Does the proposed amendment change the method(s) of extraction?

☐ Yes ☒ No

Describe the method(s) of extraction. Identify proposed changes. : 15 gal/min electric pump. The drill pumps use a 1" diameter suction hose on a diesel pump with a fine screen on the foot valve. For drilling, a fiberglass window screen with a nominal opening size of less than 1/16" opening is generally wrapped around the foot valve to prevent the intake of silt and sand into the pump. In addition, it is common practice to place the foot valve of the intake hose in a perforated 20 litre pail which further protects against harmful materials and fish being entrained into the water intake hose. For camp use, a portable gasoline-powered water pump will be used to pump water to a camp storage tank. The pump will be operational for approximately 15 minutes per day. When operating, the pump will be staged on a containment platform adjacent to the water source. When not operating the pump will be staged within secondary containment no less than 31 m from the normal high water mark of the water source. Water intake valves will be properly placed and screened in accordance with the "Freshwater Intake End-of-Pipe Screen Guideline" (DFO). No changes to the method of extraction.

The sump will be located at least 31 metres away from the high water mark of any water body. A grease trap and screens will be installed on kitchen drains to ensure grease and food solids do not enter the waste water sump. The discharge pipe into the sump will be inaccessible to wildlife. No changes.

Approved mitigations and SOPs for water use and waste water management are applied at the Angilak Property. Water and aquatic life is protected. Waterlines for drilling and domestic use are properly placed to minimize disturbance to the shoreline and substrate and are screened in accordance with the "Freshwater Intake End-of-Pipe Screen Guideline" prepared by the Department of Fisheries and Oceans. A copy of this guideline document is kept at the head office in Vancouver and at the field office at the project. No wastes enter any water bodies. This includes discharge from the camp and seepage from the drill and grey water sumps. The grey water sump will be inspected daily. In addition to drill sumps, ValOre employs specialized drill cutting settling systems to collect cuttings. Drill sumps will be inspected prior to the drill being moved and the area being reclaimed. Water use is recorded for both the domestic camp water and the water used at the drill.

With the current approved mitigation measures and SOPs in place there are no significant impacts or cumulative effects anticipated as a result of ValOre's water use and waste management at the Angilak Property.
