

Appendix 3C – Tote Road Drawings

The Tote Road upgrades are an integral part of the Approved Project and this work was approved under Project Certificate No. 005. DFO Authorization NU-06-0084 allows Baffinland to undertake the works on water crossings (bridges and culverts). Quarry permits and other necessary authorizations have obtained (refer to Volume 2, Table 2-2.3 Current Authorizations).

Project Certificate condition No. 29 requires that Baffinland “provide the respective regulatory authorities with construction engineering design and drawings”. In accordance with this requirement, Appendix 3C contains design drawings for the Tote Road upgrades. These drawings are provided in the ERP submission for information purposes.

The ERP component that involves the Tote Road is the transportation of iron ore by trucks and the associated interaction of this activity with the receiving environment.
