[illegible]

1. Introduction

This report to the Nunavut Water Board (NWB) has been prepared to summarize the project activities and monitoring undertaken by Sabina Gold and Silver Corp. (Sabina) during the 2020 program, in accordance with Part B, Item 2 of License 2BE-GOO2028 (the Licence). This License was renewed without change on Feb 17th 2020 and will expire on February 18, 2028. The NWB Annual Report Form can be found in Appendix A of this report.

Key activities associated with the Goose Lake Project in 2020 are summarized as follows:

- Operation of the Goose Exploration Camp for exploration drilling and to support Water Licence 2AM-BRP1831 construction activities
- Exploration drilling
- Mapping and sampling was conducted in sections of Goose and Del Properties
- Shipment of waste materials from site to approved disposal facilities
- Reclamation of drill sites

During 2020, fresh water was utilized for both camp use and drilling activities. Potable water for the Goose Lake Camp was obtained from Goose Lake using a dedicated pump and transferred to water storage tanks at camp. Water for exploration drilling was obtained from Goose Lake and Umwelt Lake. All water utilized was metered as per water license requirements. Calcium chloride was added to drilling water to lower the freezing point and to enable drilling under permafrost conditions.

Waste management included the handling of pack waste, domestic waste in an incinerator, hazardous waste and drill waste. Waste incineration and waste backhaul details are reported in the Annual Report for Water Licence 2AM-BRP1831.

In 2020, fuel supply was provided by aircraft on all-weather airstrip at Goose Lake.

Prior to seasonal camp close Sabina reclaimed all 2020 drill sites. Materials removed from sites included garbage, metal and timbers as well as anchors and casing cut and capped. Sabina continues to exercise drilling procedures where sites are required to be cleaned up prior to moving on to the next drill site, and internal inspections are conducted to ensure that clean up procedures are occurring. Sabina intends to continue to cut and restore historic drill site as part of regular programs in 2021. Ongoing reclamation programs will be documented as conducted in previous programs.

Sabina did not host an inspection under this Licence in 2020 but Sabina did provide a photographic site update to the NWB on Sept 14 2020¹. Community consultation undertaken by Sabina in 2020 is outlined in the Annual Report for Water Licence 2AM-BRP1831.

¹ Sabina's letter, "Back River Project 2020 Site Update" (Sabina Gold & Silver Corp. to J. Roesch (KIA), K. Morrison (NWB), O. Pasalic (CIRNAC) and R. Dwyer (NWB), dated September 14, 2020)

2. Annual Report per Part B, Item 2

This section of the report has been constructed to address each of the requirements of Part B, Item 2 of the Licence. For ease of comparison, each subheading corresponds directly with the identically alphabetized subheading of Part B, Item 2 of Water Licence 2BE- GOO2028.

A. SUMMARY OF WATER USE AND WASTE DISPOSAL

Potable water was extracted from Goose Lake via an electrical submersible pump with a screened intake. This screened intake meets Department of Fisheries and Oceans Freshwater Intake End of Pipe Fish Screen Guidelines requirements. Water was pumped directly from Goose Lake via a pipe into holding tanks within camp. Prior to consumption, potable water is treated with filtration, chlorination and UV disinfection. Appendix B summarizes daily water used for Goose Camp, all of which was withdrawn from Goose Lake. Due to a water meter malfunction, water usage values prior to August 6th of 2020 were calculated as camp occupancy multiplied by average per capita water usage post August 6th (the day a new water meter was installed). Total annual camp water usage was 1,297.2 m³, daily camp water usage did not exceed the 30 m³/day.

Drill water was obtained from Umwelt and Goose Lakes. Daily drill water usage is provided in Appendix C by water source. The Licence specifies a daily water usage allowance of up to 267 m³ for drilling purposes. This daily allowance was not exceeded in 2020. Total annual drill water usage was 4,267.4 m³.

Wastes disposed of under this Licence include Greywater, latrine, non-hazardous and hazardous wastes and drill wastes. All Waste storage area locations are provided in Table 2.A-1. Grey water generated at the Goose Lake camp consists of waste streams collected from the kitchen and camp washing facilities (showers and laundry). Grease traps are installed within the kitchen which removes solid particles prior to discharge. Grey water is discharged at two locations at the Goose Lake camp located at a site away from surface water. At the Goose Lake camp, latrine toilets (pacto toilets) are used from which human waste is collected and disposed of in camp incinerators. Water discharged from Goose fuel berms is addressed in the Annual Report for Water Licence 2AM-BRP1831.

Goose Lake Fuel Farm	433,959	7,269,975	65°32'42.9"	106°25'47.2"
Major Drilling Oils/ Additives Location #1	434,079	7,269,648	65°32'32.5"	106°25'37.2"

Major Drilling Oils/ Additives Location #2	434,061	7,269,636	65°32'32.1"	106°25'38.6"
---	---------	-----------	-------------	--------------

Non-hazardous waste streams consist of kitchen refuse, paper, recyclable food containers, cardboard and inert wood. Kitchen refuse and paper are disposed of in two-stage commercial incinerators daily. Plastic and metal food containers which were deemed appropriate for recycling are shipped off site to an approved disposal facility in Yellowknife.

A lined storage area was previously constructed where materials can be sorted and packaged to be shipped to Yellowknife. Once received in Yellowknife, KBL Environmental was retained to manage and properly dispose of hazardous wastes generated at the Goose Lake Camp. Hazardous wastes generated at the Goose Lake site included waste hydrocarbon liquids, used batteries and contaminated soil. Empty fuel drums are either stored on site for further use or shipped back to the supplier for recycling purposes. Remaining hazardous materials are stored within a lined containment area for future shipment from site.

Types and quantities of solid wastes incinerated, open burned or backhauled from the Back River Project, including from the Goose Property, are detailed in the Annual Report for Water Licence 2AM-BRP1831.

For drilling activities, sumps consisted of an excavated trench at the Goose camp where drill cuttings were deposited. Coordinates of all cutting disposal sites are maintained and are available on request. Continual inspections were conducted of these locations to ensure stability of areas.

The drilling program utilizes a poly drill system whereby brine was recirculated and cuttings were separated and collected in mega bags. Mega bags containing cuttings were kept in containment trays to ensure overflow or remaining brine did not contaminate the tundra. Once full, mega bags were transported to the designated disposal site by an overland vehicle or helicopter.

B. UNAUTHORIZED DISCHARGES

No spills meeting or exceeding the NWT/NU spill reporting thresholds occurred in 2020.

C. MANAGEMENT PLAN REVISIONS

Sabina did not revise any management plans under this Licence in 2020.

D. PROGRESSIVE AND FINAL RECLAMATION

Sabina continues to exercise drilling procedures where sites are required to be cleaned up prior to moving on to the next drill site, and internal inspections are conducted to ensure that clean up procedures are occurring. Restoration of historic drill sites will continue in 2021 as practical. As in previous years, ongoing reclamation programs will continue to be documented.

E. ARTESIAN FLOWS

No artesian flows were encountered in 2020.

F. INFORMATION REQUESTS AND RESULTS OF MONITORING PROGRAM

Daily quantities of water used and wastes generated under this Licence are discussed in Section 2.A of this report and water sampling results and waste details can be found in the Annual Report for Water Licence 2AM-BRP1831.

Personnel were on site at the Goose Property in March and from June to December of 2020. No runoff was observed and no sampling under Part J, Item 8 was required.

As no construction applicable to this Licence took place in 2020, no construction-related sampling was conducted under this Licence. Construction activities related to Licence 2AM-BRP1831 are described in the annual report for that Licence. No on-ice drilling took place in 2020.

No inspections were conducted by CIRNAC under this Licence in 2020.
