Hi Assol,

1-We expect to have up to 10 people working on this project.

2-There is no area overlap with another water licence.

3-The map showing the properties location is attached. The folder "Area under application" contained the shapefile that you could read using a GIS.

4-The drilling mud, Matex DD2000, is not used systematically in each drilling hole. It will be add when there is some difficulty like a fault or in a long hole so the volume to be used is quite variable. The used water is disposed of in natural depressions located at more than 31 meters from a water body and where a direct flow to the water is not possible.

You'll find attached the Spill Contingency Plan, the Closure and Reclamation Plan and the application (not signed), but in a searchable format.

Regards,
