Hello Stewart,

Q1; Yes, these are appropriate. Smaller meters are available but may be an unnecessary expense; as long as there are some records of water use that is really all that is required.

Q2; DIAND recommends using a modified 45 gal drum that operates as a crude incinerator and higher consistent temperatures, rather than open burning. I tried looking for one of the DIAND reviews that contained the sketches of the drum but couldn't locate it. It was prepared by Robert Eno, so if you'd like to drop him an email, I'm sure he'd be more than happy to forward it to you. His email is enor@inac-a-inc.gc.ca

Q3; It would be nice to have a revised Plan, unfortunately if you submit a revised plan, then the NWB will be required to distribute again for review/comment and approval. Therefore, as indicated in the licence, an addendum is preferred, however the Plan should be revised for your own records and for use at the site so that all information is easily accessible.  
When you apply for a renewal, which I'm sure you'll be hoping you do at some point, then the Plan will be complete and ready to submit with minor updates.

Q4; try this link to the nwb ftp subfolder "Guidelines and Other Legislation"  
ftp://ftp.nunavut.ca/nwb/NWB%20Administration/NWB%20GENERAL%20INFORMATION/Agency%20Regulations/Guidelines%20and%20Other%20Legislation/  
The 1990 A&R guidelines there. It's a couple mb so I'll let you get it on your own.

one A&R Plan that I have referenced on numerous occasions is by Placer Dome, it's not fully complete, they did have to add some small items etc.  
but it's a good layout and simple. See attached.

I hope I have answered all your questions, if not, please get back to me by email or phone and I'll be glad to help you out.

Regards,

David
