Re: Response to reviewer comments regarding the Meliadine West underground exploration and bulk sampling program. NIRB # 07EN044

Dear Ms. Inglis-McQuay,

Comaplex Minerals Corp. and its consultants have carefully reviewed the comments and questions submitted to your office regarding the proposed underground exploration and bulk sample application by Comaplex. Responses to the queries of the various parties are attached as one document. There are five attachments that accompany the response document. These are:

- Attachment A: J.S. Redpath letter to NIRB re: Mine Rescue Plan
- Attachment B: Comaplex Waste Management Plan
- Attachment C: Meliadine West camp incinerator specs
- Attachment D: Nuna / M&T Environmental Procedures Manual
- Attachment E: site air photo with hydrology,

We have attempted to answer all questions or comments directly, in the context and scale of the work being proposed and for which permission is being applied for. Due to the timing and limited scale of the proposed program, there will be little change in the level of activity in the camp itself and the camp activities. The main change for the camp will be working through the fall and winter months.

It is important to re-iterate that the program as laid out is a short term project of limited impact, that may or may not lead to the full scale development of the Tiriganiaq deposit. In this context, we have designed the program to minimize impact on the environment, while maximizing the benefit of what we are trying to do. We have also designed the program for success.

Comaplex Minerals has a long standing reputation in the north as a company that operates clean work sites and that deals with governments and regulatory officials in an open and honest manner. We intend to continue this with the underground program. We look forward to further correspondence in the near term.

Yours truly,

Mark Balog
Comaplex Minerals Corp.
