ANURAAQTUQ, Exploration Project

Agnico Eagle Mines Limited (Agnico Eagle) acquired mineral properties on Crown Lands from CIRNAC in 2024. Agnico Eagle named these mineral properties, the Anuraaqtuq exploration project. These properties are located on the West side of the Meadowbank property and at a distance between 85 km to 105 km mostly north of the Baker Lake community. The distance between these properties and the Meadowbank Camp site is from 24 km to 50 km. The exploration activities planned include mineral prospection, till sampling, geophysical surveys and diamond drilling.

Workers will be accommodated at the Meadowbank camp site and transport to and from the exploration sites will be conducted daily by helicopter.

To increase the safety for the workers during the exploration activities on this remote area, an exploration shelter, consisting of 3 small tents, is planned to be installed in vicinity. No worker is planned to stay at the shelter more than 12 hours, unless bad weather prevents to return to Meadowbank.

The present application has been prepared with the objective to obtain the required authorisations to conduct mineral exploration activities, including the installation of a temporary shelter.
