

**NON-TECHNICAL PROJECT DESCRIPTION**  
**NANUQ PROJECT – NTS 56G**  
**Dunsmuir Ventures Ltd.**

A camp is to be set up to be used as a base of operations from which to conduct mineral exploration consisting of till sampling, prospecting and geological studies. Work should take place with a 3 to 5 week period sometime between the 1<sup>st</sup> of July and the 25<sup>th</sup> of August, depending on the receiving of permits, weather conditions, etc. Exploration will be supported by 1 helicopter. The camp will consist of 5 or 6 Weatherhaven tents or the equivalent and contain a maximum of approximately 10 people at any one time, but will not have that number of people continuously. It will fluctuate between 6 and 10 people once the project is in operation and will likely have only 1 or 2 people while being set up and torn down. Personnel will include 1 cook, 1 helicopter pilot and between 4 and 8 geological staff. Camp will be serviced by Twin Otter aircraft with tundra tires which will utilize the sandy esker as a landing strip

All impacts will be kept minimal. We are planning to locate the camp on a large N-S trending flat sandy esker about 500m west of the Lorillard River 100m east of a small unnamed lake with a small creek draining it. The proposed camp location is: 65° 14.6' N, 91° 08.3' W. Fuel will be stored in 200 L drums (45 gallon) in a depression on the esker, at least 100m away from the lake. A spill contingency plan is in place and all drums will be monitored regularly for any leakage. All sump pits, latrine pits etc. will be at least 100m from any water body. We will ensure that the camp is not located near any raptor nesting sites. It will be inland and not in an area deemed "Polar Bear Habitat". We will avoid disturbing caribou. The camp will be dismantled and it, and all materials, fuel drums etc. removed at the end of the field season.
