Re: Application to Amend License 2BE-MEL0709 - Type B Permit
- Meliadine West Project

Dear Ms. Beaulieu,

Attached to this letter, is an amendment application to water license 2BE-MEL0709 for the Meliadine West project. The amendment is required to accommodate our proposed underground exploration program and bulk sample planned for late summer 2007, continuing to summer 2008.

The underground exploration program and bulk sample is an extension of the exploration of the Tiriganiaq deposit and will be conducted concurrently with the surface diamond drilling, which has been conducted by Comaplex for the last 3 years. The presently permitted Meliadine West camp will be used to house all workers.

The water requirements for the proposed underground program itself are restricted to water for the brine re-circulation system, which is used for underground dust suppression during blast drilling. We have estimated 10 cubic meters per day in the permit, but the mining contractors suggest this will more likely be in the 3 cubic meter per day range. Consumption for the entire project, including the underground exploration work, the camp, and the diamond drilling will be less than 100 cubic meters per day, and significantly less when the surface diamond drills are not in operation. It is for this reason that we suggest this program be considered for an amendment to our existing water license.

We have attached the NWB forms and questionnaires and the entire underground application document for your review. If you have any questions, please do not hesitate to contact either myself (403-265-2846) or Ben Hubert (403-256-0017) at any time. Thank you.

Yours truly,

Mark Balog
