| K | plywood floors situated on a flat top sand esker approx 8 metres above the surrounding tundra. The nearest water body Nutaaq Lake is approx. 200 metres west of the spill site. 2 workers sent to inspect the site on the weekend noted that tent W5 was lifted off its foundations by wind and moved 4 metres south. An adjacent fuel drum was knocked over. The impact cracked a fuel valve connection at the drum causing a fuel leak. A surface stain of approximately 1 sq. metre is noted. The spill did not enter any water body or drainage. Contaminated soils were excavated to a depth of approx. 1 metre by the workers using shovels. The contaminated soil has been contained in four 205 litre drums. The drums will be removed from site and disposed of at an authorized facility. Photo's are attached. | | | | | | | | | |
