Hi Michael,

The Nunavut Water Board (NWB or Board) is currently undertaking the final technical review for the above-mentioned application.

To assist the Board with completing its review, the following items should be addressed:

- 1. Block 9 of the water licence application form indicates that lake-based and on-land drilling activities are associated with the project. However, inadequate information was provided regarding the lake(s) where drilling will occur, conditions under which lake-based drilling will be undertaken, the extent of lake-based drilling activities, management plan(s) and best practices developed to minimize or prevent potential negative impacts to the lake(s) involved, and a monitoring plan or program to support lake-based drilling activities.
- 2. Clarification is required on whether any drilling activities will be conducted within 31-metres of the ordinary high water mark of any water bodies.

If you have any questions regarding the above, please contact me at your earliest convenience.

Regards, Sean

Hi Sean,

Please see North Arrow's response/comments to your questions in **BLUE** below.

Let me know if you have any other questions or require any further clarification.

Cheers,

Mike

Hi Michael,

The Nunavut Water Board (NWB or Board) is currently undertaking the final technical review for the abovementioned application.

To assist the Board with completing its review, the following items should be addressed:

1. Block 9 of the water licence application form indicates that lake-based and on-land drilling activities are associated with the project. However, inadequate information was provided regarding the lake(s) where drilling will occur (it is unknown at this time which lakes will be drill-tested. North Arrow would like to be

able to drill from any of lakes within the mineral claims), conditions under which lake-based drilling will be undertaken (in the winter months to utilize lake ice to support the drill), the extent of lake-based drilling activities (again, it is unknown at this time which lakes will be drill-tested. North Arrow would like to be able to drill from any of lake within the mineral claims), management plan(s) and best practices developed to minimize or prevent potential negative impacts to the lake(s) involved (see "Luxx Project North Arrow Minerals Spill Contingency Plan" and "Luxx Project Project Specific Information Requirements" submitted to the NWB November 5, 2015), and a monitoring plan or program to support lake-based drilling activities (see "Luxx Project North Arrow Minerals Spill Contingency Plan" submitted to the NWB November 5, 2015),

2. Clarification is required on whether any drilling activities will be conducted within 31-metres of the ordinary high water mark of any water bodies. North Arrow has applied to drill lake-based targets in the winter, therefore drilling activity will be conducted within 31 metres of the high water mark.

If you have any questions regarding the above, please contact me at your earliest convenience.

Regards,

Sean
