Dear Richard Dwyer,

**MMG Resources Inc Exploration Program Relocation Notification - Land Use Permit
N2024C0022 – Izok and N2024C0021 – High Lake**

MMG wishes to formally provide notification that our exploration activities will be conducted on our Crown Indigenous Relations and Northern Affairs (CIRNAC) Land Use Permits (LUP) N2024C0022 – Izok and N2024C0021 – High Lake. Exploration activities will be based out of Blue Star Gold Corps' Ulu camp.

Planned exploration activities consist of ground geophysical surveys, mapping, prospecting, and environmental baseline studies on both LUPs. Drilling is currently planned on the High Lake and High Lake East Projects (LUP N2024C0021). The drill staging and laydown area will be at Blue Star Gold's Ulu camp. The program is planned to commence with drilling activities May 7th and continue until mid-September.

Baseline environmental studies are planned at Izok (LUP N2024C0022) and High Lake (LUP N2024C0021). The environmental work at Izok may be based out of a fly camp on the southern portion of our CIRNAC LUP N2024C0022 mineral claims in the Izok area at the site of MMG's decommissioned Ham Lake Camp, or potentially supported by Mandalay's Lupin Camp. If a fly-camp is erected in the Izok area, MMG will provide advance notice and all work conducted from the camp will be operating in accordance with the CIRNAC LUP N2024C0022, Nunavut Water Board Water Licence 2BE-IZO2328 and MMGs approved Management Plans.

Aurora Geosciences will be contracted to conduct and oversee field operations. Aurora's field supervisor, Corey Segboer, can be reached at (867) 920-2729 if needed.

Please do not hesitate to contact me if you have any questions or concerns.

Yours sincerely,

A handwritten signature in black ink that reads 'CKnight' in a cursive, professional style.
