

Non-Technical Summary **Committee Bay Project, Three Bluffs Deposit**

By North Country Gold Corp

December 10, 2012

Location and Ownership

The Three Bluffs Deposit is located on crown lands approximately 220 km south of Kugaaruk and 235 km west of Repulse Bay. The project is 100% owned by North Country Gold Corp. of Edmonton through its wholly owned subsidiary Committee Bay North Ltd.

Exploration History

North Country Gold Corp. (NCG). And its predecessor companies have been exploring for economic mineral deposits in the Committee Bay region for more than 20 years. We believe that the under-explored Committee Bay Greenstone Belt has the potential to host world class gold deposits. The Three Bluffs deposit was first identified in 1994. Continuous exploration programs from 1994-2003 identified significant gold mineralization with potential for commercial production. NCG significantly expanded the Three Bluffs gold deposit by drilling from 2004-2012.

Proposal

Diamond drilling in the last 6 years has delineated a number of high grade gold bearing units at surface and at depth. These units are structurally complex. Since the reliability of any economic deposit is determined in part by drilling, we propose to complete 30,000 m of drilling in 2013, with further drilling through to 2016. Infrastructure upgrades at Hayes Camp started in 2011 will continue in 2013 with the completion of the upgrade to the current all-weather airstrip. All upgrades and new infrastructure will focus on minimizing the environmental impact of our work, and improving the health and safety of all those working at the site.

The potential development of a gold mine at Three Bluffs would likely generate 200+ jobs and positively impact both Kugaaruk, Gjoa Haven, and Repulse Bay.

Timing

The proposal as presented will start in February with equipment and fuel mobilization, followed by a spring and summer drill program, as well as regional exploration.
