Introduction:

This Abandonment and Restoration Plan applies to land use activities undertaken by Strongbow Exploration Inc. on Inuit Owned Land Parcels CO-08, CO-20, CO-40, and CO-44 located in the West Kitikmeot Region of Nunavut (contained within the general latitudes 67.004° to 66.009°N and general longitudes -112.957° to -110.217°W).

Initial field work will commence in early July and involve one team of 2 geologists accessing the IOL parcels via helicopter and landing at the specific target areas. Phase one of the exploration program will consist of bedrock mapping, prospecting, ground geophysical surveys and the collection of bulk (~20 litre) till samples. Temporary fly camps, established for 3-5 days, will be considered depending on the specific program. If the phase one program proves successful, then a phase two drilling program will be considered for August or September of 2005, or in the Spring of 2006. Personnel requirements for the phase two drilling program would likely include 10-12 persons (5 drillers, 1 cook, 1 pilot, 1 engineer, 1-2 geologists) and the construction of an exploration camp may be required. An initial program of drilling would consist of 5 to 8 exploration drill holes, each likely of no more than 100m depth. As a decision to proceed with such a program will be based on the results of phase one, it is not possible to determine collar positions for proposed drill holes at this time.

Abandonment and Restoration Plan:

Upon completion of the Land Use Operation on Inuit Owned Land Parcels CO-08, CO-20, CO-40 and CO-44 the following steps and procedures will be followed to allow proper abandonment and reclamation of the area. Each drill hole will be restored to previous conditions after completion of the hole (on average less than one week).

1. All fuel drums and drilling equipment will be removed from the site immediately upon completion of the hole.
2. On-ice drill cuttings will be scraped clean and removed to an on land sump located more than 30m from the ordinary high water mark on an on-going basis.
3. All drilling sumps (if used) will be back-filled, burying the cuttings and sludges if appropriate.
4. If the crew members discover waste of any type left behind by others, every effort will be made to remove it from the area and have it disposed of in an acceptable manner.
5. Each drill site will be inspected to ensure that all garbage (combustible and non-combustible) has been collected and removed from the area.

6. Gray water sumps and sewage pits at the camp will be back-filled.
7. All remaining garbage will be incinerated in a burn barrel.
8. All wood (tent floors, frames etc.) will be burned. The coals and ash will be raked for non-combustible items (i.e. nails etc) which will be collected and removed from the site. The remaining coals will be buried.
9. All camping materials, fuel drums, and drilling equipment (if applicable) will be removed from the site.
10. A last inspection will ensure that there is no remaining material at the site and that there is little/no evidence for Strongbow's land use activity.
11. Seasonal closures will not affect the area.
