Date: Friday, September 11, 2009 11:26:00 AM

Good morning – Thank you for your comments regarding KE's current licence. We have no record on file at this time, of any waste backhauled to the Hamlet of Rankin Inlet. Under the terms and conditions of the licence the company is required to provide that information if and when any waste is backhauled. By copy of this email to the company in question, the Nunavut Water Board hereby requests that Kivalliq Energy Corp address your concerns directly and provide our office with a courtesy copy.

Please note that an amendment has been received for this file to change camp location. To date we have not received the necessary documentation to complete this application and send the file out for the standard 30 day review.

May I suggest that when forwarding comments on a particular file an NWB file number is quoted in order for the staff to quickly identify the project in question. Thank you.

Regards,

Phyllis Beaulieu
Manager of Licensing
Nunavut Water Board

Hello

I noticed that KE's water licence requires documentation related to the backhauling of waste to Rankin Inlet, could I have copies of the submitted documentation? Our group is very concerned about waste management on this site as well as others.

We would like copies of the documentary evidence that the hazardous wastes from this project were disposed of in a licensed facility.

Thank you

Alice Baker
