Hi Andrea

I expect Mathieu will respond as soon as he has access to his e-mails. Unfortunately due to the Ecosystems Biologist position being vacant Mathieu is the only person who can provide this information. I am however copying Jay Mc Connell our GIS technician working with the Ecosystems Biologist. He might be able to provide you with some of the information you are looking for.

Good afternoon Mr. Gissing,

I just received an "out of office reply" from Mathieu's email address, so I am forwarding this request to you. Indicator Minerals is requesting the information below in response to comments we received pertaining to a water licence application. Mathieu forwarded spatial information pertaining to aerial caribou surveys last Friday. Any assistance you may be able to provide us regarding the questions below would be greatly appreciated.

Sincerely,  
Andrea Maynes

**Subject:** Boothia Peninsula wildlife

Good afternoon Mathieu;

I just called and left you a voicemail referring to a couple of questions I have for you. I will try to detail them here:

1./ The shapefiles you forwarded last week were entitled "General Known Caribou Calving Areas." On the map you provided, you have identified these outlines instead as aerial surveys (1985, 2006 and 1991 + satellite collar data from 1991-1993). In any reproductions we make of this data, would it be more accurate to show these outlines as aerial survey coverage rather than actual caribou calving areas? Is there any knowledge of caribou distribution and calving areas outside the aerial surveys?

2./ Would it also be possible to obtain the spatial data outlining muskox and polar bear distribution plus sensitive bird habitat in the area as well?

I very much appreciate your help. I look forward to hearing from you,  
Cheers,  
Andrea
