Hi Brady,

Thank you very much for the update.

We will make the necessary amendments to the Management Plans and send resubmit to your office (as well as the ANADC and NIRB so everyone is on the same page).

Will supply your office with dates as soon as they are known.

Just an FYI as well, after a nightmare trying to find an Inuinnaqtun translator during this busy time, I was able to commission someone, but unfortunately they have failed to produce the documents. I have since found another translator who is going to do me a favour and put a rush on the translations. As soon as I get the documents I will forward. Thanks again for your patience and understanding.

Warmest Regards,

Tara

Subject: 2BE-MDP Apex Geoscience Muskox Diamond Project

Dear Mr. L'Heureux:

The technical review period has concluded for your water licence application no. 2BE-MDP---. Please note, the NIRB has not yet completed its screening process, citing insufficient information from the applicant, and the NWB must wait until an affirmative screening determination has been received before issuing a licence.

To ensure that a licence can be authored expediently upon an affirmative screening determination, I am requesting that you make the following revisions to your management plans:

- 1) AANDC recommends that Apex provides the dates of when each camp will be in use. If these are not yet known, the dates should be provided to AANDC and the NWB as soon as possible.
- 2) The contact information for AANDC Field Operations in the Management Plans should be changed to as follows:

AANDC Manager of Field Operations Phone Number (867) 975 4295 and Fax (867) 979 6445

- 3) The A&R Plan describes the use of burning to get rid of certain structures. Apex should revise the Plan to indicate that open burning of structures will only occur after approval from the NWB is provided. This will not require an amendment to the licence, but can be obtained quickly upon request to the NWB's licensing department, who will issue a standard approval letter after a review of the characteristics and volume of material to be burned is completed by the tech staff.
- 4) Applicable guidelines and legislation should be included in the Spill Contingency Plan
- 5) Regarding the Waste Management Plan, the GPS locations of the Fuel Caches, Hazardous Waste Storage Areas, and incinerator should be provided in the Annual Reports once known. Also, a quantification of expected waste produced annually by the project should be included in the plan.
- 6) Regarding the Fuel Management Plan, the GPS locations of fuel caches should be included in the Annual Report once known.

Please contact me with any questions or concerns you may have.

Regards,

Brady MacCarl, MSc->5△∩ Lbb5c
