The water source for the proposed camp will be a river adjacent the historic Orofino campsite located at approximately 67°43'13"N and 111°23'6" W. The exact location of water sources for drilling is unknown at this stage as targets are still being defined. "170601 - WKG Arcadia Bay Property Potential Field Areas," illustrates the prospective areas for exploration, including drilling. As soon as drill targets are confirmed NWB and KIA will be supplied with the coordinates and maps.

The proposed change is to increase the quantity of water used, there are no other changes.

(show location(s) on map)

See "170601 - WKG Arcadia Bay Property Potential Field Areas."

Does the proposed amendment change the quality of the water source and/or its available capacity?

Yes No

Describe the quality of the water source(s) and the available capacity(s). Identify any changes: The water on the Property is considered pristine. All water sources used for camp or drilling will contain sufficient volume so that there will be no drawdown associated with extracting water.

Does the proposed amendment change the overall quantity of water to be used?

Yes No

Provide the overall estimated quantity to be used. Identify proposed changes. : 299 m³/day

Current Approval: 2 m³/ day for camp and 40 m³/day for drilling.

Amendment requested: 10 m³/day for camp and 289 m³/day drilling.

Does the proposed amendment change the quantity of water to be used from each source?

Yes No

Provide the estimated quantity(s) of water to be used from each source. Identify proposed changes. :

Change from 2 m³/day (current approval) to 10 m³/day (amendment request) from river adjacent to camp for camp use.

Change from 40 m³/day (current approval) to 289 m³/day (amendment request) from numerous locations for drilling.

Does the proposed amendment change the quantity of water to be used for each purpose?

Yes No

Provide the estimated quantities to be used for each purpose (camp, drilling, etc.). Identify proposed changes.:

Change from 2 m³/day (current approval) to 10 m³/day (amendment request) from river adjacent to camp for camp use.

Change from 40 m³/day (current approval) to 289 m³/day (amendment request) from numerous locations for drilling.

Does the proposed amendment change the method(s) of extraction? Yes No

Describe the method(s) of extraction. Identify proposed changes.

The water intakes for the camp will likely use an electrically powered submersible pump with a fine screen (<1/4" openings) on the intake. The drill pumps use a 1" inside diameter suction hose on the diesel pump with a fine screen on the foot valve. For drilling, a fibreglass window screen with a nominal opening size of less than 1/16" is also generally wrapped around the foot valve to prevent the intake of silt and sand into the pump, which can cause considerable damage to the pump chambers. In addition, it is common practice for the drilling contractor to place the foot valve of the intake hose in a perforated 20L pail, which further protects against harmful materials and fish being entrained into water intake hoses.

Does the proposed amendment change the quantity(s) of water returned to source(s)?

Yes No

Estimated quantity(s) of water returned to source(s). Identify proposed changes. : 0 m³/day

Does the proposed amendment change the quality(s) of water returned to source(s)?

Yes No

No change from original licence. Water used for camp and drilling will not be returned directly to the source, but placed in a sump to allow for slow infiltration into the soil and will be located at least 31 m away from a water body. A filter and grease trap will be installed on the kitchen drain to ensure solid food wastes do not enter the sump.

Describe the quality(s) of water(s) returned to source(s). Identify any changes. : 0 m³/day

17. PREDICTED ENVIRONMENTAL IMPACTS OF UNDERTAKING AND PROPOSED MITIGATION MEASURES

Does the proposed amendment change the predicted environmental impacts of the undertaking or the mitigation measures?

Yes No

Describe direct, indirect, and cumulative impacts related to water and waste. Identify any changes. Potential environmental effects associated with the proposed Arcadia Bay Project are considered localized effects which can be mitigated. No significant residual impacts to the environment are expected to occur as a result of the implementation of this program. While individually no significant effects are anticipated, consideration should be made to the combination of all existing or known planned activities within the vicinity of the project area. Some cumulative effects can be positive, such as increased employment rate, infrastructure and potential for investment in communities by government. Cumulative effects may also be negative and therefore attention should be given to the potential for these to occur in advance of project growth. Cumulative effects on the land might include changes to the number of wildlife, increases in non-native plants, or the melting of permafrost. Other potential or current projects in the area include the Kitikmeot Inuit Association's proposed port in nearby Gray's Bay, approximately 20km to the northeast, and MMG's High Lake Deposit, approximately 40 km to the southeast.
