Does the proposed amendment change any of the alternative methods and locations that were considered to carry out the project?

☒ Yes    ☐ No

Provide a brief explanation of the alternative methods or locations that were considered to carry out the project. Identify proposed changes.

*AEM initially followed the example of the previous owner of the Meliadine Gold Project and removed all its solid, nonhazardous waste to the Rankin Inlet landfill. This practice was discontinued due to the concerns with the condition of that landfill. Since then all solid, nonhazardous waste is being stored on site awaiting the approval of a landfill.*

*Liquid and hazardous waste continues to be sent south to a certified waste management company for disposal or recycling. All organic waste is burned in an onsite incinerator with the ash stored alongside the other waste awaiting land filling.*

*Continued storage of waste suitable for land filling is proving impractical. Approval of this amendment will allow the establishment of a landfill on the commercial lease held with the Kivalliq Inuit Association. Their letter of approval for a landfill is attached.*

*The proposed location of the landfill is shown on the attached figures 1 and 2. As noted on figure 2, the landfill is to be located within the footprint of the eventual tailings and waste rock storage facility. The landfill would continue to be used during ongoing advanced exploration and, subject to the NIRB's approval of the Meliadine Gold Mine, during the construction phase of the mine.*

## 23. STUDIES UNDERTAKEN TO DATE

List and attach updated studies, reports, research etc.

*The Project has entered the environmental assessment process resulting in the preparation of many baselines reports just getting underway. These baseline reports were synthesized into two single reports:*

- 2. Terrestrial Baseline Synthesis Report 2009, and*
- 3. All Management plans for Water Licence 2BB-MEL0914 were updated in 2010.*

*These plans and earlier ones can be found on the NWB ftp site.*

Provide a compliance assessment and status report including a response to any inspector's reports. The licensee must contact the NWB for licence specific direction in completing the assessment and report.

*On July 7th, 2011 INAC's inspector carried out an inspection of the Meliadine Site. Some findings were judged unacceptable by the inspector. These issues are noted below with the correctives actions following:*

- Minor hydrocarbon spills should be cleaned up as soon as possible and a general clean-up is required at various locations around the site. The drillers shack and storage area in particular need to be cleaned up and fuels, oils, and batteries must be properly contained.*

- *Efforts for the remainder of 2011 were directed to making all employees and contractors aware of the environment importance of the local area, and the need to maintain a clean work site with all hazardous materials properly stored.*
- *All fuel, oils and chemicals should be properly stored in secondary containment.*
  - *The above problem was corrected. Also in 2011 on two occasions, Qikiqtaaluk Environmental Inc. came to the Meliadine site to prepare all hazardous waste for TDGA shipment to a certified southern facility for treatment and/or disposal.*
- *The grey water should be redirected to the biodisk unit and the grey water discharge area (sump) must be reclaimed by treating and backfilling.*
  - *In early 2012, Agnico-Eagle will install a second biodisk and at that point all grey water will be directed to the Sewage Disposal Facility. The sump will subsequently be back filled.*

If in non-compliance, a licence may not be issued until compliance is achieved. If in non-compliance, attach plans/reports for consideration. Application will not be processed if significant issues of non-compliance exist.
