Hello Karen,

You're right, the grey water is now treated in the Biodisk with the black water. The term regarding the sump could be removed.

I'm agree that you can do an update of the monitoring stations. I would say, regarding to the Biodisk, the MEL7 would be enough...

Hi David,

I have a couple of small questions, please, before finalizing the draft renewal:

- From my understanding currently the grey water is also treated in the Biodisk prior to release? So do you want that the renewal licence still includes a term regarding the greywater contained in a sump or there is no need for this?

- And if the answer to 1 question is no, and no sump will be used for the grey water treatment that means keeping the Monitoring stations MEL-3a (downstream of old grey water sump), MEL-3b (downstream of upgraded sump) and MEL-4 (upstream of the discharge from wetland area) is not really necessary.

Thanks in advance, and have a good weekend!

Objet : 2BB-MEL0914 Renewal/Amendmewnt Licence

Hi David,

Just to update with the 2BB-MEL0914 Licence Renewal/Amendment application status: we are currently waiting for the NIRB decision to finalize the application for the Board's consideration.

And a couple of small questions:

Amendment 2 to the Licence authorized the Licensee to conduct geotechnical drilling within 31 m of the high water mark along the proposed all-weather road. I may think you don't any more need this condition to be included in the renewal Licence? **Exactly, the bridges are constructed so this condition can be removed.**

Amendment 4 was for the authorization to establish a Non-hazardous landfill. However, based on the AEM reporting and AANDC inspection the landfill has not been built yet. Am I right? **Exact, the landfill is not established yet, so this condition should be included in the renewed licence.**
