Subject: RE: July 2009 Monthly Report -2BB-MEL0709
Date: Thursday, August 27, 2009 9:11:55 AM

Thanks for the report John however the monitoring reports for June and July are not acceptable to KIA. As per previous KIA correspondence from 2008 and expectations for water quality reporting as per CMC's 2009 work plan, the reports need to be much more substantive. Considering the impacts associated with the bulk sampling program in 2008 and the storage of waste rock, monthly monitoring reports need to include as a minimum the following:

- Site location plan
- Historical analytical results
- NWB license discharge requirements, applicable CCME and MMER guidelines clearly stated and all exceedances clearly highlighted. Rational for each parameter above applicable guidelines and mitigative action to follow must be addressed as text within the monitoring summary.
- location of supply water for drilling purposes (site plan)

Aside from regular laboratory analytical results, field readings from June 2008 and June 2009 vary considerably. Please explain and provide corrective action to follow. Temperature and pH field results for the July 2009 event also need to be included.

Please incorporate as a minimum these KIA comments and resubmit the monthly monitoring reports before the end of this month. If you have any questions please contact me at 867-645-5733.

Sincerely

Stephen
