

Non- Technical Summary

Request to Amend 2BE-GEO1015 to Increase Water Use and Change Project Boundaries

Sabina Gold & Silver Corp. (Sabina) is a Canadian owned company actively exploring for precious metals in the Back River area of the Kitikmeot Region, Nunavut Territory about 110 km south of the community of Bathurst Inlet. Sabina has been actively exploring in the area since 2005 at the Hackett River Project and since 2009 at the Back River Project (Goose, Del, Boulder, Boot, George properties) and the Wishbone Trend (Malley and Wishbone claim groups).

Sabina sees an opportunity to continue exploration activities in the Back River area and currently holds a water license for the George Property that allows water use up to 143m³/day for exploration activities such as drilling, geophysical surveys and field programs and the operation of a main camp and temporary camps to support these activities. This amendment request would increase the volume of water used on a daily basis to 175 m³/day for increased exploration activities. This increase volume of water also includes water used, diverted, stored and/or discharged in activities associated with exploration activities. This may include water crossings, dust management, on-going reclamation, and collection/diversion around infrastructure.

The activities included under this amendment request are:

1. Increase daily water volume use up to 175 m³/day;
2. Amend the Project boundaries; and
3. Amend water use to include activities such as water diversion, collection, dust management, and water crossings.

Several Inuit employees will be hired to help with activities associated with the construction, operation and closure of these camps. Sabina is committed to ensuring its operations minimize environmental impact and best management practices for the exploration activities will be followed.
