Activities Inspected ☐ Camp ☐ Drilling ☐ Mining	☐ Construction ☐ Reclamation ☐ Fuel Storage		
Roads/Hauling Other: Water Discharge	Other:		
CECTION 1 Comments (a.) Non Compliance with Act on Linguist (a.)			
SECTION 1			
On July 12 th , 2017, a regularly scheduled compliance inspection was conducted of Agnico Eagle Mines Ltd.'s Amaruq Project (photo 1) with the assistances of Agnico Eagle Mines Ltd. (AEM) Environmental Coordinator, David Frenette.			
The following report was produced with the observations noted during that inspection.			
Pre inspection meeting notes			
-Current population of the camp is 107.			
-Six drills in total are in operation; this includes the drill	on the barge.		
-There is at least one environmental staff onsite at all ti			
-Material is being brought from Esker #7 to the camp to improve the durable ground in camp.			
Observations 1. The reclamation of spill no. 15-329 is still ongoing (photon)	o 2) The environment division collected camples of the spill		
1. The reclamation of spill no. 15-329 is still ongoing (photo 2). The environment division collected samples of the spill excavation to confirm the location had been cleaned. The inspector noted an area close to the south end of jet A1 tank no.			
9 which had a strong smell of fuel.	The state of the s		
 Contaminated soil is being stored in a temporary lined structure to avoid further contamination to the environment. AEM 			
has extended the temporary structure a number of times to make additional room as spills occur.			
3. Two spills have been inspected, spill no. 2017-171 a sewage spill from the Amaruq camp's sewage treatment system			
referred to as the 'Bionest', and spill no. 2017-180 a diesel spill at the Meadowbank exploration laydown located on the			
Meadowbank mine road. Both spill will be remain open and require a follow up inspection. 4. The culvert installation which was constructed September 2015 at culvert crossing 181 between Amaruq Exploration Camp			
4. The culvert installation which was constructed September 2015 at culvert crossing 181 between Amaruq Exploration Camp and the fuel farm showed no sedimentation or erosion which is in compliance with PART C item 8.			
5. The lay down pad for the fuel farm and seacan storage area is fully constructed and located on durable ground in			
compliance with PART E item 2.			
6. Esker #7 respects the 31 meter limit from Whale Tail Lake on the West side of its boundaries, in compliance with PART E			
item 9. AEM observed some run off from the quarry and installed the appropriate erosion mitigation measures as per PART			
E item 10. 7. A drill is in operation on the barge in Whale Tail Lake (N65° 24′ 4.93″, W96° 41′ 55.0″) location which is approved in PART F			
item 4 (photo 4).			
8. The barge is operated closer to shore to allow for the appropriate disposal of cutting of 31m from the high water mark,			
which complies with PART F item 1.			
9. The barge operates with a TSS curtain and a floating berm as a mitigative measure against a release of contaminates into			
Whale Tail lake (photo 5).			
10. A sheen is noted on the water inside and outside of the floating berm (photo 6). The inspector was concerned that the drilling equipment, greasy raggs and barge deck was not clean of hydrocarbon after the recent spill allowing transfer of			
contaminates to the water. The drill operators immediately address the inspector concerns by deploying absorbent matting			
and committed to addressing the concern moving forward (photo 7).			
11. A gravel dissipation channel was constructed at the bionest outfall. The channel appears to be providing good guarding			
against erosion (photo 3).			
SECTION 2 Comments (s) Non-Comp	oliance with Act or Licence (s.2) Action Required (s)		
	the corrective measures taken to address the hydrocarbon transfer		
from the barge to Whale Tail Lake in the annual report.			
SECTION 3 Comments (s) Non-Comp	oliance with Act or Licence, (s)		
	of the contaminated soil being stored temporarily at the Amaruq		
exploration camp, to the inspector before August 25 th ,
