

Non-Technical Summary

Meliadine Gold Project

Renewal Request of the Water Licence 2BB-MEL0914

The Meliadine Gold advanced exploration project is located in the Kivalliq Region of Nunavut between Rankin Inlet and Chesterfield Inlet. Agnico Eagle Mines wants to renew its existing water licence that expires in July 2014. Under this licence, the activities performed will include prospecting, diamond drilling, trenching, geophysics, underground exploration via a ramp and the operation of a camp site. Agnico Eagle Mines wants to use this renewal request to add a new exploration area located on Inuit Owned Lands to the authorised area. The company also wants the authorisation to operate a landfarm to treat the hydrocarbon-contaminated soil created by its operation.
