Land Use Plan - West Kitikmeot-Anialik River Project

Strongbow Exploration Inc. ("Strongbow") is a mineral exploration company which is dedicated to exploring for economic mineral deposits in Canada. The purpose of Strongbow's activities under this renewal application is to continue to evaluate the potential for economic concentrations of minerals in this region.

In March 2003, Strongbow Resources Inc., (a predecessor company of Strongbow Exploration Inc.) and Nunavut Tungavik Inc. signed a Mineral Exploration Agreement (MEA) to explore over all or parts of 28 parcels of Inuit Owned Lands (IOL) in the West Kitikmeot Region of Nunavut. These areas contain geological environments considered prospective for deposits of gold, base metals, and diamonds. Strongbow is proposing a 2006 field program for the Anialik River project, which is located approximately 180km southeast of Kugluktuk. The Anialik River Project consists of both Inuit Owned Lands (surface and subsurface rights) and mineral claims on Crown Lands. Strongbow considers the project area prospective for base metals and gold due to its proximity to Wolfden's High Lake polymetallic base metal and Ulu gold deposits.

The first phase of the 2006 Anialik River Project will be conducted over approximately 4 to 6 weeks in July and August. Work will include prospecting, mapping, soil sampling, and channel sampling. A total of four to six geologists will conduct the program from a series of small temporary fly camps. Float planes or helicopters will be utilized for mobilization and demobilization.

A second phase of the Anialik River Project will be contingent upon favorable results. This phase (the drill program) will involve testing of selected targets in at least two areas. Ten drill holes are tentatively planned in the Run Lake area and over 4 holes are tentatively planned in the Frank showing area. This program would be based out of the established Rush Lake camp and involve 5 drillers, 2 geologists, 1 cook, and 1 helicopter pilot (9 people). The drill program would run approximately 6 weeks between July and September.

At the end of the proposed program, all camps materials, fuel drums, and the drill (if required) will be removed from the site. All garbage will be incinerated at the site, with non-combustible garbage (scrap metal etc.) collected and removed. Once the clean up is complete, there will be no remaining evidence of the camp.

Strongbow and our partners conduct extensive exploration programs within Nunavut and the Northwest Territories. We recognize the importance of our role in discovering mineral deposits and that our exploration programs must be conducted in the most socially and environmentally responsible fashion possible. Thank you in advance and we look forward to working with you.
