Please refer to the Whale Tail Pit Expansion Final Environmental Impact Statement (FEIS) for more information regarding description of topographical features, natural or manmade features, structures, works and waters that may be affected by the project during the construction and operations phases. Please refer to the relevant approved management plans for mitigations measures being implemented to reduce impact of the project on above-mentioned features. No additional impacts are predicted at this time.

#### SECTION 6 • 2022 PLANNED ENVIRONMENTAL MONITORING

The studies discussed below may continue to be impacted by restrictions related to COVID-19 and therefore may require adjustment throughout 2022.

#### 6.1 WILDLIFE MONITORING

All wildlife monitoring is conducted in accordance with the Terrestrial Ecosystem Management Plan (TEMP) and discussions with the Terrestrial Advisory Group (TAG).

#### 6.1.1 Terrestrial Advisory Group

As part of the Terrestrial Advisory Group (TAG), meeting to discuss Project's mitigation, monitoring, and adaptive management measures related to the protection of wildlife will continue to be held in 2022.

#### 6.1.2 Habitat mapping

The habitat mapping monitoring program was developed to describe the overall area of different Ecological Land Classification (ELC) units lost due to mine-related activities at the Whale Tail site and the WTHR. The primary objective of the habitat mapping monitoring program is to confirm that estimated habitat losses associated with mine site and WTHR construction have not exceeded the threshold limits identified in the TEMP plus approved extensions. Habitat mapping was last completed in 2019, the next program is to be done in 2022.

#### 6.1.3 Raptor Nest Surveys

The raptor nest survey monitoring program has been designed to confirm that mine-related activities do not result in inadvertent negative effects on nesting raptors. As part of the weekly road and quarry inspection, Agnico Eagle will conduct a raptor nest survey. Agnico Eagle is working closely with Alastair Franke (Arctic Raptors Inc.) to assist in managing and mitigating any potential disturbance to raptors and possible nest sites.

#### 6.1.4 Caribou Satellite-Collaring Program

Agnico Eagle is assisting the GN in a Caribou satellite-collaring program within the Meadowbank Regional Study Area (RSA). Information on the status and location of various herds that use the RSA at different times of the year is an important component of on-going monitoring and management efforts at the mine site and along the Haul Road. This collaring data will be used to assist Agnico Eagle in anticipating large herds passing near the Whale Tail Pit Haul Road and contribute to appropriate management decisions. A new MOU is currently under discussion with the GN.

#### 6.1.5 Checklist Surveys and Wildlife Logs

At the mine site, noteworthy wildlife sightings are recorded in an on-site wildlife log, which is tabulated at the end of each year and included in the annual wildlife monitoring summary report. Employees are also encouraged to record wildlife sightings on a daily basis. A monthly wildlife report is sent to the GN DOE and KivIA.

#### 6.1.6 WTHR and Mine-Site Road Surveys

The Whale Tail Haul Road (WTHR) and Mine-Site road surveys monitoring program has been designed to evaluate sensory disturbance to wildlife utilizing habitats adjacent to the road. Roadkill information and large Caribou herds are also documented to facilitate the implementation of adaptive management strategies. The terrain on both sides of the road (to a maximum horizontal distance of 1 km) is surveyed as the vehicle progresses at a maximum speed of 30 km/hr. For each sighting, the vehicle is safely parked in a road pullout and UTM coordinates are recorded along with estimated distance of animals from the road, habitat type and direction of movement.

The WTHR survey monitoring program will continue on an annual basis.

#### 6.1.7 Screening Level Risk Assessment

The SLRA for the Meadowbank Mine (including the Whale Tail Pit) will evaluate risks to wildlife from contaminant exposure in and around the mine site every three years during operation, and results will be reported to NIRB in the context of Agnico's Annual Report for the Meadowbank site. It provides an updated evaluation of soil and vegetation tissue chemistry as well as an assessment of risk to resident birds, mammals and a conservative estimate of potential impacts to local harvesters due to consumption of wildlife. Sampling was completed for this program in 2021 and the results will be reported as part of the 2021 Annual Report. The next sampling campaign is planned for 2024.

#### 6.2 AQUATIC EFFECTS MONITORING PROGRAM

#### 6.2.1 Core Receiving Environment Monitoring (CREMP)

The Whale Tail Project was merged with the Meadowbank and Baker Lake CREMP reporting framework in 2018. This monitoring program will continue throughout the operations and closure phases of the mine project. Monitoring will continue to be conducted in accordance with the approved CREMP management plan.

#### 6.2.2 Metal and Diamond Mining Effluent Regulations (MDMER) Monitoring

In 2022, Whale Tail site will have regulated discharge points subject to MDMER regulations: Consequently, Agnico Eagle is monitoring these discharges in accordance with the MDMER (and Water License) requirements. This includes weekly sampling for metals, monthly toxicity testing, and monitoring water quality in the release and control/reference areas. The first Biological Monitoring Study Cycle 1 in Mammoth Lake as per MDMER Schedule 5 Part 2 was conducted in 2020 and the

Interpretive Report was submitted in July 2021. This program is regulated by Environment and Climate Change Canada and is designed specifically to evaluate the effects of effluent discharge on the receiving environment. The second Biological Monitoring Study Cycle 2 will be performed in 2023.

#### 6.2.3 Water Quality and Flow Monitoring

All water sampling conducted at the mine site and along the WTHR designed to monitor the performance of the waste and water management systems for the project fall into this category. In 2022, Agnico Eagle will continue to monitor the performance at the sewage treatment plant, attenuation ponds, landfill, landfarm, pit sumps, seeps, bulk fuel storage facilities, freshwater usage volumes, water quality along the WTHR, and all other monitoring requirements stipulated in NWB Type A water license 2AM-WTP1830.

#### 6.2.4 Blast Monitoring

The blast monitoring program will be used in 2022. The program will monitor blasting peak particle velocity and overpressure in the receiving environment and ensure that Agnico Eagle uses the specific charge weight/delay/set back necessary to meet DFO requirements, and to ensure the stability of the dikes and mines site infrastructure.

Agnico Eagle has implemented a field-based study to understand and document the visual and physical parameters of the blast and quantify the response of caribou to the blast. This will continue in 2022.

#### 6.2.5 Habitat Compensation Monitoring Program

The habitat compensation monitoring program will continue in 2022 as per the approved Habitait Compensation Monitoring Plan. Results of this program will be provided as part of the 2022 Annual Report.

#### 6.3 GROUNDWATER MONITORING PROGRAM

The groundwater monitoring will continue in 2022. The groundwater monitoring program will be conducted in accordance with the Groundwater Monitoring Plan and result will be presented in the annual report.

#### 6.4 NOISE MONITORING PROGRAM

The noise monitoring will continue in 2022 with sampling twice a year at monitoring locations established at the mine site. Results will be presented in the annual report.

#### 6.5 AIR MONITORING PROGRAM

Agnico Eagle will continue in 2022 the annual WTHR dustfall and air quality monitoring around the Whale Tail site. Results will be provided in the 2022 Annual Report.

#### SECTION 7 • 2022 PROGRESSIVE RECLAMATION PLAN

This section addresses Condition 5.09 d. In 2022, Agnico Eagle will be in operation phases of the Whale Tail Pit project.

Progressive closure work started in 2021 with the partial placement of the thermal cover placement on the Whale Tail WRSF. The thermal cover is composed of run-of-mine non-acid, non-metal leaching metal material originating from both Whale Tail and IVR pits. In 2022, thermal cover placement is planned to continue on the Whale Tail WRSF and begin on the IVR WRSF.
