Subject: Re: 2BE-KIG0812 Request for an Amendment Water Licence
Date: Monday, November 23, 2009 2:33:52 PM

Hi,

The timing window provided by the DFO operational statement re: on-ice drilling referred to in Areva's management plan - states that for zone 2 in Nunavut requires consultation with the local HTO after a determination of what fish species lives in the waterbody, was this done? If so, what fish live in that waterbody?

Given the nature of the exploration project, is there any potential risk to harvesters who eat the fish in that water body after the drilling takes place? What is the evidence supporting this?

Alice Baker, Iqaluit.
