[OFFICIAL]

Hi Assol,

The comment responses are listed below in bold for the preliminary technical review. Please let me know if you require any additional information.

1. The waste management plan states: "If drilling is on ice, the cuttings are collected in plastic "sausage" tubes using a centrifuge to separate the water from the cuttings. The tubes are then collected and deposited in a natural depression on land." Please confirm whether only cuttings are deposited (no tubes end up in the sumps).
Correct. We will not be putting plastic into the sumps.
2. Part F, Item 9 of licence 2BE-CHI1823 requires the submission of an updated bulk sampling monitoring plan. We have no records of the submission--could you please provide it? **I have attached an updated version of the Bulk Sampling Plan and Map. No Bulk Sampling was conducted proceeding the 2018 license renewal. Should bulk sampling or trenching occur another updated version will be provided in accordance with Part F, Item 9**
3. Please confirm whether De Beers/Peregrine seek to have the licence issued to Peregrine or De Beers. **De Beers (unless this would cause significant delays)**

Thank you,

Chad
