On July 14, 2024 Resource Management Officer Kyle Amsel (Inspector) for Crown-Indigenous Relations and Northern Affairs Canada (CIRNAC) conducted an Inspection Water Licence 2BE-ANG2227 issued to Latitude Uranium (Licensee).				
Preliminary Information				
The purpose of this inspection was to ensure compliance with conditions of the License. The Exploration Project has it's camp located on Crown Land while the drilling area is both on Inuit-Owned Land (IOL) and Crown Land.				
Observations				
The Camp is generally located at N62° 34' 15.	0" \\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\			
 The camp is situated on sand/gravel eskers at washrooms and dry are located on one esker on another esker within 150m of accommoda is located on an esker approximately 1km to 3. Fuel on site is stored in large covered berms a 	nd is divided in three portions. Accommodations, kitchen, core shack, . Helicopter pad, fuel storage, equipment storage and core storage is located ations area and connected by small trail through a swampy area. A landing strip the West and not connected by any ground trail.			
4. Waste a. The grey water sump is located at N	62 ⁰ 34′ 45.1″ W98 ⁰ 27′ 19.1″.			
b. The camp utilizes pacto toilettes whi				
c. Enclosed garbage bins are located outside the kitchen. This garbage is backhauled.				
5. Temp Camp located at N62° 31' 15.2" W99° 08' 15.1" a. The area was inspected and no remnants were located of the camp.				
 6. Drilling a. The drilling for this season was located on IOL. However in previous seasons the YAT and DP areas were drilled. These areas were inspected and nothing of note was located. b. The Inspector attended Drill #2 at N62° 34′ 44.72″ W98° 34′ 3.92″ located on IOL. The drill area was noted to be clean with no garbage or debris. A slump occurred at this drill area on the first drill location and the drill was subsequently moved over. Water intake for drill 2 was N62° 34′ 42.6″ W98° 34′ 14.92″. A screen was on the water intake and a water meter records water usage. At time of inspection the meter read 7343gal or 27.7m³. 				
 There are two cuttings storage areas within the IOL parcel proximal to historic drilling. a. Historic hot cuttings or cutting with higher concentrations of Naturally Occurring Radioactive Material (NORM) storage is located in drums and is located near N62° 35' 25.7" W98° 37' 30.2". The licensee has indicated plans to review, consolidate and manage these cuttings which are remnants of the previous owner of the operations. The Inspector notes that these drums are standing upright in an un-bermed area which causes risk to fresh water. b. Historic cold cuttings with low or no levels of NORM are stored near N62° 34' 21.3" W98° 30' 41.3". These cuttings also remnants of the previous camp owners are stored in mega bags. 				
Administrative				
The 2023 annual report was submitted.				
	Non-Compliance with Act or Licence (s.2) Action Required (s)			
No non-compliance				
	Non-Compliance with Act or Licence, (s) Action Required (s.3)			
The Licensee shall: - Take necessary steps to prevent impacts to water from the hot core storage area				
- Take necessary steps to prevent impacts to water from the flot core storage area
