

Indicator Minerals Inc.
Abandonment and Restoration Plan
Updated March 13, 2008

Upon completion of the land use operation and exploration of the Darby Project, the following steps and procedures will be implemented to allow proper abandonment and reclamation of the area. This plan will be updated on a yearly basis and/or when changes to the exploration plan warrant it.

Greywater sumps and sewage pits at the camp(s) will be back filled.

All remaining garbage will be incinerated in an incinerator or modified burn drum.

All wood (tent floors, frames etc.) will be removed from the site to an approved landfill site or will be burned along with all other combustible material in an incinerator or modified burn drum. If the wood and/or combustible material is burned on site, the coals and ashes will be raked for non-combustible items, which will then be collected and removed from the site to an approved landfill site. The remaining coals and ashes will be buried.

Where possible, contaminated materials and soils will be bagged and burned either in a modified burn drum, or in the incinerator. Materials that could not be burned would be bagged or contained in spill kit drums and shipped via twin otter to Rankin Inlet for disposal at an appropriate facility there or elsewhere. An appropriate environmental agency (ie DIAND, GN-DOE, etc) would be consulted in order to determine the best way to remediate the contaminated soil.

All camp materials, fuel drums, and drilling equipment will be removed from the site.

All drilling sumps will be backfilled, burying the unused cutting and drill waters.

Each drill site will be inspected prior to departure to make sure all garbage has been removed and any disturbed ground will be reclaimed.

If crew members discover waste of any type left behind by others, every effort will be made to remove it from the area and have it disposed of in an acceptable manner.

A final inspection will be completed to ensure that there is no remaining material at the site and that there is little/no evidence of Indicator Minerals Inc. land use activity.

The above procedures have been put in place to ensure that once Indicator Minerals Inc. is off site, there has been minimal impact to the environment.
