Hello,

As an update to the July 23rd email regarding the artesian in the non-mineralized hole BONG-066, I would like to make you aware that at 6:30 PM yesterday there was a re-appearance of artesian water at this location. A water sample was taken and the initial flow rate at that time was measured again to be 4L/min with a depth of 324m. Drilling continued through the night with this flow rate until 9:00 AM at which point the hole was discontinued at a final depth of 369m. The hole is currently in the final stages of cement sealing.

Regards,

Curtis Rhinas

SHEQ Supervisor, Exploration
