Subject: 2BE-PBD--- Licence Application

Hi Graham,

The technical review period for your "Type B" Licence Application for the Pelly Bay Exploration Project has concluded. Comments were received from AANDC, which I have attached for your consideration.

Before completing the Licence and sending it to the Board for a decision, I am asking that you make minor adjustments to your management plans to address the recommendations and concerns raised by AANDC in its comments, and to address the concerns identified by the NWB during its own review, which are identified below:

- The Abandonment and Reclamation Plan states that hand dug trenches will be excavated, generally no larger than 2-3 metres in diameter and less than 1-2 metres deep. The Proponent is asked to provide if known, or an estimation if unknown, the number of trenches that will be excavated.
- The Spill Contingency Plan contains the following deficiencies: The Plan does not reference the GN Spill Contingency Regulations and the AANDC Guidelines for Spill Contingency Planning; the Plan does not include a site map identifying spill kit equipment; the Plan should expand on information regarding response personnel, including their off-site work locations and 24 hour telephone numbers; and the Plan contains in the Appendix an expired version of the GN Hazardous Waste Guidelines, rather than the more recent version enacted in 2010.
- The following revisions should be made to the Abandonment and Reclamation Plan: legislative documents and guidelines used for reference should be noted in the Plan; and the Proponent should indicate that notification of reclamation shall be provided to the NWB and AANDC field operations.

The revised plans may be submitted to myself with the NWB licensing department cc'd.

Please contact me with any questions or concerns you may have.
