Dear Mr. Hunter:

Re: Arctic Copper Corp Water License Renewal, File 2BE-CPP2325

The Department of Fisheries Office (DFO) has reviewed the above captioned file pertaining to the water license renewal application by Arctic Copper Corp and provided their comment and recommendations in a letter to the Nunavut Water Board dated May 15, 2025. This letter comprises Arctic Copper Corp's response to that letter.

I have read the letter and the DFO website information from the links included in the letter and declare that Arctic Copper Corp will comply with all of the recommendations set out in the letter and carry out the protective measures as outlined in the DFO best practices guideline. The proposed drilling program will take place from July 7, 2025 to July 21, 2025 and as such, will not conflict with either a spring or fall spawning season. Furthermore, the water sources we expect to draw from are very small, shallow ponds and not likely to contain fish.

I have also read the letter from CIRNAC in which they state that they have no concerns after reviewing Arctic Copper's water license renewal application. Arctic Copper has a valid Land Use Permit in place and will comply with all terms and conditions set out in that permit.

Thank you,
Best regards,

Donald Penner
