

Bathurst Inlet Project, Nunavut Canada

Upit and Pomy Claims

Rockgate Capital Corporation, supported by Kingaunmiut Ltd of Bathurst Inlet Nunavut, is currently planning to initiate a helicopter assisted diamond drill program for their Bathurst Inlet Upit and Pomy Sites Project. The drilling program is proposed to commence in mid to late August 2008 and continue through October of 2008 with the possibility, based on 2008 results, of commencing again in 2009.

The project is located south of the community of Bathurst Inlet and within their Claim Block along the west side of Bathurst Inlet. The community is located approximately 270 km south southwest of Cambridge Bay, Nunavut and 575 km north of Yellowknife Northwest Territories. Upit (66°34'58.34"N - 108° 0'5.28"W) and Pomy (66°10'36.12"N - 107° 1'51.27"W) sites are located south of the community of Bathurst Inlet by approximately 30km and 90km, respectively. Drilling targets include three holes for a combine core length of 500m at Upit Site and up to 10 holes for a combined total of 1000m at Pomy Site.

A team of seven persons include a drill crew and helpers, a project supervisor, safety staff and helicopter pilot, will support the drill program. Project staff will be accommodated remotely from the project site within the community of Bathurst Inlet. A temporary "tent-frame" structure, consisting of a 12'x16' wood floor, wood frame and canvas cover, will be used as a core logging building and serve as an emergency shelter at each Upit and Pomy sites when drilling is occurring. While working from each site one fuel cache area will be designated to provide storage for a maximum of eight fuel drums at any one time. An emergency fuel spill kit will be maintained at this site at all times.
