**Importance:** High

Hi David

I have received and reviewed INAC's shutdown review.

Please note the following:

- A final closure and decommissioning report is near completion. We are waiting on water analysis information from ALS laboratory. Should receive the analysis by weeks end. Will submit shortly after.
- The report will address all procedures identified in the March 2006 A&R Plan and demonstrate that the terms and conditions included in Part H of the license have been met.
- The report will also address any issues with contaminated soil.
- We will submit this report to NWB and NIRB for review and approval.

I will await a decision from Richard Dwyer on comment/recommendation #2.

Please note that we requested an extension from NWB to update the Uranium Exploration and Spill Contingency Plans.

Thanks for your time and patience in this matter

Steve

Hi Richard, Steve, and Peter,

Attached to this email is the INAC Water Resources (Iqaluit, NU) review of the July 22/09 Nunavut Water Board notification of Aurora's decision to shutdown operations at their Baker Lake Basin Project.

Feel free to give me a shout to further discuss this review.

David
