Re: Water Licence 2BE-NAD0813 Outstanding Water Use Fees

Mr. Kharatyan,

Please accept this cheque for \$470.40 on behalf of Commander Resources Ltd. ("Commander") for outstanding water use fees for Water Licence 2BE-NAD0813.

I have also included the Water Fee Tool, which was used to calculate the amount owing, and the communication regarding the calculated amount between Robin Ikkutisluuk and myself.

Please do not hesitate to contact me if you have any questions or concerns or if you require any additional information.

Best Regards,

A handwritten signature in black ink that reads "Tara Gunson".

11. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl *a* is located in the thylakoid membranes of chloroplasts. It plays a central role in the light reactions of photosynthesis, where it captures light energy and converts it into chemical energy in the form of ATP and NADPH. The structure of Chl *a* consists of a central magnesium atom coordinated by four nitrogen atoms in a porphyrin-like ring, with a long phytol side chain attached to one of the ring carbons.

Figure 1. The effect of the number of trials on the mean number of correct responses. The number of correct responses increased with the number of trials, and the increase was more pronounced for the 10 trials condition than for the 20 trials condition. The error bars represent the standard error of the mean.
