NO.	TOPIC	AGNICO EAGLE RESPONSE
ECCC #1	**Mitigation of (GHG) Emissions**	Measures provided
ECCC #2	**Air and Dustfall Monitoring Locations**	The dustfall monitoring proposed for the three locations along the Whale Tail Haul Road (kilometers 18, 36, and 54) will employ the same methods as used to assess dustfall along the existing All-Weather Access Road between the Meadowbank Mine and Baker Lake (kilometers 18, 76, and 78)
ECCC #3	**Nitrogen Dioxide (NO2) Concentrations**	Statistics and modelling results reviewed – no change to HHRA
ECCC #17	**Climate Change and Timing of Predictions**	Agnico Eagle will follow the ARD/ ML Management and update the Waste Rock Storage Facility Management Plan to include additional storage of NPAG and NML material in the East WRSF as a contingency for closure and will use adaptive management to ensure long-term success in post-closure. Experience and knowledge gained through operations and closure of Meadowbank facilities will continue to inform final closure planning for the Project.

NO.	TOPIC	AGNICO EAGLE RESPONSE
HC 2	**Air Quality**	Consistent with the approach along the AWAR, Whale Tail Pit Haul Road watering and/or the application of chemical suppressants will also be employed in sensitive areas identified by local stakeholders or Agnico Eagle (e.g., adjacent to traditional land use areas). Improvements to best practices are expected over time and will continue to be informed by Agnico Eagle's Air Quality and Dustfall Monitoring Program
KivIA-TC-Air-03 (PreTC-Air-3)	**Air concentrations from explosives detonation**	Response consistent with ECCC 3
KivIA-TC-Air-04 (PreTC-Air-4)	**Dust deposition**	A key finding from the dust monitoring report includes the following: "Cumulative results to date indicate that without dust suppressant application, average rates of dustfall decline below Alberta Environment's guideline for recreational areas within 100 m of the AWAR and meet the range of background rates within 200 m."
KivIA-TC-Air-05	**Mitigation of dust from the roads**	Refer to HC 2 – adaptive management measures provided in response to Technical Comment.

FISHERIES/OFFSETTING
ᐃᖅᑲᓕᓗᓂᑦ/ᐊᖅᑭᑎᐊᖅᓯᓂᑦ

NO.	TOPIC	AGNICO EAGLE RESPONSE
DFO 1	**Freshwater Environment – Habitat Losses**	Agnico Eagle agrees and included bottom dwellers (i.e., burbot) in the conceptual fisheries offsetting calculations and will do so in the Final Offsetting Plan. Agnico Eagle agrees with DFOs recommendation and will adapt CREMP closure monitoring and fisheries and offsetting monitoring of the pit portion of Whale Tail Lake to ensure the ability to demonstrate suitable water quality in closure. If deemed unsuitable, Agnico Eagle will consider contingency fisheries offsetting options located outside the Whale Tail Lake basin that are acceptable to DFO, KivIA, and local stakeholders.

NO.	TOPIC	AGNICO EAGLE RESPONSE
DFO 2	**Freshwater Environment – Fish Out**	Agnico Eagle will utilize the Excel form provided by DFO for the Phaser Lake fish-out to report results of the Whale Tail Lake (North Basin) fish-out program Population estimates will also be made during the CPUE phase of the fish-out using both the Leslie and DeLury methods, and this information will be communicated with DFO.
DFO 3	**Freshwater Environment – Valued Components**	Agnico Eagle has re-evaluated the assumptions of the valued components (VCs) for fish and fish habitat. Agnico Eagle is confident that the environmental assessment includes all fish species in the Local Study Area (LSA), as stated in the reply to Information Request (IR) DFO-3.
DFO 4	**Freshwater Environment – Habitat Alteration**	Agnico Eagle will provide information outlining all habitat gains and losses in the next version of the Final Offsetting Plan.

GROUNDWATER
ᓂᓇᒥᑦ ᐃᒪᐃᑦ

NO.	TOPIC	AGNICO EAGLE RESPONSE
NRCan 5	**Groundwater Sampling**	Agnico Eagle acknowledges and thanks NRCan for the comment.
NRCan 7	**Groundwater quality**	Agnico Eagle agrees with the recommendation of NRCan and in 2016 installed a multi-level Westbay well beneath Whale Tail Lake near the proposed attenuation pond and near the pit location to collect representative groundwater samples. Agnico Eagle has used the results of the site specific groundwater sample collection analyses to characterize the baseline groundwater chemistry and hydrogeological characterization. Agnico Eagle will continue to monitor the groundwater conditions and hydrogeological characterization of the Whale Tail Pit site according to the FEIS Volume 8, Appendix 8-E.3.
NRCan 8	**Groundwater Modelling**	Agnico Eagle acknowledges NRCan's comment.

NO.	TOPIC	AGNICO EAGLE RESPONSE
GN-21	**Sexual health education**	Agnico Eagle will continue to work with stakeholders and employees to ensure that wellbeing information is integrated into employee orientation programming to increase awareness of STIs and safe sexual practices to employees and their sexual partners.
GN-22	**Use of community health centres**	Agnico Eagle will cooperate with the GN Department of Health to adapt monitoring efforts around the use of community health centres and interactions between staff at site clinics and community health centre staff.
GN-23	**Absence from work**	While respecting the privacy of our employees, Agnico Eagle will work with the GN to ensure appropriate data is made available; however, Agnico Eagle will not collect information that steps into the private lives of our employees.
GN-24	**Migration**	Agnico Eagle will continue to work with communities to identify local labour and strategies to remove barriers to employment.

SSWQO

NO.	TOPIC	AGNICO EAGLE RESPONSE
ECCC #16	**Site-Specific Guideline for Arsenic**	Updated water quality predictions are available for the Project which are based on an updated water balance, additional geochemistry data, and additional receiving environment data; updated predictions were developed for both the dissolved and total fraction (see response to ECCC-14). At this time, Agnico Eagle is evaluating options for treatment of arsenic the SSWQO is considered to afford a sufficient and likely similar level of protection to aquatic life in Mammoth Lake and downstream lakes as would be afforded if the CCME updated the current CWQG-PFAL using the CCME (2007) protocol and in consideration of site-specific information. Therefore, using a lower SSWQO for arsenic is not considered to be warranted.

THERMAL MODELLING – UPDATED SLIDE
ᐅᓇᖅᓂᖅᓗᑦ ᐋᖅᑭᐅᒪᔪᓕᐅᖅᓂᖅ

NO.	TOPIC	AGNICO EAGLE RESPONSE
NRCan 3	**Design Cover Thickness for the Waste Rock Storage Facility**	Agnico Eagle will perform thermal modelling of the WRSF, incorporating climate change and acquired information from the Meadowbank WRSF monitoring program, and will use the result of the model to support final design of the WRSF including that of the proposed cover. Modelling results and revised design, if any, will be submitted to interested parties prior to ~~operations~~ the Final Hearing.
NRCan 4	**Permafrost and Talik Distribution in the Project Area**	Additional thermal analyses as recommended by NRCan were undertaken in February 2017. At this time Agnico Eagle reviewed thermistor data collected to date at the site and undertook analyses to re-assess talik conditions under Whale Tail Lake based on the results of numerical thermal modelling from north of the Whale Tail Pit, south through the middle of Whale Tail Lake . The updated thermal modelling results are consistent with what was presented in the FEIS Volume 6, Appendix 6-A.

WATER QUALITY – UPDATED SLIDE
ᐃᒪᐅᑦ ᖃᓄᐃᓐᓂᖏᓐ

NO.	TOPIC	AGNICO EAGLE RESPONSE
NRCan 6	**Long-Term Water Quality in the Flooded Pit**	Agnico Eagle acknowledges NRCan's comment and will continue verifying the hypothesis that the pit acts as a recharge area using continuous monitoring throughout the mine's life.
INAC-TRC #4	**Long-Term Water Quality in the Flooded Pit**	Refer to ECCC13 and NRCan-#6
INAC-TRC #6	**Post-Closure Surface Water Impacts**	Agnico Eagle has committed to treating water from the WRSF pond or implement a long-term passive solution until it meets acceptable direct discharge criteria Refer to INAC-TRC #3
INAC-TRC #7	**Post-Closure Water Quality Uncertainty**	Agnico Eagle is of the opinion that all possible proactive measures will be identified through a monitoring and the management response approach (as identified in the Meadowbank AEMP; Azimuth 2012) which will be sufficient to reduce future uncertainties and risk around water quality for the Whale Tail Project (Project) during operations and into closure/post-closure.

NO.	TOPIC	AGNICO EAGLE RESPONSE
DFO 9	**WQ and Flow Monitoring Plan**	will ensure that all Agnico Eagle staff are aware that occurrences affecting fish and fish habitat are to be reported immediately and directly to DFO
KivIA-TC-Freshwater Environment 01	**Increase of arsenic levels during the pit flooding and post closure**	Details on the treatment design and treatment quality will be provided prior to the Final Hearing.
KivIA-TC-Freshwater Environment 02	**The potential for mercury (methylmercury) result of flooding**	Agnico Eagle agrees with this comment and is committed to temporal monitoring fish mercury concentrations in relation to the flooding of Whale Tail Lake (South Basin). Mercury-related monitoring will be integrated into the Fisheries and Offsetting Monitoring Plan prior to the Final Hearing.
KivIA-TC-Freshwater Environment 03	**Phosphorus enrichment**	Discussion -how the installation of these wells are related to the Subject: Significant phosphorus enrichment will lead to the predicted average dissolved phosphorus being higher than the meso-eutrophic trigger value in Mammoth Lake.

NO.	TOPIC	AGNICO EAGLE RESPONSE
ECCC #5	**Migratory Birds: Waterbird Entanglement**	Agnico Eagle will prepare a stand-alone mitigation and monitoring plan for diving waterbirds, specific to the Whale Tail fish-out operations.. The plan will be included as an appendix to the Fish-out work plan, and will be reviewed with ECCC prior to initiating the fish-out.
ECCC #6	**Migratory Birds: Use of Tailings Storage Facility (TSF)**	Agnico Eagle does not currently include upland birds in the current pit and mine site surveys, but will discuss this or other means of monitoring upland birds with ECCC.
ECCC #8	**Species at Risk**	ECCC concerns will be addressed by existing mitigation in the next iteration of the TEMP which will be submitted to NIRB prior to the Final Hearing. The TEMP will include global mitigation of restriction activities to the mine footprint, prohibiting harassment of wildlife, providing wildlife with the right-of-way and providing environmental awareness training to site staff.

NO.	TOPIC	AGNICO EAGLE RESPONSE
ECCC #9	**Migratory Birds: Mitigation and Monitoring**	The TEMP will be updated to include the mitigation recommended by ECCC that can be practically implemented. Agnico Eagle has committed to preparing a mitigation plan for the protection of diving waterbirds prior to any fish-out. Agnico Eagle will make efforts to avoid clearing vegetation during the migratory bird nesting period (mid-May to mid-August), and will consult with ECCC prior to any clearing of vegetation during this season.
ECCC #10	**Migratory Birds: Flooding**	Agnico Eagle will describe mitigation to reduce impacts to migratory bird nests during flooding as an appendix to the TEMP.
GN-05	**Disruption of Caribou Movements**	preliminary investigations into potential caribou movement areas along the Whale Tail haul road have been identified, and will be further investigated in 2017, and the height-of-land survey locations have been placed in close proximity to these movement areas. Information will be contained within the TEMP and include monitoring locations and monitoring frequency.

NO.	TOPIC	AGNICO EAGLE RESPONSE
GN-06	**Caribou group sizes for triggering adaptive management**	Agnico Eagle will work with the GN, KivIA, and HTO to finalize thresholds in the final TEMP.
GN-07	**Monitoring to support adaptive management**	A viewshed analysis of the height of land survey locations and the Whale Tail haul road is currently being completed.
GN-08	**Adaptive management for caribou**	The revised TEMP will also consider group size (as discussed in GN-06), and will extend the mitigation thresholds to last for one week minimum regardless of subsequent caribou observations after the threshold is triggered; this will be adjusted based on seasonality to ensure maximum protection of caribou.
GN-09	**Air traffic**	Although the flight safety of employees and the aircraft will be paramount, the updated TEMP will suggest that aircraft pilots will receive the site-wide notifications of caribou movements, and include a recommended minimum distance from all caribou of 300 m vertically and 1 km horizontally.

NO.	TOPIC	AGNICO EAGLE RESPONSE
GN-10	**Blasting and wildlife**	Regarding updates to the TEMP, Agnico Eagle agrees with the GN's recommendations and will update the procedures to reduce sensory disturbance to caribou as a result of blasting. Consistent with other mine site activities, Agnico Eagle has developed trigger levels to account for blasting noise and have selected HOL locations that will allow caribou detection 3 to 5 km away. Agnico Eagle is investigating the viewshed from nearby height-of-land (see GN-07) and will work with the GN to define a "minimum no blasting buffer".
GN-11	**Problem carnivores**	the TEMP and specifically Appendix A: Wildlife Protection and Response Plan includes consideration of these suggestions.
GN-12	**Wildlife harvesting**	Agnico Eagle will continue conversations with the Baker Lake HTO about the no shooting zone, will continue to implement a check-in/check-out procedure that discusses the no shooting zone at the security gate at KM 0. Furthermore, Agnico will post 1 km markers out on the land for spatial reference to hunters.

NO.	TOPIC	AGNICO EAGLE RESPONSE
GN-13	**Traffic monitoring and management**	Agnico Eagle is confident that the assessment of no significant impacts in the FEIS is accurate, and expects to further refine the TEMP to incorporate the best available information for the protection of caribou and caribou movement.
GN-14	**Muskox mitigation and management**	Agnico Eagle agrees with the GN and will continue to monitor muskox presence as part of the TEMP (consistent with Meadowbank operations).
GN-15	**Road design to facilitate caribou movement**	The specifics of the haul road design will be provided in the next version of the TEMP and corresponding monitoring and mitigation will also be provided in this revision as per the outcome of discussions between Agnico Eagle, the KivIA and the GN at our last two workshops.

NO.	TOPIC	AGNICO EAGLE RESPONSE
GN-16	**Scope of assessment and size of the wildlife effects study areas**	The LSA and RSA (illustrated in Figure 5.5-1) are considered sufficient to capture the Project effects. Cumulative effects from past, present and reasonably foreseeable future development are considered separately. The LSA includes Vault Pit, while the RSA includes Vault Pit, the Meadowbank Mine, and the northern sections of the AWAR. These disturbances were included in the habitat loss calculations.
GN-17	**Sensory disturbance of caribou, indirect habitat loss and cumulative effects**	The RSA includes the Project, Vault Pit, Meadowbank Mine, and part of the AWAR (i.e., some of the most developed areas of the Kivalliq region), but total disturbance from all these developments makes up less than 0.4% of the RSA,
KivIA-TC-Terrestrial 01	**Uncertainty in caribou responses to Whale Tail haul road**	Agnico Eagle will continue to work with the GN and will provide any support required to undertake the analysis.

NO.	TOPIC	AGNICO EAGLE RESPONSE
NRCan 2	**Baseline Permafrost and Terrain Conditions in the Project Area**	Agnico Eagle is confident in the FEIS characterization of the ground ice conditions and identified sensitive terrain in area where main structures will be built. Additional drilling is ongoing to feed the engineering. More specifically, geotechnical investigations are presently underway in the area of the WRSF (4 holes). Refer to full response re: additional field work.
INAC-TRC #1	**Design and Depth of Waste Rock Cover [to Assure Long Term Freezing of Metals Leaching and Potentially Acidic Generating Waste Rock]**	Agnico Eagle will perform thermal modelling which will incorporate climate change and acquired information from the Meadowbank (WRSF) monitoring program, and will use the results of the model to support final design of the WRSF. Modelling results, revised design, if any, and proposed locations of thermistors for long-term monitoring will be submitted to interested parties prior to the Final Hearing.

AGNICO EAGLE RESPONSES TO TECHNICAL COMMENTS
ᐊᖏᓂᔪᒃᑯᑦ ᑭᐅᓴᒪᔨᖏᑦ ᐊᐱᖅᑯᑕᐅᓴᓚᓂᑦ

SUBMITTED APRIL 7, 2017
ᑐᓂᐊᑕᐅᓴᖅ ᐃᐳᓗ 7, 2017-ᒥᑦ

In Summary:

- Agnico Eagle believes we have responded in full to the majority of the technical comments
- Prior to the final hearings Agnico Eagle will continue to :
  - Finalize the Terrestrial Ecosystem Monitoring Plan (TEMP) in collaboration with KivIA, GN, HTO
  - Finalize bonding and securities for Whale Tail Pit with KivIA and INAC
  - Finalize the fisheries offsetting plan with DFO and KivIA
  - Continue to consult with local stakeholders and employees
  - Provide final management plans, as a condition of the NWB Type A license
- Additional details, by topic, will be presented in the subsequent presentations
