

Executive Summary

Comaplex Minerals Corp (Comaplex) has been active with the Meliadine West Gold Project since 1989. In a deal announced in July 2003 and finalized in October 2003, Comaplex completed a transaction with WMC International Ltd (WMC), which resulted in Comaplex owning a 78% interest in the Meliadine West Gold Project (Cumberland Resources 22%). Comaplex is now the operator of all future work and WMC is no longer involved.

During the 2004 – 2005 season, Comaplex will continue to explore the gold potential of the property through diamond drilling. A total of up to 40 people will be at the camp off and on throughout the year engaged in diamond drilling and other exploration activities including prospecting, geological mapping and geophysical surveying. We anticipate that field operations will be conducted between April and November of 2005.
