

NON-TECHNICAL PROJECT PROPOSAL DESCRIPTION

Amaruq (IVR) Exploration Camp

Agnico Eagle Mines Limited (AEM) signed an exploration agreement with the Nunavut Tunngavik Inc. in January 2013 for the Amaruq (IVR) property. This property is located approximately 50 km northwest of the Meadowbank mine and 125 km north of the Baker Lake community. The mineral exploration aims gold mineralization. Drilling on this property began during the summer 2013 with helicopter support. To facilitate and improve the exploration in this area, AEM started the installation of an exploration camp directly on the Amaruq (IVR) property. This license amendment is requested to install a waste water treatment type "Bionest". This system will improve the water quality released to the environment. Also an increase in the water volume authorized is requested to add 30m³/day.

Also, gravel will be needed to construct pads for the camp site or roads in the vicinity of the camp. To do that, we will request the authorization to exploit gravel pits in the area. The proposition will include 2 gravel pits located in the exploration area. A road up to these pits will be required. A protection buffer between the water body and the pits would be maintained, 31 meters from the water would be protected.
