Dear Mrs. Beaulieu:

**Re: SPILL CONTINGENCY PLAN and ABANDONMENT & RESTORATION PLAN
BOOTH RIVER PROJECT**

The Department of Environment (DOE), Government of Nunavut has reviewed the Spill Contingency Plan and Abandonment & Restoration Plan for the Booth River Project, Allyn Resources Inc., Nunavut". This report was submitted to the NWB under Allyn Resources Inc. application for a new Type "B" water license.

Comments/Recommendations:

Spill Contingency Plan:

- 1) Allyn Resources must provide contact names, addresses, and a 24 hr phone number for the persons in charge for activating the spill contingency plan. Also, the names, addresses and phone numbers of the owners and project manager should be included into the plan.
- 2) The proponent should provide a site map making certain to include all infrastructure, fuel storage facilities, and locations of spill kits. This map should also include UTM coordinates for the project areas and spill kits for fast response in the event of a large spill.
- 3) Allyn Resources should provide locations and contents of the spill kits. This would ensure that each kit contains enough materials for the workers to respond to minor spills.
- 4) A list of all fuels and chemicals including quantities and MSDS should be provided in the plan for workers safety and for spill response. The plan should also include clean up and disposal options for contaminated soils.
- 5) The proponent must provide the workers with adequate training for spill response and clean up.

Abandonment and Restoration Plan:

- 1) The proponent should provide a brief introduction of the site including the history, location, and type of exploration. A description of the area and the number of workers on site should also be included.
- 2) Allyn Resources should provide a site map showing the locations of all buildings, fuel and chemical storage, spill kits, drill sites, and any equipment that is on site. GPS or UTM coordinates should also be included in the site map to show the location of the camp with respect to other communities.
- 3) The proponent should provide a list and quantities of all fuels and chemicals that will be brought on site. MSDS for all fuels and chemicals should be placed in a central location for easy access in the event of a spill.
- 4) Allyn Resources should provide contact names, numbers, and addresses of the owner, management, and site supervisor. The names and numbers of local heavy equipment contractors and clean up specialists could also be included into the plan in the event of a large spill.
- 5) All drill holes, sumps, and disturbed areas should be covered and re-contoured to allow for natural re-vegetation.
- 6) The proponent must check for soil contamination due to fuel and chemical spills. All contaminated soils must be treated and disposed off properly, either on site or at a registered facility.

We thank the NWB for giving us the opportunity to review the Spill Contingency Plan and Abandonment & Restoration Plan for Allyn Resources Inc., Nunavut. Please contact me if you have any further questions or comments.

Sincerely,
