Re: Site Water Management Plan for NWB license #2BB-MEL0709

Dear Ms. Beaulieu,

As per the NWB request in their Decision Letter dated August 2, 2007 regarding the above license for the Meliadine West underground exploration and bulk sampling program, Comaplex and its consultants have compiled the attached Site Water Management Plan. This document outlines in detail how we will conduct the program with respect to water management for the property under the amended license and in particular, with the ongoing underground exploration program. The plan has been designed in conjunction with the Waste Rock and Ore Storage Management Plan, which was forwarded to your office earlier this fall.

The Plan has benefited from a review by two senior Golder water personnel. It consists of the text document, five figures, and four appendices. We have broken the document into two emails with Appendix D (previous water hydrology report) forming all of the second email. The Appendix D reports were included in a CD with the original underground application in May 2007. Copies of the Water Plan will also be forwarded to KIA and NIRB. If you have any questions, please contact me in Calgary. All parties please acknowledge receipt of the report.

Yours truly,

Mark Balog
Comaplex Minerals Corp.
