AGNICO EAGLE

Summary of FEIS Results

- Terrestrial Wildlife and Wildlife Habitat
  - Direct loss of habitat
  - Loss of bird habitat and potential denning habitat
  - Mine operations noise, haul road traffic are expected to cause indirect impacts on wildlife, including caribou.
  - Haul traffic is expected to have an effect on caribou movements, however, the TEMP will implement mobile caribou protection measures and upon closure caribou will cross freely.
- With Mitigation measures in place, there will be no adverse effect on caribou or other terrestrial wildlife in the project area

AGNICO EAGLE

Monitoring that is proven and effective:

- Caribou radio-collaring program in collaboration with the GN.
- Mine Site and Haul Road surveys
- Working with BL HTO, KivIA and elders
- Local field technicians

Based on workshop discussions, Agnico Eagle has added the following:

- Increased Mine Site and Haul Road Height of Land Surveys
- 2 dedicated local technicians monitoring wildlife along roads (one BL HTO representative)
- Gates and alert signs

Considering the following monitoring:

- Reconyx camera's in specific areas
- Improve detection beyond 3 km (i.e. motion sensing camera's at the mine site similar to Sabina)

AGNICO EAGLE

- As per Meadowbank NIRB Project Certificate conditions we meet with HTO annually to discuss the results of the wildlife monitoring
- Overall, good feedback over the years from the HTO, however few comments from NIRB interveners regarding TEMP methods and caribou mitigation since 2008
- As part of the Whale Tail Pit review process and to fulfill our NIRB IR response we have been collaborating with the HTO, GN, and KivIA by hosting three workshops on:
  - November 18th, 2016 (Winnipeg)
  - Feb 22 and 23rd, 2016 (Ottawa)
  - June 20 and 21st, 2016 (Winnipeg)
- Committed to protecting caribou throughout our operations, with heightened protection measures during fall and spring migration

TERRESTRIAL ENVIRONMENT MONITORING
ᓄᓇᒥᐅᑕᐃᑦ ᖃᐅᔨᓴᕆᔨᖃᖅᑕᕐᓂᖅ

AGNICO EAGLE

- Tiered monitoring and mitigation approach that is protective in sensitive seasons
- Routine monitoring occurs year round (Green)
- Level 1 (Yellow) – using caribou collaring information, 1 caribou is within 25 km of activities
  - Increased monitoring
  - Increased notifications
- Level 2 (Yellow) – GST is exceeded within 4 km (or maximum distance observed)
  - **Increased monitoring**
  - Increased mitigation:
    - Convoys,
    - Speed reduction,
    - Alerts including dispatch notifications every 3hr
  - Notify KivIA, GN, BL HTO

LEVEL 3 TRIGGERED
REMAINDER OF YEAR

- Speeds reduced to 30 km/hr near caribou
- Limit non-essential traffic
- Site-wide notification of caribou presence and location will be confirmed by Environmental Technicians
- Consult with KivIA, GN, HTO
- Level 2 monitoring continues

LEVEL 3 TRIGGERED
APRIL 1 TO MAY 25 AND SEPTEMBER 16 TO NOVEMBER 7

- Suspend non-essential vehicles within a 500 m radius of the group of caribou must stop and yield to caribou
- Road will be closed to non-essential vehicles
- Trips in progress will be completed to the mill and could be accompanied by a pilot vehicle; 30 km/hr speed limit imposed on haul road
- Haul road gates closed and non-essential vehicle use ceases
- Hourly site-wide notification by dispatch of caribou presence; location and proximity of caribou confirmed by Environment Technician
- Consult daily with KivIA, GN, HTO to discuss response and options to re-open road
- Road may be re-opened if Project tolerant caribou are grazing next to road and not migrating; 30 km/hr speed limit imposed along haul road

Level 3 monitoring:

- Height-of-Land surveys at least 2 x daily nearest to the group of caribou
- Haul road surveys and Height-of-Land surveys daily
- GN satellite collar information reviewed daily, or as frequently as made available to Agnico Eagle

- Agnico Eagle believes the proposed tiered approach:
  - Is realistic and feasible;
  - Proven to be effective along the AWAR; and
  - Supported by the interveners during recent workshops
- Based on feedback during the workshops, Agnico Eagle:
  - Completed additional analysis including: revised viewshed analysis, seasonal group size thresholds, ZOI, Encounter rate and residency analysis
  - Revised the TEMP including but not limited to updated decision trees based on GSTs and distance thresholds

AGNICO EAGLE

- Other Monitoring Techniques to consider to help address detection at greater distances (i.e., >3 km from Project) as discussed in workshops:
  - Height of land surveys (with platforms) at appropriate locations through meaningful analysis (viewshed analysis) and testing of detection distances and as many as possible as frequent as necessary, particularly during the two main time frames
  - Aerial monitoring – potential use of drones; potential use of fixed wing aircraft to determine distribution and abundance (perhaps only during certain time frames)?
  - Geofence programming of collars – will have to talk to the GN about the merits of this method, but will help with fine-scale analysis of caribou movements and distribution
  - Military grade cameras

AGNICO EAGLE

- Cumulative Encounter and Residency Assessment for Caribou
  - Examined caribou (Ahiak, Beverly, Lorillard and Wager Bay) interaction with developments in their spring migration, fall migration and winter seasonal ranges
  - All developments in the public realm were plotted on a map including communities, exploration camps, contaminated sites, active mines, inactive mines, etc
  - Interactions were assessed at different points in time including before operations, addition of Meadowbank and AWAR operations, addition of the Whale Tail Pit and Haul Road and finally addition of other future developments in the Kivalliq
  - Interactions include a count of how many times a caribou interacts with a hypothetical ZOI from developments and then how much time is spent within each hypothetical ZOI

AGNICO EAGLE

TERRESTRIAL ENVIRONMENT MONITORING - BIRDS
ᓄᓇᒥᐅᑕᐃᑦ ᖃᐅᔨᓴᒪᔪᖃᑦᑕᕐᓂᖅ - ᑎᓪᓗᐊᑦ

- Monitor shoreline birds, complete PRISM plots and will conduct bird surveys prior to and during flooding activities.
- Agnico Eagle developed:
  - “waterbird monitoring and mitigation plan” to ensure the protection of birds during flooding activities
  - “Fishout waterbird mitigation plan” to ensure the protection of waterbirds during the Whale Tail Lake North Basin fishout
- Conduct WSLRA according to ECCC recommendations
- Monitor raptor nesting

- ᖃᐅᔨᓴᒪᔪᖃᑦᑕᕐᓗᓂᑦ ᓂᕆᔨᒥᐅᑕᐃᑦ ᑎᓪᓗᐊᑦ, ᐱᐊᓂᓗᓂᑦ PRISM-ᒧᑦ ᐊᑐᖅᑕᐅᔪᑦ ᐊᒻᒪᓗ ᑎᓪᓗᐊᓂᖅ ᖃᐅᔨᓴᐃᓂᖃᑦᓯᓗᓂᖅ ᐃᒻᒥᖅᑐᐃᓂᖃᐊᖅᓂᕐᒧᑦ ᐊᒻᒪᓗ ᐃᒻᒥᖅᑐᐃᑎᑦᓗᓂᑦ.

TERRESTRIAL ENVIRONMENT
ᓄᓇᒥᐅᑕᐃᑦ

In summary Agnico Eagle will:

- Adhere to the TEMP v4 which includes improved:
  - Decision trees with clear commitments to monitoring and mitigation based on the best available data
  - Implement new monitoring techniques (ie HOL, cameras, etc.)
  - Implement new data analysis to evaluate caribou migration (i.e. ZOI)
  - Hire an HTO representative to assist in wildlife monitoring
- Implement a Terrestrial Advisory Group (TAG)
- Annual Terrestrial Monitoring Auditing through the TAG
- Continued collaboration with the GN (and the TAG) on caribou collar data analysis methods and collar study objectives
