Abandonment and Restoration Plan:

- 1) The proponent should provide a brief introduction of the site including the history, location, type of exploration, and an inventory of all infrastructure and equipment that is stored on site.
- 2) Strongbow Exploration should provide a site map showing the locations of all buildings, fuel and chemical storage, spill kits, and drill sites located on site. GPS or UTM coordinates should also be included in the site map to show the location of the camp with respect to other communities.
- 3) The proponent should provide a list and quantities of all fuels and chemicals that will be brought on site, or have already been stored on site. MSDS for all fuels and chemicals should be placed in a central location for easy access in the event of a spill.
- 4) Strongbow Exploration should provide contact names, numbers, and addresses of the owner, management, and site supervisor. The names and numbers of local heavy equipment contractors and clean up specialists should also be included into the plan in the event of a large spill.
- 5) Cap and cover or backfill all drill holes, and re-contour any disturbed areas to allow for natural re-vegetation.
- 6) The proponent must check for soil contamination due to fuel and chemical spills. All contaminated soils must be treated and disposed off properly, either on site or at a registered facility.

We thank the NWB for giving us the opportunity to review the Spill Contingency Plan and Abandonment & Restoration Plan for Strongbow Exploration Inc., Nunavut. Please contact me if you have any further questions or comments.

Sincerely,
