

Waste Management Plan
Arctic Copper Corp – Coppermine Project
May 2025

Arctic Copper Corp (ACC) plans to conduct a small 2 week drill program which is anticipated to begin in early July 2025. It is a helicopter supported program and all personnel will be housed in Kugluktuk and commute to site by helicopter for each shift.

Because this is a small, short duration program, the waste generated will be minimal. Whatever waste is generated will be flown out on helicopter backhauls and disposed of in approved facilities in Kugluktuk as follows:

Combustible waste, garbage etc: will be flown to Kugluktuk and incinerated there at an approved facility or taken to the local landfill facility

Non-combustible waste: will be flown to Kugluktuk and taken to recycling facilities where possible or landfill if non-hazardous waste.

Hazardous waste: waste oil from the drill motor oil and hydraulic oil changes and contaminated empty containers will be flown to the appropriate recycling and disposal facilities in Kugluktuk.

Sewage: A portable toilet will be used at site and returned to Kugluktuk at the end of the project.

In summary, no waste will be left at site and no incineration of any waste will occur at site.
