

Proposed 2022 Work Plan: Nagvaak Project on RE 27

StrategX Elements Corp. is a Vancouver based junior exploration program trading on the Canadian Securities Exchange under STGX. StrategX (or the Company) has several early-stage exploration properties in the NWT and Nunavut and are exploring mainly for cobalt, nickel, vanadium, and copper.

In 2021, the Company conducted activities based out of North Arrow's fully permitted Mel camp under an agreement between the companies. Exploration included helicopter supported sampling and mapping. A local wildlife monitor was hired from Naujaat to provide direction to the company on wildlife movements and mitigation measures. If wildlife were in the area, the monitor instructed the company to either wait until the wildlife moved a safe distance away or explore in another area.

In 2022, StrategX once again, plans to base helicopter supported exploration activities out of North Arrow's Mel Camp. A local wildlife monitor will be contracted through the HTO to provide wildlife timing advice and mitigation direction to the company. Consultation with Naujaat is planned for May 2022. Proposed exploration activities, dependant on the timing of receipt of permits and licenses include drilling of proposed targets by one drill for a 5-6-week period beginning in early September.
