2003 Land Use Plan
Melville Peninsula, Nunavut

Mineral Exploration in the Melville Peninsula Area

Northern Empire Minerals Ltd. is dedicated to exploring for economic mineral deposits in northern Canada. During 2002, other companies initiated exploration for mineral deposits within the Melville Peninsula area and believe that the area has the potential to host mineral deposits. Our company is seeking to cooperate with the communities, local Inuit Associations, the Nunavut Government and the Federal Government so that all may benefit from mineral discoveries without adversely affecting the natural way of the wildlife, the people and the land.

The purpose of our activities under this land use license are to provide a preliminary evaluation of the potential for economic concentrations of minerals within Inuit land parcels within NTS map sheets 37 C, 46 J, N, O, 47 A, B, C, D and E. Our long-term plan is to conduct geological mapping, rock and soil sampling, ground and airborne geophysical surveys, prospecting, and diamond drilling, all of which have a low impact on the environment.

We plan to initiate activities about June 1, 2003, and our field crews will be working out of Igloolik, Repulse Bay and within small tent camps. Our 2003 program will be completed in several stages and will likely be complete by October 2003. Our 2004 activities are undetermined.

Our activities will be helicopter supported out of Igloolik, Repulse Bay or small tent camps. More specifically, small temporary camps for four people and a period of up to 10 days may be required from time to time.

Northern Empire Minerals Ltd. and their partners conduct extensive exploration programs within Nunavut and the Northwest Territories. We recognize the importance of our role in discovering mineral deposits and that our exploration programs must be conducted in the most socially and environmentally responsible fashion possible. Thank you for your consideration into this matter and we look forward to working with you.
