

WATER LICENCE # 2BE-KAX0609 AMENDMENT SUMMARY

FOR

PACIFIC RIDGE EXPLORATION LTD.

Pacific Ridge Exploration Ltd. is submitting an amendment to its current water license # 2BE-KAX0609. The reasons for the amendments concern an update to our water requirements for diamond drilling and camp usage. These changes do not trigger any changes to the supplemental information already given with respect to our original submission.

The amount of water required is greater because the scope of the exploration program has been changed to incorporate the use of three drills instead of one which will increase water consumption from 50 to 150m³ per day and the increase of personnel from 15 to 25 will also increase water usage at our camp from 6m³ to 20m³ per day. By increasing our total usage from 56 m³/day to 170 m³, the daily total water used for the total project will still be within the allowable amount for Type "B" classification.

Also with respect to grouting of our exploration drill holes, Pacific Ridge would also like to request a decrease in the overall depth from surface of grouting to seal the drill holes. The current depth of grouting required by our water licence is 31m. Pacific Ridge requests that this depth be amended to 15m to reflect the shallow overburden depth at the Baker Basin property which is generally < 5m.
