Re: Request for Additional Information for the Ferguson Lake Water Licence Application.

Dear Mr. Krause:

To process the application filed by Starfield Resources for exploration work at Ferguson Lake, the NWB requires additional information and clarification with regard to supplementary questionnaire. Please clarify the following:

- 19, 20, 21: *Midwest Drill* Will the company be using additives? If so, we require a copy of the MSDS. It is written that the water will be filtered and cleaned. Please elaborate on how this will be accomplished. *Arctic Sediment*
- 23: Does the company have a spill contingency plan in place? *no*
- 32: Waste Oil/Hazardous waste that is not burned will be transported to Rankin Inlet. With reference to Question 34, has the municipality authorized the disposal of these wastes? Will Rankin be the final destination of these wastes? Are all non-burnable waste inert material? *no*
- 36: Question remains unanswered. *Base line water studies*
- 37: The NWB would appreciate receiving any background information you might have on the Propane toilet system and Ferguson Lake lodge septic system. *Co. records*
- 38: What measures will Starfield resources undertake to ensure that progressive reclamation is undertaken at the site.
