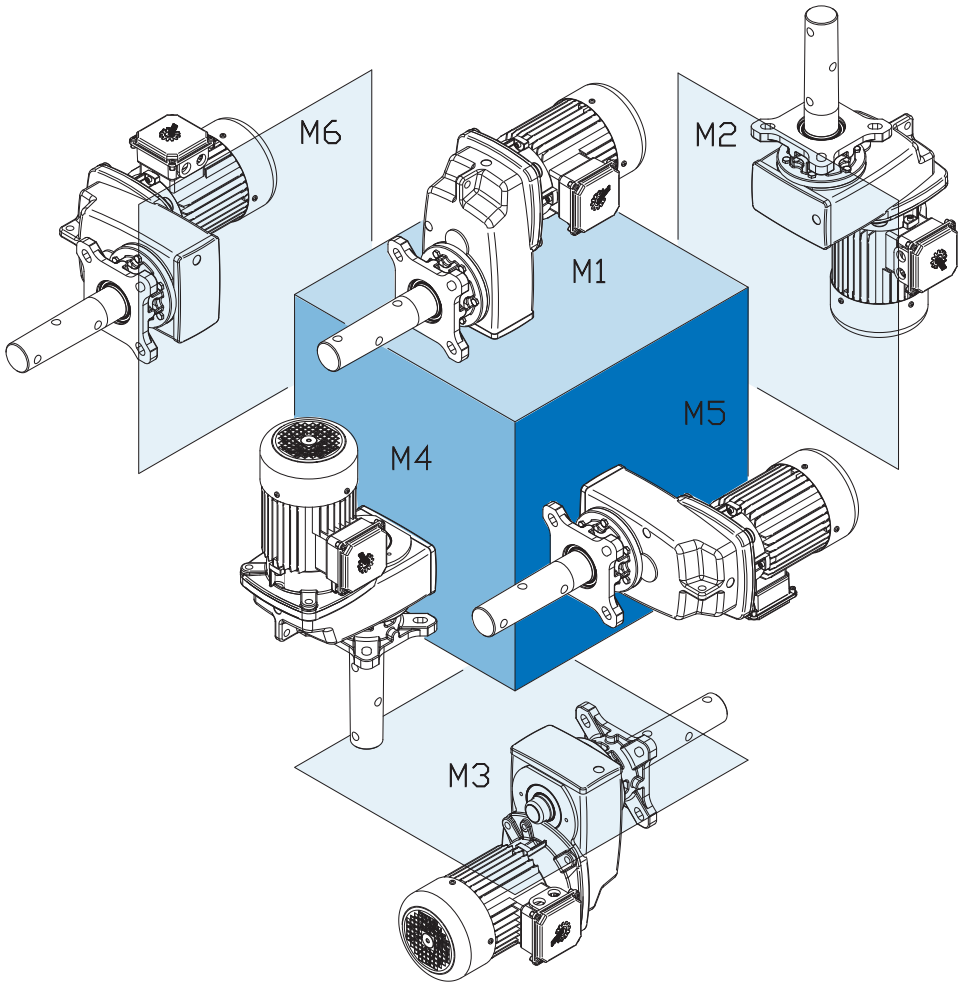
Measures to Expand the Application Range

There are a variety of measures that may be taken in order to protect against thermal overload and expand the application range of the gear reducer. Common examples include the following:

- Recommending a change in lubrication viscosity and/or a specific synthetic lubricant type.
- Applying high-temperature seals.
- Increasing air flow around the gear unit.
- Shielding or protecting the reducer from high heat sources.
- Considering an integral motor instead of the bolt-on input assembly covers. In many cases the motor fan will substantially increase air-flow around the gear unit.

Mounting Positions

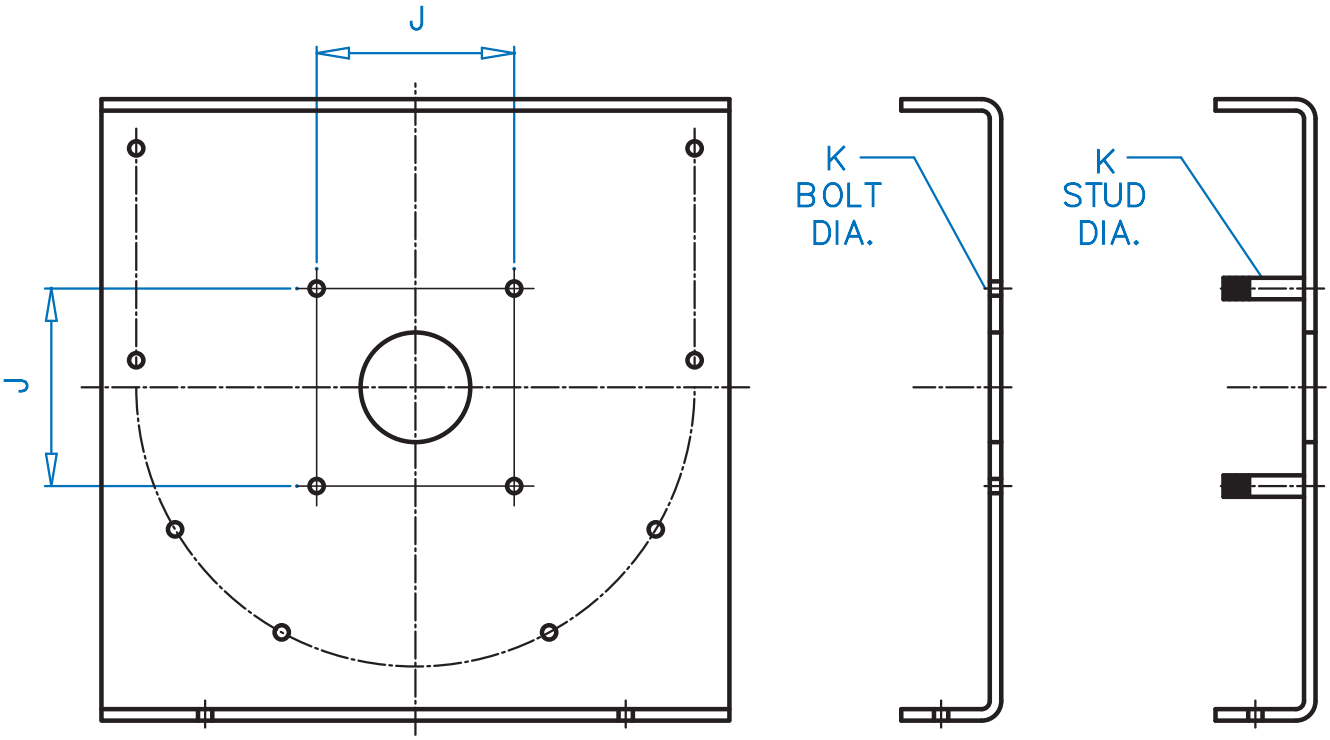
The reducer mounting position determines the approximate oil fill level and the appropriate vent location. In some cases the mounting position may dictate possible variation in final reducer assembly. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering.



New Mounting Position System

NORD is in the processes of incorporating a new mounting position systems. Historically the NORD mounting position system was based on international motor standards. NORD is changing in an effort to simplify the system. The new system is based on the six sides of a cube. Below is a cross reference between the old and new mounting position codes.

Mounting Position Cross Reference Table



New	M1	M2	M3	M4	M5	M6
Old	B3, B5	V3, V6	B8, B5I	V1, V5	B5II, B6	B7, B5III

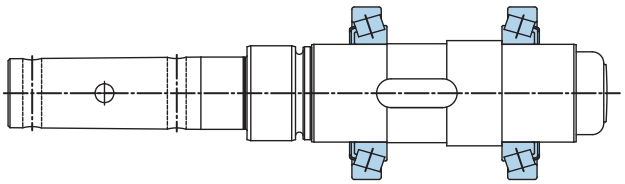
PC	Grease Purge Seal	16
SM5	Stainless steel output shaft	16
VL	Heavy Duty Bearings	16
none	Special Drain Plugs	17
none	Paint coatings	18



Heavy Duty Output Bearings (VL)

Replacing standard output bearings with heavy-duty versions will increase the external load carrying capacity of the speed reducer. Increased capacity in either or both overhung (radial) or thrust (axial) loading insures that premature bearing failure will not occur due to high stresses in the bearing elements. The increased bearing capacity will also keep the speed reducer as small as possible by not having to select the next larger case size in order to handle the bearing loads. If increased bearing life is desired, larger bearings will reduce the relative stress on the bearings and increase B10 bearing life.

Standard Bearing

Heavy Duty Bearings (VL)-option

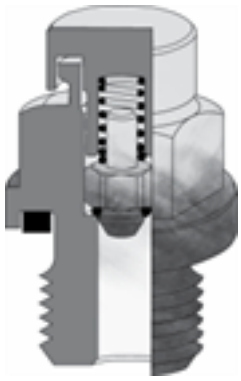
Grease Purge Seal (PC)

The SCP screw conveyor package has an optional grease purgeable sealing system. The design replaces the greased packed felt packing seal with a grease filled cavity. The system also includes a grease nipple and relief to allow the seal to be flushed with fresh grease.

Stainless Steel Output Shaft (SM5)

Output shafts made from stainless steel are available and are frequently used in food, pharmaceutical, and washdown applications. In some cases stainless steel solid input shafts may also be provided.

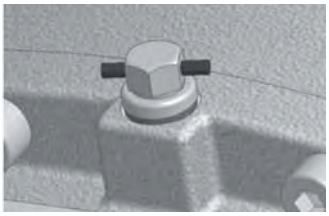
Oil Expansion Chamber (OA)



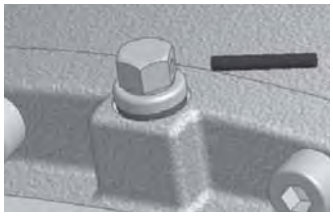
Oil expansion chambers are available for most reducers. These chambers allow for expansion of the oil-air mix in the reducer that can occur during operation. This expansion chamber is similar to a car radiator over-flow chamber.

Oil Sight Glass (OSG)

The oil sight glass provides a visible oil level indication on the reducer. The sight glass replaces the standard steel fill plug and consists of a sealed clear porthole centered in the middle of a brass plug. The sight glass allows for quick oil level and color inspection.



Autovent™ (DR)



The Autovent™ prevents entry of foreign material, such as water, dust, corrosives, etc… and is perfect for washdown and dusty environments. The Autovent™ is a ball and spring check valve that opens at 2 psi and during operation and closes tightly when the gearbox cools. The Autovent™ is standard on all vented NORD reducers. Some of the benefits are cleaner gearbox oil, extended lubrication life and longer lasting seals, gears, and bearings.

Open Vent (OV)

An open vent may be optionally supplied on NORD reducers. The open vent allows for air pressure differences between the inner space of the reducer and the atmosphere. This open vent will be closed upon delivery to prevent oil leakage. Before the reducer is put in service the open vent should be activated by removing the sealing plug.

Sealed vent

Activated vent

Filtered Vent (FV)

NORD offers a filtered vent, which allows gases to permeate, but does not allow dust and debris to pass through the vent.

Magnetic Drain Plug (MDP)

Magnetic drain plugs attract and hold ferrous metal particles that may circulate inside the reducer's lubrication system. These potentially abrasive particles may cause excessive wear in the reducer if they remain circulating. An increase of collected material may be a warning sign of future problems.

Special Drain Plugs

NORD oil drain valves are offered to make draining the oil from the gearbox clean and easy. The drain hose needs to be supplied by the customer. The hose fittings are offered in either 90° or straight to accommodate the user.

A brass drain valve is threaded into the existing oil drain port of the gearbox. The spring valve is closed using a rubber o-ring. When the hose fitting is threaded into the drain valve, the spring valve is pushed open and allows oil to drain. When the hose fitting is removed, the drain valve closes. A brass, threaded cap is supplied to cover the drain valve when not in use.

Additional Drain Plug Hole (ADP)

NORD can add an additional drain hole to the reducer housing for a small surcharge if required for special oil plumbing needs.

Long Term Storage (LL)

Speed reducers are frequently put in storage prior to installation for long periods of time and in some cases exposed to the elements. NORD's long term storage option protects the unit from moisture or corrosion by coating all unpainted surfaces with a dry, transparent, durable waxy film. Once installation is necessary this waxy film can be easily removed with a commercial de-greaser or petroleum solvent. If possible the store room should be vented and dry, with room temperatures between 23°F and 104 °F (-5 °C and 40 °C).

Paint Coatings

NORD's standard paint coating is a two component, aliphatic polyurethane finish contaning 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications.

Advantages of NORD's stainless steel two component polyurethane:

- Excellent adhesion to cast iron, aluminum, steel, and plastics
- Excellent corrosion resistance
- Excellent chemical resistance
- Excellent gloss and color retention
- Suitable for indoor and outdoor exposure
- Nonporous and excellent abrasion resistance
- USDA compliant

NORD also offers a variety of severe duty paint coatings that provide a high level of protection against water and severe environments both indoors and outdoors. NSD+ (NORD Severe Duty) consists of a primer undercoat and a stainless steel polyurethane topcoat. For the most demanding environments, NORD offers NSD-X3 (NORD Severe Duty triple coated) which consists of a primer undercoat, stainless steel polyurethane coating, and a clear topcoat. Paint coatings are also available in alternate colors as seen in the table below.

Finish	Color	Coating	Use
Standard (stainless steel paint)	Stainless steel silver (Gray)	1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment

Special colors and paints possible please contact NORD with your specific requirements.

Input

NORD's modular design allows for many different types of inputs to be added to gear reducers. All inputs are bolt on and include machined pilots to ensure simple and accurate assembly. NORD offers the following different input types:

- Integral motor
- NEMA C-face motor adapter
- IEC B5 motor adapter
- Solid input shaft
- Servo motor adapter
- Top mount motor platform
- Custom mounting interface

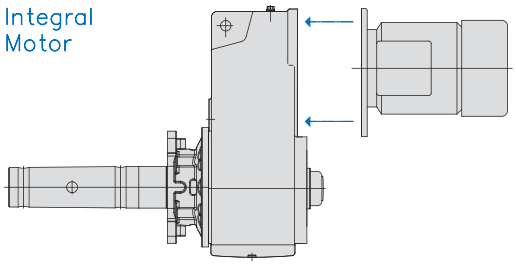
Example Nomenclature

SK3282SCP - W

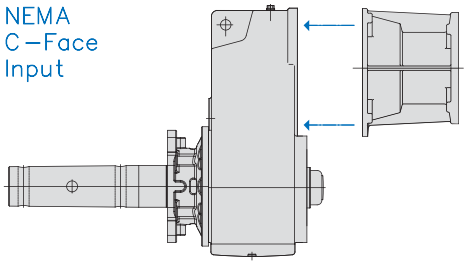
- **W** — Solid Input Shaft
- **SK3282SCP** — Gear unit

SCP Gear unit with solid input shaft.

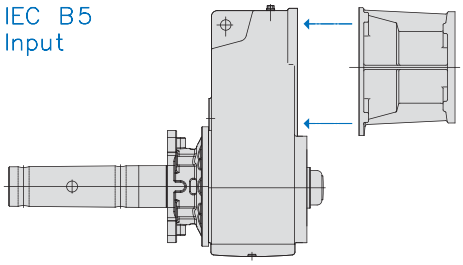
SK3282SCP -140TC



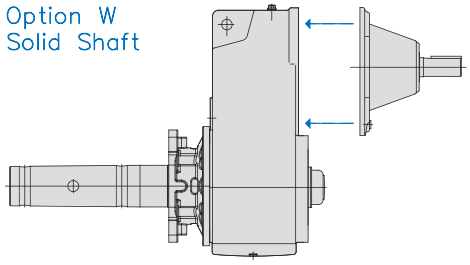
- **140TC** — NEMA 140 TC Motor Adaptor
- **SK3282SCP** — Gear unit



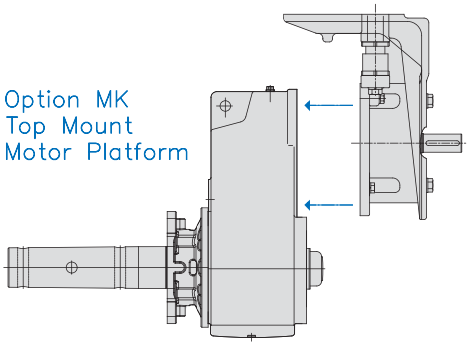
SCP Gear unit to recieve standard NEMA C-Face motor adaptor.



SK3282SCP - IEC80



- **IEC80** — IEC 80 B5 Motor Adaptor
- **SK3282SCP** — Gear unit



SCP Gear unit to recieve standard metric IEC B5 flange mount motor adaptor.

Integral Motors

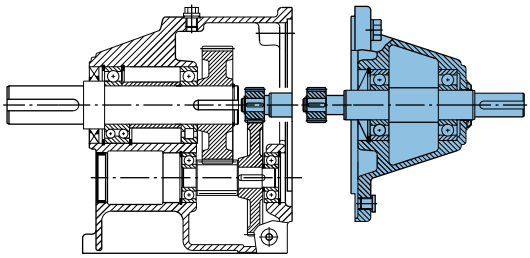
NORD provides integral motors that mount directly to the gearbox. Integral motor mounting eliminates the need for costly v-belts or sheaves and directly couples the motor to the reducer. This also results in a dimensionally compact one-piece package.

NORD high performance integral motors are available in many operational voltages, are inverter duty rated, and offer many valuable options including energy efficient motors and power off brakes. For more information on integral motors, see the motor section found on page 119.

NEMA C-Face Motor Adapter

NEMA C-face motor adapters allow for easy installation and removal of industry standard C-face motors. NEMA C-face motor adapters consist of a coupling and an adapter housing that connects the motor to the gear reducer. Gear units with NEMA C-face adapters are commonly used where applications require specialized motors or the user wants to easily find a replacement motor if failure occurs. NORD also offers high performance NEMA C-face motors and brakemotors, that can be factory installed to the motor adapter.

NORD motor adapters deliver nearly 100% of the torque generated by the motor and can be used from -13°F (-25°C) to 212°F (100°C). Most motor adapters have specially sealed bearings that are lubricated for life.



The maximum input power of a gear unit with a NEMA C-face adapter is generally limited by the power rating of the standard NEMA C-face motor size. The power limit is indicated in the ratings table for a standard 4-pole 1750 rpm motor. In some cases the gearbox limit ($T2_{max}$) will be the limiting capacity. Both the NEMA adapter limit and the gearbox torque limit must be considered. If the speeds required exceed those included in the performance and speed reduction tables please contact NORD.

IEC Motor Adapter

IEC motor adapters allow for easy installation and removal of industry standard IEC motors according to DIN 42677. The IEC adapter is very similar to the NEMA C-face adapter in construction. The maximum input power is generally limited by the IEC motor size. For ratings and dimensions, please consult NORDS metric catalogs that may be found online at www.nord.com under the document section.

Solid Input Shaft

Designed to mount couplings, sheaves or sprockets, which transfer torque from the prime mover. The input shaft is made from ANSI 1045 or stronger material and is dimensioned with long keys according to ANSI B17 standards. The maximum gearbox input power rating is indicated in the speed reducer performance tables.

Servo Motor Adapter

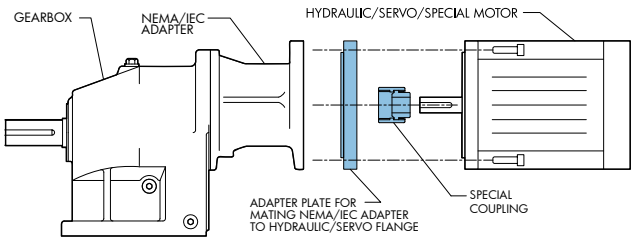
Servo motor adapters are designed to handle the highly dynamic capabilities of servo motors. NORD servo motor adapters have a square mounting flange and are available with either a keyed (SEP) or a key-less (SEK) coupling. They are suitable for speeds up to 3000 rpm and the high torques produced by servo motors. Higher input speeds can be handled for a short duration and the bearings and input shaft are designed to cope with the high torque loads.

Top Motor Mount Platform

Some applications require the motor to be mounted on top of the reducer with a belt drive connection from the motor to the reducer. MK platforms can be bolted-on to all UNICASE™ gearboxes in any mounting position and offer the following advantages:

- Light, vibration inhibiting aluminum construction
- Corrosion resistant, easily adjustable mechanism for belt tensioning
- Corrosion resistant fasteners
- Available in all mounting positions
- Can be swung 90° to the right or left
- Platform has multiple bolt patterns for various motors

Motor platforms are pre-drilled and tapped to bolt on a standard NEMA footed motor. Each platform has belt tension adjusters. Motor, belts, sheaves and guard are supplied by the customer.



Custom Mounting Interface

NORD can provide custom input adapters typically consisting of a special adapter plate and special coupling to mount non-standard dimensioned motors or other devices.

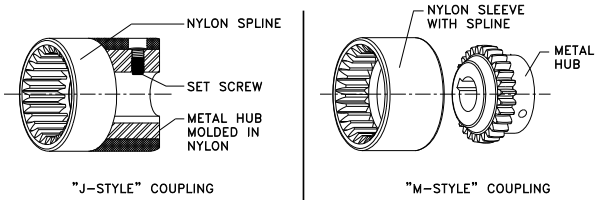
When a custom input adapter is required, special attention needs to be given for each application to be sure the customer receives the performance that is necessary. The following information is required:

- Motor Dimensional Drawing
- Motor Weight
- Motor performance specifications, including torque, horsepower and operating speed ranges.

NORD engineers will review the performance requirements and make a unit selection based on given parameters.

Vertical Motor Adapter Applications

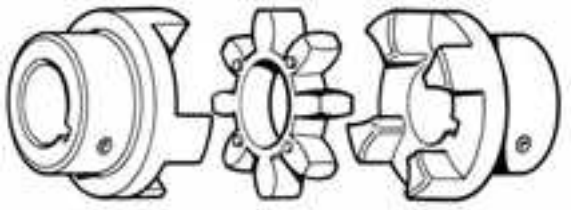
Gear units with motors frame sizes 250TC (IEC160) and larger, in a vertical up motor mounting position, NORD recommends using an integral gearmotor instead of a NEMA or IEC input adapter. If your application requires this mounting position and a NEMA or IEC input, please consult NORD. In vertical down motor mounted applications it is recommended to shorten the maintenance interval.



Couplings

Couplings are made with tough abrasion resistant materials, which resist most chemicals and petroleum products. They are electrically isolated (prevent metal to metal contact) and require no lubrication or maintenance. Depending on the size of the C-face input, NORD provides either a gear or jaw type coupling.

Gear Couplings



Gear couplings are used with 56C to 280TC adapters and provide a compact space saving design. C-face adapter input shafts have a machined male spline that meshes with a molded nylon spline on the coupling. This specially designed molded nylon sleeve that exhibits high torsional stiffness, resulting in minimum fit-up backlash and reduced internal frictional losses. Gear couplings lightweight design yields low inertia and use blind assembly and slip together components to make inspection easy without disassembly.

NORD incorporates two styles of gear couplings, the “J” and “M” styles. The “J” style is one-piece couplings consisting of a nylon sleeve and metal hub that are fused together. The “M” style is a two-piece coupling consisting of a separate nylon sleeve and metal hub.

Jaw Couplings

Jaw couplings are used with 320TC and larger adapters. The cast iron jaw type couplings have a urethane “spider” that provides smooth transmission of the motor torque and has excellent shock and vibration dampening characteristics. A set screw on the coupling prohibits axial movement along the motor shaft.

The Importance of Proper Lubrication

Proper gearbox lubrication is essential in order to reduce friction and component wear, and protect against corrosion and rust. Gear lubricants reduce heat and wear by inserting a load-sharing "protective fluid film" between mating parts and preventing direct metal to metal contact. Properly selected lubricants will operate under various film conditions, improve heat transfer, optimize reducer efficiency, absorb shock loads, reduce noise, inhibit foaming, and separate water readily.

Design Considerations

Along with many other factors, the gear designer must consider the gear load and speed conditions, and the expected operating oil temperatures. These factors help determine a generally suitable oil category, a desired additive package, preferred base-oil type, and oil viscosity.

It is important that the consumer be aware of these many design factors before making any changes in the critical areas (oil category, base-oil type, viscosity, etc.) One should consult their preferred lubrication supplier or NORD Gear when questions arise.

Gear Oil Types, Categorized by Base Oil

Mineral Oil with an EP Additive (DIN 51517, Type CLP)

High performance mineral gear oils are carefully engineered and manufactured to improve aging characteristics, minimize friction, offer good wear protection, provide corrosion and oxidation resistance, minimize foam, and separate water. Mineral gear oils are classified as API Group I or II oils, depending upon viscosity.

The standard NORD mineral gear oil has an extreme pressure (EP) additive ISO Viscosity Grade EP220 (AGMA 5 EP) and is generally acceptable for helical gear units. Good quality mineral oil should have the ability to operate at moderate sump temperatures (up to 80-85 °C) without losing viscosity or thickness. A minimum viscosity index (VI) of 93 or higher is suggested. The oil must also have good film strength to handle shock loads, high torque, and start-up conditions. A minimum FZG Scuffing Load Stage 12 is desirable.

Advantages:

- Most economical of all the gear oil types.
- Generally offers good compatibility with shaft seals, gaskets, paint finishes, etc.
- Offers good corrosion and oxidation protection.
- Effectively reduces internal friction and wear.

When Synthetic Oils Are Used

Synthetic gear oils are suggested when mineral gear oils have reached their performance limit or when they no longer meet certain application requirements. NORD may recommend synthetic oil for any one of the following conditions:

- Severe duty applications or when gears are exposed to frequent starts and stops, high-load or shock.
- For applications in low or high temperature service.
- To extend oil service interval requirements.
- To eliminate the necessity for seasonal oil changes.
- To extend service life of factory-sealed or maintenance-free gear units.
- To take advantage of performance benefits: shear resistance, low traction coefficient, reduced internal friction, improved lubricity, reduced operating temperatures, improved gear efficiency, etc.

Performance Advantages of Synthetic Oil

Compared to mineral oils, synthetic oils provide a number of performance advantages including:

- Ability to operate at higher temperatures without losing viscosity or thickness, due to a much improved viscosity index.
- Improved low-temperature stability due to a lower pour point
- Increased oil change intervals due to superior oxidative & wear resistance
- Lower tendency to form residues and increased resistance to foaming.
- Other benefits may include: very good shear resistance, low traction coefficient, reduced internal friction, improved lubricity, reduced operating temperatures, improved gear efficiency, extended component life and wear protection.

When application conditions warrant the use of synthetic oil, NORD may suggest a particular type of synthetic oil, depending upon the gear unit type and the application.

Synthetic Hydrocarbon/Polyalphaolefin (SHC/PAO) Oil (DIN 51517, Type CLP-HC)

Synthetic Hydrocarbons (SHC) or Polyalphaolefin (PAO) synthetic base oils offer good miscibility with mineral base oils and are very readily available. SHC/PAO oils are classified as API Group IV oils. The can be formulated with or without anti-wear (AW) or extreme pressure (EP) additives. They can also be formulated for acceptance in food-grade applications.

Advantages:

- Higher viscosity index and therefore greater high-temperature stability than mineral oil.
- Better low-temperature stability and lower pour point than mineral type gear oils
- High surface tension and lower tendency to foam compared to mineral oil, and water-soluble polyglycol gear oils.
- Compatible (miscible) with mineral oil.
- Better water seperability (demulsibility) than PG oils.

Polyalkylene Glycol or Polyglycol Synthetic Oil (DIN 51517, Type CLP-PG)

Polyalkylene glycol or polyglycol (PAG or PG) synthetic gear oils are made readily available through many lubrication suppliers. PG oils are classified as API Group V gear oils. They can also be formulated for acceptance in food-grade applications.

PG gear oils possess extremely low traction coefficients and a viscosity index higher than any of the other synthetics (often greater than 220 VI), resulting in excellent heat resistant, shear stability, and natural anti-wear properties.

Typical PG gear oils are formulated with a 1:1 or higher ratio of ethylene oxide to propylene oxide (50:50 or 60:40 is common); this makes PG gear oils water soluble, providing them with very good corrosion resistance even when water is present in concentrations that are higher then what is normally allowed.

Advantages:

- PG oils offer the highest viscosity index of any other synthetic resulting in excellent heat resistant, shear stability, and superior natural anti-wear properties without requiring EP-additives.
- PG gears oils minimize internal friction and often result in improved gear efficiency.
- PG oils have significantly higher film strength than mineral and SHC/PAO oils and out perform these oils at higher operating oil temperatures (approaching 80°C or higher).

IMPORTANT NOTE

Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil, hydrosynthesized synthetic or PAO synthetic oils.

Food-Grade Lubricants

Food-grade lubricants should be manufactured in compliance with FDA 212 CFR 178.3570 and should either satisfy the former 1998 USDA Guidelines as an H1 lubricant or currently qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturers for more information or visit www.nsf.org

H1 food grade oil can only contain additives which appear on the FDA "approved list" for food safe compounds. H1 oils are generally absent of common zinc-based AW additives, and sulfur-phosphorus based, EP chemistries, commonly found in many industrial gear oils.

Food manufacturers control risk and liability by following detailed guidelines outlined by the HACCP (Hazard Analysis and Critical Control Point) program, which includes food-grade H1 lubricants.

Food grade H1 lubricants may be formulated as highly refined mineral oils (white oils), SHC/PAO synthetic oils or PG synthetic oils.

The highly refined nature of good-quality food-grade white-oils provides good long-term oxidative stability and in most cases adequate lubrication under high-load (boundary) conditions. So long as food-grade white oils meet the minimum anti-wear requirements of the normally specified non-food grade oil, they are often acceptable.

Both food-grade white oils and PAO's have an inherent "purity" and absence of polar compounds, making them better than the average mineral oil or even PG oil in terms of demulsibility (water seperability).

Compared to food-grade white-oils, food-grade synthetic PAO or PG oils typically provide:

- Better wear and oxidation resistance.
- Improved high-temperature characteristics.
- Better cold-temperature behavior.

The Importance of Oil Viscosity

Viscosity or the oil's resistance to shear under load, is often considered the single most important property of any gear oil.

NORD Gear Designers have selected the most appropriate ISO viscosity grade of oil, for each type or class of gear reducer. Gear oil viscosity is selected by assuming typical ambient conditions, at rated speed and load conditions.

Important Considerations:

- The correct viscosity selection helps provide proper lubrication and assures that a minimum film thickness is maintained between interacting surfaces.
- The degree to which viscosity changes with temperature or the viscosity index, varies from oil to oil, and depends upon the type of lubricant & additive agents used.
- Selecting too low of a viscosity can result in mixed boundary (partial metal-to metal contact) or boundary lubrication (full metal-to-metal contact) conditions, increasing internal friction heat build-up and wear.
- Selecting too high of a viscosity results in increased churning and squeezing losses in the load zone and excessive heat (especially when peripheral gear speeds are high); Ultimately, this causes the oil temperature to rise and the viscosity to go down, decreasing the effectiveness of the lubricant.

Considering an Oil Viscosity Change

There are three primary reasons to consider a lubrication viscosity change as follows:

1. Low temperature gear oils should be selected so that the pour point is at least 9°F (5°C) lower than the expected minimum ambient temperature. In extreme cases, consider a lower ISO Viscosity rating and test the critical performance of the gear box under cold start-up.

2. High temperature applications may require an increase in the lubricants viscosity to assure proper lubrication conditions in the critical load zones of the gear unit. NORD also recommends switching to synthetic oil if oil sump temperatures exceed 176-185 °F (80-85 °C).

3. In cases of extreme load conditions, gear pairs and antifriction bearings may be more susceptible to scuffing wear. In these operating conditions, it may be beneficial to consider an increased lubrication viscosity and/or lubrication with improved antiwear additive packages.

IMPORTANT NOTE

NORD recommends that the user consult with their primary lubrication supplier when considering changes in oil viscosity.

Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation, depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85 °C (176-185 °F)	95 °C (203 °F)
Synthetic	105 °C (220 ° F)	107 ° C (225 ° F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

Ventilation

Most gear reducers are equipped with a vent which helps compensate for air pressure differences between the inner space of the gear unit and the atmosphere.

The spring-pressure vent (Autovent™) is commonly supplied and factory-installed. Normally open vents may also be supplied as an option; normally-open vents are closed upon delivery in order to prevent oil leakage during transport. When normally open vents are supplied, the sealing plugs must be removed prior to commissioning the reducer.

Prior to reducer start-up, it is important to check the maintenance manual to verify that the vent is properly located with respect to mounting position.

Mounting Position

The reducer mounting position determines the approximate oil fill-level and the appropriate vent location. In some cases mounting position may dictate possible variation in final reducer assembly.

If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering.

Oil Fill Quantities

Oil fill quantities shown in the catalog or maintenance instructions are approximate amounts. The actual oil volume varies depending upon the gear ratio. Prior to commissioning the reducer, the oil-fill level should be checked using the reducer's oil-level plug. It may be necessary to drain excess oil or add additional oil.

Unless otherwise specified, NORD supplies most all gear units factory-filled with the standard lubrication type per the specified mounting position.

Lubrication Replacement

If the gear unit is filled with mineral oil, the lubricant should be replaced at least after every 10,000 operating hours or after every two years. If the gear unit is filled with synthetic oil, the lubricant should be replaced at least after every 20,000 operating hours or after every four years. Often gear reducers are exposed to extreme ambient conditions, hostile environments, wet conditions, or dirty and dusty operating areas. Especially in these situations, it is important to establish a condition-based oil service interval.

The Importance of Routine Oil Analysis

Routine oil analysis, sound lubrication practices, and good tracking of oil performance trends will help establish proper lubrication maintenance and change-out intervals. To maximize equipment reliability, NORD Gear generally recommends a condition-based lubrication maintenance program. One may take exceptions to this general recommendation on sealed-for-life or maintenance-free gear units or smaller and less costly gear units. In these instances, the replacement cost of the gear unit is often small compared to the costs associated with this type of oil analysis program.

NORD suggests replacing the gear oil if oil analysis indicates any of the following:

- Viscosity has changed by approximately 10% or more.
- Debris particles (silicon, dust, dirt or sand) exceed 25 ppm.
- Iron content exceeds 150-200 ppm.
- Water content is greater than 0.05% (500 ppm).
- The total acid number (TAN) tests indicate a significant level of oxidative break-down of the oil, and a critical reduction in performance; If the TAN number measured changes by more than 5% over the new oil, then an oil change would be recommended.

Lubrication Types

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

Mounting position not only determines the proper fill-level but may also have some effect on final reducer assembly. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering. Unless otherwise specified, NORD supplies all Screw conveyor gear units factory-filled with the standard mineral lubrication type and the appropriate quantity.

Standard Oil Lubricants

Gear Unit Type	ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
Clincher™ SCP	VG220	MIN-EP	0 to 40°C (32 to 104°)	Mobilgear 600XP220	♦❶

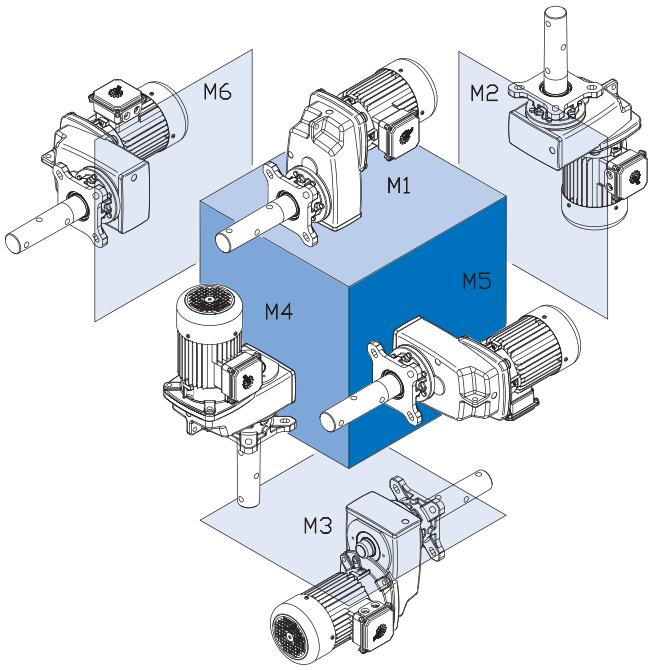
IMPORTANT NOTES

- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol(PG) oils are not miscible with other oil types and should never be mixed with mineral oil.
- Consult NORD if considering oils of ISO Viscosity VG100 or lower.

Oil Formulation Codes

MIN-EP	Mineral Oil with EP Additive
PAO	Synthetic Polyalphaolefin Oil
FG	Food-Grade Oil
FG-PAO	Food-Grade, Synthetic Polyalphaolefin Oil

SCP Mounting Positions & Oil Fill Quantities



Screw Conveyor Package lubrication

Unless otherwise noted below, the following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

STOP ***HARMFUL SITUATION*** **STOP**

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add additional oil as needed.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

CLINCHER™

Explanation of Selection Tables

OUTPUT SPEED – Output speed at NORD standard efficiency motor rated speed.

OUTPUT TORQUE – Output torque produced by motor.

◈ The maximum input power limit shown is the largest motor power typically combined with the gear unit. *The Italicized power values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.*

* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available Combinations and based on a 1750 rpm motor.

◈ The maximum input power limit shown is the largest motor power typically combined with the gear unit. *The Italicized power values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.*

* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available Combinations and based on a 1750 rpm motor.

MOTORS

Motor Options & Construction

NORD motors are stocked in one of two ways. The first method is to stock a complete motor that is ready to be assembled to a gear reducer or shipped as a stand alone motor. The second method, the motor is assembled from component parts. The Mod next to a motor option designates that the option can be added to a complete motor by simple modification. The Build next to a motor option indicates that the motor will need to be built from component parts in order to incorporate the motor option.

Stocked NEMA C-Face Motors

NEMA C-Face Motors

The National Electrical Manufacturers Association (NEMA) provides standardization of electrical equipment, enabling customers to select from a range of safe, effective and compatible products. A NEMA C-face motor has a machined face with a pilot and threaded holes for direct mounting onto a NORD reducer or other industrial equipment. NORD offers NEMA C-face motors stocked as finished goods and will also assemble NEMA C-face motors to your specifications. For ratings, see page 142.

Stocked NEMA C-Face Motors

Stocked NEMA C-face motors are offered in standard efficiency, energy efficient and in a brakemotor design. They are available in 230/460V-60Hz and 575V-60Hz up to 10 hp. Part numbers for stocked NEMA C-face motors are in the table below.

Assembled per Order NEMA C-Face Motors

NORD will assemble a NEMA C-face motor to your specifications based upon the available motor options from this catalog.

Motor Type	Power	Part Number 230/460V-60Hz	Part Number 575V-60Hz	Weight [lb]

Standards

All motors are in accordance with existing standards and regulations:

NEMA MG 1 - Motors and Generators:

- Electrical performance
- Motors for operation on variable AC vector drive

UL 1004 – Electric Motors

CSA C22.2 No. 100-04 - Motors and Generators:

Industrial Products
IEC 60034 parts 1, 5, 6, 8, 9, 11 and 14.

- Part 1 – General rules
- Part 5 – Types of enclosures
- Part 6 – Types of cooling
- Part 8 – Terminal lead designations and sense of rotation
- Part 9 – Noise limits
- Part 11 – Integrated thermal protection
- Part 14 – Mechanical vibration

IEC 60038 – Standard voltages

CE	NORD motors carry the CE mark in accordance with the Low Voltage Directive and, if installed properly, the Electromagnetic Compatibility Directive (EMC). The CE mark is required for installation in European Union (EU) states.
®	Many NORD motors from frame size 63 to 315 are an Underwriters Laboratories Recognized component per UL standard 1004. Frames 63-132 File number E191510 Frames 160+ File number E227215
C SP® US	The Canadian Standards Association CUS mark indicates that CSA has tested and approved NORD motors according to both US and Canadian standards. It is equivalent to the Underwriters Laboratories RU recognition mark (UL standard 1004) and the CSA mark according to CSA Standard C22.2 No. 100-04 Frames 63-132 File number LR112560 Frame 160+ File number LR13494
ee	NORD Energy Efficient motors up to frame 160 have been evaluated by the United States Department of Energy and recieved a Certificate of Compliance to certify the efficiency ratings. The certificate of compliance is CC 092B.
CSA E	NORD energy efficient motors carry the CSA energy efficiency verification mark. This mark ensures that CSA has verified that NORD motors are designed and manufactured to meet energy efficiency requirements number EEV112560.

EPAct – US Energy Efficiency

The Energy Policy Act of 1992 (EPAct) covers efficiency levels of general purpose industrial electric motors and became effective October 24, 1997. The basic goal of the law is to promote energy conservation. This law mandated energy efficiency requirements for many devices including some types of industrial electric motors. The efficiency levels are defined in NEMA MG-1 table 12-10. The regulations to implement this law have been developed by the Department of Energy (DOE).

The law covers minimum efficiency levels for general purpose motors including:

- Single-speed, polyphase NEMA T frame (and IEC equivalents)
- 1 to 200 hp (0.75 to 150 kW)
- 1200, 1800 or 3600 rpm
- NEMA design A and B
- Continuous rated
- Foot-mounted
- 230/460V-60Hz

The law excludes the following motor types from minimum efficiency levels:

- Integral gearmotors
- Brake motors

The NORD "H" line of energy efficient motors are designed to meet the efficiency levels defined by EPAct. NORD offers these motors as an option in combination with our high efficiency gear units for superior energy savings.

Efficiency levels for enclosed 4-pole motors per EPAct and NEMA MG 1 - in percent efficiency [%]

Efficiency for EPACT & NEMA MG1 4-Pole Motors

hp	1	1.5	2	3	5	7.5	10
kW	0.75	1.1	1.5	2.2	3.7	5.5	7.5
Eff%	82.5	84.0	84.0	87.5	87.5	89.5	89.5

hp	15	20	25	30	40	50	60
kW	11	15	18.5	22	30	37	45
Eff%	91.0	91.0	92.4	92.4	93.0	93.0	93.6

hp	75	100	125	150	200
kW	55	75	90	110	150
Eff%	94.1	94.5	94.5	95.0	95.0

Canadian Energy Efficiency

The Energy Efficiency Act and the Energy Efficiency Regulations establish minimum energy performance levels for electric motors from 1 to 200 HP (0.75 to 150 kW) for sale or lease in Canada. The Energy Efficiency Regulations were developed by Natural Resources Canada (NRCan).

Certain National Electrical Manufacturers Association (NEMA) motors have been regulated since Feb. 3,1995. Effective Nov. 27, 1997, the Energy Efficiency Regulations were amended to include International Electrotechnical Commission (IEC) motors. This amendment also increased the minimum energy performance levels that motors must meet. For explosion-proof motors and motors contained within an integral gear assembly, the effective date of the Regulations is Nov. 27, 1999.

The regulations mandate that motors carry an energy efficiency verification mark that is authorized by Standards Council of Canada (SCC) accredited certification organization such as Canadian Standards Association (CSA).

CEMEP Agreement
European Efficiency Categories

CEMEP, the association of European Electric Motor Manufacturers, has reached an agreement with the European Commission's General Directorate for Energy so that in the future all 2 and 4-pole low voltage motors from 1 to 100kW will be categorized on the basis of their efficiency. The classification will be displayed on the nameplate and in catalogs. The following categories will be used: EFF1, EFF2 and EFF3.

EFF 1	EFF1-indicates a high efficiency factor.
EFF 2	EFF2-indicates an improved efficiency factor.
EFF 3	EFF3-Indicates a standard efficiency motor.

NORD supplies both motors of EFF1 and EFF2 categories in its 4-pole motors. The category EFF2 motors are the standard efficiency motors and the EFF1 motors are the "H" line of energy efficient motors.

In the future NORD will mark all of its 50-Hz motor with the CEMEP efficiency symbols.

INVERTER DUTY MOTOR

Inverter/Vector Duty

NORD single–speed motors are Inverter/Vector Duty. The construction of the NORD motors insulating system takes into account the non-sinusoidal wave forms produced by variable frequency drives. NORD uses high grade insulating components and extra first turn protection as well as double coated wire to ensure long service life when connected to AC vector drives. NORD motors can produce full torque at zero speed if properly sized, selected and controlled.

Voltage and Frequency

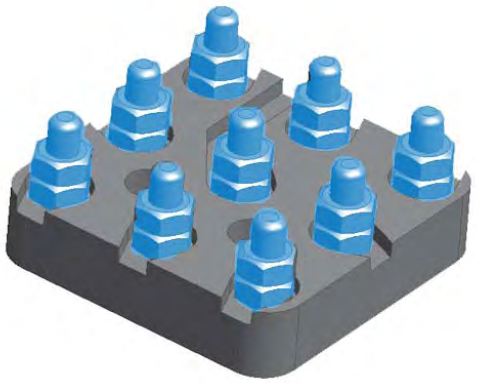
NORD motors are available in a wide range of voltages and frequencies for use in North America and around the world. For a more detailed list of choices see page 128.

NORD motors designed for North American voltages (208V, 230V, 460V and 575V) conform to the voltage and frequency tolerances in NEMA MG-1. The voltage tolerance is +/-10%, the frequency tolerance is +/- 5% or a combined voltage and frequency tolerance of +/-10%.

Low Inertia

The motor inertia in all NORD motors is extremely low which allows for a much more dynamic motor control capability. Low motor inertia is a significant advantage when using NORD motors with AC vector drives or vector controllers. NORD motors can cycle more frequently and require less mechanical energy to start than standard NEMA frame motors. This leaves more energy to start the load.

High Torque



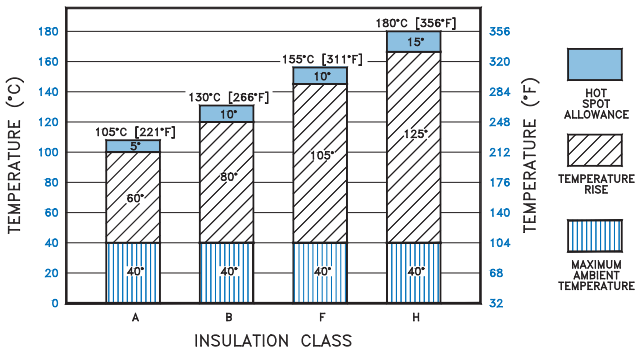
The NORD motors produce higher starting torque than required by NEMA standards. This is achieved through improved motor winding, rotor design and construction.

Non-Sparking Fan

The standard NORD motor fan is a non-sparking design. The fan will also provide proper airflow in either direction of rotation.

Terminal Block

Each NORD motor uses a terminal block, which is a superior method of wire termination when compared to pigtail leads. A terminal block ensures long-term reliability of the power connections.



Tropical Protection (Anti-fungal)

As a standard the NORD motor insulation system is tropically protected. The insulating and construction components are inorganic materials that resist fungal growth.

Insulation Class

NORD motors are constructed with a thermal class F insulating system. The motors are also designed for a class B temperature rise (80°C). The use of class F insulation with a class B temperature rise provides increased operating life. Motors constructed with class H insulation are also available as an option.

Insulation System

NORD motor insulation system is designed to provide a superior degree of protection. NORD utilizes the following insulation components:

- Magnet wire – double coated insulation
- Varnish dip impregnation
- Slot liners
- Phase paper
- Phase separators
- Top sticks
- Connecting wire sleeves

Other motor manufacturers eliminate some of these insulating components for cost reduction.

Inverter/Vector Duty – Voltage Spikes

All NORD motors are constructed with an insulating system designed to withstand the repeated voltage spikes generated by modern AC vector drives. The insulation system withstands the ratings in conformance with NEMA MG 1-2006 Section 31.4.4.2 Voltage Spikes.

$V_{peak} = 3.1 \times V_{rated}$ with a Rise time ≤ 0.1µs.

Ambient Temperature

NORD motors are designed to operate with a maximum ambient temperature of 40°C (104°F). If the motor's operating environment exceeds 40°C, the motor's nominal power P_n either needs to be de-rated (see table below) or use upgraded insulation.

Ambient temp [°F]	113	122	131	140
Ambient temp [°C]	45	50	55	60
De-rate factor	0.96	0.92	0.87	0.82

Motor Rated Power = [P_n x De-rate factor]

Elevation

NORD motors are designed to operate at an elevation of up to 3300 ft (1000 m) above sea level. At higher elevations the air is thinner resulting in less cooling capacity. If the motor's nominal power P_n installation elevation exceeds 3300 ft (1000 m), the motor either needs to be de-rated (see table below) or requires upgraded insulation.

Altitude [ft]	5000	6500	8200	10000	11500	13000
Altitude [m]	1500	2000	2500	3000	3500	4000
De-rate Factor	0.97	0.94	0.90	0.86	0.83	0.80

Motor Rated Power = [P_n x De-rate factor]

Service Factor

Motors rated 230/460V-60Hz and 332/575V-60Hz have a service factor of 1.15. Almost all other motors have a service factor of 1.1 or 1.0.

Duty Classes

The following duty types are defined in IEC 60034-1.

Duty Type	Explanation Excerpts
S1	Continuous operation at a constant load, the motor reaches thermal equilibrium
S2	Short-time operation at a constant load for a given time followed by a time of rest until the motor is completely cooled down to ambient temperature. Example: S2-10 minutes Recommended values for determination: 10, 30 min.
S3	Intermittent operation sequential, identical run and rest cycles with constant load. Temperature equilibrium is never reached. Starting current has little effect on temperature rise. The cyclic duration factor (cdf) indicates the portion of operation time in relation to a complete duty cycle. The typical duty cycle time is 10 minutes, unless otherwise specified. Example: S3-40% Recommended values for determination: 25, 40, 60%
S6	Continuous operation with intermittent load sequential, identical cycles of running with constant load and running with no load. No rest periods. Example: S6-40% Recommended values for determination: 25, 40, 60%

Power Increasing Factor for Short-term & Intermittent Operation

Motor ratings in this catalog are based on continuous duty operation (S1). If a motor is designed for S1 duty, but is to be operated for short-time or intermittent operation it can be subjected to higher loads. The available motor power can be raised above the motor rated power by the "increasing factor" in the table below.

Duty Type			Increasing factor
S2	Operating time	10 min	1.40
		30 min	1.15
S3	Cyclic duration factor (cdf)	25%	1.33
		40%	1.18
		60%	1.08
S6	Cyclic duration factor (cdf)	25%	1.45
		40%	1.35
		60%	1.15

Motor Rated Power = [P_n x Increasing factor]

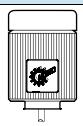
Enclosure

The NORD standard motors are provided with Totally Enclosed Fan-Cooled (TEFC) with an IP55 enclosure rating. Other enclosures are available, including Totally Enclosed Non-Ventilated (TENV), Totally Enclosed Blower-Cooled (TEBC), and IP66.

The motor integral cooling fan provides proper air flow in either direction of rotation. The IEC cooling classification is IC 411 according to IEC 60034-6.

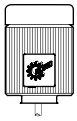
IP Enclosures per IEC 60034-5 - Simplified

	1st digit Foreign body protection		2nd digit Water protection
0	No protection	0	No Protection
1	Protected against solid objects 50mm (2 in) in diameter and larger	1	Protected against dripping water
2	Protected against solid objects 12 mm (1/2 in) in diameter and larger	2	Protected against dripping water up to a 15 degree angle
3	Protected against solid objects 2.5 mm (0.1 in) in diameter and larger	3	Protection against sprayed water
4	Protected against solid objects 1 mm (0.04 in) in diameter and larger	4	Protection against splashed water
5	Protected against dust	5	Protection against water jets
6	Dust tight	6	Protection against high pressure water jets
7	--	7	Protection against intermittent submersion in water
8	--	8	Protection against continuous submersion in water



Protective Features

All NORD Motors and Speed Reducers are constructed to provide a high degree of protection against wet and severe environments. NORD Motors and Speed Reducers are extremely well sealed against moisture ingress and use corrosion and moisture resistant components. NORD has recently made many enhancements in the motor and gear units standard construction to provide improved environmental protection. Many of the standard protection features of the NORD units are only available at an additional cost from other motor and gear drive suppliers. NORD designs all gearmotors, speed reducers and motors for installation in harsh industrial, commercial and municipal installation environments.



Standard Construction

- Shaft lip seals on both ends of the motor shafts
- Stator to endbell connections sealed to exclude moisture
- Double coated magnetic wire insulation
- Inverter/vector duty insulation system conforms to NEMA MG1-1998, section 31.4.4.2 voltage spikes
- Moisture resistant varnish dipped windings improved varnish materials
- Inorganic insulating components for tropical protection
- Moisture resistant motor windings
- Conduit box sealed with gaskets
- Corrosion resistant alloy materials
- Threaded cable entry holes

General Options

Voltage and Frequency

NORD motors are available in a number of voltages and frequencies. The standard voltages are commonly available. Optional voltages can be provided, but may include an increase in price and additional lead time. It also may be possible to provide motors with special voltages and frequency operation points.

Standard Voltages

Single speed motors	Two speed motors
230/460V-60Hz (up to 30 hp)	460V-60Hz
460V-60Hz (40 hp and larger)	230V-60Hz
575V-60Hz	575V-60Hz
400V-50Hz	400V-50Hz

Optional Voltages

Single speed motors	Two speed motors
208V-60Hz (up to 10 hp, not available in energy efficient design)	Other voltages & frequencies available upon request
380V-50Hz	
415V-50Hz	
380V-60Hz	
Other voltages & frequencies available upon request	

Poles / speeds

NORD offers a variety of single speed and two speed motors in addition to the standard 4 pole motor. NORD single speed motors are inverter/vector duty rated, however, it is not recommended to run a NORD two speed motor with an AC vector drive.

Number of Poles	Synchronous Speed at 60Hz	Synchronous Speed at 50Hz	Notes:
Single Speed Motors			
4	1800 rpm	1500 rpm	–
2	3600 rpm	3000 rpm	–
6	1200 rpm	1000 rpm	–
Two Speed Motors			
4-2	1800/3600 rpm	1500/3000 rpm	Single winding
8-2	900/3600 rpm	750/3000 rpm	Two winding
8-4	900/1800 rpm	750/1500 rpm	Single winding

Other speeds available upon request.

US Canadian Standard (CUS)

CUS motor construction defines that NORD motors are constructed in accordance to UL 1004 (electric motors) and CSA C22.2 No. 100-04 (motors and generators) guidelines. This option is standard for 208, 230, 460, and 575 Volt operation at 60 Hz.

Motors nameplated with the CUS option will be marked and indicating that the Underwriters Laboratories and CSA have tested and approved NORD motors according to both US and Canadian standards.

Motor Protection

Selecting the appropriate motor protective system is a key factor in reliable motor operation. There are two common classes of motor protection; current based and motor temperature based. Electrical installation codes require at least two types of protection in the motors circuit, both of which are normally current based. First is short-circuit protection normally accomplished by fuses or circuit breakers. Second is "motor overload protection" this is normally a device called a "motor overload" or a "heater." Current based protection is effective in some conditions. NORD can provide two different types of motor temperature based protection, a PTC thermistor (TF) or a bi-metallic thermostat (TW). Temperature based protection is more effective motor protection in many situations, see the table below.

⬆ = Good protection ⬌= Limited protection ⬇ = No protection	Fuses	Motor Overloads	PTC Thermistor (TF)	Bi-metallic Switch (TW)
Over current up to 200%	⬇	⬆	⬆	⬆
High inertia starting	⬇	⬌	⬆	⬌
Frequent motor starts	⬇	⬌	⬆	⬆
Stalling	⬌	⬌	⬌	⬌
Single phasing	⬇	⬌	⬆	⬆
Supply voltage deviations	⬇	⬆	⬆	⬆
Supply frequency deviations	⬇	⬆	⬆	⬆
Inadequate motor cooling	⬇	⬇	⬆	⬆
Bearing Damage	⬇	⬇	⬆	⬆

Thermostat (TW)

Build

Three bimetallic switches are connected in series in the motor windings, one per motor phase. Upon reaching the limit temperature, this device automatically opens circuits. The installer is responsible to wire the thermostat into the motor control circuit. After the temperature has fallen below the trip limit, the thermostat switch re-sets automatically. The auto resetting property must be considered when designing the safety aspects of the control scheme.

TW Ratings	
NC (Normally Closed)	auto resetting
Voltage	6 to 500VAC
Current	1.6 A
Resistance	less than 50 mΩ

Thermistor (TF)

Build

Three positive temperature coefficient (PTC) thermistors are connected in series in the motor windings, one per motor phase. Thermistors require an external tripping device. Upon reaching the limit temperature, the thermistors change their resistance suddenly. In connection with a tripping device, this property is employed to monitor the motor temperature. The relay built into the tripping device has a make-and-break-contact, which is used in the control wiring. NORD does not provide the external tripping device with the TF thermistor option. You must request a thermistor tripping device separately. Many AC vecotor drives and PLCs include a built in PTC thermistor evaluation input.

TF Ratings	
Transition Temperature	150 °C +/- 5°C
Resistance < Transition	20 ... 500 . Ω
Resistance > Transition	> 4k Ω.
Reed Voltage	< 7,5 V
Rated Current	< 1 mA
Motor Ambient Temp.	40°C

General Options

Space Heater (SH)

Build

Motors subjected to extreme temperature fluctuations or severe climatic conditions can be damaged by the formation of condensation. NORD can provide motor anti-condensation space heaters inside the motor to heat up the windings when the motor is not operating. This will prevent moisture from condensing inside the motor. The space heaters must not be switched on while the motor is running.

Space Heater Voltage Must be specified

Voltages available
❍ 115V – 50/60Hz
❍ 230V – 50/60Hz
❍ 460V – 50/60Hz
❍ other voltages available on request

Class H Insulation (ISO H)

Build

NORD motors can be manufactured with class H insulation system. Standard NORD motors include double coated magnetic wire windings. When these windings are paired with a class H insulation it provides extra temperature capacity for the motor and will lengthen the motor's life. Class H insulation rated motors are also an advantage in some severe applications:

- Increased ambient temperature installations above 40°C (104°F)
- Increased elevation installations – above 3300 ft (1000 m)
- Applications with a high number of starts per hour.
- Meets class H insulation motor specifications
- Lower operating frequency when used with AC vector drive systems
- For additional information on insulation class see page 125.

High Resistance Rotor (WU)

Build

Using Silumin rotor material, NORD offers a high resistance rotor to soften the motors operation and allow higher overload torques.

Single Phase Motors, 60Hz (ECR)

Build

The ECR series of single phase motors is intended for demanding operation at 60Hz with a supply voltage of 115V or 230V. The permissible voltage range is 115/230V +/- 10%. The ECR motors have a 1.15 service factor and are available from 0.16 - 2 hp.

Paint Coatings

Mod

NORD's standard paint coating is a two component, aliphatic polyurethane finish contaning 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications. For more information and an explanation of all of our paint options please see page 18

Condensation Drain Holes

NORD motors can be equipped with condensation drain holes. These drain holes are placed in the motor endbells at the lowest possible point. The drain holes are closed at the factory with plastic snap in plugs. They allow for condensation accumulation in the motor to drain after the closing plugs are removed.

The motor drain holes can be provided by NORD either open (KBO) or sealed with a closing plug (KB).

IMPORTANT NOTE

The motor must be installed in the mounting orientation specified on the nameplate or the drain holes will not function properly and may result with the motor filling with water.

Condensation Drain Holes, Plugged (KB)

Build

KB drain holes are plugged for shipment. In order for the holes to effectively drain moisture, the plugs must be removed before using the motor.

Condensation Drain Holes, Open (KBO)

Build

KBO drain holes are shipped open (not plugged).

IP65 Enclosure Protection

Mod

NORD motors can be provided with an IP65 enclosure protection. IP65 protection is suitable for wet, low-pressure wash down and extremely dusty environments.

IP	1st digit Foreign body protection	IP	2nd digit Water protection
6	Dust tight	5	Protection against water jets

IP66 Enclosure Protection

Mod

NORD motors can be provided with an IP66 enclosure protection. IP66 protection is suitable for wet, high-pressure wash down and extremely dusty environments, and includes all requirements included in IP65 enclosure protection.

IP	1st digit Foreign body protection	IP	2nd digit Water protection
6	Dust tight	6	Protection against high pressure water jets

Terminal Box Sealed with Resin (KKV)

Mod

Terminal boxes can be sealed with a flexible, electrically safe resin to ensure that contaminants, water, and moisture cannot pass through the terminal box into the stator body. This option is helpful in extremely dusty, wet and humid environments. Another environment where this option is helpful is in installations that have frequent large temperature swings where condensation may form.

Additional Insulation (AICM)

Build

NORD can provide additional insulation inside the motor to provide additional electrical protection in extremely wet or corrosive environments. An electrically safe insulating material is coated internally in the stator windings and on the rotor body

Epoxy Dipped Windings (EP)

Build

In extremely wet environments, the motor windings are dipped in epoxy for improved moisture protection. The motor can also be treated with the standard NORD Severe Duty + (NSD+) package for an even higher degree of protection.

Canopy Drip Cover (RD)

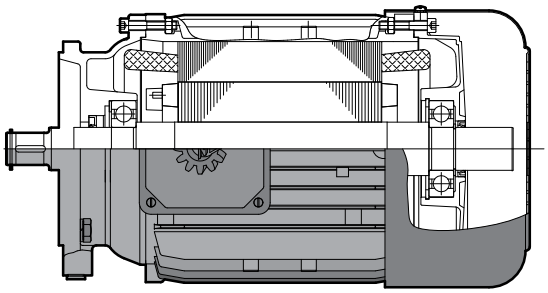
Mod

For wet or dirty installations where the fan end of the motor is mounted up, thus allowing water or debris to fall into the motor's fan guard, NORD offers a canopy drip cover to block this falling water or debris.

Double Fan Cover (RDD)

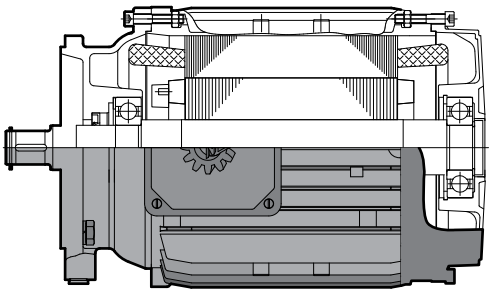
Mod

For wet or dirty installations where the fan end of the motor is mounted up, the NORD Double Fan Cover provides protection against falling or wind blown water, snow, dirt or debris from entering the back of the motor.



Additional Options

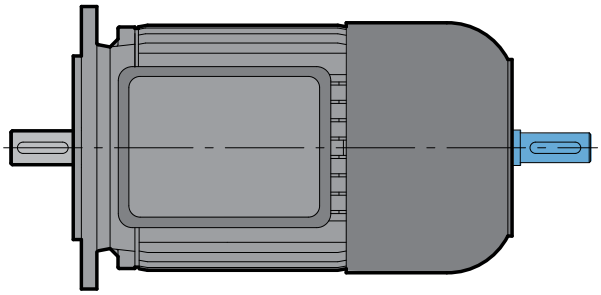
Totally Enclosed Non-Ventilated (OL) Mod



NORD can provide totally enclosed non-ventilated (TENV) motor enclosure. TENV motors provide benefits in certain operating environments; such as extremely dusty or dirty applications, where cooling fans may have material accumulation, which can be detrimental to the motor and the application. The OL series of motors are the standard fan cooled motor construction including the fan cover, but provided without the fan. TENV motors can also be used to reduce cooling fan noise on a standard motor.

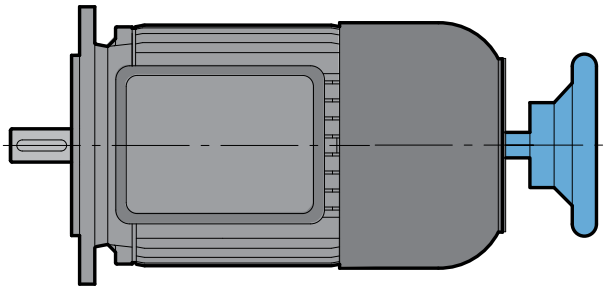
A TENV motor's frame size is larger then a totally enclosed fan cooled (TEFC) motor. For intermittent operation, a TENV motor can be operated at a 50% duty cycle at full rated power.

Totally Enclosed Non-Ventilated, without Fan Cover (OL/H) Build



The OL/H series of TENV motors are more compact in space than the OL series. They do not include the rotor shaft extension through the back bearing end bell or the fan cover.

2nd Shaft Extension on Fan Side (WE) Build



NORD can provide a second shaft extension on the fan side of the motor that protrudes through the fan cover. This extension can be used as a power take-off or to mount customer supplied devices such as encoders and tachometers.

The shaft extension can be provided on both motors with and without brakes. The shaft extension can not be used on motors with blower fans (F) or (FC). For dimensions see pages 148 - 152.

Hand Wheel (HR) Build

Motors can be supplied with a hand wheel provided on the second shaft extension. The hand wheel can be used for manual operation during power outages, or for machine positioning setup. For dimensions see pages 148 - 152.

WARNING

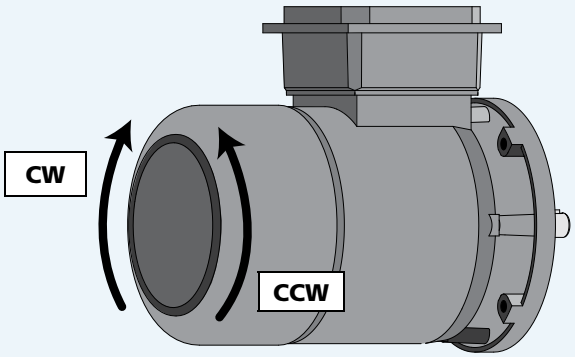
The customer is required to provide appropriate safety guarding of the rotating hand wheel.

High Inertia Cast Iron Fan (Z)

Build

An optional cast iron motor cooling fan is available. This fan is used as a mechanical soft start and/or soft stop. This fan adds inertia to the motor. The high inertia fan can also be used for a flywheel effect to store mechanical energy. This can be helpful in smoothing rapid load changes. The cast iron fan replaces the standard plastic motor fan. The motor length is the same as a brakemotor.

Motor Frame	Fan Inertia J_z[lb-ft²]
71	0.0475
80	0.1140
90	0.2375
100	0.2684
112	0.5653
132	0.9500



Motor Backstop (RLS)

Build

NORD can provide backstops on many motor frames. A backstop will prevent the motor from rotating in one direction. A common use is to prevent a motor from allowing a load to move backwards when power is removed. A motor brake can also be used for this same purpose. A backstop adds length to the motor. For the motor length extension, see the table below.

The allowable direction of rotation must be specified in the order.

Allowable Shaft Rotation
❍ Clockwise - Back of Motor
❍ Counter Clockwise - Back of Motor

Motor Size	Backstop Torque [lb-in]	Minimum Speed [rpm]	Motor Extension [in]
80S/L	1150	860	2.52
90S/L	1150	860	2.95
100L	1150	860	3.58
112M	3270	750	3.66
132S/M	3270	750	4.21

250M	22130	400	9.84
280S/M	51330	320	11.02

Additional Options

Quick Power Plug Connector (MS)

Mod

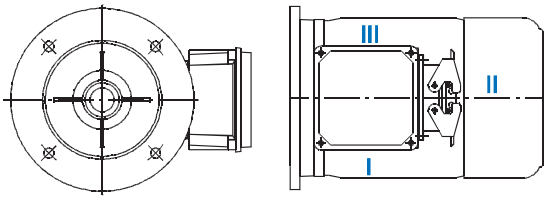
The quick power plug connector (MS) is a simple and fast way to connect and disconnect a motor or brake motor. The MS connector is available on NORD three-phase motors from frame size 63 to 132. The motor connections are made by a modular power plug manfacturer by Harting. After the first installation, the motor can be quickly changed by simply plugging and unplugging the electrical connections. This will ensure the new motor is properly wired. This is a significant advantage to equipment builders who fabricate machinery on site and then ship to another location. The motor with the MS connector can simply be plugged in during final installation.

NORD supplies the male connector half mounted on the motor conduit box. The customer must supply the female connector half mounted on the power wiring. NORD supplies a protective plastic cover on the motor male connector half to protect from dirt and damage prior to installation.

Advantages:

- Simple motor wiring
- Accurate wiring of motor at final job site
- Fast motor replacement
- Accurate wiring of replacement motor
- Ideal for portable equipment
- Reduces the required personnel for motor replacement
- Faster motor changes reduce down time

Plug ratings:



Manufacturer	Harting
Connector	HAN 10 ES/HAN 10ESS Cage Clamp Connectors

132	6.85	4.13	4.13	2x M25 x 1.5

Blower Cooling Fan (F & FC)

Mod

NORD offers continuous running motor mounted cooling fans that provide motor cooling at low motor speeds. When a motor is operated on an AC vector drive at low frequency, standard rotor fans do not provide adequate airflow for cooling. NORD's separate powered motor cooling fans provide that necessary airflow. These separately powered fans replace the standard motor fan cover and fan.

Encoders for NORD AC Drives

NORD AC vector drives with encoder inputs are designed to use TTL/RS422 encoders. There are also advantages in using an encoder with the 10-30VDC power supply system. The NORD AC vector drives can use a wide range of pulse counts, however the 1024PPR version provides good performance with minimal interference issues. A 4096 PPR encoder can also be used and will provide increased precision in some application but has some increased concerns with noise interference.

Recommended encoder: IG11P – 1024PPR/TTL/10-30VDC
Alternate encoder: IG41P – 4096PPR/TTL/10-30VDC

Absolute Encoder (AG)

Build

Absolute encoders offer a unique value (voltage, binary count, etc.) for each mechanical position. When an absolute encoder is powered up, the position of the encoder is known. Absolute encoders are available in single or multi-turn versions. The encoder is attached under the fan cover with field bus connection outside the fan cover.

Absolute encoders can be provided to meet a variety of specifications:

- Resolution: up to 17 bits of resolution per turn (131,072 steps) with 4096 turns (12 bits of turns)
- Interfaces: Synchronous serial interface (SSI), SSI with incremental track, ProfiBus, DeviceNet, CANopen, CANlift, and other interfaces

AC Vector Drive
SK 300E Trio

NORDAC SK 300E
Motor Mounted Frequency AC Vector Drive

For select HP ratings, NORD can provide a fully programmable, high performance AC vector drive mounted on the motor. This motor mounted AC vector drives:

- Eliminates the need to separately mount & wire the AC drive
- Insures AC vector drive/motor compatibility
- Has an IP 55 washdown duty enclosure
- Provides Electronic Motor Overload protection
- Insures smooth constant torque operation down to 2 Hz (check motor thermal limitations)
- Features a unique plug-in construction where the program stays with the motor, minimizing return to service time in the event of AC vector drive replacement

SK 300E AC Vector Drive Ratings

- 200-240 VAC 3 phase 50/60 Hz input, ½ through 3 HP
- 380-480 VAC 3 phase 50/60 Hz input, 3/4 through 5 HP
- Full range of built-in pre-engineered options available
- For dimensions see page 154

Selection Steps

1) Choose the SK300E-trio AC vector drive based on motor ratings and input line voltage
2) Select the required Trio Interface (TI)
3) Select the braking resistor if required
4) Select additional customer based I/O if required (SK CU2-STD)
5) Select cover mounted technology unit if required
6) If remote wall mounting is required
7) Select any needed programming tools

Step 1: AC vector drive Selection

Basic NORD Motor Description	Power Rating HP/kW	P [in]	240 VAC Input Inverter Type SK 300E	480 VAC Input Inverter Type SK 300E
63 S/4	0.16 / 0.12	5.12	-370-323-B	-550-340-B
63 L/4	0.25 / 0.18	5.12	-370-323-B	-550-340-B
71 S/4	0.33 / 0.25	5.71	-370-323-B	-550-340-B
71/L/4	0.50 / 0.37	5.71	-370-323-B	-550-340-B
80 S/4	0.75 / 0.55	6.50	-550-323-B	-550-340-B
80 L/4	1.00/ 0.75	6.50	-750-323-B	-750-340-B
90 S/4	1.50/ 1.1	7.20	-111-323-B	-111-340-B
90 L/4	2.00/ 1.5	7.20	-151-323-B	-151-340-B
100 L/4	3.00/ 2.2	7.91	-221-323-B	-221-340-B
100 L/40	5.00/ 3.7	7.91	Not Available	-401-340-B

AC Vector Drive Ratings

Type designation SK 300E	-370-323-B	-550-323-B	-750-323-B	-111-323B	-151-323-B	-221-323-B	-550-340-B	-750-340-B	-111-340-B	-151-340-B	-221-340-B	-301-340-B	-401-340-B
Supply Voltage	3 Phase 200-240 VAC +/- 10%, 47-63 Hz						3 Phase 380-480 VAC, -20%/+10%, 47-63 Hz						
Motor Rating	1/2 HP	3/4	1 HP	1 1/2 HP	2 HP	3 HP	3/4 HP	1 HP	1 1/2 HP	2 HP	3 HP	4 HP	5 HP
Rated Output Current Amps [RMS]	2.2	3	4	5.5	7	9.5	1.6	2.2	3	3.7	5.5	7	9.2
Typical Output Current Amps [RMS]	3.1	4.2	5.6	7.7	9.8	13.3	2.5	3.1	4.2	5.2	7.7	9.8	12.9

Step 2: Selection of Trio Interface (TI)

Following selection of the appropriate SK 300E AC vector drive rating from the preceding chart, an appropriate Trio Interface (TI) must be specified. The Trio Interface (TI) is an adapter that replaces the motor conduit box and contains a circuit board that the SK 300E plugs into.

A typical TI is shown below

SK 300E Trio Interface (TI) Types

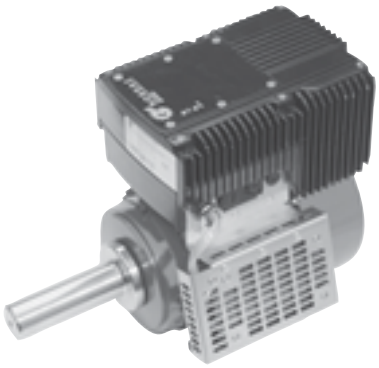
SK TI 0/1	For standard 380-480 VAC units
SK TI 0/1 - 230	For standard 200-240 VAC units
SK TI 0/2	For 380-480 VAC units using Harting connectors
SK TI 0/2 – 230	200-240 VAC units using Harting connectors

Harding H10E series connector options for side 1(CE1) of SK TI 0/2 (and -230) Interfaces

LE H10E	Socket for AC supply input
MA H10E	Plug for motor output

Conduit plate options for side 3(CE3) of SK TI 0/2 (and -230) Interfaces

SK DA4	Plate with 4 x M16
SK DA2	Plate with 2 x M20 and 1 x M16 (Provided as standard with SK TI 0/2)
SK DA1	Plate with 1 x M25 and 2 x M16
SK DA0	Plate with no entries



Added related components for Trio Interfaces

P/N 018524200	M20 x ½ adapter (Qty 2 provided as standard on assembled trios)
P/N 011015410	Adapter to mount Trio Interface on 63 & 71 frame motors
P/N 013097000	Gasket to mount Trio Interface on 63 & 71 frame motors

SK 300E Options & Related Information

Step 3: Braking Resistors

Braking Resistor Options for SK 300E for mounting on Trio Interface

During dynamic braking, energy is delivered from the load through the motor (acting as a generator) to the AC vector drive. The AC vector drive dissipates this energy as heat via the integral brake chopper to the optional external braking resistors.

For use with SK TI 0/1 adapters

SK BR3-120/100-TI 0/1	120 ohm/100 W for all ratings except 5 HP
SK BR3-82/200-TI 0/1	82 ohm/200 W for 5 HP only

For use with SK TI 0/2 adapters

SK BR3-120/100-TI 0/2	120 ohm/100 W for all ratings except 5 HP
SK BR3-82/200-TI 0/2	82 ohm/200 W for 5 HP only

Step 4: Customer I/O Based Control Interface Option - SK CU2-STD

The standard I/O based control available via the Trio Interface can be expanded via selection of an optional Customer Unit, **SK CU2-STD**, that plugs into the Trio Interface. Interface I/O points are listed on the following chart:

I/O on standard Trio Interface	Additional I/O on SK CU2-STD Option
1 X programmable digital input	4 X programmable digital input
5 VDC and 15 VDC power supplies	2 X single-ended analog inputs
RS 485 interface via M-12 connector and terminals	+10 VDC reference supply
1 X programmable relay output	1 X selectable/programmable analog/digital output
	PID control access

Step 5: Cover Mounted Technology Unit (TU) Options

A variety of pre-engineered plug in Technology Unit (TU) options can be ordered to replace the standard blank cover of the SK 300E AC vector drive. Only a single TU can be installed on the AC vector drive at a given time. Available units include operator and field bus interfaces:

Technology Unit (TU) Name	Description
SK TU2-POT	Analog reference potentiometer box with L/Off/R control switch
SK TU2-CTR	Digital control/programmer with 4 digit, 7 segment LED display
SK TU2-PBR	Profibus field bus interface
SK TU2-PBR-24V	Profibus field bus interface powered by customer 24 VDC supply
SK TU2-PBR-KL	Profibus field bus interface with clamp on connectors
SK TU2-AS1	AS (Actuator/Sensor) Interface
SK TU2-CAO	CANopen field bus interface
SK TU2-DEV	DeviceNet field bus interface
SK TU2-IBS	InterBus field bus interface
SK TU2-DECKEL	Original blank cover for TU slot (in case TU option is removed)

Step 6: Wall Mounting Option Kit, SK WMK-DA1

The wall mounting kit enables placing the SK 300E AC vector drive on a nearby wall or the machine instead of directly on the NORD motor or gearmotor. The Trio Interface (TI) is still required and all other options can be used.

Step 7 : Additional Tools & Related Interface Options

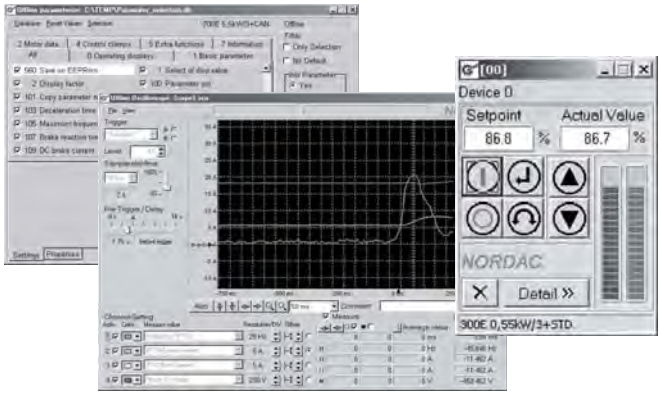
In addition to the cover mounted SK TU2-CTR option, there are several additional options that enable simple programming and control of the SK 300E:

Handheld Parameter Box (P-Box) with 10 foot cable, SK PAR-2H

Detachable external add-on unit that can be used to program and display parameters and control the operation of the connected SK 300E. Features multi-line plain text display selectable in six languages. Manages and stores up to five unique AC vector drive programs. Cable plugs into M-12 connector in side of Trio Interface.

Panel Mount Parameter Box (P-Box), SK PAR-2E

Panel Mount version of Parameter Box with same functionality as SK PAR-2H. Installs in cut-out in front of customer supplied operator panel. Interface connection is performed by customer with their shielded cable via terminals on SK PAR-2E and SK 300E.



NORD CON Software – Available free at NORD Website

NORD CON Software is a Windows-based PC program that enables the control and programming of NORDAC AC vector drives. It provides for accessing up to 31 AC vector drives simultaneously via the RS485 interface. It features both off-line and on-line programming and data management modes.

NORD CON allows user to:

- Program AC vector drives and upload/download parameter files
- Control connected AC vector drives for test/troubleshooting
- Monitor connected AC vector drives and examine up to four variables versus time with built-in oscilloscope feature
- Display parameter information in six languages

Optional accessories required to interface user PC to SK 300E via NORD CON are:

SK IC1 – RS 485 to RS 232 interface converter
Enables communication between RS 232 port on computer and RS 485 port on SK 300E

Cable SK 300E –
10 foot cable that connects between the 9-Pin D shell connector on the SK IC1 and the M-12 connector on the side of the SK 300E Trio Interface.

Electromechanical Brake Interface & Coil Voltage Selection

As standard, the SK 300E provides a dedicated high voltage DC power supply and coordination software to directly control an Electromechanical Brake. This is equivalent to using a half wave rectifier, so the brake coil voltage must be specified per the following chart:

Nominal Inverter AC Input Voltage	Brake Coil Voltage
440 – 480 VAC	205 VDC
200 – 240 VAC	105 VDC
380 – 415 VAC	180 VDC

The brake gets connected to terminals +Br and –Br on the Trio Interface

Motor overload protection

Electronic motor overload protection is provided as standard on the SK 300E AC vector drive. If required, more precise protection can be achieved via the use of motor thermostats (TW) or thermistor sensors (TF). These devices can be interfaced to the SK 300E via the programmable digital input to indicate a motor over temperature error.

Performance Data

Standard Efficiency

230/460V – 60Hz

Inverter duty • TEFC
Synchronous speed 1800rpm @ 60Hz • 4-pole • Three-phase
Voltages: 230/460V – 60Hz • 1.15 Service Factor
Continuous Duty • 40°C Ambient • up to 3300ft Elevation
Class B temperature rise • Class F insulation

Pn - Full load power
Nn - Full load speed
In - Full load current
Ia - Locked-rotor current
Ia/In - Locked-rotor current ratio (%)
Tn - Full-load torque
Ta - Locked-rotor torque

Ta/Tn - Locked-rotor torque ratio
Tk - Break-down torque
Tk/Tn - Break-down torque ratio
pf - Power factor
Eff - Normal efficiency
Jm - Motor inertia

Performance Data

Standard Efficiency

200-208V – 60Hz

Inverter duty • Induction motor • TEFC
Synchronous speed 1800rpm @ 60Hz • 4-pole • Three-phase
Voltages: 208V – 60Hz • 1.15 Service Factor
Continuous Duty • 40°C Ambient • up to 3300ft Elevation
Class B temperature rise • Class F insulation

NORD GEAR CORPORATION

Conditions of Sale

1. CONTRACT

Any contract between Nord Gear Corporation, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller. Accordingly, the Buyer and Seller acknowledge and agree that the terms and conditions set forth below and on the face hereof shall govern Buyer's purchase of the goods described on the face hereof and shall take precedence over and represents the final agreement between Buyer and Seller, notwithstanding any inconsistent, contradictory or other prior or further conditions contained in any oral or written request or purchase order issued by Buyer or any other document furnished by Buyer in connection with its purchase of the Goods, regardless of whether such document or documents are exchanged simultaneously with this Invoice or prior or subsequent thereto. Any additional or different terms or conditions which may appear in any communicaiton, oral or written, from Seller, its officers, employees, agents or representatives, are hereby expressly rejected and shall not be effective or binding upon the Seller, unless specifically hereafter agreed to in writing by Seller and no such additional or different terms or conditions in any document submitted to Seller by Buyer shall become part of the contract between Buyer and Seller, unless such written acceptance by Seller specifically recognizes and assents to their inclusion. Any objection by Buyer to the terms and conditions hereof shall be ineffective unless Seller is advised in writing thereof within two (2) days of the date of this Invoice.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Corporation's home office in Waunakee, Wisconsin, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Waunakee, Wisconsin. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by the Buyer, its agents, servants, employees, or by carriers. Such obligations under this warranty are limited to remedying any deficiencies in the goods at Waunakee, Wisconsin, or at such place or places in the United States of America as may be designated by Seller. THIS WARRANTY SHALL PERTAIN TO ANY PART OR PARTS OF ANY GOODS TO WHICH BUYER OR ITS ASSIGNS HAS GIVEN WRITTEN NOTICE OF CLAIMED DEFECTS TO SELLER. NORD GEAR CORP. WARRANTS ITS PRODUCTS AGAINST DEFECTS IN MATERIAL AND WORKMANSHIP FOR A PERIOD OF 12 MONTHS FROM DATE OF INSTALLATION OR 18 MONTHS FROM DATE OF SHIPMENT WHICHEVER COMES FIRST ON ALL COMPONENTS. 36 MONTHS FROM DATE OF INVOICE OR 24 MONTHS FROM DATE OF INSTALLATION WHICHEVER COMES FIRST ON GEARS AND HOUSINGS ONLY. PARTS WHICH ARE SUBJECT TO OPERATIONAL WEAR AND TEAR, SUCH AS BELTS & TRACTION DISCS, ARE NOT COVERED BY THE LIMITED WARRANTY. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. THE LIMITED WARRANTY SET FORTH HEREIN IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH HEREIN, SELLER HAS MADE AND MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO, THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE ANY WARRANTY, EXPRESS OR IMPLIED. SELLER MAKES NO REPRESENTATIONS AS TO THE CAPACITY OR PERFORMANCE OF THE GOODS SOLD HEREUNDER, EXCEPT AS SET FORTH IN THE INVOICE'S SPECIFICATIONS OR OTHER VALID AGREEMENT OR CONDITION AGREED TO BETWEEN THE PARTIES, AND ANY SUCH REPRESENTATIONS ARE EXPRESSLY CONDITIONED UPON THE CORRECTNESS OF THE DATA AND INFORMATION FURNISHED BY THE BUYER AND UPON THE GOODS BEING PROPERLY INSTALLED AND MAINTAINED. THE REMEDIES OF THE BUYER PROVIDED HEREUNDER ARE EXCLUSIVE. In no event shall the Seller be liable to the Buyer or to any other person for any loss or damage, direct or indirect, arising out of or caused by the use or operation of the goods, or for the loss of profits, business, or good will, or for any incidental, special or consequential damages. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any and all costs of the return to the Seller of such goods and all related costs to remove and re-install such goods, shall be borne by Buyer. Goods sold but not manufactured by the Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provision of the preceding paragraph of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gearmotors are in conformity with Seller's tests.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. Buyer may not return any goods claimed to be in non-conformity without Seller's prior written authorization. Goods returned without permission will not be accepted, including for credit, and will be returned to Buyer, F.O.B. Sellter's plant. Any claim based on the receipt of damaged Goods must be filed with the carrier which delivered the goods. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any change which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries, In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. The liability of the Seller to Buyer, if any hereunder, for breach of warranty, contract, negligence or otherwise, shall in no event exceed the amount of the purchase price of the goods sold with respect to which any damages are claimed. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer: provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchases at public or private sale, and hold the Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for a state court receivership is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order of judgement entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganizing or if a state court receivership is filed against Buyer, then, at its option Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(a) Any indicated dates of delivery are approximate only, but NORD Gear will attempt to meet them whenever possible. (b) NORD Gear will not be liable for any penalty clausess contained in any specifications or order submitted unless agreed to in writing by an authorized officer of NORD Gear Corporation. (c) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (d) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Unless otherwise provided, terms of payment are 30 days net from the date of invoice with a 1% discount if paid within 10 days of date of invoice. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for a state court receivership is filed against Buyer, or if the Buyer makes any assignment for the benefit of it's creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable attorney's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such forthwith, together with reasonable attorney's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable attorney's fees, shall forthwith be due and payable from Buyer to Seller. Buyer agrees to pay all reasonable costs and reasonable attorneys' fees incurred by Seller in enforcing Seller's rights against Buyer, including Seller's right to payment of the purchase price of the goods and Buyer's payment of all other amounts owing to Seller required under this Invoice and Conditions of Sale.

13. SECURITY INTEREST AND TITLE

In states and localities which are governed by the Uniform Commercial Code, this contract shall serve as security agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Uniform Commercial Code regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale. In states and localities where the Uniform Commercial Code does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under the Uniform Commercial Code with the proper registers or offices, or for filing or recording the conditional sales contract.

14. SALES AND USE TAX

Buyer agrees to bear and pay any sales or use tax in connection with the purchase herein, and to hold the Seller harmless from payment. At the option the Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

The Buyer will be charged for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. CHANGES/CANCELLATION

NORD Gear will not accept changes in specifications to a confirmed order unless such changes are requested in writing and confirmed back in writing. In addition, the purchaser must to agree to any additional charges that may arise from the change. Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

20. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operation procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to defend, indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to defend, indemnify and save Seller harmless from any such claims arising from such accident.

21. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and affect, except that the parties shall try to replace such invalid provision closest to their original mutual intentions. (b) This Invoice and these Conditions of Sale constitute the entire agreement between the parties regarding the subject matter hereof and supercedes all prior agreements, understandings and statements, whether oral or written, regarding such subject matter. No modification to, change in or departure from, the provisions of this Invoice and Conditions of Sale shall be valid or binding on Seller, unless approved in writing by Seller. No course of dealing or usage of trade shall be applicable unless expressly incorporated into this Invoice and Conditions of Sale. Any amendments to any contract or contracts between the parties shall be valid only upon the written consent of both parties.

22. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

23. APPLICABLE LAW AND VENUE

All contracts and their interpretation are governed by the applicable, substantive laws of the State of Wisconsin. Any litigation brought by the Buyer regarding this Invoice or goods purchased hereunder may only be brought in the Circuit Court for Dane County, Wisconsin.

NORD GEAR LIMITED

Terms and Conditions of Sale

1. CONTRACT

Any contract between Nord Gear Limited, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Limited's home office in Brampton, Ontario, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Braenton, Ontario. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by the Buyer, its agents, servants, employees, or by carriers. Such obligations under this warranty are limited to remedying any deficiencies in the goods at Brampton, Ontario, or at such place or places in Canada as may be designated by Seller. This warranty shall pertain to any part or parts of any goods to which Buyer or its assigns has, within one year from date of original factory invoice, given written notice of claimed defects to Seller. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH ABOVE, SELLER HAS MADE NO WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE AN EXPRESS WARRANTY. THE REMEDIES OF THE BUYER SET FORTH IN THIS SECTION ARE EXCLUSIVE. In no event shall the Seller be liable to the Buyer or to any other person for any loss or damage, direct or indirect, arising out of or caused by the use or operation of the goods, or for the loss of profits, business, or good will, or for any incidental, special or consequential damages. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any costs of the return of such goods to Seller shall be borne by Buyer. Goods sold but not manufactured by the Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provisions of the preceding paragraph of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gearmotors are in conformity with Seller's test. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE THE SELLER DOES NOT ASSUME, NOR DOES IT AUTHORIZE ANY PERSON TO ASSUME, ON ITS BEHALF, ANY OTHER OBLIGATION OR LIABILITY.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any changes which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other course beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer; provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installment thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days' written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for Buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchaser at public or private sale, and hold Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for appointment of a receiver is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order or judgment entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganization or if a state court receivership is filed against Buyer, then, at its option, Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(a) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (b) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or on any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for appointment of a receiver is filed against Buyer, or if the Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable solicitor's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such forthwith, together with reasonable solicitor's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable solicitor's fees, shall forthwith be due and payable from Buyer to Seller.

13. SECURITY INTEREST AND TITLE

In provinces which are governed by a Personal Property Security Act, this contract shall serve as Security Agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Personal Property Security Act regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale herein. In provinces where a Personal Property Security Act does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under a Personal Property Security Act with the proper registers or offices, or for filing or recording the Conditional Sales Contract herein.

14. SALES AND USE TAX

The Seller's prices do not include sales, use, excise or other taxes payable to any governmental authority in respect of the sale of Seller's goods. The Buyer shall pay, in addition to the Seller's price the amount of any such taxes or shall reimburse the Seller for the amount thereof that the Seller may be required to pay. At the option of the Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

The Seller does not charge for standard packaging for domestic shipment. The Buyer will be charged, however, for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. EXPORT ORDER

Export orders are to be accompanied by a confirmed irrevocable Letter of Credit in Seller's favour, in Canadian currency, with an accredited Canadian bank, subject to Seller's draft, with shipping documents attached.

20. CANCELLATION

Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

21. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operating procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to indemnify and save Seller harmless from any such claims arising from such accident.

22. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and effect; except that the parties shall try to replace such invalid provision with a provision closest to their original mutual intentions. (b) Any amendments to any contract or contracts require the consent in writing by both parties.

23. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

24. APPLICABLE LAW

All contracts are governed by the applicable laws of Ontario.

25. This instrument sets forth the entire understanding and agreement of the parties hereto in respect of the subject matter hereof, and all prior undertakings between the parties hereto, together with all representations and obligations of such parties in respect of such subject matter, shall be superceded by and merged into this instrument.

26. The provisions of this agreement shall bind and ensure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and (subject to any restrictions or assignment herein above set forth) assigns, as the case may be.

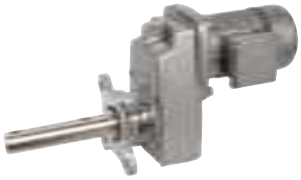
27. The parties acknowledge that they have requested this Contract and all notices or other documents relating thereto be drafted in the English language.

Les parties reconnaissent qu'ils ont requis que ce contrat et tous les avis ou autres documents qui s'y rapportent soient rédigés en langue anglaise.

"Terms and Conditions in French available upon request."

Product Overview

UNICASE™ SPEED REDUCERS



HELICAL IN-LINE
- Foot or Flange Mount
- Torque up to 205,000 lb-in
- Gear ratios – 1.82:1 to over 300,000:1

NORDBLOC®.1 HELICAL IN-LINE
- Foot or Flange Mount
- Torque up to 26,550 lb-in
- Gear ratios – 1.88:1 to over 370:1

PARALLEL HELICAL CLINCHER™
- Shaft, Flange or Foot Mount
- Torque up to 797,000 lb-in
- Gear ratios – 4.26:1 to over 300,000:1

SCP SCREW CONVEYOR PACKAGE
- Shaft, or Flange Mount
- Torque up to 53,100 lb-in
- Gear ratios – 4.32:1 to over 1500:1

RIGHT ANGLE HELICAL-BEVEL 2-STAGE
- Foot, Flange or Shaft Mount
- Torque up to 5,840 lb-in
- Gear ratios – 4.1:1 to 72:1

RIGHT ANGLE HELICAL-BEVEL
- Foot, Flange or Shaft Mount
- Torque up to 283,000 lb-in
- Gear ratios – 8.04:1 to over 300,000:1

RIGHT ANGLE HELICAL-WORM
- Foot, Flange or Shaft Mount
- Torque up to 27,585 lb-in
- Gear ratios – 4.40:1 to over 300,000:1

HIGH PERFORMANCE MOTORS & BRAKEMOTORS

INVERTER/VECTOR DUTY
- Standard or Energy Efficient
- Integral, NEMA or Metric IEC
- 1/6 to 250 hp

UNICASE™ SPEED REDUCERS

MINICASE™ RIGHT ANGLE WORM
- Foot, Flange or Shaft Mount
- Torque up to 3,540 lb-in
- Gear ratios – 5:1 to 500:1

FLEXBLOC™ WORM
- Modular bolt-on options
- Torque up to 4,683 lb-in
- Gear ratios – 5:1 to 3,000:1

MAXXDRIVE™ LARGE INDUSTRIAL GEAR UNITS PARALLEL HELICAL
- Modular bolt-on options
- Torque up to 2,027,000 lb-in
- Gear ratios – 5:1 to 1,600:1

MAXXDRIVE™ LARGE INDUSTRIAL GEAR UNITS HELICAL-BEVEL
- Modular bolt-on options
- Torque up to 2,027,000 lb-in
- Gear ratios – 5:1 to 1,600:1

NORDAC AC VECTOR DRIVES

SK200E
- Decentralized, high performance
- 380-480V, 3-phase to 10 hp
- 200-240V, 3-phase to 5 hp
- 200-240V, 1-phase to 1.5 hp
- 100-120V, 1-phase to 1 hp

SK500/520/530E
- Compact, high performance
- 380-480V, 3-phase, to 30hp
- 200-240V, 3-phase, to 15hp

SITRANS WM100 Motion Sensing Switch

SITRANS WM100 motion sensing switch is a heavy-duty zero speed alarm. It is used to detect the absence or presence of motion of rotating, reciprocating, or conveying equipment. The WM100 has a circuit card and a magnetic assembly potted in the probe body. The WM100 is powered from the line voltage and provides a set of dry relay contacts to indicate motion when the ferrous targets of the machinery being monitored pass in front of the probe.

Safety Notes

Special attention must be paid to warnings and notes highlighted from the rest of the text by grey boxes.

WARNING: relates to a caution symbol on the product, and means that failure to observe the necessary precautions can result in death, serious injury, and/or considerable material damage.

WARNING[1]: means that failure to observe the necessary precautions can result in death, serious injury, and/or considerable material damage.

CAUTION: means that failure to observe the necessary precautions can result in considerable material damage.

Note: means important information about the product or that part of the operating manual.

Safety marking symbols

In manual	On Product	Description
		Caution: refer to accompanying documents (manual) for details.
		Protective Conductor Terminal

1. This symbol is used when there is no corresponding caution symbol on the product.

The Manual

Notes:

- The SITRANS WM100 product is to be used only in the manner outlined in this instruction manual.
- This product is intended for use in industrial areas. Operation of this equipment in a residential area may cause interference to several frequency based communications.

This instruction manual covers the installation, operation and maintenance of the SITRANS WM100. It is essential that this manual be referred to for proper installation and operation of your unit. Adhering to the installation and operating procedures will ensure a quick, trouble free installation and allow for the maximum accuracy and reliability of your motion sensing probe.

If you have any questions, comments, or suggestions about the manual contents, please email us at techpubs.smpi@siemens.com.

For the complete library of Siemens manuals, go to www.siemens.com/processautomation.

Specifications

Power

- 115 V AC, 50/60 Hz, 7 VA
  or
- 230 V AC, 50/60 Hz, 7 VA
- ±10% of rated voltage

Output

- 1 form C (SPDT) dry relay contacts, rated 5 A at 250 V AC non-inductive, fail-safe operation
- time delay :
  - start up : 10 to 14 seconds (or 5 to 7 seconds with 5 sec/12 PPM jumper installed)
  - zero speed : 5 seconds ±1 (minimum speed 10 to 15 ppm)[1] or 10 seconds ±2 (minimum speed 5 to 7.5 ppm)[1]
  - LED indicates detection of changes in magnetic field (resets zero speed timer)

Operating Temperature

- – 40 to +60 °C (– 40 to +140 °F)

Environmental

- location: indoor/outdoor
- altitude: 2000 m (6562 ft.) max.
- ambient temperature: -40 to +60 °C (-40 to +140 °F)
- relative humidity: suitable for outdoor (Type 4 / NEMA 4, Type 4X / NEMA 4X, Type 6 / NEMA 6, IP67)
- installation category: II
- pollution degree: 4

Dynamic Range

- minimum 6 or 12 pulses per minute[1]
- maximum 3000 pulses per minute

Shipping Weight

- 2 kg (4.4 lbs)

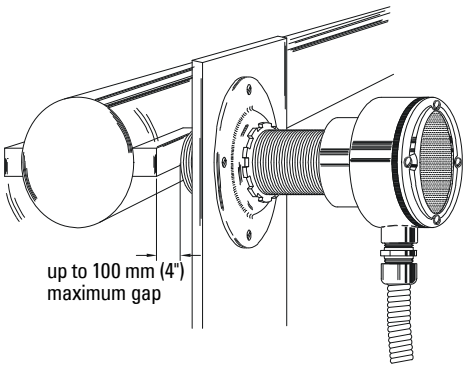
Approvals

- $CSA_{US/C}$, CE, C-TICK

1. Selected via a common jumper. Refer to Operation.

Installation

WARNING: The probe face is magnetic. Keep it away from magnetosensitive materials such as computer discs and audio or video tapes.



WARNING: All field wiring must have insulation suitable for at least 250 V and the maximum ambient temperature of +60°C (+140 °F).

Notes:

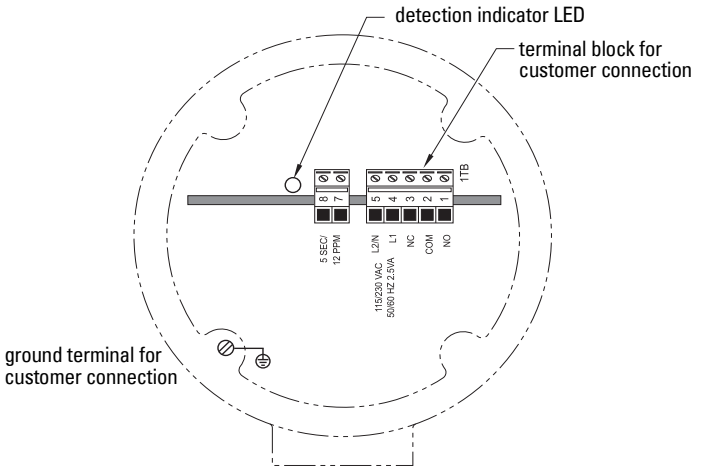
- The Protective Earth Terminal indicated by (⏚) must be connected to reliable ground.
- All wiring must be done by qualified personnel in accordance with all governing regulations.
- The equipment must be protected by a 15 A fuse or circuit breaker in the building installation.
- A circuit breaker or switch in the building installation, marked as a disconnect switch, shall be in close proximity to the equipment and within easy reach of the operator.
- Relay contact terminals are for use with equipment which has no accessible live parts and wiring which has insulation suitable for at least 250 V.

Environment

The WM100 must be mounted in an area that is non-hazardous, within the ambient temperature range and non-corrosive to the materials of construction. Refer to Dimensions for materials of construction.

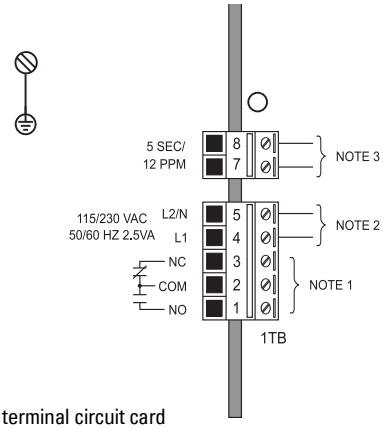
The probe should be mounted using the supplied mounting flange, onto a vibration free structure. The gap between the probe and the target should be sufficient such that there is no danger of the target damaging the probe. The maximum allowable gap ranges from 20 mm to over 100 mm from the face of the target to the face of the probe. The range is dependent on the target type and range of speed expected. See typical performance graphs on page 9 for examples.

The WM100 is sensitive to lateral disturbances to its magnetic field. If the WM100 is responding to motion from an interfering target, move the WM100 or install a ferrous plate (steel) as a shield between the WM100 and the interfering target.



Where possible, the probe should be mounted so the conduit entry is pointing down to avoid accumulation of condensation in the casing. Connection of the probe should be made via flexible conduit for easier removal or adjustment of the probe.

Note: In climates where direct sunlight may cause the SITRANS WM100 temperature to rise above the specified limit, shade the unit by installing a sun shield.

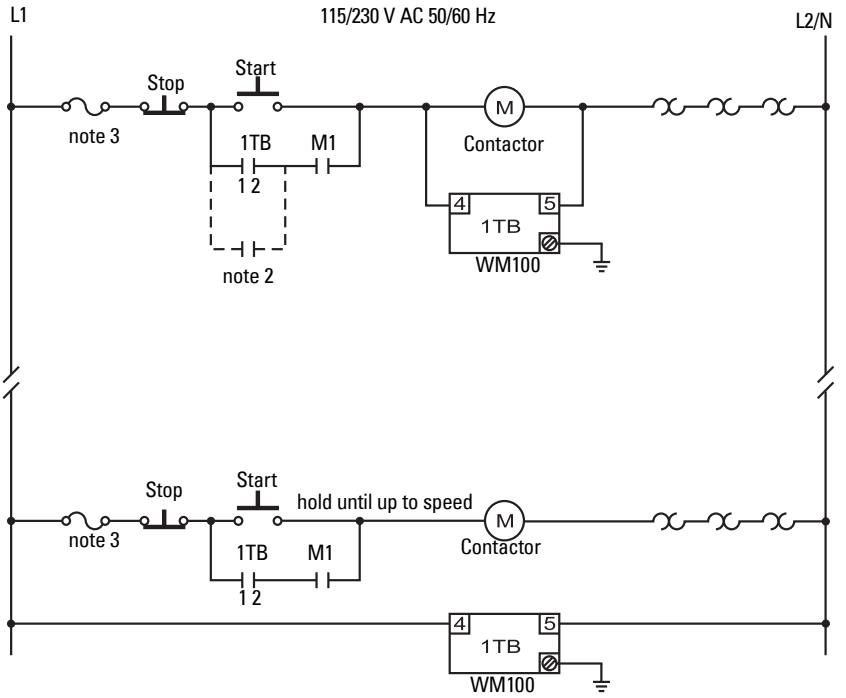


WM100 Circuit Card

⚠ **WARNING: Disconnect power before opening top cover.**

Note: Check nameplate for proper operation voltage (115 V AC or 230 V AC).

WM100 Connection



terminal circuit card

Notes:

1. Dry contacts shown in de-energized (alarm or shelf) state.
2. WM100 is manufactured for either 115 or 230 V AC operation. Check WM100 nameplate for applicable voltage. Correct voltage must be supplied. Voltages lower than specified will result in an inoperative condition. Voltages higher than specified will severely damage unit.
3. For 5 second time delay and minimum 12 ppm range, connect jumper across terminals 7 and 8. Without a jumper, the default is 10 second time delay and minimum 6 ppm range.

WM100 Typical Wiring

Should the time delay feature on start up not be required, power should be applied continuously from a separate source. Typically this would be desirable for automatic up-stream start up of conveying devices after down stream drive has reached its operation speed.

Notes:

1. Interlocks and safety pull switches are not shown.
2. If 'START' is initiated by programmable logic controller, closure time may be of insufficient duration to allow WM100 contact to latch. In such a case, program a timer contact into circuit.
3. CSA requires a 3 A or less fuse to protect contacts. For 240 V AC, protect contacts with a 1500 VA transformer as well.

Operation

When power is initially applied to the WM100, the alarm relay is energized and held artificially by the timing circuit. This will simulate the normal operation of the WM100 for a start up delay of >10 seconds (or >5 seconds if a jumper is wired across terminals 7 and 8).

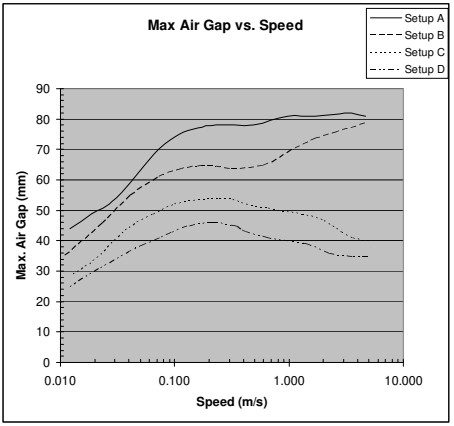
As a ferromagnetic object passes through the probe's permanent magnet field, the distortion of the flux is sensed by the magnetic detection circuit. If the distortion is of suitable magnitude, a short pulse is generated to reset the timing circuit, visible to the user by the LED shown in the lid window. This action keeps the alarm relay energized providing fail-safe operation of the contacts.

If no change in flux (target motion) is sensed for a period of 10 seconds (or 5 seconds if a jumper is wired across terminals 7 and 8), the timing circuit will not be reset. This will cause the alarm relay to de-energize and the contacts to change state.

Thus the WM100 cannot detect the motion of uniform ferromagnetic masses such as a rotating pulley or a keyless shaft.

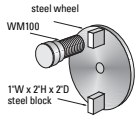
When adjusting the WM100 mounting position, it may take up to 10 seconds for the detection circuit to adjust to the new ambient magnetic environment. During this adjustment period, the LED may fail to flash for an otherwise normally detectable moving target.

Typical Performance



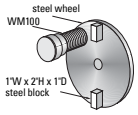
The maximum air gap for which the WM100 will reliably detect the moving ferrous target varies according to the target's size, shape, orientation and direction of motion, as well as the material to which the target is attached.

An example shown below compares typical results from steel blocks used as targets on a wheel (either ferrous or non-ferrous). As shown, a larger detection range can typically be achieved when there is a ferrous object behind the target. The WM100 provides excellent detection of a relatively small target, such as a 3/16" (~5 mm) shaft key installed in a 5/8" (~16 mm) motor shaft with < 0.125" (~3 mm) of the key protruding beyond the shaft envelope.

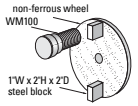


To ensure proper operation in any setup, use the LED indicator to confirm consistent detection of the target over the full range of expected operational speeds. Note that detection range may vary slightly with voltage supply and temperature, so it is recommended to use the minimum air gap that is physically safe to implement.

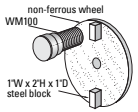
Performance Examples



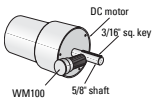
Wheel Driven Examples



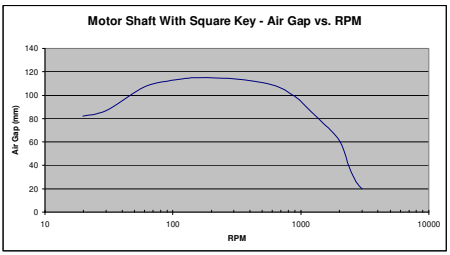
Setup A: WM100 with two 1"x2"x2" steel targets mounted on steel wheel



Setup B: WM100 with two 1"x2"x1" steel targets mounted on steel wheel

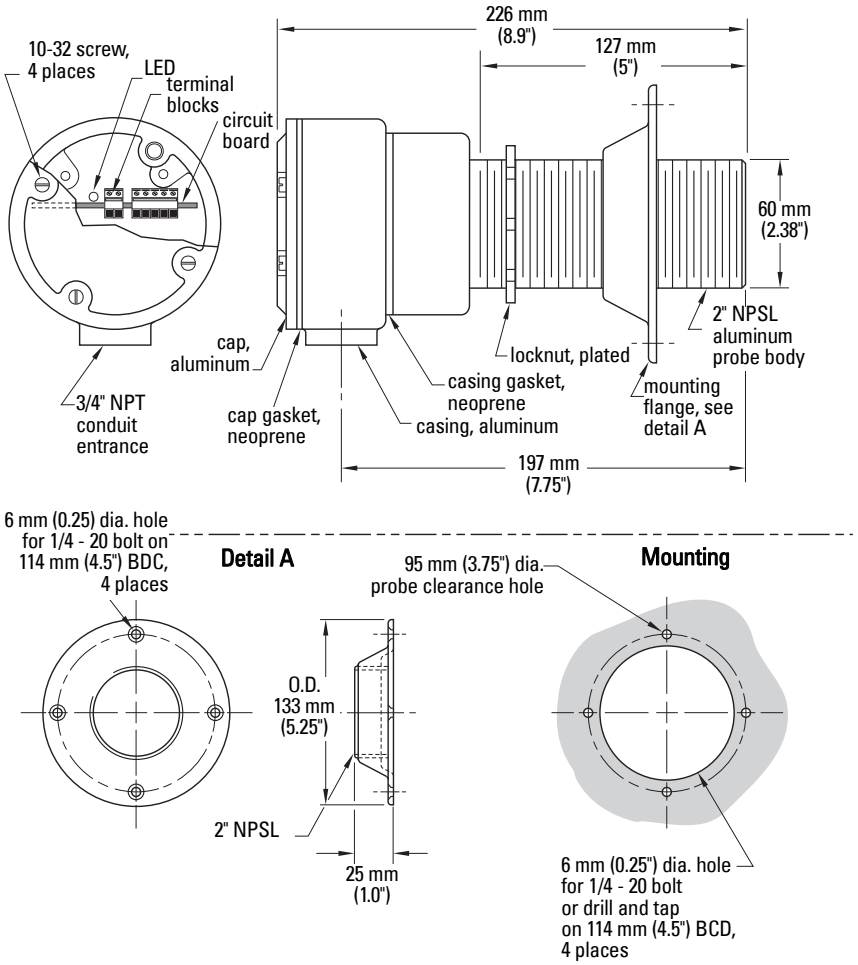


Setup C: WM100 with two 1"x2"x2" steel targets mounted on non-ferrous wheel



Setup D: WM100 with two 1"x2"x1" steel targets mounted on non-ferrous wheel

Setup E: DC motor with 5/8" drive shaft and 3/16" square key



Shaft Driven Example

Note: 1 m/s ~ 200 ft/min; 25 mm ~ 1.0"

Dimensions

Maintenance

The WM100 can be cleaned by wiping the enclosure exterior with a damp cloth. No further maintenance is required for the device.

INTRODUCTION

The Screw Conveyor and Bucket Elevator Engineering Committee of the CEMA (Conveyor Equipment Manufacturers Association) Engineering Conference was assigned the task of bringing together, under one cover, the accumulated experience of many individuals and their companies in an effort to provide a common basis for the safety, operation and maintenance of screw conveyors.

The CEMA Safety, Operation & Maintenance Manual contains instructions for the safe installation, operation and maintenance of screw conveyors. The reliability and service life depend on the proper care taken while installing and preparing the equipment for its intended use.

Read **ALL** instructions in this manual and manufacturer's manuals **BEFORE** installing, operating and maintaining the equipment.

SECTION A - SAFETY

Screw conveyor safety begins with a plan that considers every possible danger and potential hazard. Operation and maintenance personnel must be thoroughly trained in safe operating procedures, recognition of possible hazards, and maintenance of a safe area around screw conveyors.

CEMA has a comprehensive safety program that includes:

- Warning and Safety Reminder for Screw Conveyors, Drag Conveyors and Bucket Elevators - (CEMA Document: SC2004-01)
- CEMA Safety Label Brochure - (CEMA Document: 201)
- CEMA Safety Label Placement Guidelines:
  - Screw Conveyor - (CEMA Document: SC-2)
  - Vertical Screw Conveyor - (CEMA Document: SC-3)
- Screw Conveyor Safety Poster - (CEMA Screw Conveyor Safety Poster)
- Screw Conveyor, Drag Conveyor and Bucket Elevator Safety Video - (CEMA Document: AV6) This video describes key safety practices that personnel must follow when operating and maintaining screw conveyors, drag conveyors and bucket elevators.

Screw conveyor accidents can be avoided by implementation and enforcement of an in-plant safety program. A number of safety precautions are included in this manual. Carefully study and follow the safety precautions. Remember - accidents are usually caused by negligence or carelessness.

CEMA Document: SC 2004-01

WARNING AND SAFETY REMINDERS FOR SCREW , DRAG , AND BUCKET ELEVATOR CONVEYORS

APPROVED FOR DISTRIBUTION BY THE SCREW CONVEYOR SECTION OF THE CONVEYOR EQUIPMENT MANUFACTURERS ASSOCIATION (CEMA)

It is the responsibility of the contractor, installer, owner and user to install, maintain and operate the conveyor, components and, conveyor assemblies in such a manner as to comply with the Occupational Safety and Health Act and with all state and local laws and ordinances and the American National Standards Institute (ANSI) B20.1 Safety Code.

In order to avoid an unsafe or hazardous condition, the assemblies or parts must be installed and operated in accordance with the following minimum provisions.

1. Conveyors shall not be operated unless all covers and/or guards for the conveyor and drive unit are in place. If the conveyor is to be opened for inspection cleaning, maintenance or observation, the electric power to the motor driving the conveyor must be LOCKED OUT in such a manner that the conveyor cannot be restarted by anyone; however remote from the area, until conveyor cover or guards and drive guards have been properly replaced.

2. If the conveyor must have an open housing as a condition of its use and application, the entire conveyor is then to be guarded by a railing or fence in accordance with ANSI standard B20.1.(Request current edition and addenda)

3. Feed openings for shovel, front loaders or other manual or mechanical equipment shall be constructed in such a way that the conveyor opening is covered by a grating. If the nature of the material is such that a grating cannot be used, then the exposed section of the conveyor is to be guarded by a railing or fence and there shall be a warning sign posted.

4. Do not attempt any maintenance or repairs of the conveyor until power has been LOCKED OUT.

5. Always operate conveyor in accordance with these instructions and those contained on the caution labels affixed to the equipment.

6. Do not place hands, feet, or any part of your body, in the conveyor.

7. Never walk on conveyor covers, grating or guards.

8. Do not use conveyor for any purpose other than that for which it was intended.

9. Do not poke or prod material into the conveyor with a bar or stick inserted through the openings.

10. Keep area around conveyor drive and control station free of debris and obstacles.

11. Eliminate all sources of stored energy (materials or devices that could cause conveyor components to move without power applied) before opening the conveyor

12. Do not attempt to clear a jammed conveyor until power has been LOCKED OUT.

13. Do not attempt field modification of conveyor or components.

14. Conveyors are not normally manufactured or designed to handle materials that are hazardous to personnel. These materials which are hazardous include those that are explosive, flammable, toxic or otherwise dangerous to personnel. Conveyors may be designed to handle these materials. Conveyors are not manufactured or designed to comply with local, state or federal codes for unfired pressure vessels. If hazardous materials are to be conveyed or if the conveyor is to be subjected to internal or external pressure, manufacturer should be consulted prior to any modifications.

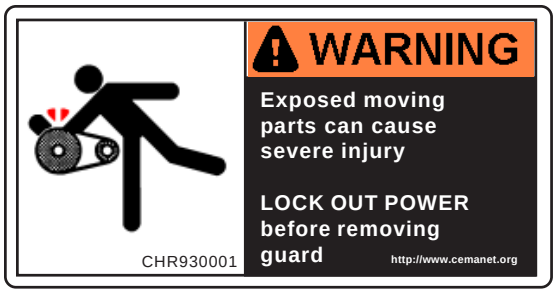
CEMA insists that disconnecting and locking out the power to the motor driving the unit provides the only real protection against injury. Secondary safety devices are available; however, the decision as to their need and the type required must be made by the owner-assembler as we have no information regarding plant wiring, plant environment, the interlocking of the screw conveyor with other equipment, extent of plant automation, etc. Other devices should not be used as a substitute for locking out the power prior to removing guards or covers. We caution that use of the secondary devices may cause employees to develop a false sense of security and fail to lock out power before removing covers or guards. This could result in a serious injury should the secondary device fail or malfunction.

There are many kinds of electrical devices for interlocking of conveyors and conveyor systems such that if one conveyor in a system or process is stopped other equipment feeding it, or following it can also be automatically stopped.

Electrical controls, machinery guards, railings, walkways, arrangement of installation, training of personnel, etc., are necessary ingredients for a safe working place. It is the responsibility of the contractor, installer, owner and user to supplement the materials and services furnished with these necessary items to make the conveyor installation comply with the law and accepted standards.

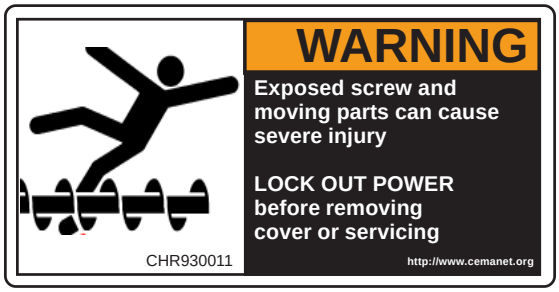
Conveyor inlet and discharge openings are designed to connect to other equipment or machinery so that the flow of material into and out of the conveyor is completely enclosed.

One or more warning labels should be visible on conveyor housings, conveyor covers and elevator housings. If the labels attached to the equipment become illegible, please order replacement warning labels from the OEM or CEMA.



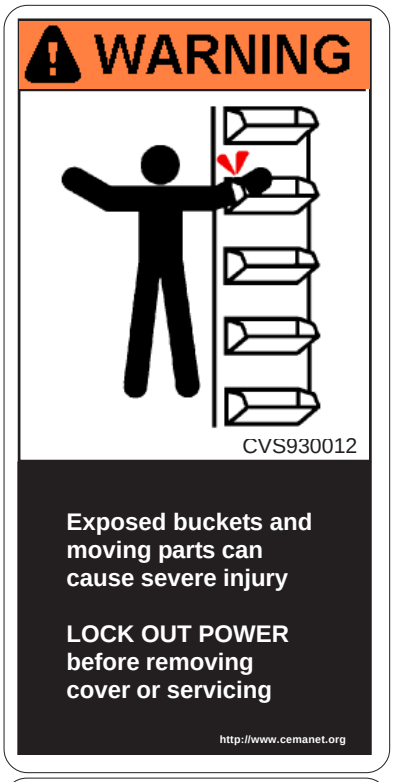
The Conveyor Equipment Manufacturers Association (CEMA) has produced an audio-visual presentation entitled “Safe Operation of Screw Conveyors, Drag Conveyors, and Bucket Elevators.” CEMA encourages acquisition and use of this source of safety information to supplement your safety program.

SEE NEXT PAGE FOR SAFETY LABELS

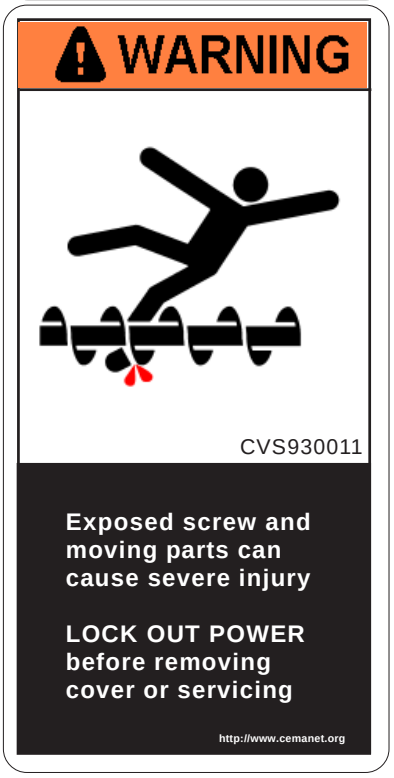


CEMA Safety Labels

CEMA Document: SC 2004-01



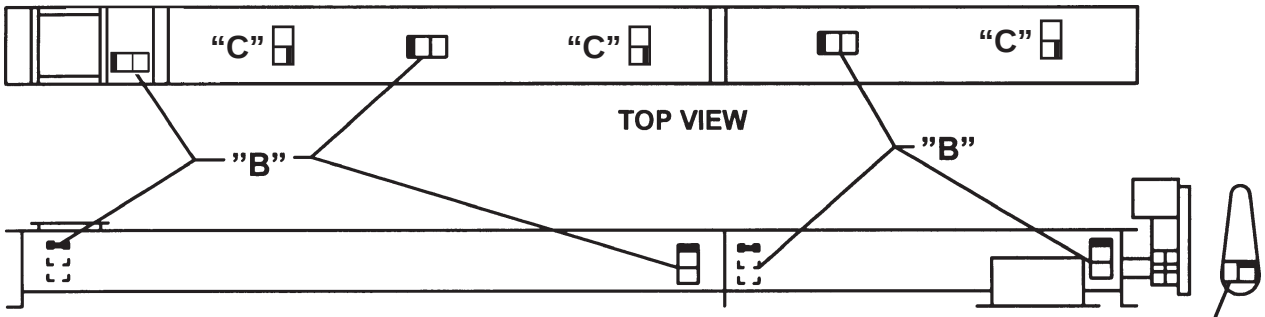
The CEMA safety labels shown below should be used on screw conveyors, drag conveyors, and bucket elevators. Safety labels should be placed on inlets, discharges, troughs, covers, inspection doors & drive guards. See CEMA Safety Label Placement Guidelines on CEMA Web Site: http://www.cemanet.org



PROMINENTLY DISPLAY THESE SAFETY LABELS ON INSTALLED EQUIPMENT

SEE PREVIOUS PAGE FOR SAFETY REMINDERS

Note: Labels alone do not substitute for a thorough in-plant safety training program centered on the hazards associated with operating your installed equipment.



Contact CEMA or Your Equipment Manufacturer for Replacement Labels

CONVEYOR EQUIPMENT MANUFACTURERS ASSOCIATION

CEMA Safety Labels — *Placement Guidelines*

Product: Bulk Handling Equipment

Equipment: Screw Conveyor

SIDE VIEW

"B"

To be placed on inlets and discharges, troughs, covers, and inspection doors of screw conveyors to provide warning against exposed moving parts while in operation.

"A"

"C"

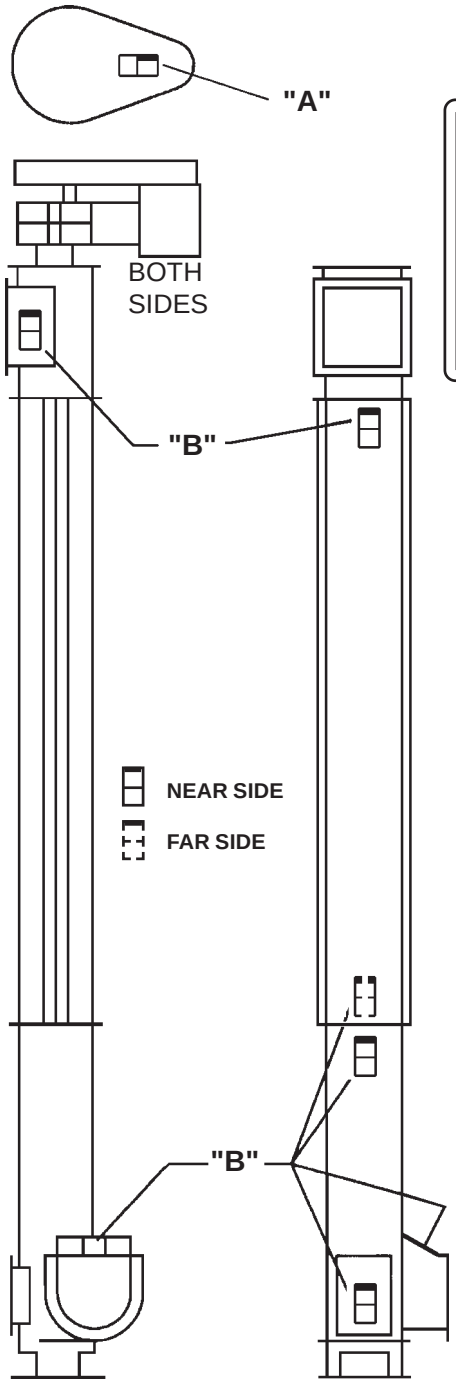
To be placed on removable guards to warn that operation of the machinery with guards removed would expose chains, belts, gears, shafts, pulleys, couplings, etc. which create hazards

NEAR SIDE

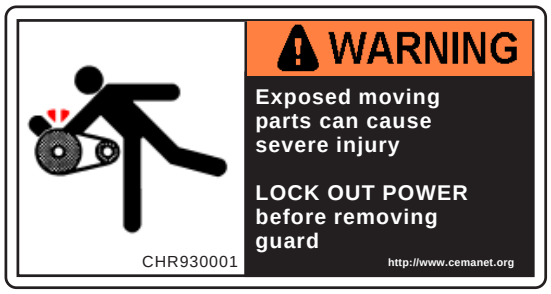
FAR SIDE

USE LABEL "A" ON BELT GUARD
USE LABEL "B" ON ENDS OF TROUGH, MIDDLE OF COVERS AND AT INLET OPENING.
USE LABEL "C: ON TOP OF COVERS

SC-2



CEMA Safety Labels — *Placement Guidelines*



Product: Bulk Handling Equipment

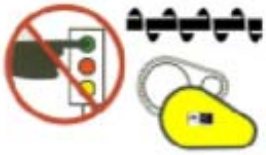
Equipment: Vertical Screw Conveyor

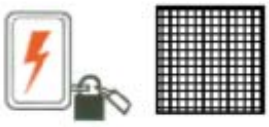
USE LABEL "A" ON BELT GUARD

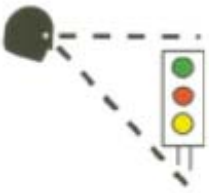
USE LABEL "B" ON ENDS OF TROUGH,
ON INTAKE INSPECTION DOOR,
AND
BOTH SIDES OF DISCHARGE SPOUT

"A"

To be placed on removable guards to warn that operation of the machinery with guards removed would expose chains, belts, gears, shafts, pulleys, couplings, etc. which create hazards



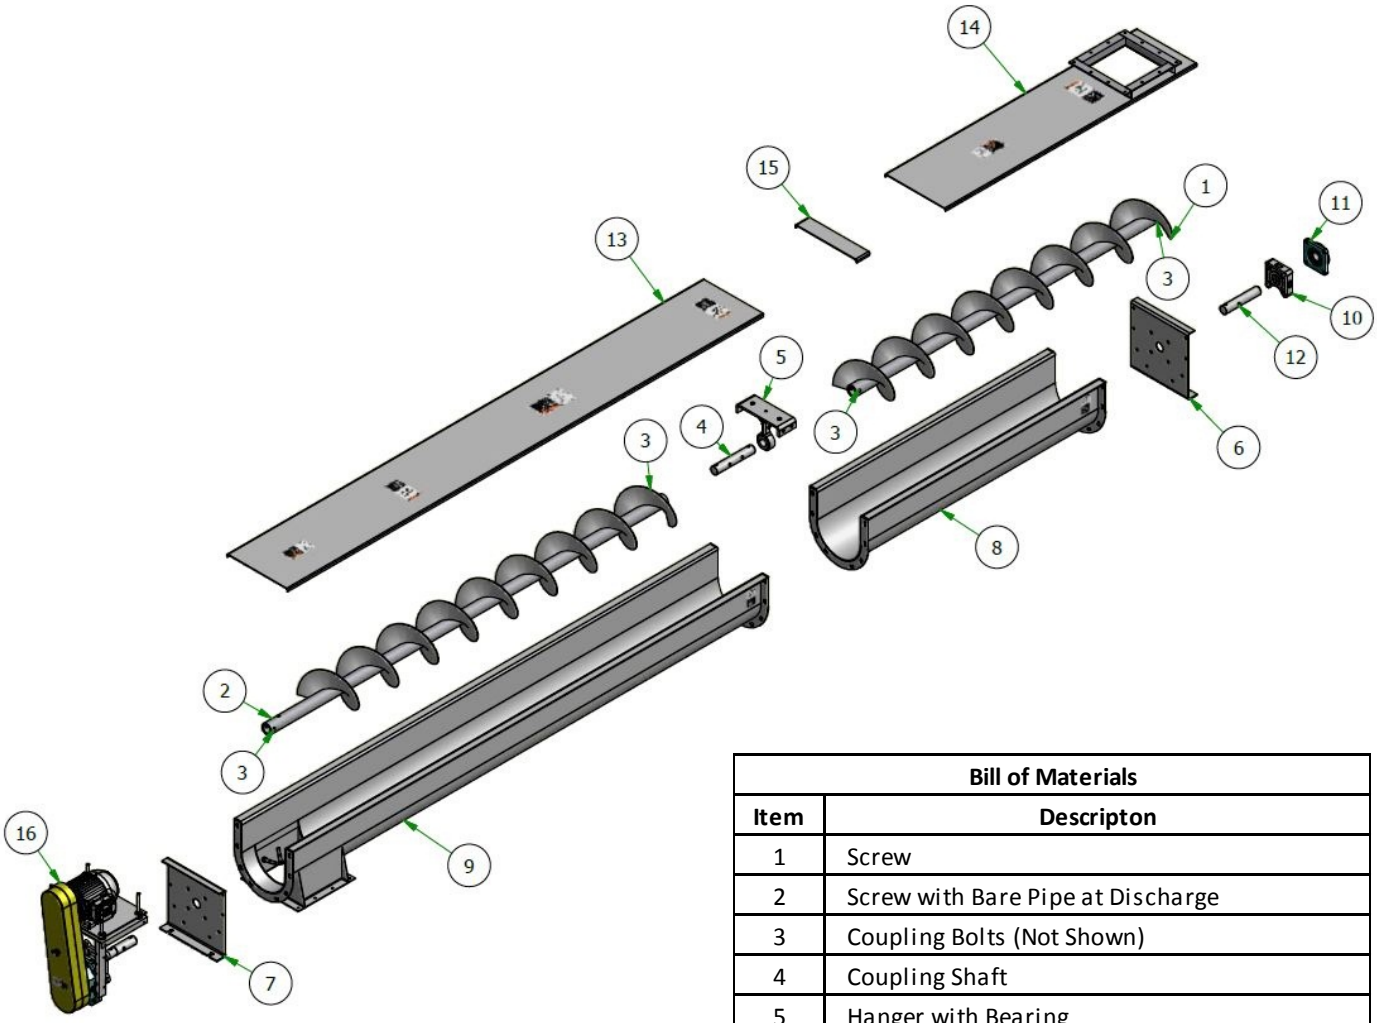




"B"

To be placed on inlets and discharges, troughs, covers, and inspection doors of screw conveyors to provide warning against exposed moving parts while in operation.

SC-3



Screw Conveyor Safety

 Do Not Climb, Sit, Stand or Walk, On Conveyor At Any Time	 Do Not Perform Maintenance on Conveyor Until Electrical, Air, Hudraulic and Gravity Energy Sources Have Been Locked Out and Blocked	 Operate Equipment Only With All Approved Covers and Guards in Place
 LOCK OUT ALL Power and Block Gravity Loads Before Servicing	 Ensure That All Personnel Are Clear of Equipment Before Starting	 Allow Only Authorized And Trained Personnel To Operate or Maintain Conveyors and Accessories
 Keep Clothing, Body Parts, and Hair Away from Conveyors	 Clean Up Spillage Near Moving Parts ONLY When the Power Is Locked Out AND Guards Are In Place	 DO NOT Modify Conveyor Controls
 Ensure That All Controls are Visible and Accessible	 Operate Equipment Only With All Approved Covers, Guards, and Safety Labels In Place	 Report All Unsafe Conditions

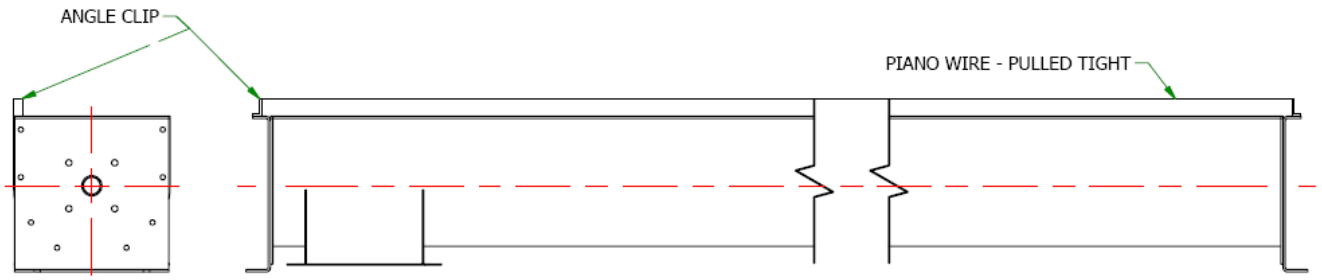
13	Flanged Cover
14	Flanged Cover with Inlet
15	Buttstrap
16	Screw Conveyor Drive Unit with Motor Mount, V-Belt Drive, and Guard

SECTION B - INSTALLATION

RECEIVING

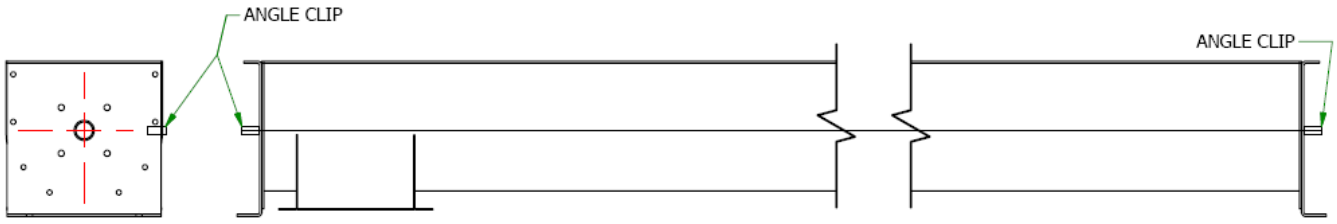
1. Screw conveyors may be ordered as individual components with all the assembly operations performed in the field, or assembled completely by the manufacturer, with drawings and bill of materials.
2. Immediately upon receipt all items in the shipment should be checked against shipping papers for shortages and inspected for damage.
3. Items to be inspected include troughs, screws, covers and drive units.
4. DO NOT ATTEMPT TO INSTALL DAMAGED COMPONENTS OR ASSEMBLIES.



LIFTING AND MOVING

1. Extreme care must be taken to prevent damage when moving assembled conveyors or components.
2. Spreader bars with slings are the recommended support method for lifting.
3. Unsupported span should be no greater than 12 feet.
4. NEVER LIFT A CONVEYOR WITH ONLY ONE SUPPORT POINT.
5. Unusually heavy items such as drives or gates shall be considered when choosing support points because of load balance and their bending effect.
6. Shop assembled conveyors are typically match marked and shipped in the longest sections for practical shipment.

ASSEMBLY



1. The mounting surface for supporting the conveyor must be level and true.
2. Screw conveyor troughs must be assembled straight and true with no distortion.
3. Place troughs in proper sequence with discharge spout properly located.
4. Connect the joints loosely. DO NOT TIGHTEN BOLTS.
5. Assemble each trough end to proper end of conveyor.
6. Attach piano wire full length of conveyor at centerline. Make sure piano wire is pulled tight. Refer to Figure 1 at the end of this section.
7. Tighten trough flange bolts keeping the trough assembly true to piano wire. Alignment must be checked in both horizontal and vertical directions. Maximum deviation in either direction at any point along the length of the conveyor is 1/8". Torque bolts to proper torque rating per Chart A.
8. Anchor trough assembly to mounting surface. Make sure entire length of trough is straight and true. CEMA recommends supporting trough assemblies every 10 to 12 feet. Saddles and feet may be required.
9. Mount drive or thrust unit on correct trough end. Drive or thrust units are normally located at discharge end of conveyor. Make sure drive or thrust unit is centered in seal and trough end openings. Torque bolts to proper torque rating per Chart A.
10. Place the first screw section in the trough starting at the drive or thrust end. Install screw so end lugs are opposite carrying side of flight.
11. Insert screw onto drive shaft and install coupling bolts. DO NOT TIGHTEN COUPLING BOLTS.
12. Insert coupling shaft into opposite end of screw and install coupling bolts. DO NOT TIGHTEN COUPLING BOLTS.
13. Pull screw section away from drive or thrust unit to seat thrust connection.
14. Insert hanger onto coupling shaft.
15. Raise hanger and screw section until hanger top bar is flush with top of trough. Make sure correct clearance exist between outside diameter of screw and inside of trough. Match mark and drill troughs to mount hanger assembly. Insert hanger assembly bolts and hand tighten.
16. Assemble screw sections, couplings and hangers until all are installed by repeating steps 10 through 15. Install screw sections so flighting is 180-degrees from end of flighting of previous screw section.

17. Center hanger bearings between screw sections. Torque hanger assembly bolts to proper torque rating per Chart A.
18. Assemble seal and bearing to opposite trough end. Make sure end shaft is centered in seal and trough end openings. Torque bolts to proper torque rating per Chart A.
19. Insert end shaft through end bearing and into last screw section and install coupling bolts. DO NOT TIGHTEN COUPLING BOLTS.
20. Rotate entire screw assembly to check alignment and adjust hanger assemblies as required.
21. Torque ALL coupling bolts to proper torque rating. Over tightening of coupling bolts could result in failure in tension. CEMA recommends tightening coupling bolts to 75-percent of the values given in the Bolt Torque Guide to eliminate over tightening of coupling bolts.
22. Adjust seals as required.
23. Remove all debris from conveyor.
24. Install covers in proper sequence starting at inlet end and attach with provided fasteners.
25. Lubricate drive and all bearings in accordance with manufacturer's instructions. DRIVES GENERALLY SHIPPED WITHOUT OIL.
26. MAKE SURE ALL CEMA SAFETY LABELS ARE IN PROPER LOCATIONS.

CEMA COMMONLY USED PIANO WIRE SETUP

PIANO WIRE ATTACHED TO TOP OF CONVEYOR ON SIDE

OPTIONAL PIANO WIRE SETUP

PIANO WIRE ATTACHED TO CENTERLINE OF CONVEYOR ON SIDE

Figure 1 - Piano Wire Setup Diagrams

SECTION C - OPERATION

BEFORE INITIAL START-UP:

1. LOCKOUT/TAGOUT ALL POWER.
2. Lubricate all bearings in accordance with manufacturer's instructions.
3. Lubricate all gear reducers in accordance with manufacturer's instructions. Gear reducers are normally shipped without lubrication.
4. Check conveyor to ensure all tools and foreign materials have been removed.
5. Turn drive unit by hand to check for alignment and obstructions.
6. Check conveyor to ensure all covers, guards and safety devices are installed and operating properly.
7. Attach gates to inlet and discharge chutes, where applicable.

INITIAL START-UP (WITHOUT MATERIAL):

1. Reenergize power to conveyor.
2. Start conveyor momentarily to check for proper conveyor rotation. If conveyor rotation is NOT correct, quickly shutdown and have qualified electrician change wiring.
3. Operate conveyor without material for several hours as a break in period. Observe for excessive bearing temperature, unusual noise or drive misalignment. If these conditions occur refer to Troubleshooting Section of this document.
4. Stop the conveyor and LOCKOUT/TAGOUT ALL POWER.
5. Remove covers and check tightness of coupling bolts. Torque bolts to proper torque rating. Over tightening of coupling bolts could result in failure in tension. CEMA recommends tightening coupling bolts to 75-percent of the values given in the Bolt Torque Guide to eliminate over tightening of coupling bolts. Replace covers.
6. Check all assembly and mounting bolts. Torque bolts to proper torque rating.
7. Check conveyor discharge. Discharge must be clear to ensure that material flow out of conveyor will not be impeded.

INITIAL START-UP (WITH MATERIAL):

1. Reenergize power to conveyor.
2. Start conveyor and operate without material for several minutes.
3. Feed material gradually until design capacity is reached.
4. DO NOT EXCEED CONVEYOR SPEED, CAPACITY AND MATERIAL DENSITY.
5. Start and stop conveyor several times. Operate conveyor for several hours with material.
6. Check motor amperage when conveying at design capacity and compare to full load amperage of motor. Problems may exist if amperage is excessive. Check voltage to ensure that it is within normal operating limits.
7. Stop the conveyor and LOCKOUT/TAGOUT ALL POWER.
8. Remove covers and check tightness of coupling bolts. Torque bolts to proper torque rating. Over tightening of coupling bolts could result in failure in tension. CEMA recommends tightening coupling bolts to 75-percent of the values given in the Bolt Torque Guide to eliminate over tightening of coupling bolts.
9. Check hanger bearings and realign if necessary.
10. Replace covers.
11. Check all assembly and mounting bolts. Torque bolts to proper torque rating per Chart A.

SECTION D – MAINTENANCE

Practice good housekeeping. Keep area around conveyor clean and free of obstacles to provide easy access and to avoid interference with the function of the conveyor.

Establish routine periodic inspection of the entire conveyor to ensure continuous maximum operating performance. LOCKOUT/TAGOUT ALL POWER BEFORE INSPECTION OF CONVEYORS. Periodic inspections should be made of the following:

- Bearings – Check for proper lubrication. Lubricate all bearings in accordance with manufacturer's instructions. Check hanger bearings for proper alignment and excessive wear. Replace hanger bearings when wear exceeds 1/8 inch.
- Gear Reducers – Check for proper lubrication. Lubricate all gear reducers in accordance with manufacturer's instructions.
- Drives – Check for wear on belts and proper tension. Check for lubrication on chains and proper tension. Replace belts or chains as necessary.
- Screws – Check for damage, excessive wear and material buildup. Replace screw sections as necessary.
- Troughs – Check for damage, excessive wear and material buildup. Check trough alignment using piano wire as described in Assembly Section of this document. Replace trough sections as necessary.
- Shafts – Check for bolt hole elongation and wear. Check for run-out. Replace shafts when wear exceeds 1/8 inch.
- Seals – Check for leakage. Adjust seal or replace packing as necessary.
- Coupling Bolts – Check for wear. Replace worn coupling bolts as necessary. It is recommended to replace coupling bolts and lock nuts when replacing screw sections. Torque ALL coupling bolts to proper torque rating. Over tightening of coupling bolts could result in failure in tension. CEMA recommends tightening coupling bolts to 75-percent of the values given in the Bolt Torque Guide to eliminate over tightening of coupling bolts.
- Assembly Bolts – Check for tightness. Torque ALL assembly bolts to proper torque rating per **Chart A**.
- Guards – Check for clearance and bolt tightness. Check oil level on oil-tight guards.

REPLACING SCREW CONVEYOR COMPONENTS:

1. LOCKOUT/TAGOUT ALL POWER
2. Removal of a screw section must proceed from the end opposite the drive or thrust unit.
3. Remove trough end, screw sections, coupling shafts and hangers until the damaged screw section is reached and removed.
4. Reassemble conveyor components in accordance with the Assembly Section of this document.

NOTE: Quick disconnect screws can be removed at intermediate locations without first removing adjacent sections.

SECTION E – SHUTDOWN AND STORAGE

EMERGENCY SHUTDOWN

An emergency shutdown may be necessary to clear obstructions or to replace damaged or worn components.

1. LOCKOUT/TAGOUT ALL POWER.
2. Remove all covers.
3. Remove all obstructions and product from conveyor.
4. Inspect all components for damage or wear. Check conveyor components in accordance with the Maintenance Section of this document.
5. Replace all damaged or worn components. Replace conveyor components in accordance with the Assembly Section of this document.
6. Turn drive unit by hand to check for alignment and obstructions.
7. Replace all covers and guards.
8. Restart conveyor in accordance with the Operation Section of this document.

EXTENDED SHUTDOWN

An extended shutdown may be necessary if the conveyor is not in operation for a long period of time.

1. Operate conveyor until all product is removed.
2. LOCKOUT/TAGOUT ALL POWER.
3. Remove all covers.
4. Remove all obstructions and product from conveyor.
5. Inspect all components for damage or wear. Check conveyor components in accordance with the Maintenance Section of this document.
6. Replace all damaged or worn components. Replace conveyor components in accordance with the Assembly Section of this document.
7. Lubricate drive and all bearings in accordance with manufacturer's instructions.
8. Coat all exposed metal surfaces with rust preventative.
9. Rotate screws by hand every week. Screws may sag and permanently deform if not rotated.

NOTE: When operation is to resume, restart conveyor in accordance with the Operation Section of this document.

STORAGE

1. Protect conveyor from weather, moisture and extreme temperatures. DO NOT use coverings that promote condensation.
2. Coat all exposed metal surfaces with rust preventative.
3. Rotate screws by hand every week. Screws may sag and permanently deform if not rotated.

NOTE: When operation is to resume, restart conveyor in accordance with the Operation Section of this document.

SECTION F – TROUBLESHOOTING GUIDE

PROBLEM	CAUSE	REMEDY
1. ACCELERATED FLIGHT WEAR	FLIGHT THICKNESS TOO LIGHT	INCREASE FLIGHT THICKNESS. USE ABRASION RESISTANT METERIALS OR HARDFACING
	RPM TOO HIGH OR TROUGH LOADING TOO HIGH	REDUCE SPEED. CONSULT CEMA 350 BOOK TO DETERMINE RECOMMENDED SPEED AND TROUGH LOADING.
2. HANGER BEARING FAILURE	INCORRECT ALIGNMENT	REALIGN TROUGH ASSEMBLY AND HANGERS IN ACCORDANCE WITH ASSEMBLY SECTION OF THIS DOCUMENT.
	IMPROPER SPEED AND TROUGH LOADING	CONSULT CEMA 350 BOOK TO DETERMINE RECOMMENDED SPEED AND TROUGH LOADING.
	IMPROPER HANGER BEARING MATERIAL	CONSULT CEMA 350 BOOK TO DETERMINE RECOMMENDED BEARING MATERIAL.
	EXCESSIVE BEARING WEAR	REPLACE HANGER BEARING.
3. PREMATURE TROUGH FAILURE	TROUGH THICKNESS TOO LIGHT	INCREASE TROUGH THICKNESS. USE ABRASION RESISTANT MATERIAL. CONSULT CEMA 350 BOOK TO DETERMINE RECOMMENDED TROUGH THICKNESS.
	SCREW DEFLECTION	CONSULT CEMA 350 BOOK TO DETERMINE PROPER PIPE SIZE AND SCRW LENGTH.
	BENT SCREW	STRAIGHTEN OR REPLACE SCREW.
4. SHAFT HOLE ELONGATION	INSUFFICIENT NUMBER OF COUPLING BOLTS	INCREASE NUMBER OF COUPLING BOLTS
	CONVEYOR SUBJECT TO FREQUENT STOP/START	CEASE FREQUENT STOP/START. INCREASE BEARING CAPACITY OF SHAFT AND/OR INCREASE NUMBER OF COUPLING BOLTS
	FREQUENT OVERLOADS	
5. DRIVE SHAFT BREAKAGE	EXCESSIVE TORQUE	CONSULT CEMA 350 BOOK TO DETERMINE PROPER TORQUE RATING.

SECTION F – TROUBLESHOOTING GUIDE - Continued

PROBLEM	CAUSE	REMEDY
6. MOTOR OVERLOAD	MOTOR UNDERSIZED	CONSULT CEMA 350 BOOK TO DETERMINE PROPER HORSEPOWER REQUIREMENTS.
	UPSET LOADING CONDITION	EMPTY TROUGH, CONTROL FEED AND OPERATE UNDER DESIGN SPECIFICATIONS.
7. TROUGH END BEARING FAILURE	BEARING CONTAMINATION	UPGRADE OR REPLACE SEAL. CHANGE TO OUTBOARD BEARING.
	INSUFFICIENT LUBRICATION	LUBRICATE IN ACCORDANCE WITH MAINTENANCE SECTION OF THIS DOCUMENT.
	IMPROPER SHAFT RUNOUT	CHECK SCREW STRAIGHTNESS AND REPLACE AS NECESSARY.
8. COUPLING SHAFT BREAKAGE	EXCESSIVE TORQUE	CONSULT CEMA 350 BOOK TO DETERMINE PROPER TORQUE RATING.
	INCORRECT ALIGNMENT	REALIGN TROUGH ASSEMBLY AND HANGERS IN ACCORDANCE WITH ASSEMBLY SECTION OF THIS DOCUMENT.
	EXCESSIVE SHAFT WEAR	REPLACE COUPLING SHAFT.

CHART A - BOLT TORQUE GUIDE

GENERAL BOLT TIGHTENING TORQUE (Ft. lbs.)

Bolt Dia. (inches)	Threads Per Inch (UNC)	SAE 2	SAE 5	SAE 8	18-8 & 316 Stainless Steel
1/4	**20**	5	9	12	6
5/16	**18**	11	18	25	11
3/8	**16**	18	31	44	20
7/16	**14**	28	49	69	29
1/2	**13**	44	73	105	40
9/16	**12**	63	108	149	52
5/8	**11**	96	147	212	86
3/4	**10**	158	252	351	115
7/8	**9**	219	389	552	180
1	**8**	316	589	784	240

All bolted applications should be evaluated to determine optimum tightening torque.
K factor in the formula below is considered an estimate.
The most commonly used K factor is 0.20 for plain finished bolts.

Formula: T= K x D x P

- T Target tighten torque (the result of this formula is in inch pounds, dividing by 12 yields foot pounds)
- K Coefficient of friction (nut factor), always an estimation in this formula
- D Bolts nominal diameter in inches
- P Bolt's desired tensile load in pounds (generally 75% of yield strength)
  [P(lbs) = (75%) Yield Strength * Tensile Stress Area]

Bolt Torque Guide is for fasteners used to assemble screw conveyors and does not include coupling bolts. Over tightening of coupling bolts could result in failure in tension.
CEMA recommends tightening coupling bolts to 75-percent of the values given in the Bolt Torque Guide to eliminate over tightening of coupling bolts

END OF DOCUMENT

CONVEYOR EQUIPMENT MANUFACTURERS ASSOCIATION

5672 Strand Court, Suite 2
Naples, Florida 34110-3314

Tel: 239-514-3441

http://www.cemanet.org

Control of Hazardous Energy (Lockout/Tagout) 29 CFR 1910.147

What Is Lockout/Tagout?

- Referred to as LOTO
- Blocks flow of energy from power source to the equipment
- Provides means of warning (tag)

Regulatory Requirements

- 29 CFR 1910.147–Control of Hazardous Energy
- Covers operators and service personnel
- Requires training of employees

Types of Lockout Devices

- Locks
- Blocks
- Chains
- Multilock hasps
- Wheel valve covers
- Ball valve covers

Requirements For Lockout/Tagout Devices

They must be:

- Durable
- Standardized
- Substantial
- Identifiable

Energy Sources

- Electricity
- Hydraulic
- Pneumatic
- Steam
- Thermal
- Chemical
- Gravity

Typical Equipment Requiring LOTO

- Presses
- Saws
- Conveyors
- Pumps
- Production Equipment
- Trash Compactors
- Ovens

When Must LOTO Be Used?

When servicing or maintaining equipment where:

- Hazardous energy exists
- Unexpected start-up could occur
- Either of these could harm an employee

LOTO Shall Be Used When:

- Employees are required to remove or bypass a safety device
- Employees are required to place any part of their body in harm's way
- Employees are exposed to hazardous energy

LOTO Exceptions

- Work where hazardous energy does not exist
- Activities performed during routine production processes
- Work on cord-controlled devices
- Hot tap operations where shutdown is not feasible

Typical LOTO Procedures

- Performing a shutdown
- Isolating equipment
- Applying and removing lockout devices
- Safely releasing stored energy

Affected Employees

Employees who

- Operate
- Work around
- Occasionally adjust equipment that is subject to LOTO

Authorized Employee

- Maintains equipment
- Services equipment
- Is trained to use LOTO

Company Responsibilities

- Ensure de-energization of equipment
- Ensure employee awareness
- Provide appropriate levels of training
- Review program effectiveness
- Maintain and revise program
- Administer appropriate disciplinary actions

Maintenance Responsibilities

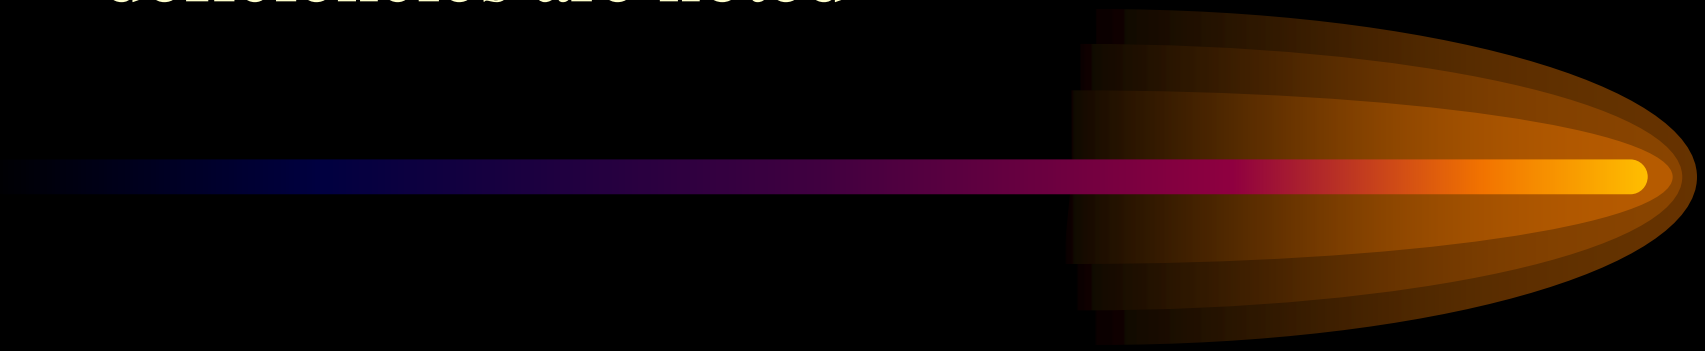
- Lockout/Tagout prior to service or repair
- Remove or cut locks off isolation devices
- Ensure proper training of authorized employees

Affected Employee Responsibilities

- Notify maintenance, etc., when equipment needs repair or adjustment
- Leave all LOTO devices in place
- Verify equipment is safe to operate following LOTO
- Follow all safety rules while operating the equipment

Authorized Employee Responsibilities

- Repair or service equipment as needed
- Ensure that all energy sources are locked out
- Test equipment to verify residual energy is dissipated
- Place a “Danger—Do Not Operate” tag on equipment



Authorized Employee Responsibilities (cont.)

- Obtain assistance when necessary
- Remove locks and/or tags following LOTO
- Coordinate multi-shift repair

Training Requirements

- Authorized employees—initially and at least annually
- Affected employees—at least initially
- Authorized and affected—whenever changes are made to jobs or procedures
- Authorized and affected—when program deficiencies are noted

How to Perform LOTO Safely

- Follow company safety procedures for LOTO
- Refer to procedures on how to lockout specific equipment
- Keep everyone informed when equipment is repaired or serviced
- Stay alert
- Use common sense

Quiz

1. The LOTO standard is designed to block the flow of energy to a piece of equipment. True or False
2. Types of LOTO devices include _____, _____, and _____.
3. It is not required that a company have written procedures for proper lockout/tagout. True or False
4. An authorized employee is one who _____ or _____ the equipment.
5. If a safety device is removed from a piece of equipment, LOTO is not required. True or False

Quiz (cont.)

6. Typical energy sources found on equipment include: _____, _____, and _____.
7. Affected employees are those who operate or work around a piece of equipment. True or False
8. As long as an employee has had training on LOTO, the employer or company has no additional responsibilities under 1910.147. True or False
9. Training for authorized employees must be conducted _____ and at least _____.
10. Locks should always stay on the equipment during a shift change. True or False

Quiz Answers

1. True. It should block the flow of energy and provide a means of warning.
2. Types of LOTO devices include locks, blocks, chains, hasps, wheel valve covers and ball valve covers.
3. False. If lockout is required, a company must have a written program and procedures.
4. An authorized employee is one who services or maintains the equipment.
5. False. LOTO is required when a safety device is removed, an employee is in harms way or when employees are exposed to hazardous energy.

Quiz Answers (cont.)

6. Typical energy sources include: electricity, hydraulics, pneumatics, steam, thermal, chemical and gravity.
7. True. Affected employees are those who operate or work around the equipment.
8. False. Training is just one of the responsibilities of a company.
9. Training for authorized employees must be conducted initially and at least annually.
10. False. Locks should be removed during shift change and the shift coming on duty should place their locks on the equipment.

SECTION III

COMPONENT CUT SHEETS

FEATURES/BENEFITS

Setscrew Ball Bearings

For over 70 years, DODGE has been talking to mounted bearing users and listening to their needs. This experience lead to the design of the optimum mounted ball bearing. A state-of-the-art facility was built in Rogersville, Tennessee, to manufacture the new DODGE design.

The result is the DODGE SC/SCM VSC/SL line. it is the most current design setscrew mounted ball bearing on the market and provides the user unmatched quality and true total value.

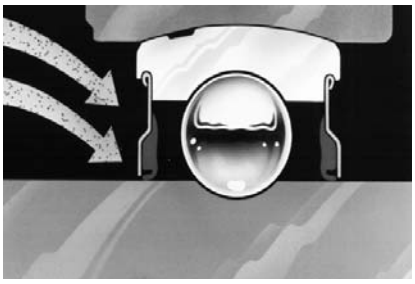
- Light Duty Narrow Inner Ring (SL)
- Intermediate Duty Narrow Inner Ring (VSC)
- Normal Duty Wide Inner Ring (SC)
- Medium Duty Wide Inner Ring (SCM)
- Wide Variety of Housing Configurations
- Available in 1/2 to 3-1/2 (17 to 90mm) Bore Sizes
- Seal Options:
  - Flingers on SC/SCM (flingers are standard on E-Z KLEEN® nickel plated and Screw Conveyor Hanger Bearings)
  - Low friction labyrinth on SC/SCM
- Other Options:
  - Corrosion resistant inserts for SC/SCM, E-Z KLEEN and nickel plate
  - FDA/USDA lubricant and other special lubricants
  - High temperature SC/SCM designed for temperatures from 225ºF to 400ºF. Factory assembled to order.

For application assistance, contact DODGE Engineering

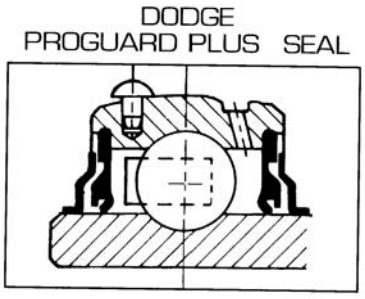
Phone 864-281-2195
Fax 864-281-2317

DODGE End Covers
Available from stock to fit SC, SCM and VSC mounted units, these end covers are designed for added protection from contaminants as well as for OSHA requirements. Covers are OSHA yellow.

Superior Locking Forces

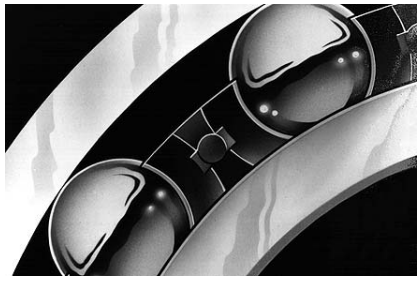


The DODGE SC/SCM/VSC/SL line uses 65˚ design which offers an optimum balance between locking force and inner ring stress.



Setscrew Ball Bearings

The DODGE PROGUARD™ Seal



PROGUARD positive contact, low drag rubber seal

DODGE SC/SCM/SSC/SL mounted ball bearings use the field proven PROGUARD land-riding contact seal with steel shield protection. This highly effective positive seal design assures uniform lip contact with the inner ring to seal out contaminants and seal in lubricants.

On SC/SCM optional flingers can be added to form a tight labyrinth with the PROGUARD seal and provide additional seal protection against contaminants and trash.

Stronger, More Flexible Cage

Reinforced, stabilized nylon cage

The ball cage is made of heat stabilized nylon with 33% fill short fiberglass reinforcement for added strength. The nylon material provides a natural lubricity for longer life. Fiberglass reinforcement allows higher operating temperatures than plain nylon, yet is more resistant to fatigue than metallic cages. Short fiberglass allows greater flexibility than steel or normal fiberglass, especially under misalignment. That means longer life in mounted bearings where some degree of misalignment is unavoidably encountered.

Anti-Rotation Pin (SC/SCM)

An anti-rotation pin prevents rotation of the outer race within the housing. Simple and effective, it makes system inserts easier to replace. There is no need to remove and replace grease fittings, location pins or other devices.

Simplified Anti-rotation device

DODGE E-Z KLEEN Ball Bearings

Available with Polymer and stainless steel housing, with corrosion resistant bearing inserts. These features make the SC ball bearing uniquely suited for the food, chemical and processing industries.

HOW TO ORDER/ NOMENCLATURE

Setscrew Ball Bearings

HOW TO ORDER

There are two ways to specify DODGE Bearings. Most of the product offering have part numbers with listings shown throughout this catalog. Use of part numbers ensures accurate ordering processing.

When part numbers are not shown, the product may be specified by description or part name. This method is used when ordering units that include modifications or options. To order by description, use the nomenclature key shown below and add any special instructions to the end of the description for options not covered by the nomenclature.

NOMENCLATURE

P2B - SC - 104S - NL

Modification or Feature
- CR = Corrosion Resistant Insert
- E = Expansion
- FF = ProGard Plus seals (with Flingers)
- HT = High Temperature option (400º F maximum)
- LL = Low torque labyrinth seal
- MOD = Modified
- NL = No Lube (sealed for life)
- RL = Relube (used with SL flanges)

Shaft Size

Inches:
- First digit = Number of inches
- Second & third digits = Number of sixteenths of an inch
  - 104 = Indicates 1-4/16 or 1-1/4
- S = Next smaller ring size. E.g. 1-1/4 206 would be written as 104S
- L = Next larger ring size. E.g. 1/2 204 would be written as 008L

Metric:
- First two digits = number of millimeters
- M = Metric

Bearing Type:
- CC = Wide inner ring, normal duty, setscrew locking (for Fan & Blower pillow blocks)
- SC = Wide inner ring, normal duty, 65º setscrew locking
- SCM = Wide inner ring, medium duty, 65º setscrew locking
- SL = Narrow inner ring, light duty, stamped steel housing, 65o setscrew locking
- VSC = Narrow inner ring, intermediate duty, 65º setscrew locking"

Suffixes to the above:
- AH = Air handling
- B = Low backing height pillow block
- H = High backing height (used with non-expansion and expansion units)
- U = Higher back pillow block (for interchangeability with competitor pillow blocks)

Housing:
- CYL = Cylindrical Unit
- F2B = 2 bolt flange
- F2BZ = 2 bolt flange with pilot machined on the back side (used with metric <D> Lok bearings)
- F3B = 3 bolt flange
- F4B = 4 bolt flange
- FB = Flange bracket
- FC = Flanged cartridge (piloted flange)
- F&B = Fan and blower pillow block
- HNG = Hanger bearing
- LF = 3 bolt light duty flange
- LFT = 2 bolt light duty flange
- NSTU = Narrow slot take-up
- P2B = 2 bolt base pillow block
- SCHB = Screw conveyor hanger bearing
- TB = Tapped base pillow block
- TP = Top angle take-up
- WSTU = Wide slot take-up

Setscrew Ball Bearings

DODGE mounted ball bearings are primarily designed for radial loading. However, they have the capacity to carry thrust loads and combined radial/thrust loads. The maximum recommended load which can be applied is limited by various components in the system, such as bearing, housing, shaft attachments, speed and life requirements. DODGE mounted ball bearings have been applied successfully when these limits have been exceeded under controlled operating conditions. Contact DODGE Engineering for applications which exceed these recommendations.

Select a bearing from the Selection Chart that has a radial load rating at the operating speed equal to or greater than the calculated Equivalent Radial load for a desired L_{10} life. This simple method is all that is required for the majority of general applications and provides for occasional average shock loads.

L_{10} Hours Life-is the life which may be expected for at least 90% of a given group of bearings operating under identical conditions. For an L_{10} hours life other than those listed in the Selection Chart, multiply the equivalent Radial load by one of the following factors. For 50,000 L_{10} hours life, use a factor of 1.18 and for 80,000, use 1.39. Then select a bearing from the bold face (30,000) L_{10} ratings only in the Selection Chart that has a rating equal to or greater than this value.

Heavy Service-For heavy shock loads, frequent shock loads or severe vibrations, add up to 50% (according to severity of conditions) to the Equivalent Radial Load to obtain a Modified Equivalent Radial Load. Consult Application Engineering for additional selection assistance.

A thrust load value of C/10 is recommended as a guide for general applications and will give adequate L_{10} life. Where substantial radial load pulls the housing away from the mounting base, both the hold-down bolts and housing must be of adequate strength. Auxiliary load carrying devices, such as sheer bars, are advisable for side or end-loading of pillow blocks and radial loads for flange units.

To determine the L_{10} hours life for loads and RPM's not listed use the following equation:

$$L_{10} = \left(\frac{C}{P}\right)^3 \times \frac{16667}{RPM}$$

Where:
L_{10} = Life, hours
C = Dynamic Capacity, lbs. or N
P = Equivalent Radial Load, lbs. or N

When the load on a ball bearing is solely a radial load with no thrust (axial) load, the Equivalent Radial Load (P) is equal to the actual radial load. However, when a thrust (axial) load is applied, the radial and thrust loads applied must be converted into an Equivalent Radial Load. The use of the X (radial factor) and Y (thrust factor) from Table 1 convert the actual applied thrust and radial loads to an Equivalent Radial Load which has the same effect on the life of a bearing as a radial load of this magnitude.

$P = (X \times F_R) + (Y \times F_A)$

Where:
P = Equivalent Radial Load, lbs.
F_R = Radial load, lbs.
F_A = Thrust load, lbs.
e = Thrust load to radial load factor (Table 1)
X = Radial load factor (Table 1)
Y = Thrust Factor (Table 1)
C_O = Basic static capacity

To find X and Y, first calculate F_A/C_O to determine e. Calculate F_A/F_R and compare to e to determine the X and Y factors to use from Table 1.

Substitute all known values into the Equivalent Radial Load equation. The Equivalent Radial loads (P) thus determined can be used in the L_{10} life formula or compared to the allowable Equivalent Radial Load rating desired in the expanded rating chart to select a bearing (Table 2).

If calculated value of P is less than F_R, use $P=F_R$.

$\frac{F_A}{C_0}$	e	Radial/Thrust Factors			
		If F_A/F_R is equal to or less than e		If F_A/F_R is greater than e	
		$F_A/F_R \le e$		$F_A/F_R > e$	
		X	Y	X	Y

Lubrication-DODGE Ball Bearings are lubricated at the factory and are ready to run. The bearings are initially lubricated with Shell Alvania #2 and should be relubricated with the same or some equivalent. For high speeds, high loads, extreme temperatures and other abnormal operating conditions, special greases may be required. Contact DODGE Application Engineering for recommendations on these types of applications.

Misalignment-DODGE Ball Bearings are designed to allow a maximum of ± 2° static misalignment. These bearings are not suitable for dynamic misalignment. To ensure good alignment, mounting surfaces must be checked for flatness and must lie in the same plane. When tightening base bolts, each bolt should be alternately tightened in incremental torque values until full torque is achieved to prevent the angular shifting of the pillow block that occurs when one bolt is tightened to its full torque. Shimming may be required to minimize misalignment.

MODIFICATIONS/ ACCESSORIES

Setscrew Ball Bearings

LUBRICANTS
DODGE ball bearings are factory lubricated with Shell Alvania #2 lubricant. For applications where extreme ambient temperatures or speeds are anticipated or environmental considerations require a different lubricant, DODGE has a wide variety of lubricants available. Special lubricant options usually require set-up charges and premiums
.

SEALS
The PROGUARD PLUS seal is a highly effective positive contact, land riding seal with flingers pressed on to each side of the inner ring offering added protection from wash down or extreme contamination. For high speeds or where seal drag would be an impediment, an all metallic labyrinth seal is available.

HIGH TEMPERATURE
DODGE high temperature bearings are designed to operate in temperatures from 225°F (108°C) to 400°F (205° C). The bearings have adjusted internal clearances, metallic labyrinth seals, high temperature retainers, heat stabilized outer rings, and lubricants to meet the temperature needs of the application. To insure proper replacement, the bearing is identified by a six digit part number etched on a stainless steel nameplate riveted to the housing. The part number identifies the specific feature of the bearing. High temperature bearings are factory assembled to order and are available at extra cost. Consult Dodge Engineering for application assistance at (864)297-4800 or fax (864)281-2317.

AIR HANDLING
Industrial fans and blowers generally operate at high speeds with bearing requirements of long life and quiet operation. Dodge stocks SC, and SCM Air Handling Pillow Blocks and flange bearings that are specifically designed to meet the requirements of the air handling industry. These bearings are 100% noise tested, and have an air handling fit for long life and quiet operation. These bearings are recommended for fan and blower applications. Sizes and housing configurations not listed can be supplied on a made to order basis.

HOUSING MATERIAL
For extra corrosion resistance, a variety of housing finishes are available. Special materials include stainless steel or polymer housing, as an option. These coatings conform to U.S.D.A. and F.D.A. requirements. SC and SCM inserts can be supplied with a corrosion resistant coating on the inner and outer rings, stainless steel balls and set-screws, and nickel plated flingers as well as F.D.A. lubricant.

OTHER MODIFICATIONS
For applications requiring modifications not listed, we encourage you to contact our Customer Order Engineering Department at (864)284-5700 or fax (864)281-2317.

Mounted Bearings Life Adjustment Factor

1.1 GENERAL. For certain applications, it is desirable to specify life for reliability other than 90%. In such cases a life adjustment factor for reliability may be applied to the RATING LIFE. Section 1.2 discusses life adjustment factors for reliability.

Some bearing steels; e.g., vacuum-melted steels, and improved processing techniques, permit manufacture of bearings which offer endurance greater than that calculated by the RATING LIFE formula. Section 1.3 recommends methods to incorporate life adjustment factors for bearing materials into the life formula.

Bearing life calculated according to the RATING LIFE formula assumes proper application conditions. If lubrication is not adequate, loading unusual, or temperatures extreme, the ability of the bearing to attain or exceed the RATING LIFE is seriously impaired. Section 1.4 contains some basic recommendations concerning the effect of unusual application conditions on bearing life.

1.2 LIFE ADJUSTMENT FACTOR FOR RELIABILITY. Bearing life estimated in accordance with this standard is RATING LIFE; i.e., the life associated With 90% reliability or the life which 90% of a group of apparently identical bearings in a given application under similar conditions of load and speed will complete or exceed. While RATING LIFE has proven useful over a period of years as a criterion of performance, some applications require definition of life at reliabilities greater than 90%.

To determine bearing life with reliabilities other than 90% (as previously calculated from the Selection Procedure) the L10 must be adjusted by a factor a1, such that $L_n = a_1 \times L10$.

The life adjustment factors for reliability of Table 11 are recommended.

Table 11: Life Adjustment Factors For Reliability

Reliability %	L_n	Life Adjustment Factor for Reliability a_1
90	L_{10}	1
95	L_5	0.62
96	L_4 (Rating Life)	0.53
97	L_3	0.44
98	L_2	0.33
99	L_1	0.21

1.3 LIFE ADJUSTMENT FACTOR FOR MATERIAL. For bearings, which incorporate improved materials and processing, the L_{10} (as previously calculated in Selection Procedure) must be adjusted by a factor a_2. Factor a_2 depends upon steel analysis, metallurgical processing, forming methods, heat treatment and manufacturing methods in general.

Bearings fabricated from consumable vacuum remelted steels and certain other special analysis steels have demonstrated extraordinarily long endurance. These steels are of exceptionally high quality, and bearings fabricated from these are usually considered special manufacture. As such, a_2 values will not be specified for such steels in this discussion. Generally, a_2 values for such steels can be obtained from the bearing manufacturer.

1.4 LIFE ADJUSTMENT FACTOR FOR APPLICATION CONDITIONS. Application conditions which affect bearing life include:

1. Lubrication.
2. Load distribution (including effects of clearance, misalignment, housing, and shaft stiffness, type of loading and thermal gradients).
3. Temperature.

Consideration of (1.2) and (1.3) above requires analytical and experimental techniques beyond the scope of this discussion, therefore, the user should consult the bearing manufacturer for evaluations and recommendations.

In most bearing applications, lubrication serves to separate the rolling surfaces; i.e., rolling elements and raceways; to reduce retainer-rolling elements and retainer-land friction and sometimes to act as a coolant to remove frictional heat generated by the bearing.

If all limitations and qualifications specified by this discussion are observed, then the life adjustment application factor for bearings which are adequately lubricated is 1; i.e., a_3=1.

Operating conditions where a_3 might be less than 1 include:

a. exceptionally low values of Ndm (rpm times bore diameter in mm); e.g., Ndm 1000.
b. Lubricant viscosity less than 20.4 centistokes (100 SSU) at operating temperature.
c. Excessively high operating temperatures.

When a3 is less than 1, it may not be assumed that the deficiency in lubrication can be overcome by using an improved steel.

1.5 FACTOR COMBINATIONS. A fatigue life formula embodying the foregoing life adjustment factors is:

For Ball Bearings:

$$L_n = a_1 \times a_2 \times a_3 \left(\frac{C^*}{P}\right)^3 \times \frac{(16{,}667)}{RPM}$$

For Tapered Roller Bearings:

$$L_n = a_1 \times a_2 \times a_3 \left(\frac{C90^*}{P}\right)^{10/3} \times \frac{(1{,}5000{,}000)}{RPM}$$

For Spherical Roller Bearings:

$$L_n = a_1 \times a_2 \times a_3 \left(\frac{C^*}{P}\right)^{10/3} \times \frac{(16{,}667)}{RPM}$$

Indiscriminate application of the life adjustment factors in this formula may lead to serious over-estimation of bearing endurance, since fatigue life is only one criterion for bearing selection.

Care must be exercised to select bearings which are of sufficient size for the application. Undersizing of shaft and housing structures by using bearings which appear adequate from a life standpoint could lead to misalignment and fitting problems which could invalidate the formulas in this discussion.

* C = Basic Load Rating computed in accordance with ABMA-ANSI Standards.
C90 = C x.259

INSTRUCTION MANUAL FOR DODGE® SETSCREW, ECCENTRIC COLLAR, D-LOK, H, H-E SERIES & EZ-KLEEN MOUNTED BALL BEARINGS

INSTALLATION

WARNING

To ensure that drive is not unexpectedly started, turn off and lock out or tag power source before proceeding. Failure to observe these precautions could result in bodily injury.

Under certain operating conditions it is possible for a static electric charge to build-up on E-Z KLEEN® Polymer Housings. Do not operate these bearings in any environment where a sudden static discharge may cause either an operating hazard or personnel discomfort.

1. Clean shaft and bearing bore thoroughly. Measure and confirm shaft size and tolerance. File flats on shaft at setscrew locations to permit easy removal of bearing.
2. Slip bearing into position. Be sure that bearing is not on a worn section of the shaft. For tighter fits, tap inner ring face only with soft driver. DO NOT HAMMER ON HOUSING.
3. The bearing outer ring OD is spherical and swivels in the housing to accommodate misalignment. Snug hold-down bolts and use shaft to swivel each bearing until its final position is in the center of free movement top to bottom as well as side to side. Pass shaft through both bearings without forcing. This will prevent preloading of the bearings. Housing slippage depends on the mounting hold-down bolt tightening torque, number of bolts and friction characteristics between mounting surfaces. Auxiliary load carrying devices such as shear bars are advisable for side or end loading of pillow blocks and radial loads for flange units where normal to heavy loading or shock loading is encountered.
   NOTE: On coated and non-metallic housings, hold-down bolts should be tightened carefully with flat washers to prevent damage to the coating. Coated housings have reduced friction characteristics, so auxiliary load carrying devices are even more important in those applications.
4. Tighten hold-down bolts to proper torque (Table 1). Turn shaft by hand. Resistance to turning should be the same as before full tightening of hold-down bolts.
5. For setscrew mounted bearings: **After final alignment of the shaft, tighten both setscrews hand tight**, then the setscrews should be tightened alternately and in small increments to the torque specified in Table 1. After 24 hours operation, the setscrews should be retightened to the torque in Table 1 to assure full locking of the inner race to the shaft. Care should be taken that the socket key or driver is in good condition with no rounded corners and the key is fully engaged in the setscrew and held square with the setscrew to prevent rounding out of the setscrew socket when applying maximum torque. Do not drill through the setscrew holes for spot drilling of the shaft. (Some inner rings have tempered setscrew threads and can be damaged by a drill.) If spot drilling is required, locate bearings on the shaft and center punch through the setscrew hole. Remove bearing and spot drill the shaft, then reassemble over the spot drilled position and assemble as above. Milled or filed flats are preferable to spot drilling.
   NOTE: On all SC Product the setscrews can be re-torqued many times without damage to the bearing system. To achieve maximum shaft holding power it is highly recommended that setscrews be replaced with new hardware after any disassembly operation.
6. For eccentric collar mounted bearings, slide collar against cam end of inner race. Use a punch in the hole provided in the collar, tap collar smartly in the direction of shaft rotation. Tighten setscrews to proper torque (Table 1). To remove bearings, loosen setscrew and tap collar in the direction opposite of shaft rotation.
7. For D-LOK mounted bearings, be sure collar is square and tight against shoulder on inner ring. Tighten cap screw to recommended torque shown in Table 1.
8. For expansion bearings (H-E Series), locate inner unit in housing to allow expansion in the desired direction before locking to the shaft.

WARNING: Because of the possible danger to persons(s) or property from accidents which may result from the improper use of products, it is important that correct procedures be followed: Products must be used in accordance with the engineering information specified in the catalog. Proper installation, maintenance and operation procedures must be observed. The instructions in the instruction manuals must be followed. Inspections should be made as necessary to assure safe operation under prevailing conditions. Proper guards and other suitable safety devices or procedures as may be desirable or as may be specified in safety codes should be provided, and are neither provided by Rockwell Automation nor are the responsibility of Rockwell Automation. This unit and its associated equipment must be installed, adjusted and maintained by qualified personnel who are familiar with the construction and operation of all equipment in the system and the potential hazards involved. When risk to persons or property may be involved, a holding device or shear bars must be an integral part of the driven equipment.

LUBRICATION

High Speed Operation — In the higher speed ranges, too much grease will cause over-heating. The amount of grease that the bearing will take for a particular high speed application can only be determined by experience. If excess grease in the bearing causes overheating, it will be necessary to remove grease fitting to permit excess grease to escape. The bearing has been greased at the factory and is ready to run. When establishing a relubrication schedule, note that a small amount of grease at frequent intervals is preferable to a large amount at infrequent intervals.

Lubrication Guide

Use a No. 2 Lithium complex base grease or equivalent.*

Hours Run per Day	Suggested Lubrication Period in Weeks							
	1 to 250 RPM	251 to 500 RPM	501 to 750 RPM	751 to 1000 RPM	1001 to 1500 RPM	1501 to 2000 RPM	2001 to 2500 RPM	2501 to 3000 RPM
8	12	12	10	7	5	4	3	2
16	12	7	5	4	2	2	1	1
24	10	5	3	2	1	1	1	1

* For H and H-E series bearings, use Exxon Unirex N3 or equivalent suitable to 300° F.

Lubrication recommendations are intended for standard products applied in general operating conditions. For modified products, high temperature applications, and other anomalous applications contact product engineering at 864-284-5700

New CinchPack CEMA CinchSeal

Shaft Size	Part Number	A	B
1.50″	SE.3C	5 3/8	1 3/4
2.00″	SE.4C	6 1/2	1 3/4
2.43″	SE.5C	7 3/8	1 3/4
3.00″	SE.6C	7 3/4	1 3/4
3.43″	SE.7C	9 1/4	1 3/4

- Designed for C.E.M.A screw conveyors to replace lip seals and waste packs
- Doesn't score rotating shafts
- Designed to handle 1/4" total shaft misalignment
- Purge with air, 5 to 8 psi above vessel pressure. Each seal should have its own dedicated airline. Sharing a single airline between multiple seals is not permitted. Use separate air regulators for each seal.
- Zero maintenance due to unique self adjusting design
  Maximum Operating temperature is 425F
- Torque Setting for seal mounting 25 ft-lbs
- Field repairable
- FDA Approved
- Standard Housing Material is 6061 aluminum alloy
- Standard Elastomer Material is silicone based, FDA approved Elastomer
- Maximum shaft speed is 400 FPM, air purged

MOTORS - AC INDUCTION, SINGLE & POLYPHASE

1. Overview

This user manual applies to NORD Motor products and it provides general information for motor operation, installation, maintenance, inspection, repair, and trouble shooting, which is relevant to most of the motor products shipped by NORD. Information and instructions provided in this manual, safety and commissioning information and all other manuals applicable to any items supplied by NORD must be observed.

This instruction manual is not intended to include comprehensive details and information related to all possible design variations or accessories options available with NORD motors. If there is any uncertainty about specific procedures, instructions or motor details, then please refer these questions to NORD for additional information or clarification.

Before installing, operating, or performing maintenance on any electrical motor become familiar with the following:

- The detailed operating instructions and wiring diagrams.
- All applicable national, local and system-specific regulations, codes and practices.
- The national / regional regulations governing safety and accident prevention.
- The proper use of any tools, transportation or hoisting equipment, and safety equipment needed to complete the installation.
- To avoid serious injury or possible damage to the equipment or machine, compliance with all safety and information notes is mandatory!

⚠ *WARNING* ⚠

All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians. All applicable national, regional, and local work regulations and safety requirements must also be complied with. NORD assumes no liability for personal injury, accidental death, or equipment damage and malfunctions resulting from failure to comply with installation or operating instructions, safety notes, or any work regulations and laws!

⚠ *WARNING* ⚠

To avoid electrocution, injury or death, make certain the motor is properly grounded, completely de-energized and brought to a no-voltage condition prior to working on any electrical connections.

2. Motor Types

NORD AC electric induction motors described in this manual generally include the following types:

- Single speed or two-speed design.
- Three phase alternating current or single phase design.
- Enclosure types: TEFC, TENV, and TEBC.

3. Enclosure Types

Totally enclosed fan cooled (TEFC).

TEFC motor designs rely on fan that is mounted on the motor's rotor shaft so the cooling capacity can vary based upon the motor's operating speed.

Totally enclosed, non-ventilated (TENV)

The TENV motor designs rely purely on convection cooling and they have no fan. Often TENV designs are labeled for intermittent or periodic duty or at a lower power rating than is typical for the given motor frame size.

Totally enclosed, blower cooled (TEBC)

The TEBC design uses separate blower or ventilator fan, with its own low wattage motor and a separate power supply, to provide continuous airflow and cooling. The blower can be used to extend the speed range of the motor and allow extreme slow speed operation without causing a concern for overheating. Blower data is provided in Table 6, page 11.

4. Voltage and Frequency Variation

Voltage and frequency variations are based upon the assumption that the nameplate horsepower will not be exceeded and that the motor temperature may increase. Standard allowable deviations are based upon the type of motor labeling.

NEMA and CSA Labeled Motors

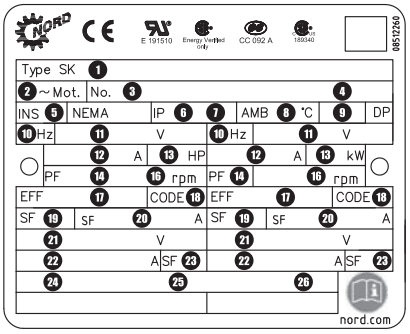
Variations are based upon the nominal utilization voltage, and not the service (supply) voltage as per ANSI C84.1.

Service Voltages	Utilization Voltages
120V, 208V, 240V, 480V, 600V	115V, 200V, 230V, 460V, 575V

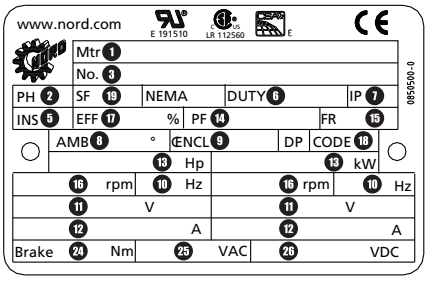
- Voltage variation at rated frequency = ±10%.
- Frequency variations at rated voltage = ±5%.
- Combined voltage/frequency variation = ±5%.

CE Labeled Motors

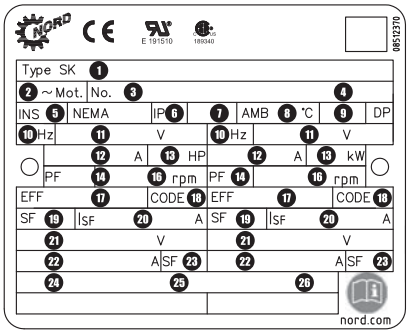
Per IEC 60038, allowable service voltage variations on in the current system, compared to the previous system, are as indicated.



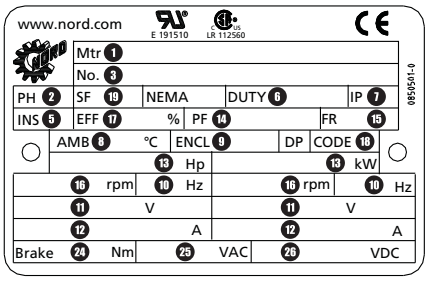
Previous Service Voltages	Current Service Voltages
220V, 380V, 660V	230V, 400V, 690V +6/-10%
240V, 415V	230V, 400V +10/-6%



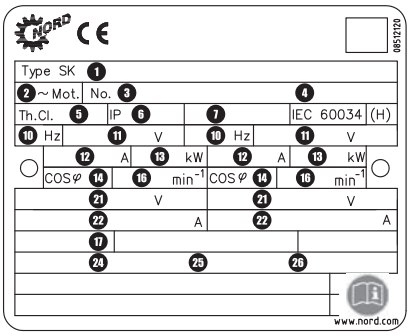
- Per EN 60034-1 a ±5% voltage variation and a ±2% frequency variation can be tolerated.
- The allowed variations are based upon the voltage (or voltage range) indicated on the motor nameplate.



MOTORS - AC INDUCTION, SINGLE & POLYPHASE



5. Motor Nameplate Information



The motor nameplate and the display of technical information may vary slightly depending upon the global standard/s that the motor conforms to and the efficiency level. Please reference the examples below.

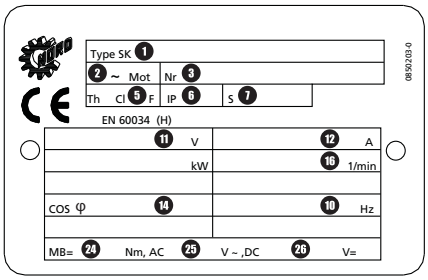


Table 1. Nameplate Data

Field	Definition
1	Model / Type
2	Number of Phases
3	Order Number
4	Serial Number
5	Insulation Class
6	IP (Ingress Protection) Enclosure Rating
7	Duty Cycle
8	Ambient Temperature Rating (°C)
9	Enclosure Type
10	Motor Frequency (Hz)
11	Voltage Rating (V)
12	Current Rating (A)
13	Rated Power (HP or kW)

Field	Definition
14	Power Factor
15	Motor Frame Size
16	Full Load Speed (rpm or 1/min^2)
17	Efficiency
18	NEMA Code Letter
19	Service Factor
20	Current Rating (If Service Factor ≥ 1.15)
21	Operating Voltage Rage (A)
22	Current Rating at Operating Voltage Range (A)
23	Service Factor at Operating Voltage Range (A)
24	Brake Rating (Nm)
25	Brake Supply Voltage (VAC)
26	Brake Coil Voltage (VDC)

6. Motor Options And Nomenclature

NORD offers many options for its motors. The option code will be shown in the motor nomenclature. Below are commonly used options.

Code	Description
AICM	Additional Internal Insulation Coating Applied
BRE	With Brake
EAR	Single Phase, Start Cap/Run Cap
ECR	Single Phase, Start Cap/Run Cap Increased SF
EHB	Single Phase, Run Capacitor Only
EP	Epoxy Dipped Windings
F	Blower Cooling Fan - 3ph & 1ph
FC	Blower Cooling Fan - 1ph
FHL	Brake – Lockable Manual Release
H	Energy Efficient
HL	Brake – Manual Hand Release
IG	Incremental Encoder
IP66	IP66 Environmental Protection
IR	Brake – Current Sensing Relay
KB	Condensation Holes - Removable Plugs
KD	Condensation Holes - Open
MIK	Brake – Microswitch
MS	Power Plug Connector

Code	Description
OL	TENV Motor – Without Fan / With Cover
OL/H	TENV Motor - Without Fan & Cover
P	Premium Efficient Motors
RD	Canopy Cover
RDD	Double Canopy Cover
RG	Brake – Corrosion Protected
RLS	Backstop
SH	Motor Space Heater
SR	Brake – Dust Protected
TF	Thermistor
TW	Thermostat
VN	10:1 Constant Torque Rated Motor
VR	5:1 Constant Torque Rated Motor
VW	20:1 Constant Torque Rated Motor
VZ-F	1000+:1 Constant Torque Rated Motor
WE	2nd Motor Shaft End
WU	High Slip Rotor
Z	High Inertia Motor Fan

Motor Nomenclature

100L / 4 BRE 40 ...

- ... — Other Options
- 40 — Brake Size Nm
- BRE — Brake
- 4 — Number of Poles
- 100L — Frame Size

Ordering Examples

100L 4 BRE 100 HL RG

- RG — Corrosion Protection
- HL — Hand Release Lever
- 100 — 100 Nm Brake Torque
- BRE — Brake
- 4 — 4 Poles
- 100L — Motor Frame Size

100 Frame Motor with 4 poles, Brake, 100 Nm with a hand release lever, corrosion protected brake, and a current sensing relay.

160L 2 BRE 40 FHL SR

- SR — Dust & Corrosion Prot.
- FHL — Locking Hand Release Lever
- 40 — 40 Nm Brake Torque
- BRE — Brake
- 2 — 2 Poles
- 160L — Motor Frame Size

63 Frame Energy efficient motor with 4 poles, Brake, 40 Nm with a locking hand release lever and dust & corrosion protection.

7. Application Conditions

Standard NORD motors are designed to operate in dusty or moist environments and have anti-fungal, thermal class F insulation.

- Enclosure Protection Rating = IP55 (minimum).
- Maximum Installation Height = 3300 ft (1000 m).
- Ambient Temperature = -4 to 104°F (-20 to 40 °C).
- Tropical-proof, Thermal Class F insulation.

The protection level and maximum ambient temperature are stated on the motor nameplate.

IMPORTANT NOTE

NORD can provide motors for an expanded range of applications and service conditions including higher protection levels, extreme ambient conditions and, higher altitudes.

WARNING

Consult NORD for recommendations if motors are operated under extreme loading conditions, exposed to high inertia loads, or need to operate under unusually high cycling conditions with high starting and stopping frequency.

WARNING

Special design and assembly considerations are needed if NORD motors are subject to any of the following conditions:

- Outdoor installation with motor in a vertical position.
- Direct contact with aggressive or corrosive materials (acids, bases, salts, certain gases, etc.).
- Exposure to extreme high or low temperatures, high relative humidity, condensation moisture or very wet environments.
- Subject to extreme material build-up on the unit (dirt, dust, sand, etc.).
- Hazardous Locations (risk of fire or explosion).

8. Transportation

During transportation observe the following:

- Make sure that all eyebolts and lifting lugs are tight and firmly against their supporting surface.
- Use all the lifting eyes that are intentionally supplied with the motor.
- Lift only at designed points.
- Protect the mounting surface from possible damage during transportation.
- Always use sufficiently rated handling equipment, lift mechanisms and lifting straps.
- With heavier objects or unbalanced loads, it may be appropriate to use more than one lifting point or an additional strap or sling to assure safe transportation of the assembly. This is especially true of assembled gearmotors and motorized reducers.
- Once the NORD motor or assembly is properly installed, remove the transportation fixtures completely or make certain they are properly re-secured and tightened.

WARNING

Transportation – Use of Lifting Devices

To avoid death, serious injury or equipment damage…

- Hoisting lugs or lifting eyes attached to the motor are designed for the weight of the motor only! Do not attach any additional loads!
- The motor must only be transported and lifted using the lifting eyes, in a position that is appropriate for its type of construction. Otherwise, it could fall over or slip in the lifting tackle.
- During suspended transport, two straps must be able to carry the entire load weight safely.
- When required use additional, suitable means of support for transportation, installation or removal.
- Always secure the support equipment to prevent it from slipping.

9. Storage

If the motor is not in service, store it according to the following conditions:

- Store the motor in a clean, dry, dirt-free, vibration free area.
- Storage temperatures of 10°C (50°F) to 50°C (120°F) must be maintained.
- Relative humidity must not exceed 60%.
- If vibration in the area exceeds 0.002 inch (0.05 mm) at 60 hertz, then vibration isolation pads are suggested to prevent brinelling of the bearings.
- Treat the unprotected shaft end and mating flange surfaces with a corrosion inhibitor that can be cleaned off prior to commissioning.
- Before placing the motor into service, visually inspect the motor exterior for evidence of deterioration during storage. Turn the motor shaft by hand to make sure the shaft turns freely.
- Motor space heaters, when provided, are to be connected and energized whenever there is a possibility that the storage ambient conditions will reach the dew point. Space heaters are optional. Remove motor from the storage container when the heater is energized.
- If the motor needs to be stored for extended periods, or if it is stored in less than favorable conditions, it is recommend that the winding insulation resistance be checked prior to commissioning (page 7).
- Even if stored in favorable conditions, the antifriction motor bearings and motor shaft seals may need to be replaced if the storage period is more than 4 years.

10. Safety Considerations

When installing, servicing or replacing electric motors it is important to be working in a “voltage-free” state. Observe the following safety rules.

Five Safety Rules

1. Disconnect the system. Disconnect the auxiliary circuits (brakes, space heaters, etc.).
2. Prevent reconnection (follow safe lock-out/tag-out practices).
3. Make sure that the equipment is at zero voltage.
4. Make certain the equipment is properly grounded and short-circuited.
5. Cover or isolate nearby components that are still electrically live.

To energize the system, apply the measures in reverse order.

Qualified Personnel

All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians.

For the purpose of this documentation, a qualified personnel is taken to mean a person or people who fulfill the following requirements:

- Through appropriate training and experience, they are able to recognize and avoid risks and potential dangers in their particular field of activity.
- They have been instructed to carry out work on the machine by the appropriate person responsible.
- They are responsible for knowing and complying with all applicable national, regional, and local work regulations and safety requirements.

10. Safety Considerations Ctd.

General Warnings and Cautions

⚠ *WARNING* ⚠

To avoid electrocution, injury or death, make certain all electrical devices (motors, brakes, variable frequency drives, etc.) are properly grounded, completely de-energized, and brought to a no-voltage condition prior to working on any electrical connections. Remember that most of these devices carry potentially dangerous energy levels for a period of time after power is removed. Always follow proper lock-out/tag-out procedures.

⚠ *WARNING* ⚠

Electrical machines contain dangerous voltage levels, electrically live parts, rotating surfaces and hot surfaces. To prevent injury, death or possible equipment damage always observe the following:

- Keep all safety covers and guards in place during operation. Remove and replace covers in compliance with the applicable safety regulations.
- Allow the machine to cool down before starting any work on it.
- Operate the machines properly.
- Perform regular maintenance on the machine.
- Secure and guard free-standing shaft extensions.

⚠ *WARNING* ⚠

Electrically Live Parts

Electrical machines contain electrically live parts. Fatal or severe injuries and substantial material damage can occur if the required covers are removed or if the machines are not handled, operated, or maintained properly.

⚠ *WARNING* ⚠

Rotating Parts

Electrical machines contain dangerous rotating parts. Fatal or severe injuries and substantial material damage can occur if the required covers are removed or if the machines are not handled, operated, or maintained properly.

⚠ *WARNING* ⚠

Hot Surfaces

Electrical machines have hot surfaces. Fatal or severe injuries and substantial material damage can occur if the required covers are removed or if the machines are not handled, operated, or maintained properly. Allow the machine to cool down before starting any work on it.

⚠ *WARNING* ⚠

Maintain Proper Cooling

Operating the motor without the intended cooling fan may cause overheating and result in very hot surfaces, personal injury and material damage. Never commission a motor intended to be fan cooled when it is missing the shaft-driven fan or external blower assembly.

⚠ *WARNING* ⚠

Condensation Drain Holes (Optional)

Inserting objects into the condensation drain holes can damage the winding and can result in death, serious injury and damage to property!

- Before opening sealed drain holes, make sure the motor is in a no-voltage condition. Close the condensation drain holes before re-commissioning.
- Exercise caution around drain holes that are intended to be left open, especially when the motor is energized.

STOP *HARMFUL SITUATION* STOP

Before start-up check the following:

- All electrical connections are secure, well grounded and properly made.
- The motor is rotating in the correct direction (when de-coupled from the driven load).
- There are no temperature-sensitive parts (cables etc.), in contact with motor enclosure.
- Condensation drain holes are always located at the lowest point of the motor.

11. Checking the Insulation

Before putting the motor into operation for the first time, after a lengthy period of storage or standstill (approx. 6 months), the insulation resistance of the winding should be checked.

⚠ WARNING ⚠

During and directly after measurement the motor connection terminals carry hazardous voltages.

A. Control

The insulation resistance of new, cleaned, or repaired motor windings against the grounded housing and against one another should be > 200 Mega-Ohms.

B. Measurement

Using a Mega-Ohm meter apply a DC voltage of 500 VDC to the motor winding for a period of 60 seconds and record the winding insulation resistance compared to ground.

- The 500 VDC test voltage is applicable to low voltage motors up to 1000 VAC.
- When performing this test the temperature of the windings should be 25°C ± 15°C (77°F ± 27°F).

C. Verification

- If the insulation resistance of the winding is less than 50 Mega-Ohms, the cause may be moisture. The windings should be dried and the test should be repeated.
- After any lengthy period of operation the insulation resistance may drop. So long as the measured value does not fall below the critical value of 50 Mega-Ohm, the motor may continue to be operated.
- If the measured value falls below the critical 50 Mega-Ohm level, the cause must be established and the windings or winding sections must be cleaned, dried, repaired, or replaced as needed.

12. Bearing Lubrication

NORD motor frame sizes 63 up to and including 225 are normally supplied with internally grease lubricated bearings and require no lubrication during normal operation.

NORD motor frame sizes 250 and larger are supplied with grease fittings for re-greasing the motor bearings.

IMPORTANT NOTE

Motors with grease fittings are normally supplied with a label indicating the grease type used, the suggested re-lubrication interval, and the amount of new grease to be applied. General bearing maintence guidelines are listed in Table 3.

Typical motor bearing grease is an NLGI No. 2 consistency, high grade product with a polyurea base thickener, synthetic or blended mineral/synthetic oil, and stabilizing agents to protect against heat and oxidation.

Table 3 – Motor Bearing Maintence Guidelines

Frame Size	Power	Poles	Re-greasing Interval
63-225	0.16-60 HP (0.12-45 kW)	All	Maintence Free
250 to 280	75-125 HP (55-75 kW)	2	4000 h
		4 to 8	8000 h
315	150-250 HP (132-200 kW)	2	3000 h
		4 to 8	6000 h

STOP HARMFUL SITUATION STOP

When re-greasing motor bearings do not to mix different greases without verifying the compatibility with a reputable grease lubrication supplier. Mixing incompatible products can lead to bearing failure.

13. Mechanical Installation

Integral motors, NEMA C-face motors, and IEC flange mounted motors must be rigidly secured to their mating connection surface using all fastening screws tightened to the proper bolt torque. It is good practice to apply a medium strength thread- locking agent (Loctite® 242) to the mounting screws.

Foot mounted motors must be securely installed to a rigid and level foundation or mounting surface to minimize vibration and maintain alignment between the motor and shaft load. All mounting hole locations must be utilized. Tighten all hold down screws or bolts to the proper bolt torque.

STOP HARMFUL SITUATION STOP

Failure to provide a proper mounting surface may cause vibration, misalignment and bearing damage.

Accurate alignment and proper balancing of output devices (couplings, belts, pulleys, etc.) is required to assure quite, low vibration, trouble free operation. When the motor is directly coupled to a gear drive or a driven machine make sure that the motor shaft and driven machine shaft are aligned with one another axially.

STOP HARMFUL SITUATION STOP

Inaccurate alignment may lead to bearing damage, excessive vibrations and shaft breakage.

IMPORTANT NOTE

For motor replacement guidelines see section 20 on page 15 and section 21 on page 16.

14. Electrical Connections

⚠ WARNING ⚠

To avoid electrocution, injury or death, make certain all electrical devices (motors, brakes, variable frequency drives, etc.) are properly grounded, completely de-energized, and brought to a no-voltage condition prior to working on any electrical connections. Remember that most of these devices potentially dangerous energy levels for a period of time after power is removed. Always follow proper lock-out/tag-out procedures.

IMPORTANT NOTE

External motor brakes have their own connection requirements as indicated in the appropriate brake instruction manuals.

⚠ WARNING ⚠

If the motor has an integral brake, make certain there is no load connected to the driven equipment before releasing the brake. Otherwise serious injury, death, or damage to the equipment may result.

- The supply voltage and frequency must agree with the motor nameplate data.
- Always feed the connecting leads into the terminal box using appropriate mating cable glands. The mating connection cables and cable glands should be suitable for temperatures ≥ 194°F (90°C).
- Provide the ends of the connecting leads and ground lead with cable lugs or curved ring eyelets before connecting them to the terminal board.
- Make certain that the wiring connections and arrangement of the terminal board jumpers conform to the appropriate wiring diagram as provided in the motor terminal box and/or page 9 of this manual.
- Tighten the terminal board screw connections on the on the main terminal board per the table below.

Table 4 – Tightening Torque: Terminal Board and Grounding Screws

Thread Size	Nut Size [mm]	Tightening Torque [lb-ft]	Tightening Torque [N-m]
M4	7	0.6-0.9	0.8-1.2
M5	8	1.3-1.8	1.8-2.5
M6	10	2.0-3.0	2.7-4
M8	13	4.0-5.9	5.5-8
M10	17	6.6-9.6	9-13
M12	19	11.8-14.8	16-20

- Upon final assembly, the terminal box cover must be sealed so that it is dust-tight and water-tight.

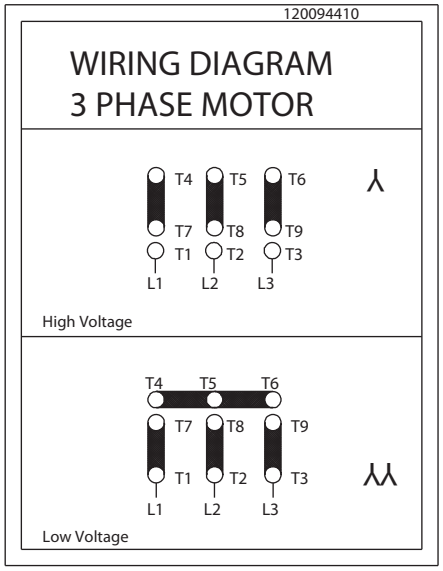

Table 5 – Tightening Torque: Terminal Box Cover Screws

Thread Size	Tightening Torque [lb-ft]	Tightening Torque [N-m]
M4	0.6-0.9	0.8-1.2
M5	0.9-1.3	1.2-1.8
M6	1.1-1.8	1.5-2.5
M8	2.2-3.7	3.0-5.0

Table 6 – Option F & FC

16. Motor Accessories Ctd.

Thermostats (Option TW and Option 2TW)

Standard connection	Series connected, one per phase
Contact	NC (Normally Closed)/ Auto Re-setting
Response Temperature (Option TW)	311 °F (155 °C) Shut-Off Device
Response Temperature (Option 2TW)	311 °F (155 °C) Shut-Off Device + 266°F (130 °C) Alarm Device
Nominal Current	1.6 Amp at 250 V
Resistance	< 50 mΩ
Switch Rebound	< 1ms
Insulation Rating	2000 VAC
Cycles	10,000 max
Lead Identification (inside terminal box)	P1 and P2 or TB1 and TB2 / 2TB1 and 2TB2

Motor thermostats or bi-metallic switches can be wired directly into the control circuit without a separate control module or tripping device. Thermostats operate on a relatively high control voltage so they are much less sensitive to voltage interference from the main power supply. Often one can run thermostat leads and motor power leads next to each other when using the appropriate shielded cable. The installer is responsible to wire the thermostats into the motor control circuit. The leads may be labeled in a variety of ways as indicated.

Thermistors (Option TF)

Standard Connection	Three devices, series connected, one per phase
Type	Positive temperature coefficient (PTC)
Transition Temperature	150°C±5 °C
Resistance	20… 500Ω (below transition) > 4 kΩ (above transition)
Reed Current	< 1mA
Max Voltage	30V
Lead Identification (inside terminal box)	P1 and P2 or TP1 and TP2

With a separate control module or tripping device (ex. Kirwan INT69) thermistors are used to sense motor overload/ over temperature conditions by converting the critical operating temperature limit into large internal resistance change. Due to their small size, heat sink construction, and high change in resistance value, minor resistance variations caused by relatively long lead runs can be tolerated. This feature also allows for one controller to be used for several temperature sensing locations. Many variable frequency drives come with on-board thermistor inputs. NORD does not supply the thermistor control module.

⚠ WARNING ⚠

Thermostats and Thermistors will automatically reset.

⚠ WARNING ⚠

All wiring must be completed by qualified personal and adhere to all local codes.

Space Heaters (Option SH)

- Connection Diagram shown on Page 9
- Space Heaters are mounted directly on the motor winding
- The leads are brought into the terminal box and labeled H1 and H2
- They require a separate voltage supply and must not be energized when the motor is energized
- The heaters will keep the winding of the motor approximately 5°C above the surrounding ambient

Table 5. Space Heater Data

Frame Size	Wattage	Voltages	Heater Strips/MTR
63 & 71	18W	110V	1
		230V	
		460V	
80	25W	110V	1
		230V	
		460V	
90 – 112	50W	110V	2
		230V	
		460V	
132-180	100W	110V	2
		230V	
		460V	
200 & 225	120W	110V	2
		230V	
		460V	

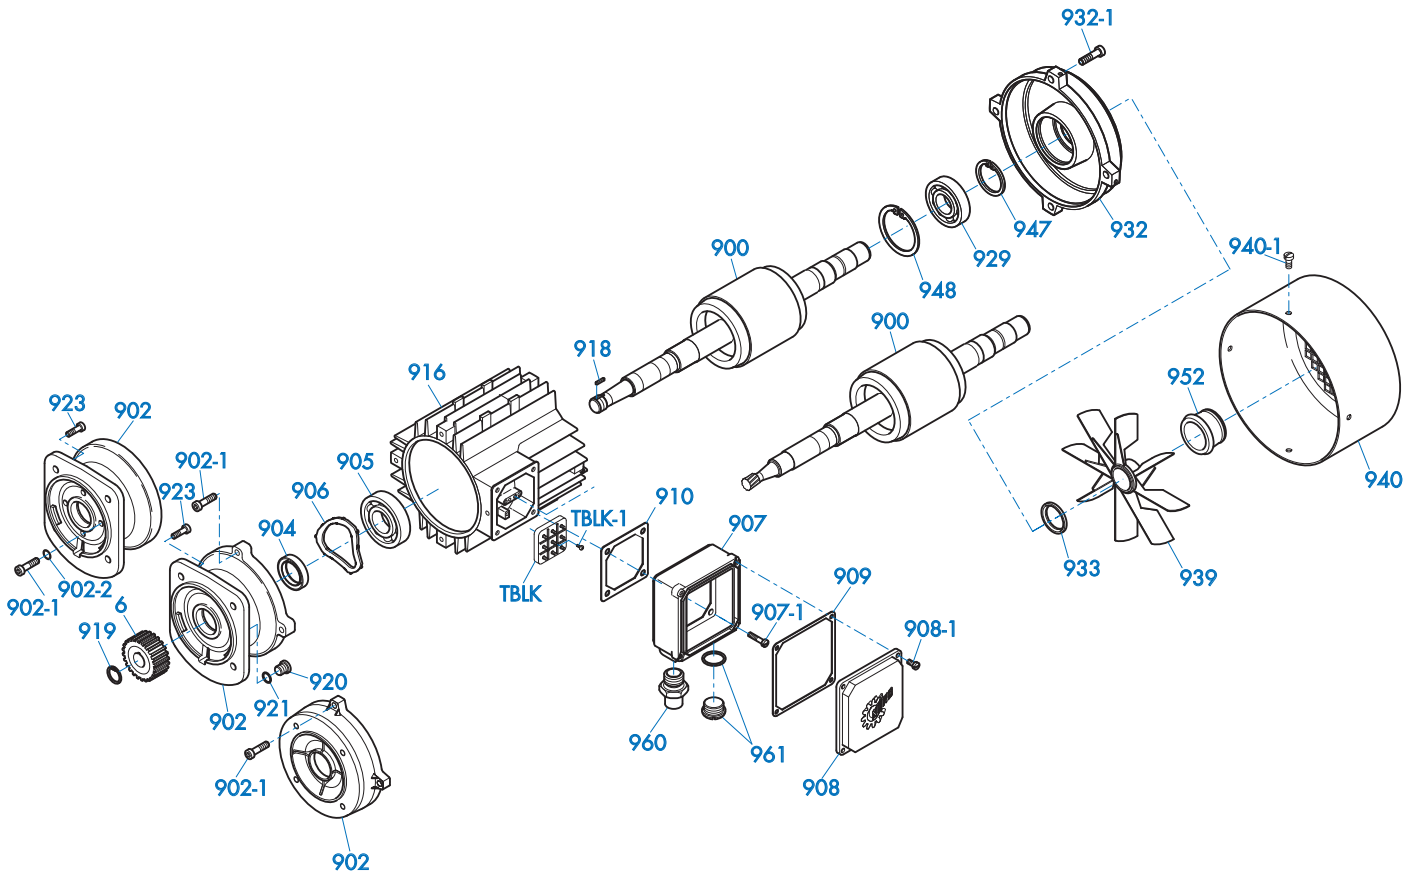
Encoder (Option IG)

- Most standard encoders will be enclosed inside the fan cover
- Incremental, Quadrature, Differential, Marker Channel
- IP66 Protection
- IG1 = 1024PPR, IG2 = 2048PPR, IG4 = 4096PPR
- TTL/RS422, HTL/Push-Pull, Line Driver.
- 5V or 10-30V available.
- Absolute encoders also available.
- Seperate encoder wiring instructions are provided by NORD.

17. Inspection

Inspect the motor after every 500 operating hours.

⚠ *WARNING* ⚠



If it is necessary to clean the motor exterior, do not use shop air. Shop air can force contaminents into the motor and may cause parts damage or result in blowing debris causing injury.

Table 8 - Inspection Guidelines

Inspect	Check	Action
Motor Exterior	Check the external surfaces for contamination. Accumulation of dirt and fibrous deposits must be removed.	Clean the motor external surfaces using clean, lint-free cloths.
		Clean deposits from between cooling fins using a vacuum cleaner and a stiff-bristled nylon brush.
	Check the external surfaces for oil film and greasy deposits.	Clean the oil film and greasy deposits from the motor surface using clean, lint-free cloths.
		If necessary, moisten the cloth with an approved non-flammable, residue-free solvent. Do not pour solvent on the motor.
	Check for evidence of damage or overheating.	If the motor has physical damage, replace the motor.
Motor Mountings	Make sure the mounting hardware is secure.	If the mounting hardware is not secure, check the motor/gearbox alignment, and tighten the mounting hardware.
Motor Electrical Connections	Check that all electrical connections are secure.	If the electrical connections are not secure, tighten them.
	Check the electrical connections for evidence of arcing.	Loose electrical connections can cause arcing, which is evident by discoloration and charring. If you find evidence of arcing, replace the damaged connections.
Insulation Resistance	Using an ohmmeter, check and record the resistance of motor winding insulation.	Compare the current resistance reading to previous readings. If the resistance drops significantly, perform an internal inspection for insulation damage or deterioration.
Motor Brake	On motors that have a brake, use a feeler gauge to check the air gap in between the brake pad and the rotor according to the appropriate user manual.	If the air gap exceeds the maximum allowed for that brake configuration provided in the manual, adjust the air gap or replace the brake pad according to user manual U35000.

18. Parts List

If you are ordering a part, provide the model and order number (table 1, page 2) of your motor. This will determine the specific part number you need.

Part Number	Part Description	Qty per Assembly
6	Input Pinion	1
900	Rotor Assembly	1
902	A-Endbell	1
902-1	Screw	4
902-2	Dubo Seal	4
904	Oil Seal	1
905	Bearing	1
906	Preload Spring	1
907	Terminal Box Frame	1
907-1	Screw	4
908	Terminal Box Cover	1
908-1	Screw	4
909	Gasket - Terminal Box Frame	1
910	Gasket - Terminal Box Cover	1
916	Stator	1
918	Key	1
919	Retaining Ring	1
920	Oil Plug	1

Part Number	Part Description	Qty per Assembly
921	Gasket	1
923	Screw	4
929	Bearing	1
932	B-Endbell	1
932-1	Screw	4
933	Oil Seal	1
939	Fan	1
940	Fan Cover	1
940-1	Screw	4
947	Retaining Ring	1
948	Retaining Ring	1
952	Fan Clip	1
960	NPT Thread Adapter	1
961	Plug (includes O-ring)	1
TBLK	Terminal Block	1
TBLK-1	Screw, Terminal Block Mounting	2
	Jumper Bar (not illustrated)	AR

19. Repair

Reference the parts list drawing on page 14 for clarification.

A. Disassemble the motor according to the general exploded view in PARTS INFORMATION. Disassemble only as far as necessary to replace the failed parts.

B. Whenever the motor is disassembled, clean all dust and contamination from the motor interior using a vacuum cleaner and a soft-bristled nylon brush.

C. The following parts must be replaced if they are removed:

- Oil seal (904), Oil seal (933)
- Gasket (909), Gasket (910), Gasket (921)
- Gasket on plug (961) • Self-locking screws (907-1, 908-1, 923, 932-1, 940-1)
- Dubo Seals (902-2)

D. If the following parts are removed, inspect them, and replace them if they are deformed or damaged:

- Retaining ring (919), Retaining ring (947), Retaining ring (948)
- Fan clip (952)

20. Removing and Replacing Integral Motors

Reference the parts list on Page 14 for clarification.

A. Disconnect the power to the electric motor. Make certain the motor is properly grounded, de-energized and secured with a lock-out/tag-out device.

B. Drain the oil from the mating gearbox, or rotate the motor/gearbox assembly so that the motor is up, to prevent oil from spilling from the gearbox when the motor is removed.

C. Support the motor and prepare it for removal. Steady the motor and support it. For larger motors, use of mechanical lifting or support devices to may be appropriate.

D. Remove the fastening screws that hold the motor to the reducer input.

IMPORTANT NOTE

Most integral motor installations have mounting bolts accessible from the motor exterior. If the bolts are not clearly visible, unbolt the input flange from the gearbox. Remove the bolts securing the motor to the reducer input flange, and discard the old DUBO sealing rings that were under the screw heads.

E. Maintain motor shaft alignment and move the motor directly away from its mounting surface until the motor shaft and mating input gear clear both the internal gear mesh and reducer input.

F. Remove and discard the old flange gasket.

G. Clean the gasket faces on the motor and gearbox, making sure no cleaning debris enters the gearbox.

H. Check the replacement motor to make sure the motor flange, motor shaft, and motor pinion are identical to the motor that was removed.

I. Place a new gasket between the gearbox and new motor.

J. Position the motor on the gearbox, making sure the input pinion meshes with the input gear. Rotate the motor as necessary to align the bolt holes and seat the motor flange. Make sure the gasket remains properly aligned and seated

K. Apply a medium strength thread locking compound to the bolt threads. Install the bolts and tighten them to the appropriate torque.

IMPORTANT NOTE

If the motor/gearbox installation uses an input flange, first mount the input flange to the motor using the four mounting bolts and NEW DUBO sealing rings under the head of each fastening screw. Make sure the fastening screws are clean and apply new thread sealant if necessary.

L. Check the gearbox oil level in accordance with the appropriate User Manual/s. If necessary fill or add oil to the gearbox.

HARMFUL SITUATION

Do not mix different types of oil!

M. Re-establish the electrical connection to the motor.

N. Observe the subsequent start-up closely to make certain the equipment is operating properly and there are no seal or gasket leaks.

21. Removing and Replacing NEMA C-Face or IEC Fange-Mounted Motors

For further clarification of these instructions, reference the parts list on Page 14 of this manual.

A. Disconnect the power to the electric motor. Make certain the motor is properly grounded, de-energized and secured with a lock-out/tag-out device.

B. Support the motor and prepare it for removal. Steady the motor and support it. For larger motors, use of mechanical lifting or support devices to may be appropriate.

C. Remove the fastening screws that hold the motor to the C-face or IEC mounting flange.

D. Maintain motor shaft alignment, and move the motor directly away from its mounting surface until the motor shaft and mating coupling clear the mounting flange surface of the driven equipment.

E. Measure and record the proper placement of the motor shaft coupling prior to removing it from the old motor.

F. Make sure the new motor shaft, key and key slot are free of all nicks, burrs, and lubrication or grease.

G. Install the new shaft key on the new motor. If the shaft key is not captured or if an open-ended key slot is utilized it is good practice to secure the key into the key slot with a medium strength thread locking agent or alternatively one may stake the key in place.

H. Re-install the coupling on the new motor shaft, making sure the placement of the coupling is in the same location as it was on the old motor (See Step E).

I. Clean all old gasket material, sealants, contamination, and corrosion from the flange surface on the driven equipment.

J. If the motor is utilized in a wet or wash down environment apply a sealing gasket or gasket eliminating compound to the mating flange surface, as would seem most appropriate for the application.

K. Support the new motor and mount it flush against the mating flange surface of the driven equipment.

L. Apply a medium strength thread locking agent to the bolt threads.

M. Install the bolts and tighten them to the appropriate torque.

N. Re-establish the electrical connection to the motor.

O. Observe the subsequent start-up closely to make certain the equipment is operating properly.

22. Testing

IMPORTANT NOTE

NORD electric motors do not require periodic testing. However, if a motor is removed from its installation, NORD recommends that the motor be checked according to the following static and dynamic testing procedures before it is reinstalled. Finding a condition that will require future repair before the motor is reinstalled decreases the overall maintenance time.

This section provides general test information and functional checks for the types of motors covered by this manual. Read and understand the tests and checks before performing them on your motor.

Record and date all measurements taken.

If the motor fails any of the test procedures provided below, use the troubleshooting guide to determine the motor problem.

Static Testing

A. The motor can only be static tested if it is disconnected from the component it drives and securely mounted on a fixture or mounting plate. These tests are usually conducted when a motor has been removed for any reason other than failure

B. Turn the motor shaft slowly by hand. Feel and listen for evidence of a failed bearing, which is indicated by a rough feel as the shaft rotates, and by noise.

C. Check for smooth rotation, with no evidence of binding or catching. If the shaft does not rotate smoothly, or binds or catches, the bearings are worn or failing, lack lubrication, or are contaminated.

D. Check the motor shaft for side play by applying pressure at right angles to the shaft in several places around the circumference. If the shaft moves perceptibly, the front bearing may be worn.

Dynamic Testing

A. Find the motor voltage and rated load current values as listed on the motor nameplate.

B. Using a volt-ohmmeter, verify that the motor power supply is in the correct range.

C. Run the motor with no load. As the motor is operating, listen for unusual motor noise and check for excessive vibration. Vibration and motor noise are indications of bearing contamination, lack of lubrication, damage, or failure.

D. Use an ammeter to measure the no-load current. Record the no-load current for comparison with previous readings, and for reference during future testing.

E. If the motor passes the no-load test, operate the motor at rated load and check and record the current.

F. Check the motor operating temperature at rated load. If the motor operates at a higher than normal temperature, the motor may be damaged, overloaded or failing.

23. Troubleshooting

Fault	Likely Cause	Corrective Action
Motor fails to start.	• Motor is mis-wired • Brake is may not be releasing. • Fan guard damaged and contacting fan. • Motor protection device has tripped or does not switch • 1-Ph Capacitor or start switch has failed.	• Verify and correct motor wiring. • Troubleshoot brake per User Manual U35000. • Replace damaged fan guard. • Check motor protection device for correct setting and correct error. • Discharge capacitor and use a volt-ohm meter to check the capacitor for an open circuit - replace if needed. Inspect switch and connections. Replace if contacts look burned or pitted.
Fuses blow or motor protection faults immediately.	• Short circuit in line. • Lines connected incorrectly. • Fuse or circuit breaker tripped. • Motor is overloaded or equipment jammed. • Stator is shorted or went to ground.	• Rectify short circuit. • Check circuit diagram and make corrections. • Replace fuse or circuit breaker. • Make sure load is free. Verify motor amp draw compared to nameplate rating. • A damaged or blown stator will show a burn mark. Stator must be repaired or replaced.
Motor hums and has high current consumption	• Brake may not be releasing. • Rotor may be rubbing stator. • Defective or incorrect stator winding.	• Troubleshoot brake per User Manual U35000. • Send motor to a repair specialist.
Severe speed loss under load or excessive acceleration time.	• Overload. • Excessive voltage drop. • Damaged or failing motor bearings. • Damaged or worn gear unit. • 1-Ph Capacitor or start switch has failed.	• Check load conditions and make certain system is unobstructed. Reduce load or consider a larger motor. • Verify service voltage is within specification. Check if nearby equipment is affecting incoming power. Make sure connection harness and wiring is adequate. • Replace motor bearings. • Replace or repair damaged gear unit. • See instructions under "Motor fails to start".
Motor runs the incorrect direction.	• Incorrect wiring.	• Rewire motor according to system schematic and/or switch two incoming motor phases.
Motor heats up excessively or thermal overload protection trips	• Overload. • Ambient temperature is too high. • Inadequate cooling. • Operation is outside the allowed duty cycle. • Motor protection device may be defective. • Excessive supply voltage. • System short or damaged stator.	• Make sure load is free. Verify motor amp draw compared to nameplate rating. Reduce load or consider a larger motor. • Do not operate above the rated conditions. • Correct cooling air supply. Open and clear cooling air passages. Retrofit with forced ventilator fan if needed. • Adjust operating duty cycle or contact a specialist to select a suitable motor or drive. • Replace motor protection device. • Adapt motor supply voltage. • Check for loose, cut or damaged wires. Check stator winding for defects or burn damage.
Excessive Noise or Vibration	• Motor bearings contaminated or damaged. • Excessive motor shaft end play. • Misaligned or imbalanced load.	• Test motor by itself. If bearings are bad noise may be heard or roughness detected. Replace bearings. Add lubrication if bearings have grease fittings. • Check shaft endplay with motor and system power disconnected. If shaft movement is excessive replace motor shaft bearings. • Check all mating shaft connections for proper alignment and correct all imbalanced load conditions.
1 Ph Start Capacitor Failures	• Motor is not coming up to speed quickly enough. • Motor is being cycled frequently • Start switch is defective or damaged.	• Verify motor size to load conditions. Motor should come up to speed in no more than 2-3 seconds. • Verify duty cycle and consult specialist for recommendations. • Replace start switch.
1 Ph Run Capacitor Failures	• Possible power surge to motor caused by transient voltage or lightening. • Excessive ambient temperature.	• Install proper surge protection. • Verify ambient conditions do not exceed nameplate value.

With energy efficient gearing, inverter-duty motors, and AC variable frequency drives, NORD provides an intelligent energy saving product portfolio. NORD can be your partner in selecting motors to match each application for ideal performance and maximum energy savings. In keeping with this concept, NORD offers a variety of high performance motors including:

- NORD ***continuous duty, premium efficient motors (1–75 HP)*** satisfy global energy efficiency mandates, NORD's premium efficient motors provide maximum energy savings, offer low rotor inertia, provide quick starts & stops, & handle high cycle rates in dynamic applications.
- NORD ***60 minute duty motors (1 - 40 HP)*** motors are labeled "60 MIN" duty & are perfectly suited for intermittent or time limited applications. These motors offer higher cycling capacity, lower motor rotor inertia, & lower energy consumption while starting or stopping, as comparedto the NORD Premium Efficient motors. NORD can also provide motors that satisfy other periodic duty or intermittent duty ratings.
- NORD ***continuous duty, standard efficient motors (0.16 – 0.75 HP)*** satisfy global energy efficiency mandates. They are exempt from the June 1, 2016 mandate requiring NEMA Premium Efficiency Levels (D.O.E. 10 CFR Part 431). Like 60 minute duty motors, these motors offer higher cycling capacity, lower motor rotor inertia, and lower energy consumption while starting or stopping, as compared to the NORD Premium Efficient motors.

Effective June 1, 2016, most general purpose, 1- 500 Hp, continuous duty motors sold in the U.S., must meet NEMA Premium Efficiency Levels (D.O.E. 10 CFR Part 431). Intermittent-rated motors (60 Min. Duty) and fractional horsepower/totally-enclosed motors are exempt from this latest U.S. efficiency mandate; properly applied, these motors often lead to less energy consumption, especially during starts and stops.

1. Importance of the operating instructions

These operating instructions are intended to provide general information and safety guidelines. It is the responsibility of the buyer, machine builder, installer and user of the NORD product to make sure that all the proper safetynotes and operating instructions have been reviewed and understood. If the contents of this instruction or any applicable operating instructions are not understood, please consult NORD.

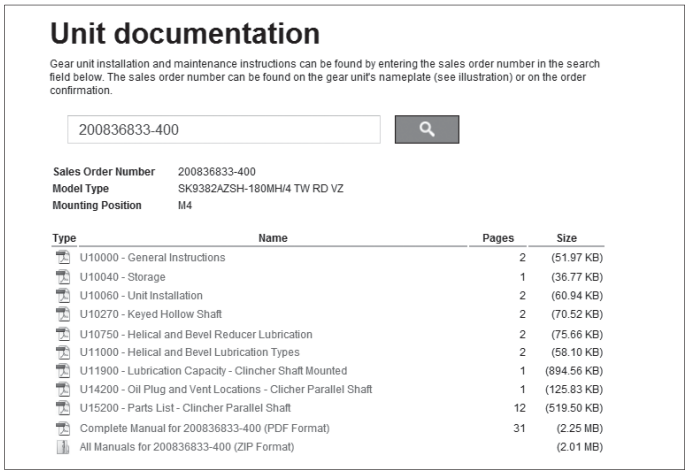
⚠ *WARNING* ⚠

Electric motors, gearmotors, electrical brakes, variable frequency drives, and gear reducers contain potentially dangerous high-voltage, rotating-components and surfaces that may become hot during operation. All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians.

2. Inspect incoming freight

Before accepting shipment from the freight company, thoroughly inspect the NORD equipment for any shipping and handling damage. If any goods called for in the bill of lading or express receipt are damaged, or if the quantity is short, do not accept until the freight express agent makes an appropriate notation on your freight bill or express receipt. If any concealed loss or damage is discovered later, notify your freight carrier or express agent at once, and request a formal review of your claim.

Claims for loss or damage in shipment must not be deducted from the NORD invoice, nor should payment of the NORD invoice be withheld awaiting adjustment of such claims, as the carrier guarantees safe delivery. NORD will try to assist in collecting claims for loss or damage during shipment; however, this willingness on our part does not remove the transportation company's responsibility in reimbursing you for collection of claims or replacement of material.



3. Obtaining detailed operating instructions

One can receive the detailed installation and maintenance instructions by entering a serial number (or NORD order number) at the appropriate location on the NORD web site.

i. Record the serial number from your gearmotor, gear reducer, or motor nameplate, or record the serial number found on your order confirmation.

ii. Go to **www.nord.com/docs** to download the appropriate operating instructions.

EXAMPLE: www.nord.com/docs

Unit documentation

Gear unit installation and maintenance instructions can be found by entering the sales order number in the search field below. The sales order number can be found on the gear unit's nameplate (see illustration) or on the order confirmation.

4. Intended use

NORD is a supplier of electric motors, gearmotors, reducers, electromechanical brakes, mechanical variators, and electrical variable frequency drives that are intended for commercial installations on larger systems and machines.

⚠ *WARNING* ⚠

NORD does not accept any liability for damage or injury caused by:

- Inappropriate use, operation or adaptation of the drive system.
- Unauthorized removal of housing covers, safety and inspection covers, guarding, etc.
- Unauthorized modifications to the drive system.
- Improper servicing or repair work on the drive system.
- Damage caused during shipment or transportation.
- Disregard of the important Safety Notes or Operating Instructions.

5. Notes concerning warranty and liability

All units are supplied according to the terms described in our standard "Conditions of Sale." The unit limited warranty is also defined in our "Conditions of Sale" and is located in the back of our product catalogs as well as the back of your order invoice.

All NORD Safety Notes and all related NORD Operating instructions shall be considered up-to-date at the time in which they were compiled by the buyer, machine builder, installer or user. NORD reserves the right to incorporate technical modifications and information updates to any safety/operating instructions that are within the scope of providing additional knowledge or clarification, communicating design changes, or product enhancements. Information updates may include any NORD product, or subsequent products purchased and supplied by NORD; No specific claims can be derived from the information or illustrations and descriptions contained in the safety notes or related operating instructions.

⚠ *WARNING* ⚠

NORD assumes no liability for personal injury, equipment damage or malfunctions resulting from failure to comply with any installation safety notes. The applicable national, regional, and local work regulations and safety requirements must also be complied with. Failure to comply with any safety notes or regulations may result in serious injury, damage to property, or even death.

6. Checklist for installation and operation

- ☑ Verify that the purchased NORD product has been supplied with the expected accessories & options. Check the received goods and packing slip to make sure items are properly received.
- ☑ Make sure that you have all of the required Operating Instructions for your NORD electric motor, gearmotor, reducer, electromechanical brake, mechanical variable speed drives, or electrical variable frequency drives.
- ☑ Consult NORD if you feel you are missing any documentation or if you have questions.

SAFETY NOTES

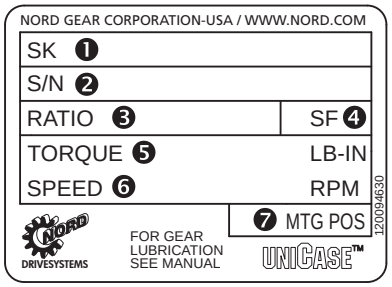
1. Safety & information symbols

All work including transportation, storage, installation, electrical connection, commissioning, servicing, maintenance and repair must be performed **only by qualified specialists or personnel**. It is recommended that repairs to NORD Products are carried out by the NORD Service Department. Instructions related to operational safety will be emphasized as shown.

Symbol	Meaning
⚠	**General Warning or Hazard -** Severe risk or danger of personal injury or death by working around dangerously high electrical voltage or moving machinery. Proper safety precautions must be taken.
STOP	**Possible Harmful Situation -** Care must be taken to avoid the possibility of damaging the drive unit, driven machine, or the environment.
ℹ	**Important Note -** Useful note or tip to help assure trouble-free operation.
♻	**Material Disposal Note -** Important note concerning suggested material disposal.

2. Safety warnings

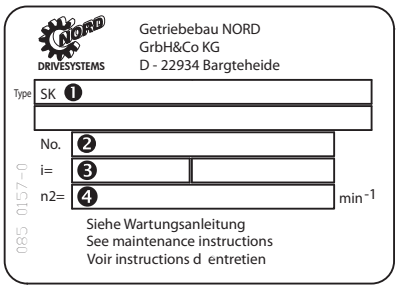
⚠ GENERAL WARNINGS ⚠



- All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians. All applicable national, regional, and local work regulations and safety requirements must also be complied with. **NORD assumes no liability for personal injury, accidental death, or equipment damage and malfunctions resulting from failure to comply with installation or operating instructions, safety notes, or any work regulations and laws!**
- Gear unit installation and maintenance work may only be performed when no power is available to the prime mover or motor. Electric motors, electrical brakes, and variable frequency drives, contain potentially dangerous high-voltage. Prior to installation or maintenance, shut down the power at the circuit breaker or power switch. **While working on the drive, make sure the power from the prime mover is isolated or secured on "lock-out" to prevent accidental start-up and to safeguard against injury!**
- Surfaces of motors and gear units may become hot during operation or shortly after start-up. In some instances additional protection against accidental contact may be necessary. **Use caution to avoid burns or serious injury!**

3. Observe published performance range & nameplate data

STOP HARMFUL SITUATION STOP



Observe the data on all reducer nameplates and verify published ratings for the NORD item/s in question. Do not operate any NORD equipment outside the published performance range. Failure to comply may result in damage to the drive unit, driven machine, or the environment.

❸ Gear Ratio
❹ Speed

4. Transportation and handling

Make sure that all eyebolts and lifting lugs are tight and lift only at designed points. Protect the mounting surface from possible damage during transportation.

⚠ WARNING ⚠

Do not attach other machinery or loads to the NORD assembly, since the supplied lifting bolts are not designed for this purpose.

If the gearmotor or assembly is equipped with two suspension eye bolts, then both locations should be used for transportation and placement of the unit; in this case the tension force of the slings must not exceed a 45° angle.

In some instances it may be appropriate to use additional lifting straps or slings in order to assure safe transportation of the assembly. Always use sufficiently rated handling equipment and ensure that adequate safety measures are taken to protect personnel from injury during transportation. Once the NORD assembly is properly installed, remove the transportation fixtures.

7. DISPOSAL

MATERIAL DISPOSAL

Properly dispose of all used gear units and internal parts in accordance with all local regulations. In particular, all lubricants must be properly collected and disposed.

For confirmation of specific materials used in a specific reducer or gearmotor assembly, please consult NORD with the appropriate unit identification or serial number.

Components	Material
Gear wheels, shafts, rolling bearings, parallel keys, snap rings, spacers, shims, etc.	Steel
Gear housing and housing components	Cast iron or Aluminum (depending on type and size)
Worm gears	Bronze alloy
Radial seals, sealing caps, and rubber components	Elastomers with some steel
Coupling components	Plastic or Elastomer with Steel
Housing gaskets and flat oil seals	Asbestos-free sealing or gasket material (various types used)
Gear Oil	Mineral, SHC-Synthetic or PG-Synthetic (can vary)

1. Installation site

Drives must be properly installed if they are to produce the rated torque. Improper installation may lead to oil leaks, reduced life, or even catastrophic failure. NORD gear drives and motors are intended to be installed at a suitable mounting site under the following conditions:

- Unimpeded airflow to and around the units.
- Accessibility to oil drain, level and breather plugs.
- On brakemotors, allow adequate space for removing the fan guard and replacing and adjusting the brake.
- Mounting surfaces must be flat, torsionally rigid, and dampened against vibration.
- Unless special measures are taken, the immediate vicinity around the gear drive or motor should not be exposed to any aggressive or corrosive substances, contaminated air, ozone, gases, solvents, acids, alkalis, salts, radioactivity, etc.

2. Mounting position

Reducer mounting position charts illustrate the standard mounting positions for horizontal and vertical mounting. All gear units are assembled with the oil fill-level, oil-drain and vent plugs installed in their proper locations, **according to the customer-specified mounting position**. For mounting orientations other than shown consult NORD Gear.

STOP *HARMFUL SITUATION* STOP

The gear reducer may not receive proper lubrication if the unit is not mounted in the position for which it is designed. Observe the mounting position designated on the reducer nameplate, or specified in the order acknowledgement. Consult NORD prior to changing mounting position in the field. While it is often possible to simply relocate the oil fill-level and vent locations, and adjust the oil fill amount, in some cases, different mounting positions may lend themselves to different internal construction features.

3. Reducer mounting

- The support foundation must be straight, level and flat. Whether the gear unit is foot-mounted or flange-mounted, NORD recommends that the straightness and flatness of the customer-supplied support foundation follow **Table 1**.
- The gear unit must be properly aligned with the driven shaft of the machine in order to prevent additional stress or load forces from being imposed upon the gear unit.
- To facilitate oil drainage it may be desirable to elevate the gear box foundation above the surrounding support structure.
- All bolting surfaces must be clean and free from contamination and corrosion.

Table 1: Recommended Straightness and Flatness of Customer-Supplied Support Foundation

Above (in)	To & Including (in)	General Tolerance on Straigtness & Flatness ISO 2768-2, Tolerance Class K
0.00	0.39	+/- 0.002 in
0.39	1.18	+/- 0.004 in
1.18	3.9	+/- 0.008 in
3.9	11.8	+/- 0.016 in
11.8	39	+/- 0.024 in
39	118	+/- 0.031 in

Above (mm)	To & Including (mm)	General Tolerance on Straigtness & Flatness ISO 2768-2, Tolerance Class K
0	10	+/- 0.05 mm
10	30	+/- 0.1 mm
30	100	+/- 0.2 mm
100	300	+/- 0.4 mm
300	1000	+/- 0.6 mm
1000	3000	+/- 0.8 mm

Straightness: Based upon the length of the corresponding line.

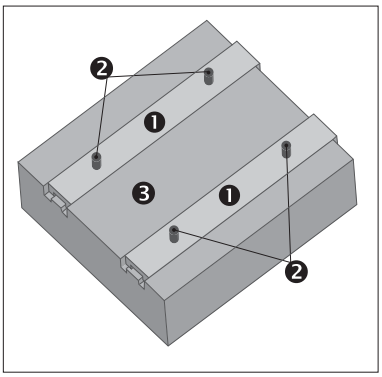
Flatness: Based upon the longer lateral surface or the diameter of the circular surface.

STOP *HARMFUL SITUATION* STOP

The responsibility for the design and construction of the support foundation is with the user. The foundation must be adequate to withstand normal operating loads and possible overloads while maintaining alignment to attached system components under such loads. ***Motors and drive components mounted on prefabricated base plates can become misaligned during shipment. Always check alignment after installation.***

4. Steel foundation

An engineered structural steel foundation should be designed to provide adequate rigidity and prevent loads from distorting the housing or causing misalignment of internal gears and shafts. When foot-mounting the gear reducer, a base plate or sole plate with suitable thickness (generally equal or greater than the thickness of the drive feet) should be securely bolted to steel supports and extend under the entire gear drive assembly. When flange-mounting the gear unit, the bulk head plate must be engineered to minimize buckling distortions and support the cantilevered weight of the gear unit or gear motor.



STOP *HARMFUL SITUATION* STOP

Do not weld on the gear unit or use the gear unit as an earth or ground connection for any welding procedure as this may cause permanent damage to the bearings and gears.

5. Concrete foundation

If a concrete foundation is used, allow the concrete to set firmly before bolting down the gear drive. Grout structural steel mounting pads and bolts of sufficient size into the concrete, to adequately distribute the load stress onto the concrete foundation.

Figure 1: Concrete Foundation

❶ Grouted Structural Steel Mounting Pads
❷ Mounting Bolts
❸ Concrete Foundation

6. Bolt connections for footed & flange mounted units

NORD footed reducers and flange-mount reducers (with B5 flange) have clearance designed into the mounting holes to allow for some minor adjustments in alignment. Bolt size, strength and quantity should be verified to insure proper torque reaction capacity whatever the mounting arrangement. Tightening torque for gear reducer mounting bolts, and recommended fastener grades, are provided in Table 2.

Table 2A: Tightening Torque for Inch Reducer Mounting Bolts

Thread Size	Grade SAE 5 / ASTM A449		Grade SAE 8

7/8-9	396	537	558	757
1-8	592	802	833	1,130
1 1/8-7	-	-	1,233	1,672
1 1/4-7	-	-	1,717	2,327
1 3/8-6	-	-	2,267	3,073
1 1/2-6	-	-	2,983	4,045
1 3/4-5	-	-	4,458	6,045

- Calculated tightening torques are based a conventional 60°, clean and dry (un-lubricated) thread, with thread-friction and head-friction equal to 0.15.
- When using inch-fasteners, NORD recommends a minimum Grade SAE 5 (ASTM A-449) for sizes up to 1-8 UNC, and Grade SAE 8 for all larger sizes.

Table 2B: Tightening Torque for Metric Reducer Mounting Bolts

Above	ISO Grade 8.8		ISO Grade 10.9		ISO Grade 12.9	
(mm)	(lb-ft)	(Nm)	(lb-ft)	(Nm)	(lb-ft)	(Nm)
M4	2.4	3.2	3.5	4.7	4.1	5.5
M5	4.7	6.4	6.9	9.3	8.1	11
M6	8	11	12	16	14	19
M8	20	27	29	39	34	46
M10	39	53	58	78	67	91
M12	68	92	100	135	110	155
M14	107	145	159	215	180	250
M16	170	230	247	335	290	390
M18	240	325	343	465	400	540
M20	339	460	487	660	570	770
M22	465	630	664	900	770	1,050
M24	583	790	848	1,150	960	1,300
M27	848	1,150	1,217	1,650	1,440	1,950
M30	1,180	1,600	1,660	2,250	1,950	2,650
M36	2,050	2,780	2,884	3,910	3,470	4,710
M42	3,297	4,470	4,639	6,290	5,560	7,540
M48	4,940	6,700	7,010	9,500	8,260	11,200

- Calculated tightening torques are based on a conventional 60°, clean and dry (un-lubricated) thread, with thread-friction and head-friction equal to 0.15.
- When using metric-fasteners, NORD recommends a minimum ISO Grade 8.8 bolt.

7. Mounting the prime mover

When the motor is not flange mounted or integrally mounted to the gearbox, it is important to properly secure and align the gear drive with respect to the driven machine before attempting to align the prime mover or motor.

A. After the main gear drive is properly aligned and bolted in place, align the prime mover with respect to the reducer input shaft.

B. Use shims under the feet of the prime mover as needed, and secure in place with the proper mounting bolts. Dowel pins may be field-installed to help prevent misalignment and ensure proper realignment if removed for service.

IMPORTANT NOTE

When using a high speed coupling connection between the prime mover and the reducer, check alignment per the coupling manufacturers recommendations. If the coupling is misaligned, the reducer alignment or shimming is incorrect. Re-align the gear reducer and re-check the high-speed coupling alignment before re-aligning the motor.

STORAGE & COMMISSIONING

1. Storage

IMPORTANT NOTE

For storage periods longer than 9 months, or for storage in less than desirable conditions, please consult NORD for recommendations.

Storage for up to 9 months is possible, so long as the following conditions are observed:

- Store the gear unit in its actual mounting position in accordance with the specified oil fill-level, in a clean and dry temperature controlled area. Avoid temperature fluctuations within the range of 0°C and 40°C (32°F to 104°F) and avoid relative humidity conditions in excess of 60%.
- Protect all exposed or unpainted shaft and flange surfaces with an anti-corrosion agent or grease.
- Store in a location free from shock and vibration, to avoid false brinelling of bearing elements and raceways.
- Whenever possible, rotate the shafts periodically, by hand if necessary, to help prevent brinelling (bearing damage) and to help keep the shaft seals pliable.
- Avoid direct exposure to the sun or UV light and aggressive or corrosive materials in the environment (ozone, gases, solvents, acids, caustic solutions, salts, radioactivity, etc.

2. Commissioning

Prior to gear unit start-up, complete the following:

- Check the lubricant and be sure the gear unit is filled with the proper oil type, to the proper level, as determined by the mounting position.

IMPORTANT NOTE

Some smaller gear units are supplied as maintenance free/ lubricated for life gear units. Oil level may not be checked on some of these units.

- Check the condition of all shaft seals and all assembled flange gasket areas. If any change is detected in the shape, color, hardness or permeability, or if any leaks are detected, the corresponding shaft seals and/or gaskets must be replaced.
- Remove all anti-corrosive metal protectant from otherwise bare metal surfaces. Follow product manufacturers directions and warnings during surface protection removal.
- Check the resistance of all motor and brake windings to verify the integrity of the winding insulation and inspect all terminal box openings and wire connection areas to verify that all components are dry and free of corrosion.

3. Long-Term Storage

By taking special precautions, problems such as seal leakage and reducer failure due to the lack of lubrication, improper lubrication quantity, or contamination can be avoided. The following precautions will protect gear reducers during periods of extended storage:

- Store the gear unit in its actual mounting position in accordance with the specified oil fill-level, in a clean and dry temperature controlled area. Avoid temperature fluctuations within the range of 0°C and 40°C (32°F to 104°F) and avoid relative humidity conditions in excess of 60%.
- Fill the reducer full with oil that is compatible with the product normally used or recommended during service.
- Apply grease to all unpainted or unprotected shafts, bores, keyways, flange surfaces, tapped holes, and to the exterior of all oil seals.
- Store in a location free from shock and vibration, to avoid false brinelling of bearing elements and raceways.
- Once every few months rotate the input shaft approximately 10-20 revolutions to redistribute the weight of gears and shafts and to prevent brinnelling of the bearings and drying of the seal track.
- Avoid direct exposure to the sun or UV light and aggressive or corrosive materials in the environment (ozone, gases, solvents, acids, caustic solutions, salts, radioactivity, etc.)

4. Commissioning After Long-Term Storage

- Remove all anti-corrosive metal protectant from otherwise bare metal surfaces. Follow product manufacturers directions and warnings during surface protection removal.
- Drain the reducer and refill it with the proper type and amount of lubricant.
- Observe start-up and initial operation to make sure there are no seal or gasket leaks, or unusual sounds, vibration or heat rise during operation.
- Check the resistance of all motor and brake windings to verify the integrity of the winding insulation and inspect all terminal box openings and wire connection areas to verify that all components are dry and free of corrosion.

HELICAL & BEVEL REDUCER LUBRICATION

1. Importance of proper lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

Most NORD reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position.

2. Standard oil type

The following tables indicate the standard oil fill type used. Please see user manual U11000 for more specific information and for optional helical and bevel gear lubricants:

Serviceable Gear Units	
Helical In-line	Standard Oil Fill: ISO VG 220, Mineral Oil
Clincher Parallel-Shaft	
Right-Angle Bevel	
NORDBLOC® Series In-line	
NORDBLOC®.1 Series In-line	
Standard Series In-line	

IMPORTANT NOTE

For shipping purposes, the following large Clincher™ gear units are supplied without oil:
• Clincher™ Sizes SK11282, SK11382 and SK12382

Maintenance-free / Lubricated For Life Gear Units	
Clincher™ sizes SK0182NB, SK0282NB & SK1382NB	Standard Oil Fill: ISO VG220 SHC/PAO Synthetic Oil
NORDBLOC® Sizes SK172, SK272, SK371F, SK372, SK373, SK320	

IMPORTANT NOTE

Maintenance-free units are supplied as sealed units with no vent-plug. Consult NORD prior to ordering if interested in ordering any of the above sizes as serviceable gear units.

IMPORTANT NOTE

Consult the sticker adjacent to the fill plug to determine the type of lubricant installed at the factory. Some units have special lubricants designed to operate in certain environments or intended to extend the service life or service temperature range of the lubricant. If in doubt about which lubricant is needed for a certain application, please contact NORD Gear.

3. Lubrication replacement

If the gear unit is filled with mineral oil, the lubricant should be replaced at least after every 10,000 operating hours or after every two years. If the gear unit is filled with synthetic oil, the lubricant should be replaced at least after every 20,000 operating hours or after every four years. Often gear reducers are exposed to extreme ambient conditions, hostile environments, wet conditions, or dirty and dusty operating areas. Especially in these situations, it is important to establish a condition-based oil service interval.

4. Oil viscosity

Viscosity, or the oil's resistance to shear under load, is often considered the single most important property of any gear oil.

- Often one will consider making a viscosity correction to the oil to improve the performance when operating the gear unit at low temperature or high temperature.
- In cases of extreme load conditions, gear pairs and antifriction bearings may be more susceptible to sliding or scuffing wear. In these operating conditions, it may also be beneficial to consider an increased lubrication viscosity and/or a lubrication with improved antiwear additive packages.

IMPORTANT NOTE

The user should consult with their primary lubrication supplier before considering changes in oil type or viscosity.

5. Maximum oil sump temperature limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85°C (176-185°F)	95°C (203°F)
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

HELICAL & BEVEL REDUCER LUBRICATION

6. The importance of routine oil analysis

Routine oil analysis, sound lubrication practices, and good tracking of oil performance trends will help establish proper lubrication maintenance and change-out intervals. To maximize equipment reliability, NORD Gear generally recommends a condition-based lubrication maintenance program. One may take exceptions to this general recommendation on sealed-for-life or maintenance-free gear units or smaller and less costly gear units. In these instances, the replacement cost of the gear unit is often small compared to the costs associated with this type of oil analysis program.

STOP *HARMFUL SITUATION* **STOP**

NORD suggests replacing the gear oil if oil analysis indicates any of the following:

- Viscosity has changed by approximately 10% or more.
- Debris particles (silicon, dust, dirt or sand) exceed 25 ppm.
- Iron content exceeds 150-200 ppm.
- Water content is greater than 0.05% (500 ppm).
- The total acid number (TAN) tests indicate a significant level of oxidative break-down of the oil, and a critical reduction in performance; If the TAN number measured changes by more than 5% over the new oil, then an oil change would be recommended.

7. Mounting position and oil fill quantity

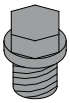
All NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. ***For additional information, please see the seperate mounting position diagrams and the corresponding oil fill quantity tables for the specified gear unit.***

The gearbox nametag will indicate the mounting position that was provided. ***For mounting orientations other than shown in the mounting position charts, please consult NORD Gear.***

STOP *HARMFUL SITUATION* **STOP**

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil-level plug and drain or add additional oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

8. Oil plug locations



All gear units are assembled with the oil fill-level, oil-drain and vent plugs installed in their proper locations, according to the specified mounting position. All standard plugs are metric and utilize sealing gaskets between the head of the plug and the reducer housing.

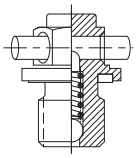
9. Drain and fill-level plugs

All reducer drain plugs are metric socket head cap screws. For easier identification, it is NORD's standard practice to provide a hex-head screw for the fill-level plug. For ease of draining the used oil from the gear reducer, use the socket head screw located at the lowest part of the gearbox.

Drain Plug

Fill Level Plug

10. Vent plug locations

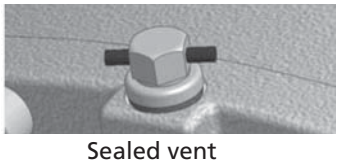


Reducer venting allows for air pressure differences that occur during operation, between the inner space of the reducer and the atmosphere, while ensuring leak-free operation. The AUTOVENT™ is standard for all vented gear units, unless otherwise noted.

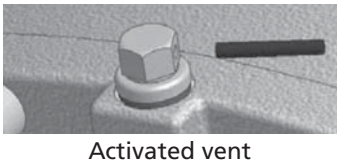
AUTOVENT™ - The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material (water, dust, corrosives, etc.). The breather opens at approximately 2-3 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, and reducing foaming and oxidation. NORD may choose to offer one of two style options as shown in Figure 1. The Type 2 AUTOVENT™ comes closed upon delivery with a transportation sealing plug (see Warning).

Figure 1 AUTOVENT™ Types

Type 1



Type 2 with transportation plug



Open Vent - An optional open vent can be supplied by NORD. The open vent comes closed upon delivery with a transportation sealing plug (see Warning).

⚠ *WARNING* ⚠

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start up.

Sealed vent

Activated vent

Filtered Vent - NORD may offer an optional filtered vent, which allows gases to permeate, but does not allow dust and debris to pass through the vent.

HELICAL & BEVEL REDUCER LUBRICATION TYPES

Lubrication Tables – Helical and Bevel Gear Units

Standard Oil Lubricants

ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG220	MIN-EP	0 to 40°C (32 to 104°)	Mobilgear 600XP220	♦❶
	PAO	-35 to 60°C (-31 to 140°F)	Mobil SHC630	♦❷
	FG	-5 to 40°C (23 to 104°F)	Fuchs FM220	♦

Optional Oil Lubricants

ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG460	PAO	-35 to 80°C (-31 to 176°F)	Mobil SHC 634	-
	FG-PAO	-35 to 80°C (-31 to 176°F)	Mobil SHC Cibus 460	-
VG220	FG-PAO	-35 to 60°C (-31 to 140°F)	Mobil SHC Cibus 220	-
VG150	PAO	-35 to 25°C (-31 to 77°F)	Mobil SHC629	-

Grease Options (applied to greased bearings and seal cavities)

NLGI Grade	Grease Type/Thickener	Ambient Temperature Range	Manufacturer Brand/Type	Notes
NLGI 2	Standard (Li-Complex)	-30 to 60°C (-22 to 140°F)	Mobil Grease XHP222	♦❶
	High Temp (Polyurea)	-40 to 80°C (-40 to 176°F)	Mobil / Polyrex EP 2	♦❷
	Food-Grade (Polyurea)	-30 to 40°C (-22 to 104°F)	Mobil SHC Polyrex 222	♦

♦ Stocked Lubricants

❶ Standard product on serviceable gear units

❷ Standard product on maintenance free gear units

IMPORTANT NOTES

- The "Ambient Temperature" is intended to be an operation guideline based upon the typical properties of all the lubricant. The viscosity and other properties of the lubricant change based upon load, speed, ambient conditions, and reducer operating temperatures. The user should consult with their lubrication supplier & NORD gear before considering changes in oil type or viscosity.
- To prevent reducer overheating, observe the maximum operating oil temperature limits:
  Mineral Oil: 80-85 °C (176 – 180 °F).
  Synthetic Oil: 105 °C (225 °F).
- In the following instances, please consult NORD for specific recommendations:
  - √ Gear units will operate in high ambient temperature conditions exceeding 40 °C (104 °F).
  - √ Gear units will operate in cold ambient temperature conditions approaching 0 °C (32 °F) or lower.
  - √ Lower than an ISO VG100 viscosity oil is being considered for a cold-temperature service.
  - √ Fluid grease is required for lubricating the gear unit.
- Observe the general lubrication guidelines outlined in user manual U10750.

Oil Formulation Codes

MIN-EP - Mineral Oil with EP Additive
PAO-EP - Synthetic Polyalphaolefin Oil with EP Additive
PAO - Synthetic Polyalphaolefin Oil
PG - Synthetic Polyglycol Oil
FG - Food-Grade Oil
FG-PAO - Food-Grade, Synthetic Poyalphaolefin Oil
FG-PG - Food-Grade, Synthetic Polyglycol Oil

Lubrication Notes

- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil or polyalphaolefin (PAO) synthetic oil.

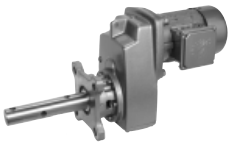
CLINCHER™ OIL FILL QUANTITIES

CLINCHER™ lubrication

Unless otherwise noted below, the following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

HARMFUL SITUATION

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add addition oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.



For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

*** For shipping purposes the larger Clincher™ gear units are supplied without oil.**

† Oil quantities shown are for the gearbox only. When the OT (oil tank) option is used, the oil must be filled to the level shown on the dipstick which is located inside of the oil tank. Even when the gear unit is filled by NORD, the user MUST add more oil untill the oil is filled to the proper level.

Standard snap ring groove is machined into input (motor) side of hollow shaft.
Fixing element can be installed into opposite side but requires a special shaft. Consult NORD.

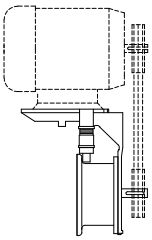
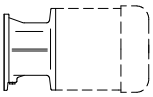
Retain These Safety Instructions For Future Use



W-STYLE

NEMA/IEC

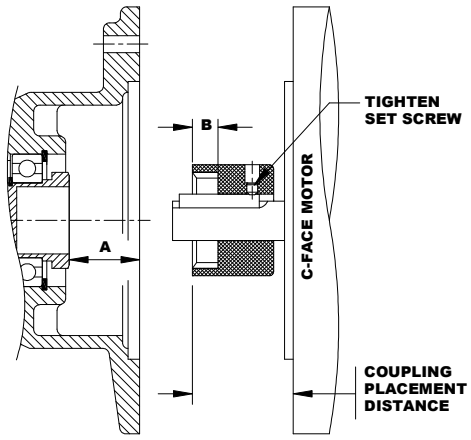


SUGAR SCOOP

MOTOR MOUNT PLATFORM

⚠ WARNING:
LOCK OUT POWER before any maintenance is performed. Make absolutely sure that no voltage is applied while work is being done on the gearbox.

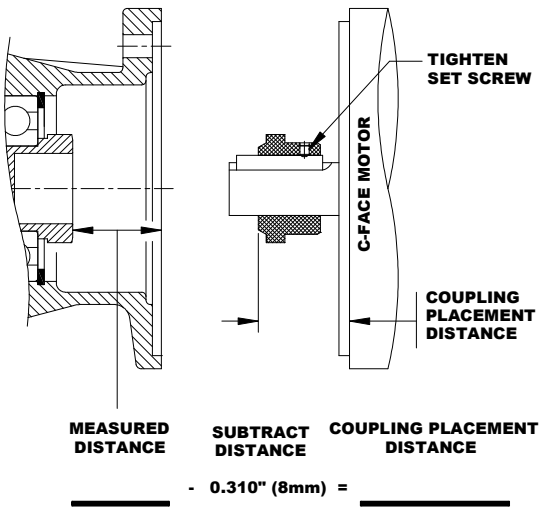
NEMA/ IEC Motor Adapters



NORD Gear supplies a coupling that is to be mounted onto the motor shaft. It is important that the coupling is properly positioned. For **NEMA Input Adapters**, follow the Motor Installation Instructions below to insure full coupling engagement onto the input shaft. For **IEC Input Adapters**, the supplied coupling will mount directly against the motor shaft shoulder. No locating measurements need to be taken. *NOTE: Some of the larger IEC inputs will have a coupling spacer included to help locate the coupling. Slide the spacer against the motor shaft shoulder, slide the coupling against the spacer and tighten set screw(s).*

For the larger motor adapters (IEC160 / N250TC and larger), an **Automatic Lubricator** is supplied. **This will need to be activated at the time of startup.** For operation and activation instructions, refer to the "*Automatic Lubricator*" section.

NORD supplies three different types of couplings depending on the size of input: "J" style, "M" style and "Jaw" style coupling. Following are instructions on how to properly mount each type of coupling onto the motor. First, identify which coupling has been supplied to you by referring to the "*Couplings for the NEMA and IEC Adapters*" section on the next page. Make sure the motor flange and shaft are cleaned and verify that the proper key is in the motor shaft.

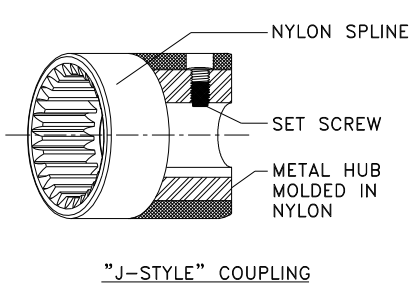


"J" Style Coupling
NEMA C-face Motor Installation Instructions

1. Measure the distance from the face of the input adapter to the face of the splined shaft and record that measurement.
2. Subtract 0.08" (~2mm) from the distance. ***This needs to be done so that the coupling will not be preloaded after installation!***
3. Use that measurement to locate the coupling from the face of the motor onto the shaft.
4. Once in place, tighten the set screw to lock the coupling in place. It is recommended that the key is staked or bonded (Loctite) in place to prohibit the key from vibrating out.
5. Mount the motor onto the input adapter with customer supplied bolts. Make sure that the coupling from the adapter and the motor engage securely. Use lock washers or Loctite to prohibit bolts from becoming loose from vibration.

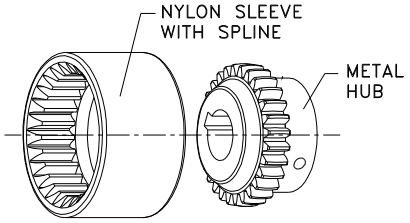
"M" Style Coupling
NEMA C-face Motor Installation Instructions

1. Measure the distance from the face of the input adapter to the face of the splined shaft and record that measurement.
2. Subtract 0.31" (~8mm) from the distance. ***This needs to be done so that the coupling will not be preloaded after installation!***
3. Use that measurement to locate the coupling from the face of the motor onto the shaft.
4. Once in place, tighten the set screw to lock the coupling in place. It is recommended that the key is staked or bonded (Loctite) in place to prohibit the key from vibrating out.
5. Mount the motor onto the input adapter with customer supplied bolts. Make sure that the coupling from the adapter and the motor engage securely. Use lock washers or Loctite to prohibit bolts from becoming loose from vibration.



Couplings for the NEMA and IEC Adapters

Depending on the size of the input adapter to the gearbox, NORD Gear supplies two styles of couplings - BoWex® (gear tooth) and Rotex® (jaw) couplings.



BoWex® Couplings

NORD C-face adapter input shafts have a machined spline on the end. NORD incorporates two styles of BoWex® couplings, the "J" and "M" styles. The "J" style is a one-piece coupling with a metal hub and nylon spline. The "M" style is a two-piece coupling – the metal hub and a nylon sleeve. Nylon and steel components allow them to operate in high ambient temperatures without lubrication or maintenance.

- Nylon sleeves resist dirt, moisture, most chemicals and petroleum products
- No lubrication required
- Operating Conditions: -22°F - 195°F (-30°C - 90°C)
- Higher temperature coupling sleeve available up to 250°F (120°C)
- Special bore available

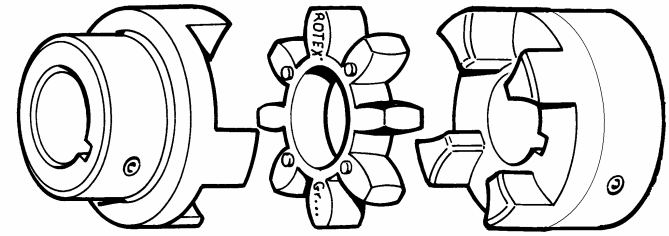
"J–STYLE" COUPLING

"M–STYLE" COUPLING

BoWex® Mechanical Ratings

"J" Style

Coupling Type	Available Bore Sizes	Cont. / Peak Torque	Input
J14	11, 14 mm 5/8 in.	10 / 20 Nm 89 / 177 lb-in	IEC 63, 71 NEMA 56C
J24	19, 24 mm 5/8, 7/8 in	20 / 40 Nm 177 / 354 lb-in	IEC 80, 90 NEMA 56C,140TC
J28	28mm 1-1/8 in	45 / 90 Nm 399 / 797 lb-in	IEC 100, 112 NEMA 180TC



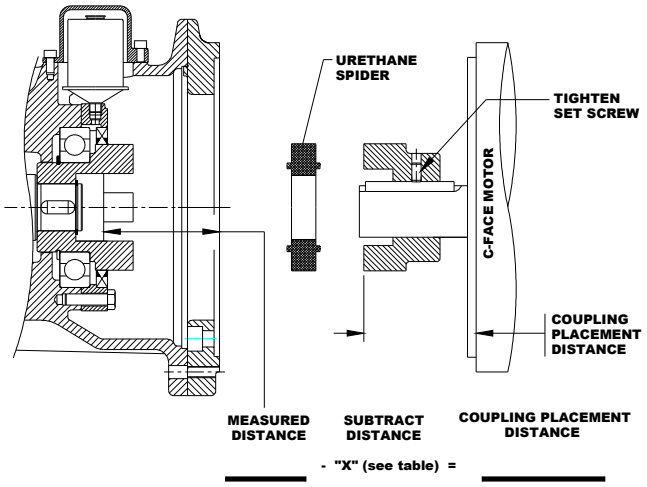
"M" Style

Coupling Type	Available Bore Sizes	Cont. / Peak Torque	Input
M14/M24/M28	Same as "J" style	Same as "J" style	Same as "J" style
M38	38 mm 1-1/8, 1-3/8 in.	80 / 160 Nm 708 / 1,416 lb-in	IEC 132 NEMA 180TC, 210TC
M42	42 mm 1-5/8 in	100 / 200 Nm 885 / 1,770 lb-in	IEC 160 NEMA 250TC
M48	48 mm 1-7/8 in	140 / 280 Nm 1240 / 2,478 lb-in	IEC 180 NEMA 280TC

Rotex® Couplings

The cast iron jaw type couplings have an integral urethane "spider" that provides smooth transmission of the motor torque. A set screw on the coupling prohibits axial movement along the motor shaft.

- Excellent shock and vibration dampening
- Excellent resistance to oils and most chemicals
- No metal-to-metal contact
- Operating Conditions: -40°F - 195°F (-40°C - 90°C)
- Higher temperature material (Hytrel) spider available up to 230°F (110°C)
- Special bores available



Hub Design 1 **Spider** **Hub Design 1a**

Rotex® Mechanical Ratings

Coupling Type	Available Bore Sizes	Continuous / Peak Torque	Inputs Used With	Spider
R19	14, 19 mm	17 / 34 Nm 150 / 300 lb-in	SEK/SEP 100	Urethane 98 Shore A Hardness Color: Red

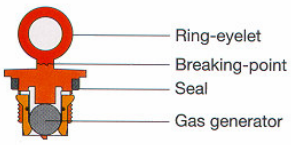
Jaw" Style Coupling
NEMA C-face Installation Instructions

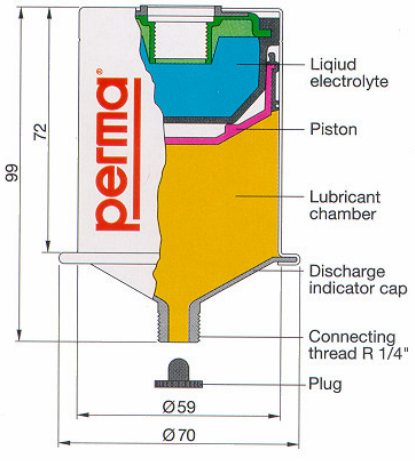
1. Measure the distance from the face of the input adapter to the face of the coupling as shown and record that measurement.
2. Subtract the "X" dimension from the measured distance. ***This needs to be done so that the coupling will not be preloaded after installation!***
3. Use that measurement to locate the coupling from the face of the motor onto the shaft.
4. The metal portion of the coupling should be heated up prior to assembly, generally 250°F to 300°F (120°C to 150°C). ***DO NOT HEAT THE URETHANE SPIDER.**
5. Once in place, tighten the setscrew to lock coupling in place. Let the coupling cool down before placing the spider into the jaws. It is recommended that the key is staked or bonded (Loctite) in place to prohibit the key from vibrating out.
6. Mount the motor onto the input adapter with customer supplied bolts. Make sure that the coupling from the adapter and the motor engage securely. Use lock washers or Loctite to prohibit bolts from becoming loose from vibration.

Coupling Size	"X" *(Subtract this value from measured distance)*
R14	0.06" (1.5mm)
R19 & R24	0.08" (2.0mm)
R28	0.10" (2.5mm)
R38/42	0.12" (3.0mm)
R48	0.14" (3.5mm)
R65	0.18" (4.5mm)
R90	0.22" (5.5mm)

Automatic Lubricator



NORD Gear supplies the larger C-face motor adapters with an Automatic Lubricator. This will provide additional grease lubrication to the outboard bearing. As the pressure from the lubricator canistor pushes the new grease into the bearing, the old grease will flow into the cavity towards the gearbox. When the cavity is filled with the "used" grease, the pressure from the new grease pushes the used grease into the gear box thru the input seal. The old grease mixes with the oil but will not cause harm to the gearing or bearings. Regular oil changes with the gearbox will remove the old grease which has been pushed into the gearbox. Refer to the PARTS LISTS for inputs equipped with the Automatic Lubricator.

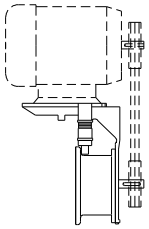


Principle of Operation

After tightening the plastic activating screw, the Zinc-Molybdenum pellet drops into the Citric Acid electrolyte. The chemical reaction builds up pressure that causes the piston to move forward. The lubricant is continuously injected into the lubrication point. At the end of the lubrication period, the discharge indicator cap becomes clearly visible indicating the lubricant has been fully discharged. The lubrication period is determined and defined by the color of the activating screw.

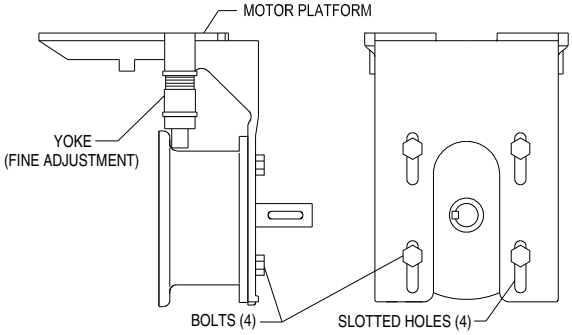
For the bearings used in NORD Gear products, a 12-month lubrication period is standard, indicated by a **gray activating screw**. This applies for an average operating time of 8 hours/day. For longer operating times, the replacement interval decreases to 6 months. Lubrication canisters are also available for cold temperature applications. Contact NORD Gear for more information.

Assembly Instructions



1. Remove the plug from the male connecting thread.
2. Screw male fitting into bearing housing within Input Adapter.
3. Insert activating screw into end of canister. Tighten until the ring-eyelet breaks off.
4. Replace every twelve months.

Perma Classic Specifications

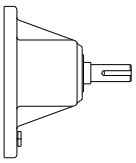


Standard Lubricant	Klüber Petamo GHY 133 (synthetic)
NORD Part Number	28301000
Lubricant Volume	120 mL (4 oz.)
Operating Temperature Range★	-30°C to 150°C (-22°F to 302°F)
Discharge Time	12 months at 25°C (77°F)
Operating Position	Independent of mounting position, operates even under water.
Male Connecting Thread	1/4" NPT

★ *The temperature range shown is for the Perma Classic Lubricator only and does not apply to other components and/or lubricants within the gear reducer.*

MK Motor Mount Platform

For proper installation of the belt drive, consult the V-belts manufacturer. NORD MK motor mounts are adjustable in two ways. Slotted holes are provided at the input cylinder for the initial height adjustment. There are two fine adjustments at the Yolk to increase/decrease tension. Two Spanner head wrenches will be needed to tighten/loosen the fine adjustments. The four bolts holding the motor platform to the input cylinder must be loosened in order to use the fine adjustments.



The motor mounting platform has tapped holes to accept the foot pattern of the standard footed NEMA or IEC motor. All MK mounting input shaft diameters are metric.

Align the sheaves or sprockets square and parallel by placing a straight edge across their faces. Alignment of bushed sheaves and sprockets should be checked after bushings have been tightened. Check horizontal shaft alignment by placing a level vertically against the face of the sheave or sprocket. Adjust belt or chain tension per the manufacturer's specified procedure. After a period of operation, recheck alignment and adjust as required.

WARNING:

NORD Gear does not furnish the safety guards for the traction mechanism. It is the responsibility of the customer to install a safety guard to conform to OSHA standards.

Solid Shaft (W-Type)

The shaft will be inch or metric, depending on how the unit was ordered. Measure and verify the shaft before mounting anything on the shaft. Below are the tolerances used for the solid shafts.

All solid input shafts have a tapped hole on the end for customer use. The chart below indicated the tap size for each shaft. Keys are also supplied with solid shaft.

Outboard pinion and sprocket fits should be as recommended by the manufacturer. The components should be heated according to the manufacturer's recommendations, generally 250°F to 300°F, (120°C to 150°C) before assembling to the shaft. The coupling hub or sprocket should be mounted per Figure 1.

On larger gearboxes (SK62, SK6282, SK9062.1), there is grease fitting on the W-Type inputs to grease the outboard bearing. About 0.75 ounce (20 - 25g) of synthetic grease should be added every 4,000 service hours. There is a sticker adjacent to the grease fitting detailing which grease should be used. **USE ONLY SYNTHETIC GREASE – NOT MINERAL.**

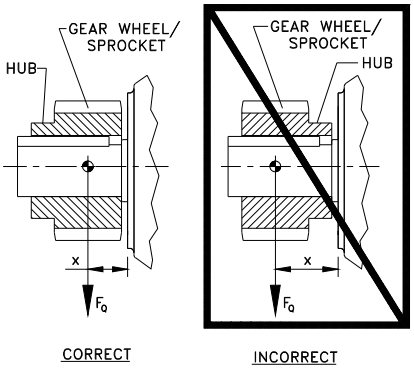


Figure 1. Mounting a coupling or a sprocket on a shaft.

> ∅ 1.100 ≤ ∅ 1.300 = 1/2-13 x 1.1 deep
> ∅ 1.300 ≤ ∅ 1.875 = 5/8-11 x 1.4 deep
> ∅ 1.875 ≤ ∅ 3.500 = 3/4-10 x 1.7 deep
> ∅ 3.500 = 1-8 x 2.2 deep

Sugar Scoop

Each sugar scoop includes the coupling for the motor and the coupling guard. The coupling guard must be mounted when the machine is in use. NORD's standard supplied coupling is the jaw type. Make sure the set screw is tighten after coupling is in place. The coupling hub or sprocket should be mounted per Figure 2.

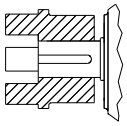

Figure 2. Place coupling flush with end of motor shaft and tighten setscrew.

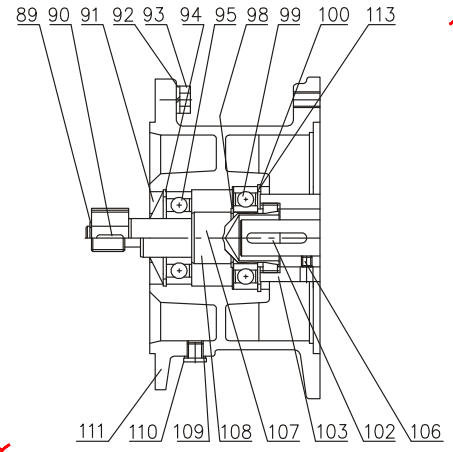
Motor Installation Instructions

1. Make sure that the motor shaft is clean
2. Mount the coupling onto the motor. Place the coupling so that the inside face is flush with the end of the motor shaft (see Figure 2). The coupling should be heated prior to assembly, generally 250°F to 300°F (120°C to 150°C). ***DO NOT HEAT THE URETHANE SPIDER.** Once in place, tighten the setscrew into the motor shaft to lock coupling in place.
3. Let the coupling cool down before mounting the spider into the jaws. The spider should not be under axial compression when installed.
4. Place the motor onto the scoop and engage the couplings together. The scoop has slotted holes for axial alignment.



****The motor and input shaft must be aligned in all directions to assure proper operation of the system.**

5. Before tightening the motor feet down, check the coupling alignment with a straight edge or a level. Maximum parallel misalignment should not exceed 0.015" and angular misalignment should be held to 1.5°. Shim the motor feet to align the couplings. Careful alignment extends the life of not only the coupling but all the components of the drive train.
6. Once aligned, tighten the bolts on the feet to the scoop. Check the coupling alignment again due to compression of the shims.
7. Mount the supplied coupling guard to the scoop.
8. After a period of operation, recheck alignment and adjust as required.

Seals – *all* Seal Plugs – *all*

IMPORTANT!

When ordering parts, it is necessary to have the ***NORD SERIAL NUMBER*** from the unit the parts are for. The serial number will dictate the correct parts for that particular unit. The gearbox nameplate will have the serial number on it.

TROUBLESHOOTING

Troubleshooting

This section identifies some of the most common issues involved with NORD Gear speed reducers , and provides recommendations to assist you in defining and answering your questions as you work with our products. You may also contact our Engineering/Application departments if your questions are not answered in the table below.

Problem With the Reducer		Possible Causes	Suggested Remedy
Runs Hot	Overloading	Load exceeds the capacity of the reducer	Check rated capacity of reducer, replace with unit of sufficient capacity or reduce the load.
	Improper lubrication	Insufficient lubrication	Check lubricant level and adjust up to recommended levels
		Excessive lubrication	Check lubricant level and adjust down to recommended levels.
		Wrong lubrication	Flush out and refill with correct lubricant as recommended
Runs Noisy	Loose foundation bolts	Weak mounting structure	Inspect mounting of reducer. Tighten loose bolts and/or reinforce mounting and structure.
		Loose hold down bolts	Tighten bolts
	Failure of bearings	May be due to lack of lubricant	Replace bearing. Clean and flush reducer and fill with recommended lubricant.
		Overload	Check rated capacity of reducer.
	Insufficient lubricant	Level of lubricant in reducer not properly maintained.	Check lubricant level and adjust to factory recommended level.
Output shaft does not turn	Internal parts are broken or missing	Overloading of reducer can cause damage	Replace broken parts. Check rated capacity of reducer.
		Key missing or sheared off on input shaft.	Replace key.
		Coupling loose or disconnected	Properly allign reducer and coupling. Tighten coupling.
Oil Leakage	Worn seals	Caused by dirt or grit entering seal.	Replace seals. Autovent may be clogged. Replace or clean.
	Unit runs hot or leaks	Overfilled reducer	Check lubricant level and adjust to recommended level.
		Vent clogged.	Clean or replace, being sure to prevent any dirt from falling into the reducer.
	Incorrect fill level	Improper mounting position, such as wall or ceiling mount of horizontal reducer.	Check mounting position on the name tag & verify with mounting chart in manual.

SITRANS WM100

Overview

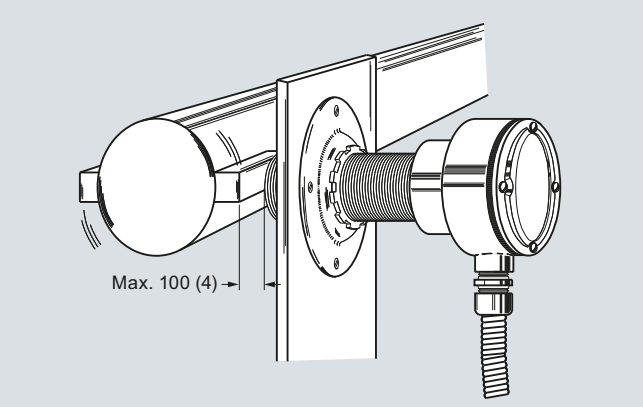
SITRANS WM100 is a heavy-duty zero-speed alarm switch. This non-contacting unit provides cost-effective equipment protection even in the harshest conditions.

Benefits

- Up to 100 mm (4 inch) gap between SITRANS WM100 and targets
- Rugged, low maintenance suitable for tough environments
- 1 SPDT Form C relay contact
- Provides cost-effective protection
- Visual indication of target triggered pulse

Application

This rugged unit is impervious to dust, dirt, build-up and moisture and is ideal for such primary industries as mining, aggregate, and cement. Operating where other systems are prone to failure, the non-contacting design eliminates the need for lubricating, cleaning and part replacement. Downtime and clean-up expenses associated with conveying equipment failure are reduced by the SITRANS WM100. It alarms to minimize spillage, prevent extensive damage or even fire caused by belt slippage at the head pulley and warn against conveyor malfunction.



The SITRANS WM100 has built-in selectable start delays and 1 Form C relay contact. With an aluminum body, it operates from -40 to +60 °C (-40 to +140 °F).

- Key Applications: tail pulleys, driven pulleys, motor shaft sensing, screw conveyor flights, bucket elevators

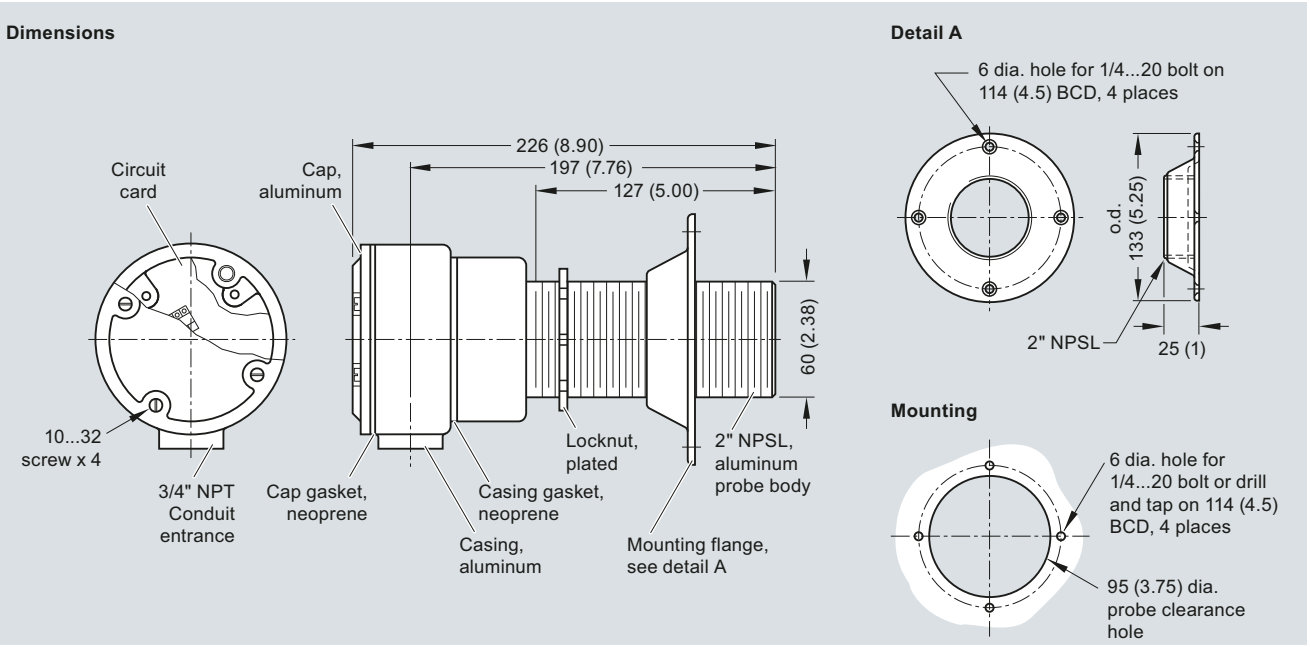
Design

Mounting

The WM100 probe should be mounted, using the supplied mounting flange, onto a vibration-free structure. The gap between the probe and the target should be sufficient such that there is no danger of the target damaging the probe. The maximum allowable gap is 100 mm (4 inch) from the face of the target to the face of the probe for 4.5 x 4.5 mm (3/16 x 3/16 inch) keyway. The WM100 is sensitive to lateral disturbances to its magnetic field. If the WM100 is responding to motion from an interfering target, move the WM100 or install a ferrous plate (steel) as a shield between the WM100 and the interfering target. Where possible, the probe should be mounted such that the cable inlet is pointing downward to avoid accumulation of condensation in the casing. Connection of the probe should be made via flexible conduit for easier removal or adjustment of the probe.

SITRANS WM100 mounting, dimensions in mm (inch)

Technical specifications



Mode of operation	
Measuring principle	Disruption of magnetic field by ferrous target
Typical application	Monitors absence or presence of motion in harsh conditions
Output	
Contact	1 SPDT Form C dry relay contact, rated 5 A at 250 V AC, fail-safe operation
Time delay	Start up: 10 ... 14 seconds (5 ... 7 seconds with 12 ppm jumper installed)
Zero Speed (selected via a common jumper)	• 5 seconds ± 1 (minimum speed 10 ... 15 ppm) or • 10 seconds ± 2 (minimum speed 5 ... 7.5 ppm)
Rated operating conditions	
Operating temperature	-40 ... +60 °C (-40 ... +140 °F)
Design	
Probe body	Aluminum
Process mounting	2" NPSL
Connection box	Aluminum, ¾" NPT conduit entrance, 5 screw terminals plus grounding terminal for electrical connection, max. 12 AWG (3.30 mm^2) wire size
Gasketing	Neoprene
Display	Red LED for verification of pulses
Enclosure rating	Type NEMA 4x, 6, IP67
Dynamic range	Minimum 6 or 12 pulses per minute Maximum 3 000 pulses per minute
Shipping weight	2 kg (4.4 lb)
Power supply	• 115 V AC/50 ... 60 Hz, 7 VA • 230 V AC/50 ... 60 Hz, 7 VA • ± 10 % of rated voltage
Certificates and approvals	$CSA_{US/C}$, CE, C-TICK

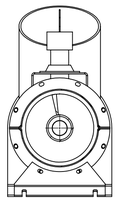
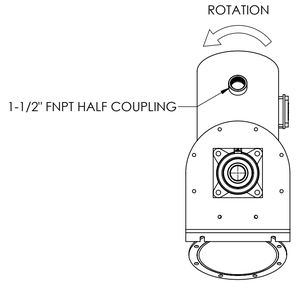
Schematics



SITRANS WM100 wiring

Notes:



1. Dry contacts shown in de-energized (alarm or shelf) state.
2. SITRANS WM100 is manufactured for either 115 or 230 V AC operation. Check WM100 nameplate for applicable voltage. Correct voltage must be supplied. Voltages lower than specified will result in an inoperative condition. Voltages higher than specified will severely damage unit.
3. For 5 second time delay and a minimum 12 ppm range, connect jumper across terminals 7 and 8. Without a jumper, the default is a 10 second time delay and a minimum 6 ppm range.

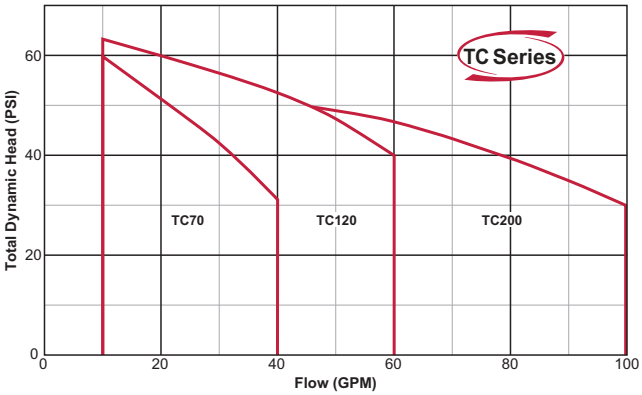
Introduction

This manual was prepared to assist the installer and/or operator in understanding the proper method of installing, operating and maintaining the SS series centrifugal pump. We recommend that you thoroughly understand the proper installation and start-up procedures, prior to starting the pump. If these procedures are followed, you will have years of trouble-free service.



WARNING

Rules For Safe Installation And Operation

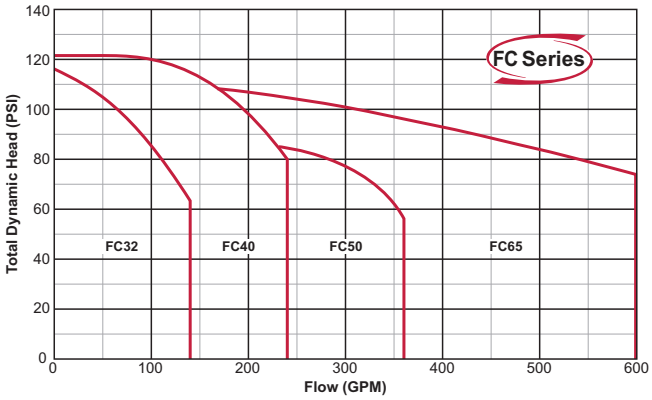
1. Read these rules and instructions carefully. Failure to follow them could cause serious bodily injury and/or property damage.
2. Check your local codes before installing.
3. For maximum safety, this product should be connected to a grounded circuit equipped with a ground fault interrupter device.
4. Before installing this product, have the electrical circuit checked by an electrician to make sure it is properly grounded.
5. Before installing or servicing your pump, BE CERTAIN pump power source is disconnected.
6. Make sure the line voltage and frequency of the electrical current supply agree with the motor wiring. If motor is dual voltage type, BE SURE it is wired correctly for your power supply.
7. Complete pump and piping system MUST be protected against below freezing temperature. Failure to do so could cause severe damage and voids the Warranty.
8. Do not run the pump dry. If it is, there will be damage to the pump seal.
9. Do not operate the pump in flammable and / or explosive atmosphere.

Performance And Specifications

TC Models

Size: Suction TC70 1-1/4" NPT
TC120 1-1/4" NPT
TC200 1-1/2" NPT

Discharge All TC Models 1" NPT



HP Range: 1/3 HP to 1-1/2 HP - 1750 RPM
3/4 HP to 3 HP - 3450 RPM

Performance: Capacity - 5.5 GPM to 100 GPM
Head - 23 to 144 feet
Liquid - clean water
Liquid Temp. - 212° F
(250°F opt.)
Working Pressure - 125 PSI

Materials: Casing - 304 Stainless
Impeller - 304 Stainless
Shaft - Stainless
Mechanical Seal - Carbon/Ceramic
Viton

Motor: Nema 56J frame / 60 Hz
Built in overload protection
(single phase models)

FC Models

Size: Suction 150 lb. ANSI FC32 2" ANSI
FC40 2-1/2" ANSI
FC50 2-1/2" ANSI

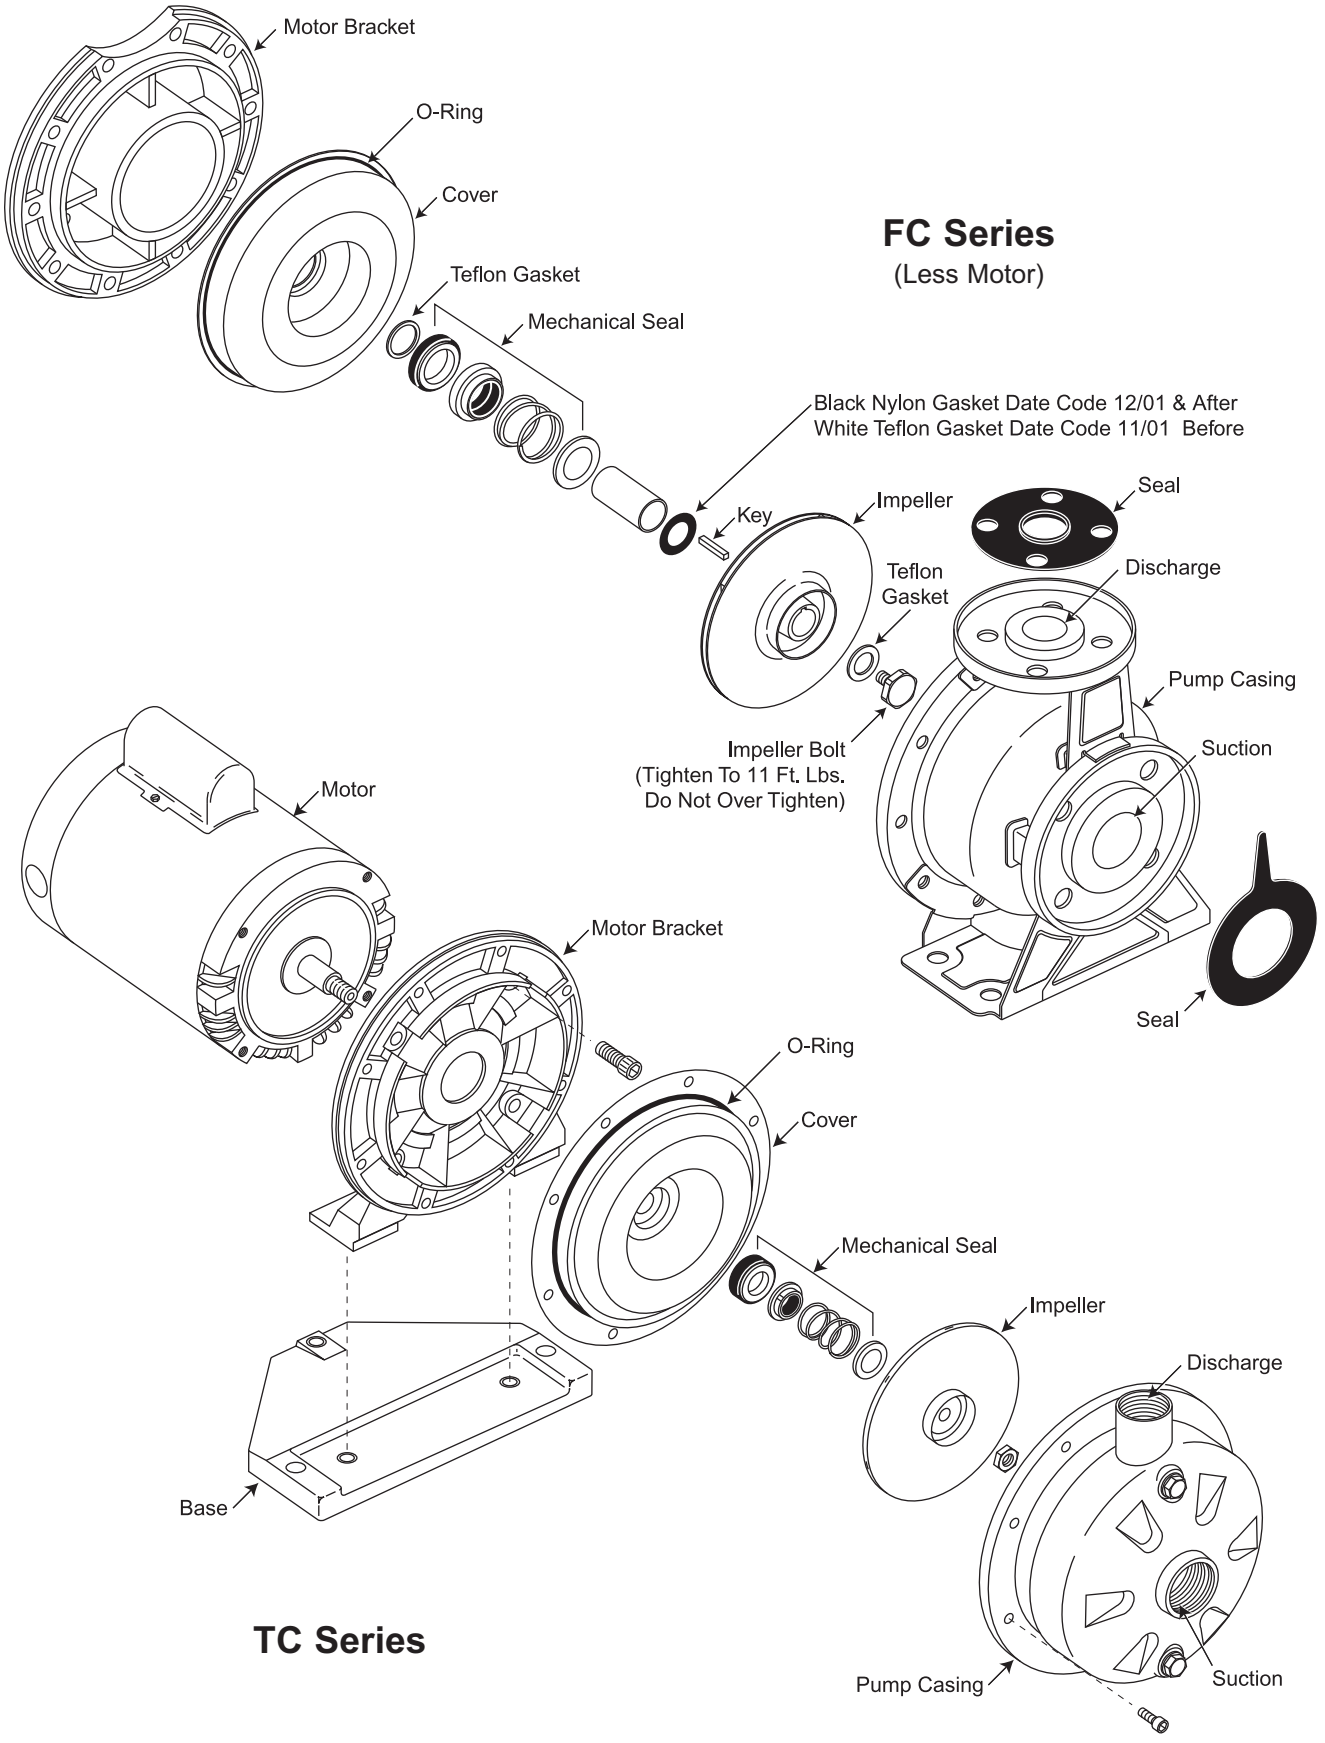
Discharge 150 lb. ANSI FC32 1-1/4" ANSI
FC40 1-1/2" ANSI
FC50 2" ANSI

HP Range: 1 HP to 2 HP - 1750 RPM
3 HP to 30 HP - 3450 RPM

Performance: Capacity - 13 GPM to 600 GPM
Head - 33 to 285 feet
Liquid Temp. - 212° F
(250°F opt.)
Working Pressure - 230 PSI

Materials: Casing - 304 Stainless
Impeller - 304 Stainless
Shaft - Stainless
Mechanical Seal - Carbon/Ceramic
Viton

Motor: Nema JM frame / 60 Hz



Pump Inspection and Handling

When receiving your pump, check to see if the shipment has been damaged in any way or if any parts seem to be missing. If so, note the damage or shortage on the bill of lading and the freight bill. Make any claims to the transportation company immediately. Keep all packaging materials until the claim is resolved.

The Webtrol Stainless Steel Centrifugal pump should remain in the shipping carton until it is ready to be installed.

Do not drop or mishandle the pump prior to installation.

Exploded Views

Pre-Installation

Pump is non-submersible. Keep motor dry at all times. Do not wash or immerse the motor.

Warning: Never run the pump dry. The internal running surfaces of the pump and mechanical seal require water lubrication for consistent operation. Allowing the pump to run dry will severely damage pump and mechanical seal.

Do not pump chemicals or corrosive liquids with the pump unless they are compatible with the pump component materials. Consult the chemical compatibility chart on page 15 of this manual or call Webtrol at (314) 631-9200 for verification. Use with nonflammable liquids.

To avoid internal damage to the pump, do not operate with the water temperature above 212° F.

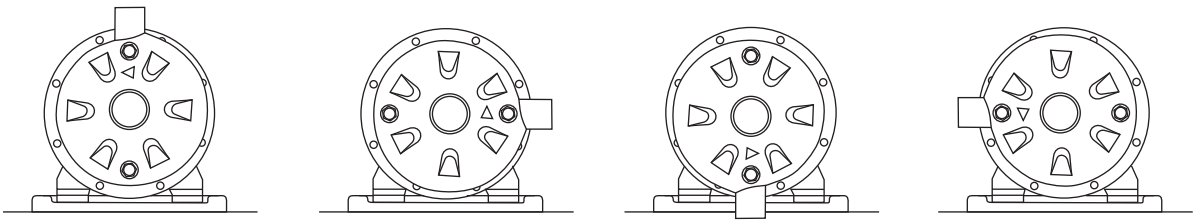
Pump must be full of liquid before operating. Do not pump dirty water or abrasive liquids. To do so, will cause the carbon seal face, and elastomers in the mechanical seal to wear and leak. Mechanical seal materials, compatible with liquids containing abrasives, are available upon request.

Avoid air pockets in suction piping or air will accumulate at the high points, making priming difficult.

Do not allow the pump or any system component to freeze. To do so may damage the pump and void the warranty.

Installation

Locate the pump as close to the liquid source as possible, so that a short, direct suction pipe may be used. Place the unit so that it is readily accessible for service, maintenance and allows air to circulate freely around the motor.



Mount pump in a dry location, on a secure base or foundation. This will prevent noise and vibration.

Piping should be stainless steel, rigid plastic or other suitable pipe that will not collapse or burst when exposed to suction and discharge pressure. The piping should be as free from turns and bends as possible, as elbows and fittings greatly increase friction losses.

Pipes must line up and not be forced into position by unions. The suction pipe should be at least one size larger than the suction inlet tapping, and have a minimum number of elbows and fittings to reduce friction losses. Also, the discharge piping should never be smaller than the pump tapping and should preferably be one size larger.

Piping should be independently supported near the pump so that no strain will be placed on the pump casing. Where any noise is objectionable, the pump should be insulated from the piping with rubber connections.

Figure 1 - The normal position of the TC Series discharge is top vertical.

Normal Position of Discharge | Discharge Rotated 90° Clockwise | Discharge Rotated 180° Clockwise | Discharge Rotated 270° Clockwise

Figure 1

Note: The FC Series discharge can only be used in the normal position.

Figure 3 - Connection to a pressurized water system.

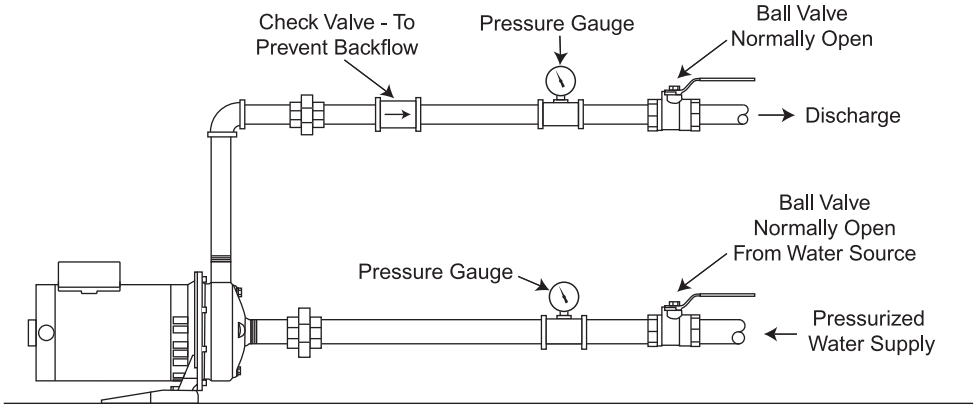

Figure 3

Figure 4 - Pump used on a suction lift application from a pond, cistern or container.

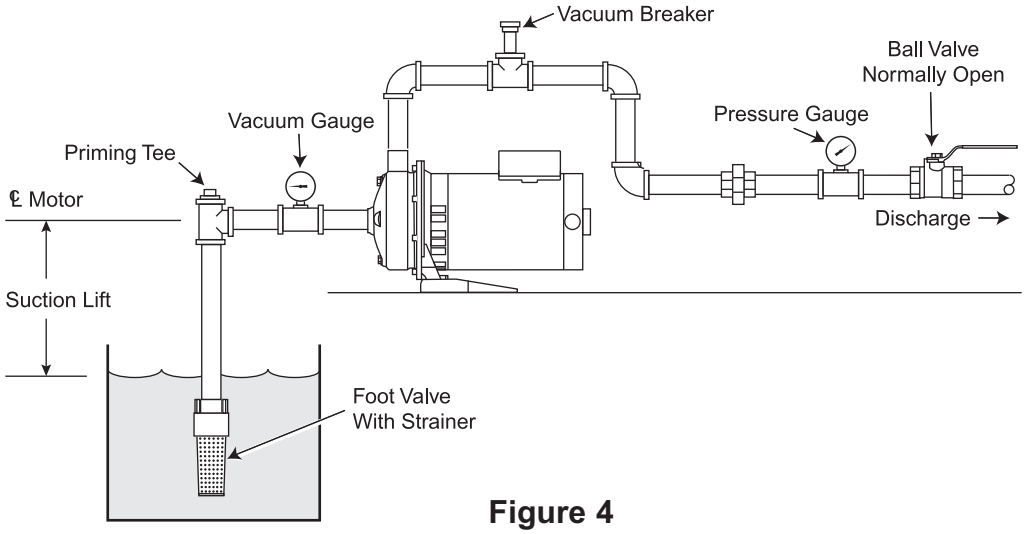

Figure 4

1. Install a service tee with a pipe plug, at the highest point in the suction line for initial priming
2. Install a foot valve at the end of the suction line.
3. Install a vacuum gauge in the suction line.
4. To retain water in the pump after turning the pump off, install a vacuum breaker in the discharge line. The horizontal run of pipe containing the vacuum breaker should be above the horizontal run of pipe containing the vacuum gauge.

Electrical Connections - **TC Pump**

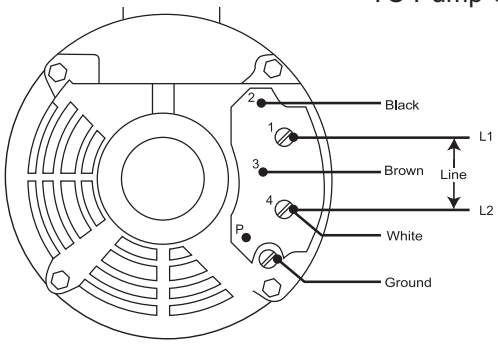
TC Series

Before wiring the pump to the power source, verify that the voltage of the motor matches the voltage of the power supply. See motor nameplate. The supply voltage must be within ± 10% of nameplate voltage. Incorrect voltage can cause fire or seriously damage the motor and voids the warranty.

Wire motor according to the diagram shown on the motor nameplate. If the nameplate diagram differs from the wiring diagrams shown in this manual, follow the nameplate diagram.

Install ground wire and maintain this pump in compliance with the National Electrical Code (NEC) or the Canadian Electrical Code (CEC) and with all local codes and ordinances that apply. Consult your local building inspector for local code information.

The motors used on the TC Model pumps are commonly manufactured by Emerson, Baldor, or Bluffton. The motors used on the FC Models are manufactured by Baldor, U.S. Motor.



Both, 1 phase and 3 phase **TC pump motors are factory wired for 230 volts.** Motor frame is Nema 56J. If the supply voltage for a 1 phase motor is 115 volts, refer to the motor wiring connections shown below to properly rewire the motor.

Electrical Connections - **FC Pump**

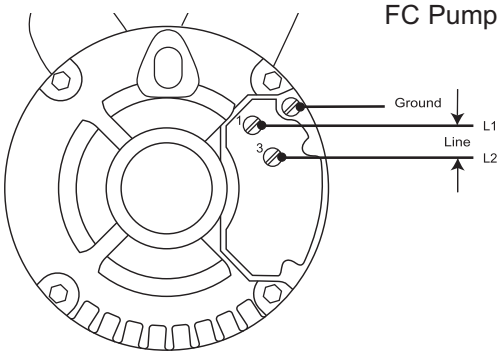
FC Series

FC Pump motors are factory wired for 230 volts. Motor is Nema JM frame. If the supply voltage for a 1 phase motor is 115 volts refer to the wiring diagrams shown below to properly rewire the motor.

Note: For 1 phase motors, Baldor has a wiring diagram on the motor for standard rotation. Standard rotation is counter clockwise facing the end opposite the shaft extension.

However, the **shaft must rotate clockwise for proper operation of the pump**. Instructions are shown on the wiring diagram for opposite standard rotation (clockwise facing end opposite shaft extension).

Since the pump has been factory tested, the motor is wired correctly for 230 volts. If the voltage is 115 volts, rewire the motor accordingly.



The information stated above also applies to the U.S. Motors.

Start-Up Procedures

To check for a free turning pump turn the power off and rotate the pump shaft. On pumps (TC models) that use a 56J frame motor (3/4 - 3 HP), this can be done by removing the motor end cap located on the back of the motor. Rotate the motor shaft in a clockwise direction. *(See Warning 1)*

For FC pumps, use a 30mm deep well socket to rotate the impeller bolt clockwise when viewed from the pump end looking into the suction. Access to the bolt head is thru the suction inlet.

Shaft Rotation - 3 Phase Motors (3/4 - 3 HP) - After the preceding instructions have been completed, turn the motor on for 1 second. If the connection is correct, the shaft will rotate clockwise, when viewed from the end opposite the motor shaft extension. If the rotation is not correct, switch connections L1 and L2. The rotation will now be correct.

View facing end
opposite shaft extension

Warning: 1. Do not start the pump if the motor shaft cannot be rotated.

2. During operation, a minimum reading of 2 PSI is required at all times on the pressure gauge installed in the inlet line.

Valves - The suction inlet valve should be fully open and the discharge valve should be partially open. This will allow the pump to develop back pressure when it is started.

Priming - The pump must be primed before starting. The pump casing and suction piping must be filled with water before starting the motor. On TC models, remove the vent plug in the top of the casing while pouring in priming water. When water is poured into the pump to prime, remove all the air before starting the motor.

The pump will automatically fill with water when the pump is connected to a city main or hydrant. To relieve the trapped air inside the pump, allow the water supply to run a minimum of 1 minute before starting the pump. After filling the pump and inlet pipe with water, turn the motor on and off several times. Repeat this priming sequence several times to be sure that all the air has been removed from the pump.

Once the preceding instructions have been completed, the pump can be started. The pump should be pumping water and rapidly build pressure. If not repeat the priming instructions. During operation, a minimum reading of 2 PSI is required at all times on the pressure gauge installed in the inlet line.

Final Inspection - Once the proceeding instructions have been completed, the pump can be started. During the first few hours of operation, inspect the pump, piping and auxiliary equipment, used in conjunction with the pump. Check for leaks, vibration or noises.

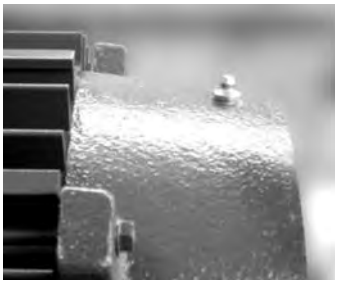
If a problem arises, consult a Webtrol representative or call Webtrol at (314) 631-9200 for assistance.

Lubrication

On the TC SS Series Centrifugal, it is not necessary to lubricate the pump or motor. The motor is designed with sealed ball bearings.

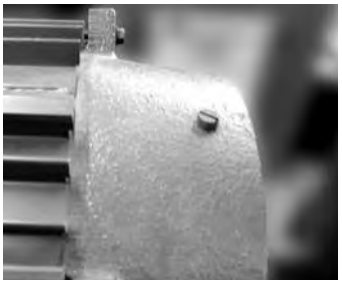
The motors used on the FC SS Series Centrifugal pumps require periodic lubrication. Good results can be obtained if the following recommendations are used in your maintenance program.

A high grade ball or roller bearing grease should be used.



Recommended Greases	
Name	**Manufacturer**
SR1 (Factory Installed)	Chevron
Rykon Premium #2	American Oil Co.
Shell Dolium R	Shell Oil Co.

Amount of Grease			
By Weight		**By Volume**	
Ounce	**Grams**	**In^3**	**Teaspoon**
0.30	8.4	0.6	2



Service Conditions			
Severity Of Service	**Ambient Temperature**	**Atmospheric Contamination**	**Regreasing Interval**
Standard	104° F	Clean, Little Corrosion	5500 Hours
Severe	130° F	Moderate Dirt, Corrosion	2750 Hours

Lubrication Procedure

1. Stop motor
2. Clean grease fitting or remove outlet plug (See Photo)
3. Add the recommended amount of grease while motor is warm
4. Reinstall grease outlet plug

Grease Fitting

Outlet Plug

Code Key: A = Good B = Fair C = Poor
NR = Not Recommended

Important-Pumpages coded C “poor” may result in reduced or unsatisfactory service life.

Where hot and aggressive liquids are to be pumped, in addition to checking the chemical compatibility, any deviations in temperature, density and viscosity from the reference data would bring about variations in terms of power input, hydraulic performance and suction capacity. Make sure, in all cases, that the power input is not higher than the rated power and the suction lift does not exceed the permissible values.

Motor Fails To Start Or Run At Full Speed

Possible Cause Of Trouble	Corrective Action
Start capacitor failed - 1 phase motor (motor hums)	Replace start capacitor
Power Loss	Replace bad fuse or reset circuit breaker (check for correct fuse/breaker size)
Incorrect voltage - voltage must be within ± 10% of motor rated voltage. Example: Rated voltage 230 volts Range: 207 - 253 volts	1. check incoming voltage, contact power company 2. Verify that the voltage of the motor matches the power supply voltage 3. Check wire size from main switch to motor.
Defective wire or connections	Replace defective wires, tighten and clean connections.
Grounded motor	Have motor rewound with new winding or replace motor.

Pump Leaks

Possible Cause Of Trouble	Corrective Action
Worn mechanical seal due to abrasive liquid/corrosion	1. Replace seal with materials compatible with liquid pumped. 2. Install filter on inlet line.
Lack of water - carbon seal on mechanical seal face overheats and wears rapidly	1. Replace seal 2. Verify inlet pressure, minimum pressure on inlet gauge is 2 PSIG
Inlet pressure to high	Reduce inlet pressure
Misalignment	Check for a bent motor shaft
Worn “O” ring seal	Replace O-ring seal
Teflon gasket leaks “bowed”	For FC Series only. Tighten bolt shown In exploded view sheet to 11 Ft. Lbs.

Pump Operates, But Delivers Little Or No Water

Possible Cause Of Trouble	Corrective Action
Incorrect rotation on 3 phase motor	Interchange any two incoming power leads to the motor.
Low line voltage	(See motor trouble shooting section above)
Air Locked Pump	Fill pump & inlet pipe with water - jog motor on and off several times. Refill with water. Repeat procedure several times to remove all air
Worn or plugged impeller	1. Replace impeller 2. Clean clogged impeller, install filter on Inlet
Inadequate inlet pressure	Minimum pressure on the inlet side of pump is 2 PSIG
Diameter of suction/discharge pipe is to small	1. Size of inlet pipe should be at least equal to the threaded inlet size in the pipe inlet housing 2. Calculate friction losses for the discharge pipe. Replace undersized piping. For assistance call Webtrol (314) 631-9200
Broken Shaft	If motor shaft is broken replace motor

Excessive Noise While Pump Is Operating

Possible Cause Of Trouble	Corrective Action
Cavitation (noise like gravel in pump)	1. Increase size of inlet line 2. Reduce flow rate - GPM 3. Too viscous (liquid is too thick) maximum viscosity is 80 centipoise (CPS)
Pump not secured to firm foundation	Bolt down to secure and rigid base
Noisy motor	1. Ensure that motor fan is clear 2. Remove motor from pump. If noise persists check for smooth bearing operation. Replace bad bearings/or motor

Thank You for Purchasing a Stainless Steel Centrifugal Pump

We at Webtrol are constantly working on new products to make your job easier, while making your systems more efficient, reliable and affordable.

Your opinion means a lot to us, so please let us know what you think about our FC or TC Series Pump.

1. Important information and warning

THIS MANUAL CONTAINS IMPORTANT SAFETY, INSTALLATION, OPERATION AND MAINTENANCE INFORMATION. MAKE THIS MANUAL AVAILABLE TO ALL PERSONS RESPONSIBLE FOR THE OPERATION, INSTALLATION AND MAINTENANCE OF THESE PRODUCTS. UNLESS OTHERWISE NOTED, TONS IN THIS MANUAL ARE US TONS; (2,000 LBS).

Danger, Warning, Caution and Notice

Throughout this manual, there are steps and procedures which, if not followed, may result in an injury, death, or substantial property damage if the warning is ignored.

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

Indicates a potentially hazardous situation, which, if not avoided, could result in death or serious injury.

Indicates a potentially hazardous situation, which, if not avoided, could result in minor or moderate injury or property damage.

NOTICE

Indicates information or a company policy that relates directly or indirectly to the safety of personnel or protection of property.

For any questions or comments:

Phone: 514 728-4527
E-mail: info@vulcanhoist.com

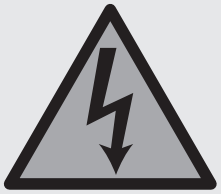
WARNING

Equipment described herein is not designed for and must not be used for lifting, supporting, or transporting people or for lifting or supporting loads over people.

Equipment described herein should not be used in conjunction with other equipment unless necessary applicable and/or required safety devices relevant to the system, crane, or application have been properly installed by the system designer, system manufacturer, crane manufacturer, installer or user.

Modifications to upgrade, rerate, or otherwise alter this equipment shall be authorized only by the original equipment manufacturer.

Equipment described herein may be used in the design and manufacture of larger machines like cranes or monorails. In those cases, additional equipment or devices may be required for the crane and monorail to comply with applicable design and safety standards. The crane designer, crane manufacturer, or user is responsible for furnishing said equipment. Refer to AISI/ASME B30.17, "Overhead and Gantry Cranes (Top Running Bridge, Single Girder, Underhung Hoist)"; AISI/ASME B30.2 "Overhead and Gantry Cranes (Top Running Bridge, Single or Multiple Girder, Top Running Trolley Hoist)"; and AISI/ASME B30.11 "Monorails and Underhung Cranes".



If a below the hook lifting device or a sling is used with the hoist, the user is responsible for their proper use and maintenance and should refer to ANSI/ASME B30.9 "Slings" or ANSI/ASME B30.20 "Below-The-Hook Lifting Devices".

Hoists and cranes used to handle molten material may require additional equipment or devices. Refer to ANSI Z241.2, "Safety Requirements for Melting and pouring of Metals in the Metal Casting Industry".

Electrical equipment described herein is designed and built in compliance with Vulcan Hoist's interpretation of ANSI/NFPA 70,"National Electric Code" and CSA C22.1, "Canadian Electric Code". The system designer, system manufacturer, crane designer, crane manufacturer, installer or user is responsible to ensure that the installation and associated wiring of these electrical components is in compliance with and all applicable Federal, State, Provincial and Local Codes.

FAILURE TO COMPLY WITH ANY ONE OF THE LIMITATIONS NOTED HEREIN CAN RESULT IN SERIOUS BODILY INJURY OR DEATH, AND/OR PROPERTY DAMAGE.

DANGER

Hazardous voltages are present in the electrical components and connections between these components.

Before performing ANY mechanical or electrical maintenance on the equipment, disconnect the main switch supplying power to the equipment and lock and tag the main switch in the position.

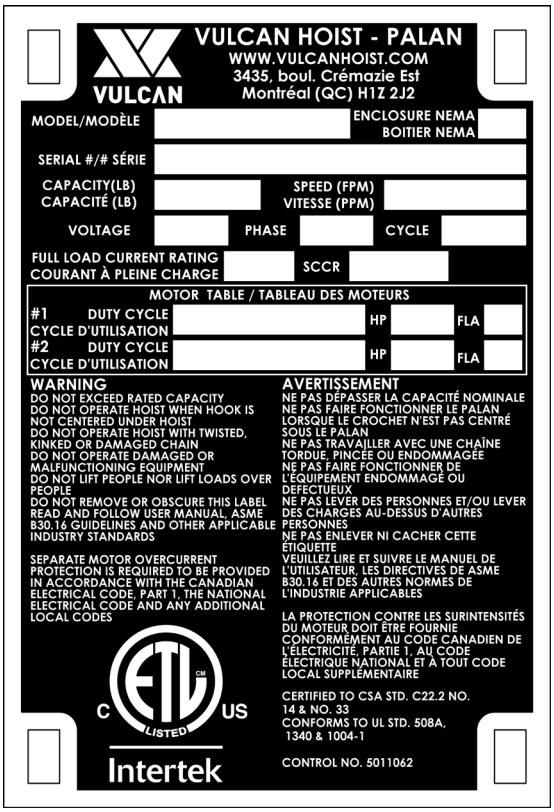
Refer to ANSI Z244.1, "Personal Protection — Lockout/Tag out of Energy Sources".

Only trained and competent qualified personnel should inspect and repair this equipment.

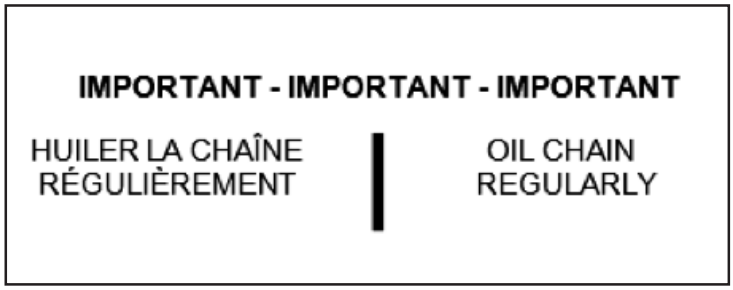
NOTICE

It is the responsibility of the owner/user to install, inspect, test, maintain, and operate a hoist in accordance with ANSI/ASME B30.16, "Overhead Hoists (Underhung)". If the hoist is installed as part of a larger lifting system, such as an overhead crane or monorail, it is also the responsibility of the owner/user to comply with the applicable ANSI/ASME B30 volumes that address that type of equipment.

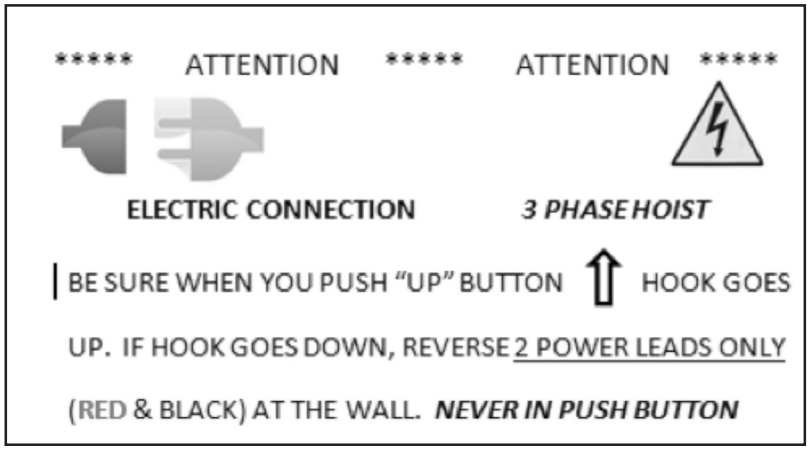
It is the responsibility of the owner/user to have all personnel involved with the installation, inspection, testing, maintenance and operation of a hoist read the content of this manual and applicable portions of ANSI/ASME B30.16, "Overhead Hoists (Underhung)". If the hoist is installed as part of a larger lifting system, such as an overhead crane or monorail the applicable ANSI/ASME B30 volumes that address that type of equipment must also be read by all personnel involved.



If the hoist owner/user requires additional information, or if any information in the manual is not clear, contact Vulcan Hoist. Do not install, inspect, test, maintain, or operate this hoist unless this information is fully understood.



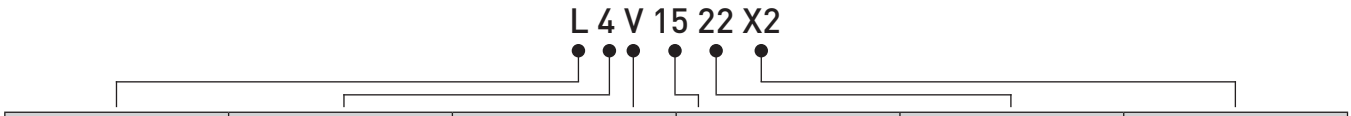
Inspection of the hoist must be performed on a regular basis in accordance with the ANSI/ASME B30.16 standard by a qualified individual. The owner/user is responsible for maintaining a record of all inspections performed on the hoist. A regular schedule of inspection of the hoist in accordance with the requirements of ANSI/ASME B30.16 should be established and records maintained.



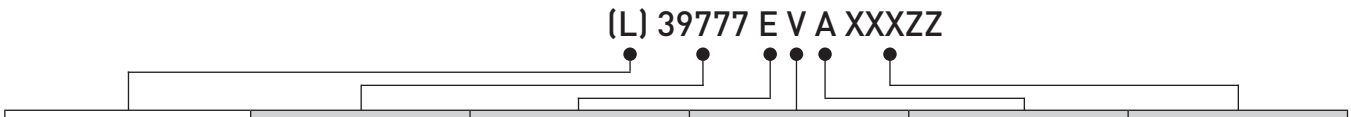
Warning labels

The warning label illustrated below is supplied with each hoist shipped from the factory. If the label is not on your hoist, order a label from the factory or the distributor and install it.

Read and follow all warnings attached to this hoist.



2. Technical Information



2.1 Product Identification

Model number

Type of chain	Capacity	Voltage	Lifting speed	Gear ratio	Number of speed
L= Link chain R= Roller chain	0.5= ¼ ton 1= ½ ton 2= 1 ton 3= 1.5 tons 4= 2 tons 6= 3 tons 10= 5 tons 20= 10 tons	A= 115 V. 1 Ph. F= 230 V. 1 Ph. H= 230 V. 3 Ph. T= 460 V. 3 Ph. V= 575 V. 3 Ph.	3 ft/min to 50 ft/min	Primary: 1 to 6 Secondary: blank or 2	Blank : 1 Speed X2 : 2 Speeds

Serial number

		Motor Brand	Brake Brand	Limit Switch	Date
Blank = Std. hook L = Low headroom	**Sequential Number**	E = Emerson D = Doerr N = Nidec A = AGI	V = Vulcan S = Supplier	Blank = Mechanical A = Adjustable	XXX = Year ZZ = Month

Operating Conditions and Environment

Temperature range	- 20˚ C to 40˚C
Humidity	85% or less
Enclosure Rating	Optional NEMA 4 Hoist and pendant
Duty rating	HST - 1

2.2 Hoist applicable standards

a. All Vulcan hoists are manufactured in compliance with Vulcan Hoist's interpretation of the applicable sections of ANSI/ASME B30.16 "Overhead Hoists (Underhung)" standard.

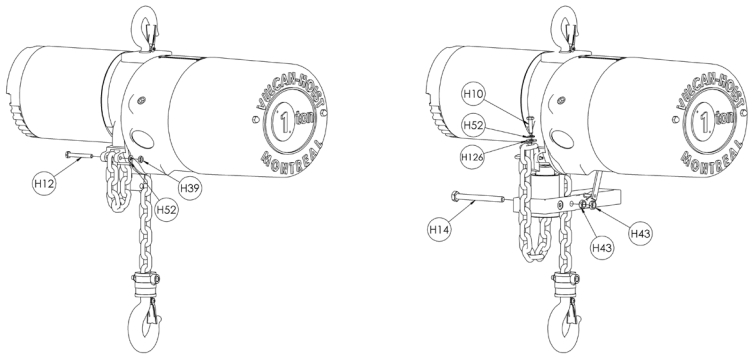
b. The user is responsible for installing the equipment in accordance with all provincial/state and local regulations applicable to the location where the equipment will be used.

c. Hoists accompanied by this manual meet ANSI/ASME HST - 1M "Performance Standard for Electric Chain Hoists" hoist duty class ratings.

d. Vulcan Hoist hoists meet the following standards according to Intertek approval:
   - CSA C22.2 no. 33 Electrical safety requirements for cranes and hoists
   - UL 1340 Standard for Hoists
   - UL 1004-1 Standard for Rotating Electrical Machines - General Requirements

e. In addition, Vulcan Hoist is part of Intertek's control panel manufacturer program, which covers the hoist control.
   - CSA C22.2 no 14 Industrial control equipment
   - UL508A Industrial Control Panels

3. Unpacking and installation



3.1 Unpacking

After opening the box, carefully remove the cardboard tray and set the control cables to the side of the box. Using an external lifting device, use the upper hook of the hoist to raise it until it is completely out of the box. It may be necessary to hold the box down.

Once the hoist is out of the box, carefully break off the packaging foam from the hoist. Do not use tools like a hammer or an axe to remove foam as this could damage and/or break the hoist.

Ensure that all parts of the hoist, including the chain, are free of any debris or packaging material. Inspect hoist for any scratches, dents or other damage that may have occurred during transport. When hoist is used without a chain container, the loose end of chain must be attached to the hoist as shown below.

Figure 3 - 1

3.2 Chain container installation

DANGER

Improper installation of chain container could result in chain and hoist damage leading to a potentially hazardous situation, which, if not avoided, could result in death or serious injury.

Follow installation instructions below.

3.2.1 Without chain guide

1. Run the load hook down, so that there are 2 feet of chain left on the unloaded side.
2. Shut off and lockout/tag out the main power source to the hoist.
3. Bolt chain container to the link on the bottom of the hoist casting. Pass bolt H14 through the chain container and the link with one 116A bushing on each side of the link. Tighten the two H43 nuts: see Figure 3-2 below.

4. Remove bolt H12 & nut H39. Place load chain end in chain container. Connect chain from chain container to hoist with bolt H12 & nut H39.

5. Re - connect the power.

6. Verify if load chain is rubbing on chain container; this would cause premature chain container wear. If chain is rubbing on container, adjust chain on chain container by one link.

7. A) Run hoist **WITHOUT** load and verify that chain falls properly in chain container.
   B) Run hoist **WITH** load, verifying that chain falls properly in chain container.

8. Ensure load is not hitting the chain container. A load that is hitting the chain container may cause chain to knot or break and/or cause serious injury to operator and others. Adjust limit switch to stop load before it comes in contact with chain container.

9. Install supporting chain to the side of the hoist body.

10. Once the chain container is securely in place, feed the free end of the load chain gradually into the chain container to prevent the chain from bundling.

11. When using a Vulcan steel chain container, refer to the instructions provided with the container for correct assembly and attachment.

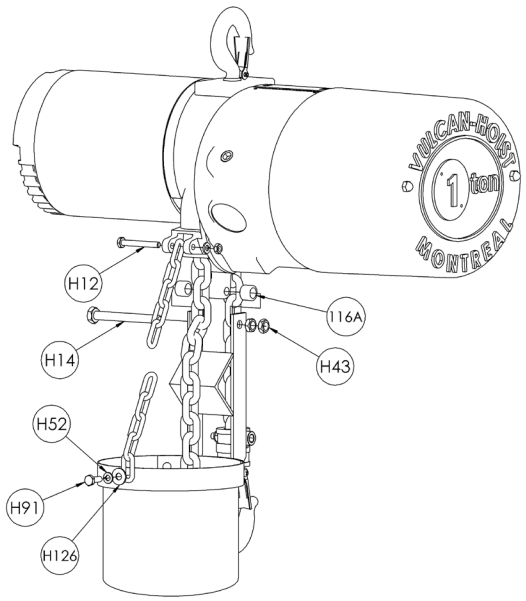


Figure 3 - 2

3.2.2 With chain guide

1. Run the load hook down, so that there are 2 feet of chain left on the slack side.

2. Disconnect the power.

3. Remove bolt H14 from limit lever # 25, install chain container arms on outside of limit lever # 25. Install bolt H14 through chain container arms and limit lever # 25. Install 2 nuts H43 lock nuts together (do not tighten to limit lever # 25). (See Figure 3-3 below.)

4. Install end of chain attached to chain container into designated hole on # 45 casting with bolt H91 and washers H52 & h16.

5. Manually verify if limit lever # 25 moves freely. This is your safety limit switch control.

6. Adjust chain container level.
7. Connect the power.
8. A) Run hoist **WITHOUT** load; verify that chain falls in chain container.
   B) Run hoist **WITH** load; verify that chain falls in chain container.
9. Ensure load is not hitting the chain container. A load that is hitting the chain container may cause chain to knot or break and/or cause serious injury to operator and others. Adjust limit switch to stop load before it comes in contact with chain container.
10. Install supporting chain to the side of the hoist body.
11. Once the chain container is securely in place, feed the free end of the load chain gradually into the chain container to prevent the chain from bundling.
12. When using a Vulcan steel chain container, refer to the instructions provided with the container for correct assembly and attachment.

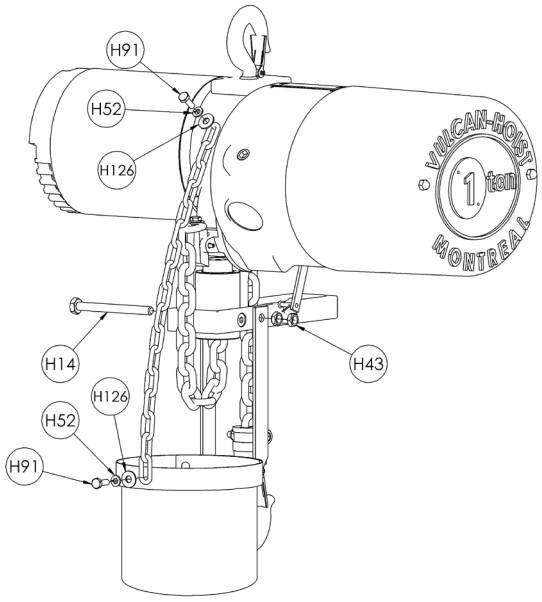

Figure 3 - 3

WARNING

DO NOT modify or install a homemade chain container. Use only the Vulcan Hoist chain container.

NEVER knot chain or attach foreign objects to the chain to act as limits or chain holders. This could cause serious injury and/or serious damage to chain and hoist.

3.3 Mounting the hoist

Manual trolley — Follow the instructions in the operator's Manual provided with the trolley.

Motorized trolley — Follow the instructions in the operator's Manual provided with the trolley.

Hook mounted to a fixed location — Attach the hoist's top hook to the fixed suspension point.

WARNING

Ensure the fixed suspension point rests on the center of the hook's saddle and that the hook's safety latch is engaged.

3.4 Chain

The number of chain links depends on the hoist model, capacity and options. Never operate the hoist with incorrect, missing, or damaged chain links. Refer to figure below to identify components.

1 chain fall

2 chain falls

3 chain falls

When the hoist is used without a chain container, the free end of the chain is attached to the hoist body. Make sure it remains free of twists before operating the hoist.

WARNING

Verify that the load chain is not twisted or tangled prior to operating the hoist. Make sure bottom hook on 2 and 3 fall models (2 ton and over) is not capsized. Always ensure that the welds on the chain links are properly oriented. Correct all chain irregularities before operating hoist.

3.5 Electrical connection

WARNING

If motor rotation is incorrect (power phases have been reversed), the limit switch will not function properly, which may cause serious damage to the hoist and/or serious injury to the operator and others.

All electrical wiring of the hoist should be performed by a qualified electrician. Verify current draw of hoist and distance to electrical inlet when hoist is at the FURTHEST POSITION from the inlet. Inadequate wiring may cause the motor to burn, EVEN IF THERE IS NO LOAD ON THE HOIST.

The hoist should be connected to a branch circuit which complies with the requirements of the National Electrical Code and applicable local codes.

3.5.1 Wiring of hoist to local power source

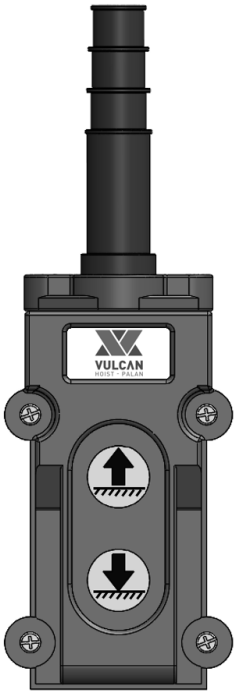

Figure 3 - 4

The hoist must be connected to the power source such that its direction of operation corresponds to the up-and-down commands issued from the pendant control, i.e. pushing the UP button moves the load chain up and pushing the DOWN button moves the load chain down. Please follow the steps below to wire the hoist:

1. Make a temporary connection at the power supply and make sure supply to the hoist can be quickly disconnected in case of a problem.
2. Push the up button momentarily and observe movement of the hook:
   a. If hook rises up, connections are correct and can be made permanent.
   b. If hook lowers down, the motor phasing must be changed. To do so, turn the power off and:
      i. If your model uses a 3-phase motor (208, 230, 380, 460, or 575 volts), switch the position of any two of the three phases **at the power source**.
      ii. If your model uses a 1-phase motor (115 or 230 volts), please contact Vulcan for additional details.

The hoist is equipped with upper and lower limit switches whose proper operation is dependent on the correct motor phasing, rotation and pendant signal:

- Limit switches are factory preconfigured – when required, always reverse phasing at the power source, never in the pendant.
- If the phasing is incorrect, the limit switches will not function properly which could result in serious damage to the hoist and/or serious injury to the operator and others.

NOTICE

115 V motors: do not plug the hoist into a standard household outlet. Although some models will work with these outlets, they may draw more current and exceed the capacity of the electrical circuit, or interfere with other devices on the same circuit. Always do the connections in a junction box. Always consult a qualified electrician when you wired one or more hoists to the electrical network.

3.5.2 Checking for adequate voltage at hoist

The hoist must be supplied with adequate electrical power in order to operate properly.
For proper operation, the voltage (measured at the hoist end of the standard power cord with the hoist operating in the up direction with full load) must be within 5 % of nominal voltage.

SIGNS OF INADEQUATE ELECTRICAL POWER (LOW VOLTAGE) ARE:

- Noisy hoist operations due to brake and/or contactor chattering.
- Dimming of lights or slowing of motors connected to the same circuit.
- Heating of the hoist motor and other internal components as well as heating of the wires and connectors in the circuit feeding the hoists.
- Failure of the hoist to lift the load due to motor stalling.

COPPER CONDUCTOR SIZES FOR 2% DROP IN POTENTIAL ON 110-120 VOLTS 2 CONDUCTORS																		
CURRENT AMPERES	Aproximate Distance in Feet to Center of Distribution																	
	20	30	40	50	60	70	80	90	100	120	140	160	180	200	240	280	320	360

175	-	-	-	-	1/0	2/0	-	3/0	-	4/0								
200	-	-	-	-	2/0													
250	-	-	-	-	-	3/0	4/0											
300	-	-	-	-	-	4/0												

1. This Table is calculated for wire sizes No. 16 to No. 4/0 AWG and gives for each size specified, the approximate maximum distance in feet of the distribution center for a 2% drop in potential at a given current. Inductive reactance has not been included since it is a function of conductor size and spacing.

2. This Table is based on conductor resistance at 60C. For conductor temperatures above 60C, multiply distances in feet in the column headings by a factor as follows to retain 2% drop in potential.

Conductor Temperature	Distance Correction Factor
75C	0.94
85-90C	0.9
110C	0.83
125C	0.79
200C	0.64

3. For 220-240 volts, multiply the distance in feet in the column headings by two, for the same percentage drop.

4. Example on use of Table:
   Consider a 2-conductor circuit carrying 10 amperes at 110-120 volts. From the Table opposite "10 amperes", it will be found that a No. 14 AWG circuit can be run 40 feet from the distribution center to the load without exceeding a 2% drop. Beyond this distance, a larger size of conductor is required (i.e. No. 12 AWG beyond 40 feet up to and including 60 feet).

- Blowing of fuses or tripping of circuit breakers.

3.6 Functional verification and trial operations

3.6.1 Confirm the adequacy of the rated capacity for all slings, chains, wire ropes and all other lifting attachments before use. Inspect all load suspension members for damage prior to use and replace or repair all damaged parts.

3.6.2 Verify and correct all chain irregularities prior to operating the hoist. Refer to Section 3.4.

3.6.3 Measure and record the "k" dimension of all hooks on back cover of this manual. See Table 5 - 4 under Section 5, "Inspection".

3.6.4 Record the hoist's model and Serial Number (from the name plate on the hoist, see page 9) in the space provided on the cover of this manual.

3.6.5 Ensure that the hoist is properly installed to either a fixed point or trolley, whichever applies.

3.6.6 If hoist is installed on a trolley, ensure that:

- The trolley is properly installed on the beam.
- Drop Stop for the trolley are correctly positioned and securely installed on the beam.

3.6.7 Ensure that all nuts, bolts, and split pins (cotter pins) are sufficiently fastened.

3.6.8 Pull down on the pendant and ensure that the Cord Strain Relief Cable takes the force, not the Pendant Cord.

3.6.9 Check supply voltage before everyday use. If the voltage is lower than 5% below nominal voltage for the motor, do not operate the hoist.

3.6.10 Confirm proper operation:

- Before operating, read and become familiar with Section 4 – Operation.
- Before operating, ensure that the hoist (and trolley) meets the Inspection, Testing and Maintenance requirements and ANSI/ASME B30.16.
- Before operating, ensure that nothing will interfere with the full range of the hoist's (and trolley's) operation.

3.6.11 The hoist must be connected to the power source such that its direction of operation corresponds to the up-and-down commands issued from the pendant control, i.e. pushing the UP button moves the load chain up and pushing the DOWN button moves the load chain down. If the hoist does not operate correctly, refer to section 3.5 for proper wiring of the motor. Failure to do so could result in serious damage to the equipment and/or serious injury to the operator and others.

3.6.12 After hoist is connected, ALWAYS test limit switches by raising the hook until it stops about 4 - 6" from the hoist body. Then lower the hook until it stops, leaving about 12" of loose chain on the unloaded side.

4. Operation

4.1 Introduction

The operation of an overhead hoist involves more than activating the hoist's controls. As per the ANSI/ASME B30 standards, the use of an overhead hoist is subject to certain hazards that cannot be mitigated by engineered features, but only by the exercise of intelligence, care, common sense, and experience in anticipating the effects and results of activating the hoist's controls. Use this guidance in conjunction with other warnings, cautions, and notices in this manual to govern the operation and use of your overhead hoist.

WARNING

Hoist operators shall be required to read the operation section of this manual, the warnings contained in this manual and warning labels on the hoist or lifting system, and the operation section of ANSI/ASME B30.16 and ANSI/ASME B30.10. The operator shall also be required to be familiar with the hoist and hoist controls before being authorized to operate the hoist or lifting system.

Hoist operators should be trained in proper procedures for the attachment of loads to the hoist hook.

Hoist operators should be trained to be aware of potential malfunctions of the equipment that require adjustment or repair, and to be instructed to stop operations if such malfunctions occur, and to immediately advise their supervisor so corrective actions can be taken.

Hoist operators should have adequate depth perception, field of vision, reaction time, manual dexterity, and coordination.

Hoist operators should not have a history of or be prone to seizures, loss of physical control, emotional instability or operate under the influence of alcohol, drugs or medication.

Overhead hoists are intended only for vertical lifting service of freely suspended unguided loads. Do not use hoist for loads that are not lifted vertically, loads that are not freely suspended, or loads that are guided.

4.2 Instructions for operation

Taking precedence over any specific rule, however, is the most important rule of all: "USE COMMON SENSE".

It is the responsibility of the hoist owner/user to establish programs to:

1. Train and designate hoist operators.
2. Train and designate hoist inspection and maintenance personnel.

The words **shall** and **should** are used throughout this manual in accordance with definitions in the ANSI/ASME B30 standards as follows:

shall this word indicates that a rule is mandatory and must be followed.

should this word indicates that a rule is a recommendation, the advisability of which depends on the facts in each situation.

Hoist operator and hoist inspection and maintenance personnel training programs should be based on requirements in accordance with the latest edition of ANSI/ASME B30.16, "Overhead Hoists (Underhung)".

WARNING

Improper operation of a hoist can create a potentially hazardous situation which, if not avoided, could result in death, serious injury or substantial property damage. To avoid such a potentially hazardous situation, the operator must be familiar with the instructions listed in this section.

THE OPERATOR SHALL:

1. **NOT** operate a damaged, malfunctioning or abnormally performing hoist.
2. **NOT** operate a hoist until he has thoroughly read and understood Manufacturer's Operating and Maintenance Instructions or Manuals.
3. **NOT** operate a hoist that has been modified without the manufacturer's approval or without certification that it is in conformity with ANSI/ASME B30 volumes.
4. **NOT** lift more than the rated load for the hoist.
5. **NOT** use hoist with twisted, kinked, damaged, or worn load chain.
6. **NOT** use the hoist to lift, support, or transport people.
7. **NOT** lift loads over people.
8. **NOT** operate a hoist unless all persons are and remain clear of the supported load.
9. **NOT** operate unless load is centered under hoist.
10. **NOT** attempt to lengthen the load chain or repair a damaged load chain.

11. **NOT** operate hoist when it is restricted from forming a straight line from hook to support in the direction of loading.
12. **NOT** use load chain as a sling or wrap load chain around load.
13. **NOT** apply the load to the tip of the hook or to the hook latch.
14. **NOT** apply load unless the load chain is properly seated in it grooves.
15. **NOT** lift any load if the weight of the load is not evenly distributed across all the chain falls.
16. **NOT** operate beyond the limits of the load chain travel.
17. **NOT** allow the load chain or hook to be used as an electrical or welding ground.
18. **NOT** allow the load chain or hook to be touched by a live welding electrode.
19. **NOT** remove or obscure the warning label on the hoist.
20. **NOT** operate a hoist on which the safety plates or decals are missing or illegible.
21. **NOT** use the hoist in such a way that could result in shock or impact loads being applied to the hoist.
22. **NOT** use the hoist load limiting or warning device to measure load.
23. **NOT** use limit switches as routine operating stops. They are emergency devices only.
24. **NOT** allow the hoist to be subjected to sharp contact with other hoists, structures, or objects through misuse.
25. **NOT** adjust or repair the hoist unless qualified to perform such adjustments or repairs.
26. **NOT** "jerk" the hoist in position to tighten the grip on the load or to facilitate the unloading process.

THE OPERATOR SHALL:

1. Protect the hoist's load chain from weld splatter or other damaging contaminants.
2. Be familiar with operating controls, procedures, and warnings.
3. Take up slack carefully – make sure load is balanced and load-holding action is secure before continuing.
4. Shut down a hoist that malfunctions or performs abnormally and report such malfunction.
5. Make sure hoist limit switches function properly.
6. Warn personnel before lifting or moving a load.
7. Warn personnel of an approaching load.
8. Maintain firm footing when operating the hoist.
9. Check brake function by tensioning the hoist prior to each lift operation.
10. Use hook latches. Latches are to retain slings chains, etc. under slack conditions only.
11. Make sure the load is free to move and will clear all obstructions.

12. Make sure hook travel is in the same direction as shown on controls.
13. Inspect the hoist regularly, replace damaged or worn parts, and keep appropriate records of maintenance.
14. Use the hoist manufacturer's recommended parts when repairing the unit.
15. Lubricate the load chain as per Vulcan's recommendations.
16. Make sure the hook latches are closed and not supporting any parts of the load.
17. Avoid swinging the load or hook.

4.3 Daily or prestart inspection

In accordance with the requirements of ANSI/ASME B30.16, the hoist operator should perform daily (prestart) inspections at the start of each shift or at the time of the hoist's first use during each shift. The daily inspection is a visual and audible examination of the hoist. Records of the daily inspection are not required except as required by the hoist owner/user. Daily inspection items that should be performed include the following:

TABLE 4 - 1: HOIST DAILY INSPECTION

Inspection item	Description of inspection
Tagged Hoist	Check that hoist is not tagged with an out-of-order sign.
Control Devices	Check that all travel motions agree with control device markings. When checking hoist travel motion, always use the lifting or up control first.
Brakes	Check that all travel motions do not have excessive drift and that stopping distances are normal.
Hook	Check for damage, cracks, nicks, gouges, deformation of the throat opening, wear on saddle or load bearing point, and twist.
Hook Latch	Check that hook latch is not missing and that it operates properly.
Load Chain	Check for nicks, gouges, and any type of deformation or damage to the chain. Check for lubrication of load chain.
Reeving	Check that load chain is properly reeved, that load chain is not kinked or twisted, and that load chain parts are not twisted about each other.
Limit Devices	Check that the primary upper limit device stops lifting motion of the hoist load block at the upper limit of travel. Then, check that the lower limit device stops lowering motion of the hoist load back at the lower limit of travel.
Oil Leakage	Check for any sign of oil leakage on the hoist and on the floor area beneath the hoist.
Unusual Sounds	Check for any unusual sounds from the hoist and hoist mechanism while operating the hoist.
Warning Labels	Check that warning and other safety labels are not missing and that they are legible.

4.4 Hoist control

4.4.1 For hoists mounted to motorized trolleys follow the control instruction included in the trolley's Owner's Manual.

4.4.2 Single Speed Pendant Control – When using the pendant control depress the UP button to raise the hoist load chain/hook or the DOWN button to lower the hoist load chain/hook as shown in Figure 4 - 2. To stop motion release the buttons.

4.4.3 Dual Speed Control – Pendant controls supplied with dual speed hoists have two step control buttons. For low speed depress the button to the first step and for high speed, depress the
button fully to the second step. Use the UP button to raise the hoist load chain/hook or the DOWN button to lower the hoist load chain/hook as shown in Figure 4 - 2. To stop motion,
release the buttons.

Figure 4 - 2

4.4.4 **OPTIONAL** Emergency Stop Button – Press the Emergency Stop Button to perform an emergency stop and lock-out of hoist motion controls. Turn the Emergency Stop Button clockwise to unlock the controls and allow hoist operation.

CAUTION! Make sure the hoist completely stops before reversing direction.

5.0 Inspection

5.1 General

5.1.1 The inspection procedure and the following definitions are based on the ANSI/ASME B30.16 standard and pertain to the inspection procedure below:

- **Designated Person** – a person selected or assigned as being able to perform the specific duties to which he/she is assigned.
- **Qualified Person -** a person who, by possession of a recognized degree or certified professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter and work.
- **Normal Service** – service that involves operation with randomly distributed loads within the rated load limit or uniform loads less than 65% of rated load for not more than 25% of the time.
- **Heavy Service** – service which involves operation within the rated load limit which exceeds normal service.
- **Severe Service** – service which involves normal or heavy service with abnormal operating conditions.

5.2 Inspection classification

5.2.1 **Initial Inspection** – prior to initial use, all new, altered, or modified hoists shall be inspected by a designated person to ensure compliance with the applicable provisions of this manual.

5.2.2 **Inspection Classification** – the inspection procedure for hoists in regular service is divided into two general classifications based upon the intervals at which inspection should be performed. The intervals in turn are dependent upon the nature of the critical components of the hoist and the degree of their exposure to wear, deterioration, or malfunction. The two general classifications are herein designated as FREQUENT and PERIODIC, with respective intervals between inspections as defined below.

5.2.3 **FREQUENT Inspection** – visual examinations by the operator or other designated personnel with intervals as per the following criteria:

- Normal service – monthly
- Heavy service – weekly to monthly
- Severe service – daily to weekly
- Special or infrequent service – as recommended by a qualified person before and after each occurrence.

5.2.4 **PERIODIC Inspection** – visual inspection by designated person with intervals as per the following criteria:

- Normal service : yearly
- Heavy service : semi-annually
- Severe service : quarterly

- Special or infrequent service : as recommended by qualified person before the first such occurrence and as directed by the qualified person for any subsequent occurrences.

5.3 Frequent inspection

5.3.1 Inspections should be made on a FREQUENT basis in accordance with Table 5 - 1, "Frequent Inspection". Included in these Inspections are observations made during operation for any defects or damage that might appear between Periodic Inspections. Evaluation and resolution of the results of FREQUENT Inspections shall be made by a designated person such that the hoist is maintained in safe working condition.

TABLE 5 - 1 FREQUENT INSPECTION
All functional operating mechanisms for maladjustment and unusual sounds.
Operation of limit switches and associated components.
Hoist braking system for proper operation.
Hooks are compliant with Section 5.7.3 and ANSI/ASME B30.10.
Hook latch operation .
Load chain is compliant with Section 5.7.2.
Idle sprocket does not show signs of excessive wear.
Check for any loose parts or fasteners on the hoist structure.

5.4 Periodic inspection

5.4.1 Inspections should be made on a PERIODIC basis in accordance with Table 5 - 2, "Periodic Inspection." Evaluation and resolution of the results of PERIODIC Inspections shall be made by a designated person such that the hoist is maintained in a safe working condition.

5.4.2 For inspections where load suspension parts of the hoist are disassembled, a load test as per ANSI / ASME B30.16 must be performed on the hoist after it is re - assembled and prior to its return to service.

TABLE 5 - 2 PERIODIC INSPECTION
Requirements of frequent inspection (see Table 5-1).
Evidence of loose bolts, nuts or rivets.
Evidence of worn, corroded, cracked or distorted parts such as load blocks, suspension housing, chain attachments, clevises, yokes, suspension bolts, shafts, gears, bearings, pins and rollers.
Evidence of damage or excessive wear of load and idler sprocket.
Evidence of excessive wear on brake.
Electrical contactors for signs of pitting or any deterioration of visible controller contact.
Evidence of damage of supporting structure or trolley, if used.
Legible function labels on pendant control stations.
Legible warning label properly attached to the hoist
End connections of load chain.

5.5 Occasionally used hoists

- Hoist Idle More Than 1 Month, Less Than 1 Year: Inspect following FREQUENT Inspection criteria in Section 5.3.
- Hoist Idle More Than 1 Year: Inspect following PERIODIC Inspection criteria in Section 5.4.

5.6 Inspection records

5.6.1 Dated inspection reports and records should be maintained at time intervals corresponding to those that apply for the hoist's PERIODIC intervals as per Section 5.4. These records should be stored where they are available to personnel involved with the inspection, maintenance or operation of the hoist.

5.6.2 A long-term chain inspection program should be established and should include records of examination of chains removed from service so a relationship can be established between visual observation and actual condition of the chain.

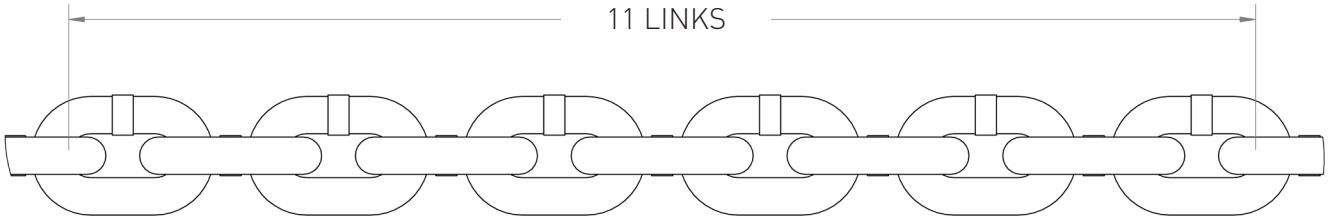
5.7 Inspection methods and criteria

5.7.1 This section covers the inspection of specific items. The list of items in this section is based on those listed in ANSI/ASME B30.16 for the Frequent and Periodic Inspections. In accordance with ANSI / ASME B30.16, these inspections are not intended to involve disassembly of the hoist. Disassembly for further inspection would be required if frequent or periodic inspection results indicate so. Such disassembly and further inspection should be performed by a Vulcan Hoist qualified technician.

TABLE 5-3: HOIST INSPECTION METHODS AND CRITERIA

Item	Method	Criteria	Action
Functional operating mechanisms	Visual Auditory	Mechanisms should be properly adjusted and should not produce unusual sounds when operated.	Repair or replace as required.
Limit Switches (Upper and lower)	Function	Proper operation. Actuation of limit switch should stop hoist.	Adjust or replace as required.
Braking System Operation	Function	Should stop the load without significant travel after motor is turned off.	Adjust or replace.
Hooks – Fretting wear	Measure	Excessive wear of original hook dimensions resulting in reduction of the load bearing cross section area of 10% or more. Refer to section 5.7.3 for details.	Replace
Hooks – Stretch	Measure	Any distortion resulting in throat opening larger than 5% of the original dimension. For additional details, refer to section 5.7.3.	Replace
Hooks – Bent Shank or Neck	Visual	Shank and neck portions of hook should be free of deformations.	Replace

Hooks – Swivel Bearing	Visual Function	Bearing parts and surfaces should not show significant wear, and should be free of dirt, grime and deformations. Hook should rotate freely with no roughness.	Clean/lubricate, or replace as required.
Hooks – Yoke Assembly	Visual	Should be free of significant rust, weld splatter, nicks, and gouges. Holes should not be elongated.	Measure, tighten, or replace as required.
Hooks – Idle Sprocket and Bearings (Bottom Hook on 2 & 3 Fall Hoist)	Visual Function	Pockets of Idle Sprocket should be free of significant wear. Idle Sprocket surfaces should be free of nicks, gouges, dirt, and grime. Bearing parts and surfaces of Idle Sprocket should not show significant wear. Idle Sprocket should rotate freely with no roughness or significant free play.	Clean/lubricate, or replace as required.
Hooks – Hook Latches	Visual Function	Latch should not be deformed. Attachment of latch to hook should not be loose. Latch spring should not be missing and should not be weak, latch movement should not be stiff – when depressed and released latch should snap quickly to its closed position.	Replace
Load Chain – Surface Condition	Visual	Should be free of rust, nicks, gouges, dents and weld splatter. Links should not be deformed, and should not show signs of abrasion. Surfaces where links touch should be free of significant wear.	Replace
Load Chain – Pitch and Wire Diameter	Measure	The "P" dimension should not be greater than maximum value listed in section 5.7.2. The "d" dimension should not be less than minimum value listed in section 5.7.2.	Replace. Inspect Load Sprocket (and Idle Sprocket for 2 & 3 fall hoist).
Load Chain – Lubrication	Visual Auditory	Entire surface of each chain link should be coated with lubricant and should be free of dirt and grime. Chain should not emit cracking noise when hoisting a load.	Clean/lubricate (see Section 6.2).
Load Chain – Reeving	Visual	Chain should be reeved properly through Load Sprocket (and Idle Sprocket for 2 & 3 fall hoist).	Reeve/Install chain properly (refer to section 6.4).
Load chain – Connection Yoke Chain Pin (2 & 3 Fall Hoists Only)	Measure	The Connection Yoke Chain Pin should not have any apparent deformation. The "d" dimension should not be less than the discard value listed at the bottom of Section 5.7.2.	Replace
Chain Container	Visual	Container should not be damaged. Brackets should not be deformed or missing.	Replace
Bolts, Nuts, and Rivets	Visual	Bolts, nuts, and rivets should not be loose.	Tighten or replace as required.



Electromagnetic Brake Assembly	Measure Visual	The electromagnetic motor brake gap is directly related to brake disk wear. As the disk wears, the brake gap will increase. The brake gap/wear dimension should not be more than 0.050". Bolts and screws should not be loose.	Section 6.6 for disc brake adjustment.
Contactors	Visual	Contact should be free of significant pitting or deterioration.	Replace
Load Sprocket	Visual	Pockets of Load Sprocket should be free of excessive wear.	Replace
Pendant – Housing	Visual	Pendant housing should be free of cracks and mating surfaces of parts should seal without gaps.	Replace
Pendant – Wiring	Visual	Wire connections to switches in pendant should not be loose or damaged.	Replace
Pendant – Switches	Function	Depressing and releasing push-button should make and break contact in switch contact block and result in corresponding electrical continuity or open circuit. Push-buttons should be interlocked either mechanically or electrically to prevent simultaneous energization of circuits for opposing motions. (up and down).	Replace
Pendant –Cable	Visual Electrical Continuity	Surface of cable should be free from nicks, gouges, and abrasions. Each conductor in cord should have 100% electrical continuity even when cord is flexed back-and forth.	Replace
Pendant - Cable Strain Relief Cable	Visual Functional	Pendant Cable Strain Relief Cable should absorb the entire load associated with forces applied to the pendant.	Replace
Pendant - Labels	Visual	Labels denoting functions should be legible.	Replace
Warning Labels	Visual	Warning Labels should be affixed to the hoist (see Section 1) and they should be legible.	Replace
Hoist Capacity Tag	Visual	The tag that indicates the capacity of the hoist should be legible and securely attached to the hoist cover.	Replace
Nameplates	Visual	The nameplates that indicate the hoist model, speed and motor data should be legible and securely attached to the hoist.	Replace

5.7.2 Load Chain Discard Criteria

The load chain used on VULCAN HOISTS is heat treated. No link or links can be added or welded after leaving factory. **DO NOT USE** hoist, even if there is only one (1) link worn out or elongated beyond the permissible dimensions listed below:

Capacity	Diameter	Length of 11 Links	
		Nominal	Permissible
ALL	7.9 mm	9.961" (253 mm)	10.157" (258 mm)

The sketch below shows the method of measuring the pitch in eleven (11) links.

5.7.3 Hook Measurements and Discard Criteria

As per the ASME B30.10 guidelines, Vulcan recommends changing any hook that exhibits the following signs of wear:

1. Missing or illegible hook identification and/or working load limit.
2. Excessive pitting, corrosion, cracks, nicks, or gouges on the hook body or retaining pin.
3. Any signs of welding or heat damage on the hook body or retaining pin.
4. Any wear, resulting in dimension change of more than 10% the original value on the hook body or retaining pin.
5. Permanent deformation resulting in throat opening exceeding the original value by 5%.

Note: if there is excessive throat opening, DO NOT attempt to repair by closing the hook. The strength of the hook will not be the same as the original.

The user is responsible for measuring the exact initial dimensions of the hook for future maintenance purposes. The following table can be used as a reference; please note that the dimensions provided are nominal and the actual hook dimensions may vary.

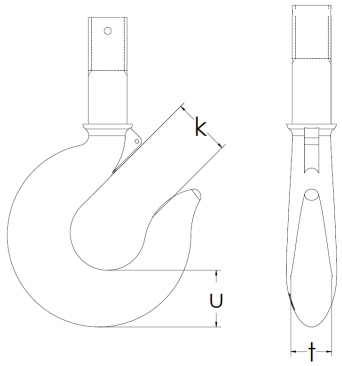


TABLE 5-4: HOOK DEFORMATION

Hook Capacity	k		t		u	
	Initial	Discard	Initial	Discard	Initial	Discard
1/4T - 1T	1.29	≥ 1.35	0.79	≤ 0.71 ≥ 0.87	0.96	≤ 0.86 ≥ 1.06
1/4T - 1 1/2T	1.10	≥ 1.16	0.87	≤ 0.78 ≥ 0.96	1.11	≤ 1.00 ≥ 1.22
2T, 3T and 5T	1.28	≥ 1.34	1.15	≤ 1.04 ≥ 1.27	1.45	≤ 1.31 ≥ 1.60

* All dimensions are in inches.

6.0 Maintenance

6.1 Maintenance schedule and records

Maintenance schedule should be based on inspection results and any maintenance procedure should be recorded in a log book for future reference.

6.2 Lubrication — load chain, hooks, and suspension

6.2.1 Load Chain

- For longer life, the load chain should be lubricated.
- The load chain lubrication should be accomplished after cleaning the load chain with an acid-free cleaning solution.
- Machine or gear oil (grade ISO VG 46 or 68 or equivalent) may be used as an alternative lubricant but must be applied more frequently.
- The chain should be lubricated every 3 months (more frequently for heavier usage or severe conditions).
- For dusty environments, it is acceptable to use a dry lubricant.

6.2.2 Hooks and Suspension Components:

- Hooks - Bearings should be cleaned and lubricated at least once per year for normal usage. Clean and lubricate more frequently for heavier usage or severe conditions.
- Suspension Pins – Lubricate at least twice per year for normal usage; more frequently for heavier usage or severe conditions.

6.3 Lubrication — transmission

6.3.1 **Oil level** – The oil level should be just below the hole when the hoist is leveled.

6.3.2 **Replacing oil** – Change gear oil once after the first 6 months of purchase and once every 2 years afterwards. The oil should be changed more frequently depending on the hoist's usage and operating environment. Follow the procedure below for replacing the gearbox oil for your hoist:

- To drain the current oil from the hoist, remove the "Oil Plug" on top of the hoist and the "Oil Drain Plug" on the bottom of the hoist. Allow the old oil to drain completely.
- NOTICE: Dispose of the used oil in accordance with local regulations.
- Refill the reducer with Meropa 320 (regular), Meropa EP 220 (synthetic) or equivalent oil until the oil level is just below the hole when the hoist is leveled.
- Warning! Using the incorrect type, grade and/or volume of oil and/or mixing different types of oil may cause serious damage to the reducer gearing.

6.4 Load chain

6.4.1 Lubrication and Cleaning – see Section 6.2.1.

6.4.2 Load Chain Replacement:

DANGER

The hoist must be properly powered and operational in order to perform the following procedures.

Be certain that the replacement chain is obtained from Vulcan Hoist Co. Ltd. and is the exact size, grade and construction as the original chain. The new load chain must have an odd number of links so that both its end links have the same orientation. If the load chain is being replaced due to damage or wear, destroy the old chain to prevent its reuse.

When replacing load chain, check for wear on mating parts, i.e. Load Sprocket, Chain Guides and Idle Sprocket, and replace parts if necessary.

1. Remove all chain components including the Bottom Hook Set Assembly and Stoppers from the chain for reuse on new chain. Inspect and replace any damaged or worn parts.
2. Activate the down button until there is approximately 12" of chain on the no load side.
3. Using a C-link, attach the new chain to the end link of the old chain on the no-load side. The end link of the new load chain should be connected so that the welded portions of the load chain's standing links are oriented to the outside as they pass over the sprocket.
4. Operate the hoist down to move the chain though the hoist body. Stop when a sufficient amount of new chain is accumulated on the load side.
5. Single fall hoists – Attach the components (step 4 above) to the chain. See sections 3.2, 3.3, and 3.4 for the proper locations.
6. 2 & 3 falls– Feed the end link on the load side of the new chain through the required chain components (step 4 above) and the bottom hook's idle Sprocket. Attach the remaining chain components to the chain referring to the sections 3.2, 3.3, and 3.4 for the proper locations. Connect the end link to the top connection yoke with the chain pin, slotted nut, and cotter pin. Ensure that chain remains free of twists. Refer to Section 3.4.
7. After installation has been completed, perform steps outlined in Section 3.6, "Functional verification and trial operations".

6.5 Adjusting your Vulcan limit switches

WARNING

DO NOT suspend a load on the hook when adjusting the limit switches.

1. Remove the bolts holding the plastic cover in place.
2. Remove the plastic cover, revealing the limit switch assembly.

Lower limit adjustment

To make your hoist stop at a certain height when lowering the hook:

3. Bring the hook to the desired height using the pendant control.
4. Loosen the two screws (9) on the limit switch without removing them.
5. Pull back the adjustment bar (10) so that the adjustment wheels can turn freely.
6. Turn on the lower limit adjustment wheel (7) towards the micro limit switch (12) until it clicks (see Figure 6-1 below).
7. Put back the adjustment bar (10) in place and tighten both screws (9).
8. Test the lower limit a few times until the hoist stops at the desired height. If not, repeat steps 3 to 8 for finer tuning. Test the lower limit a few times until the hoist stops at the desired height.

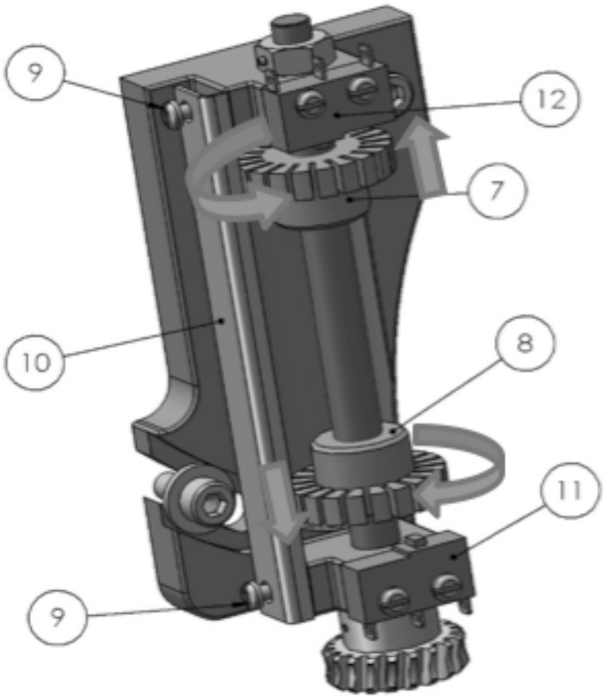

Figure 6-1

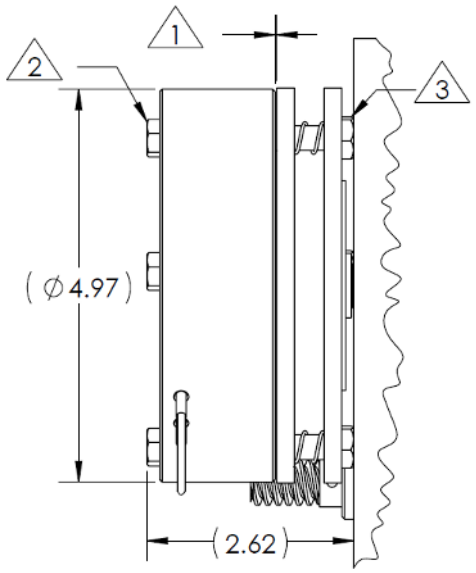
Upper limit adjustment

To make your hoist stop at a certain height when raising the hook:

10. Bring the hook to the desired height using the pendant control.
11. Loosen the two screws (9) on the limit switch without removing them.
12. Pull back the adjustment bar (10) so that the adjustment wheels can turn freely.
13. Turn on the upper limit adjustment wheel (8) towards the micro limit switch (11) until it clicks (see Figure 6-1 above).
14. Put back the adjustment bar (10) in place and tighten both screws (9).
15. Test the upper limit a few times until the hoist stops at the desired height. If not, repeat steps 10 to 15 for finer tuning.

Note: 2 to 3 teeth on the adjustment wheel represent approximately 1 foot of chain. Putting the adjustment wheel (7) closer to the micro switch (12) will reduce (restrain) the lower limit. Putting it further will increase it.

NOTICE



The limit switch is not 100% accurate, which means that the height calibrated for either upper or lower limit WILL vary up to 6 inches every time. Keep that in mind while adjusting your limit switch and make sure you test it a few times before operating the hoist.

WARNING

When adjusting the lower limit, always make sure that there is no tension in the free end of the chain. Failure to adjust the lower limit properly will damage your hoist and /or your chain.

When adjusting the upper limit, always make sure that you have a safe distance between the hook and the hoist body. Failure to adjust the upper limit properly will damage your hoist and or your chain.

6.6 Disc brake adjustment

ADJUSTMENT PROCEDURE	
1	Tighten all three mounting bolts (2) to snug, 3-4 N-m / 2.2-3.0 ft-lb
2	Adjust the gap (1) to .010 in by tightening or loosening the three bolts (3). Use a thickness gauge to check the gap at all three bolts (3)
3	Tighten all three mounting bolts (2) to 5-6 N-m / 3.7-4.4 ft-lb
4	Recheck the gap (1) with a thickness gauge. Repeat steps 2, 3 and 4 until the gap is adjusted to .010 in

CAUTION

Check the brake gap regularly and/or during the periodic maintenance of the equipment hoist. **Readjust the brake if the gap is larger than .030 in.**

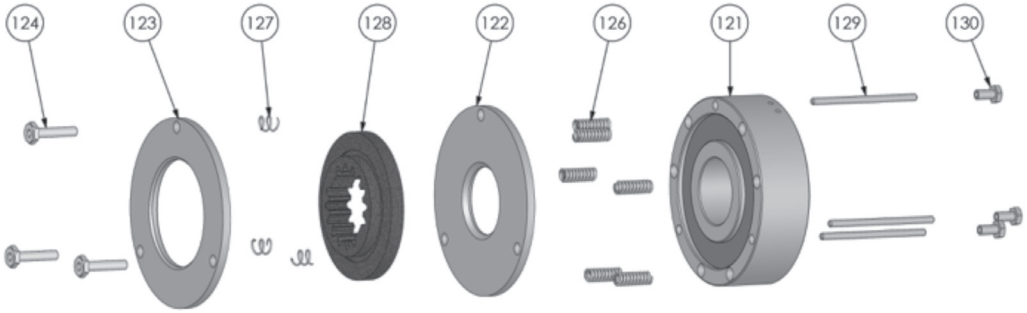


Figure 6-2

6.7 Storage

6.7.1 All hoists equipped with a vented oil cap should be stored with the cap oriented upwards to prevent oil leakage.

6.7.2 The storage location should be clean and dry.

6.8 Outdoor installation

6.8.1 For hoist installations that are outdoors, the hoist MUST BE covered and protected from the weather at all times.

6.8.2 Possibility of corrosion on components of the hoist increases for installation where salt air and high humidity are present. The hoist may require more frequent lubrication. Make frequent and regular inspections of the unit's condition and operation.

6.8.3 For hoist installations where temperature variations introduce condensation into the hoist additional inspection and more frequent lubrication may be required.

6.8.4 Refer to for allowable environmental conditions.

6.9 Operational environment

Unless otherwise specified, the hoist does not conform to the following operational environments and should therefore not be used for any such applications:

- Explosive gases or vapor.
- Organic solvents or volatile power.
- Excessive amounts of powder and dust of general substances.
- Excessive amount of acids or salts.

7.0 Troubleshooting

WARNING

Hazardous voltages are present in the hoist and in connections between components.

De-energize equipment before performing ANY maintenance. Refer to ANSIZ244.1, "Personnel Protection – Lockout/Tag out of Energy Sources".

To avoid a shock hazard, DO NOT perform ANY mechanical or electrical maintenance on the dual-speed (or VFD control) hoist within 5 minutes of de-energizing (disconnecting) the trolley or hoist.

Only trained and qualified personnel should inspect and repair this equipment.

TABLE 7-1: TROUBLESHOOTING GUIDE

Symptom	Cause	Remedy
Hoist moving in wrong direction	Power supply reversed phased	Switch 2 of the 3 power supply cords wired at the power source. (see Section 3.5 for instructions on how to check for correct power supply phase connections).
	Improper electrical connections	Refer to wiring diagram and check all connections.
Hoist will not operate	Loss of power	Check circuit breakers, switches, fuses, and connections on power lines/cable.
	Low voltage in hoist's power supply	Determine cause of low voltage and bring to within plus or minus 10% of the voltage specified on the motor nameplate. The voltage should be measured at the hoist contactor.
	Wrong voltage or frequency	Check voltage and frequency of power supply against the rating on the nameplate of the motor.
	Hoist overloaded	Reduce load to within rated capacity of hoist.
	Motor overheated and thermal overload protector has tripped	See Troubleshooting Problem "Motor or brake overheating".
	Improper, loose, or broken wire in hoist electrical system	Shut off power supply, check wiring connection on hoist control panel and inside push - button pendant.
	Brake does not release	Check motor brake coil for continuity. Replace brake if needed.
	Faulty magnetic contractor	Check coil for open or short circuit. Check all connections in the control circuit. Check for open contactors. Replace as needed.
	Emergency Stop Depressed on Push Button Pendant Control	Turn the Emergency Stop Button Clockwise to unlock the control and allow hoist operation.
	Defect in control transformer	Check transformer coil for signs of overheating. Disconnect transformer and check for open winding.

TABLE 7-1 TROUBLESHOOTING GUIDE (CONT'D)		
Symptom	**Cause**	**Remedy**
Hoist Will not Operate	Motor burned out	Replace motor frame/stator, shaft/rotor, and any other damaged parts.
	Down circuit open	Check circuit for loose connections. Check down side of limit switch for malfunction.
	Broken conductor in pendant cord	Check the continuity for each conductor in the cable. If one is broken, replace entire cable.
	Faulty magnetic contactors	Check coils for open or short circuit. Check all connections on motor circuit. Check for burned contact. Replace as needed.
Hoist lifts but will not lower	Faulty switch in pendant	Check electrical continuity. Check electrical connections. Replace or repair as needed.
	Hoist overloaded	Reduce load within rated capacity.
	Up circuit	Check circuit for loose connections. Check up side of limit switch for malfunction.
	Broken conductor in pendant cord	Check the continuity of each conductor in the cable. If one is broken, replace entire cable.
Hoist lowers but will not lift	Faulty magnetic contactor	Check coils for open or short circuit. Check all connections on motor circuit. Check for burned contacts. Replace as needed.
	Faulty switch in pendant	Check electrical continuity. Check electrical connections. Repair or replace as needed.
Hoist will not lift rated load or does not have the proper lifting speed	Hoist overloaded	Reduce load to within rated capacity.
	Low voltage in hoist's power supply.	Determine cause of low voltage and bring to within plus or minus 5% of voltage specified on the motor nameplate. The voltage should be measured at the hoist contactor.
Load drifts excessively when hoist is stopped	Motor brake not holding	Check brake for proper "Brake Gap" dimension (section 6.6). Replace if needed.
Motor or brake overheating	Excessive load	Reduce load to within rated capacity of hoist.
	Excessive duty cycle	Reduce frequency of lifts.
	Wrong voltage or frequency	Check voltage and frequency of power supply against the rating on the nameplate on the motor.
	Extreme external heating	Above an ambient temperature of 40°C, the frequency of hoist operation must be reduced to avoid overheating of the motor. Special provisions should be made to ventilate the hoist or otherwise shield it from the heat.
Hoist operates intermittently	Connectors making poor contact	Check movement of spring loaded arm, weak spring, connections and shoe. Replace as needed.
	Contactor contacts arcing	Check for burned contacts. Replace as needed.
	Loose connection in circuit	Check all wires and terminals for bad connections. Replace as needed.
	Broken conductor in Pendant Cord	Check for intermittent continuity in each conductor in the Pendant Cord. Replace entire Pendant Cord if continuity is not constant.

8.0 Part list

Please consult our website vulcanhoist.com for the complete parts list.

9.0 Warranty

Warranty explanation and terms

All product sold by the Vulcan Hoist Company Ltd. (hereinafter referred to as, Vulcan) are warranted to be free from defects in material and workmanship from date of shipment by Vulcan for the following periods:

Vulcan Manual products – 2 years

Nova Manual products – 1 year

Electric Hoists & Trolleys– 2 years

Spare / Replacement Parts – 1 year

The product must be used in accordance with manufacturer's recommendations and must not have been subject to abuse, lack of maintenance, misuse, negligence, or unauthorized repairs or alterations.

Should any defect in material or workmanship occur during the above time period in any product as determined by Vulcan's inspection of the product, Vulcan agrees, at its discretion, either to replace (not including installation) or repair the part or product free of charge and deliver said item F.O.B. Vulcan place of business to customer.

Customer must obtain a Return Good Authorization as directed by Vulcan prior to shipping the product for warranty evaluation. An explanation of the complaint must accompany the product. Product must be returned freight prepaid. Upon repair, the product will be covered for the remainder of the original warranty period. If it is determined there is no defect, or that the defect resulted from causes not within the scope of Vulcan's warranty, the customer will be responsible for the costs of returning the product.

Vulcan disclaims any and all other warranties of any kind expressed or implied as to the product's merchantability or fitness for a particular application. Vulcan will not be liable for any deaths or injuries to people, any property damages, or any additional expenses resulting from failure to follow the guidelines (intentionally or due to negligence) for safe installation, use, maintenance and inspection described in this manual and all applicable standards.

APPENDIX

DEFINITIONS OF VARIOUS HOIST TERMS

Abnormal operating conditions - Environmental conditions that are unfavorable, harmful, or detrimental to or for the operation of a hoist, such as excessively high or low ambient temperatures, exposure to weather, corrosive fumes, dust laden or moisture laden atmospheres, and hazardous locations.

Below - the - hook lifting devices - Devices that are not normally reeved onto the hoist chain, such as hook - on buckets, magnets, grabs, and other supplemental devices used for ease of handling certain types of loads. The weight of these devices is to be considered part of the load to be lifted.

Block loads - An action that facilitates the removal of slings or other lifting devices from under the load, accomplished by bringing the load to rest on wood, metal, or other spacers between the floor and load.

Brake, holding - A friction brake for a hoist that is automatically applied and prevents motion when power to the brake is removed.

Chain, load - Welded ling chain rated for lifting.

Chain, roller - A series of alternately assembled roller links and pin links in which the pins articulate inside the bushings and the rollers are free to tum on the bushings. Pins and bushings are press fit in their respective link plates.

Chain, welded link - A chain consisting of a series of interwoven links formed and welded.

Designated person - A person selected or assigned by the employer or the employer's representative as being competent to perform specific duties.

Guide, chain - A means to guide the load chain at the load sprocket.

Hoist - A machinery unit that is used for lifting or lowering a freely suspended (unguided) load.

Lifting devices - Devices that are not normally reeved onto the hoist chain, such as hook - on buckets, magnets, grabs, and other supplemental devices used for ease of handling certain types of loads. The weight of these devices is to be considered part of the load to be lifted.

Limit device - A device that is operated by some part or motion of a power driven hoist to limit motion.

Limit device, primary upper - See primary upper - limit device.

Load - The total superimposed weight on the load block or hook.

Load, rated - The maximum load for which a hoist is designated by the manufacturer or a qualified person.

Load block - The assembly of hook, swivel, bearing, sprockets, pins, and frame suspended by the hoisting load chain. This shall include any appurtenances reeved in the hoisting load chain.

Load chain - See chain, load.

Load suspension parts - The load suspension parts of the hoist are the means of suspending the hoist structure and load such as hooks, lugs, load blocks, drum and rope/cable, or sprocket and chain.

Normal operating conditions - Conditions during which a hoist is performing functions within the scope of the original design.

Overload - Any load greater than the rated load.

Over travel restraint - A device used to prevent the slack load chain from inadvertently being lowered out of the load sprocket.

Parts (lines) - Number of lines of chain supporting the load blocks or hook.

Pendant station - Controls suspended from the hoist for operating the unit from the floor.

Power transmission parts - The machinery components including the gears, shafts, clutches, couplings, bearings, motors, and brakes.

Primary upper - limit device - The primary upper - limit device is the first limit device that will be activated to control the upper limit of travel of the load block when a hoist is equipped with more than one upper - limit device.

Qualified person - A person who, by possession of a recognized degree in an applicable field or a certificate of professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter and work.

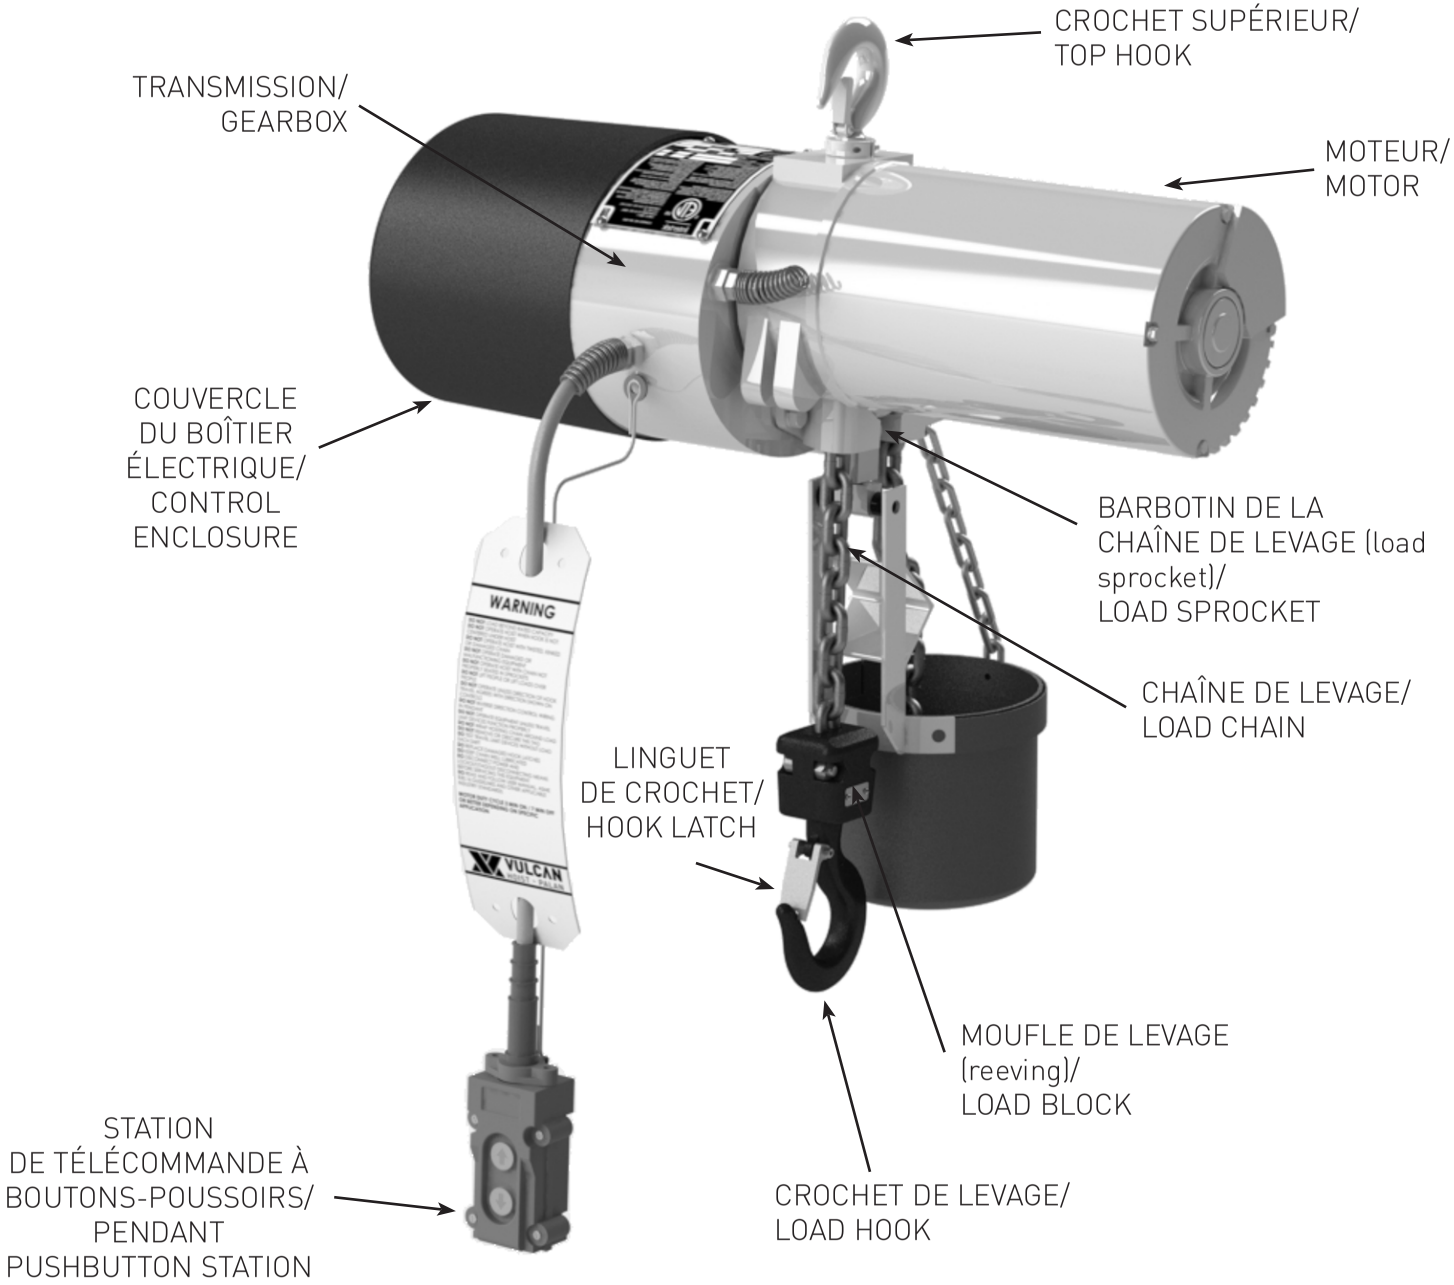
Rated load - See load, rated.

Reeving - A system in which a chain travels around sprockets, roller chain - See chain, roller.

Sheave - A grooved wheel or sprocket used with a chain to change direction and point of application of a pulling force.

Sprocket, idler - A freely rotating device that changes the direction of the load chain.

Sprocket, load - A hoist component that transmits motion to the load chain. This component is sometimes called load wheel, load sheave, pocket wheel, or chain wheel.



Switch - A device for making, breaking, or changing the connections in an electric or pneumatic circuit (valve).

Trolley - A machine unit that travels on a monorail track or crane bridge girder.
