3. LOCATION OF UNDERTAKING (describe and attach a topographical map, indicating the main components of the Undertaking) (See attached claim map and claim listing) Between Latitude: <u>67°4' and 67°25'</u> Between Longitude: <u>113°21' and 113°51'</u> NTS Map No. <u>86P/3,4,5,6</u> Scale <u>1:100,000</u>	
4. DESCRIPTION OF UNDERTAKING (attach plans and drawings) The exploration camp is Early stage diamond exploration – includes camp (6 tent structures) and exploration work to consist of geological mapping, till sampling, ground geophysics and diamond drilling. The exploration camp is located on the east shore of an unnamed lake at latitude 67°8'25"N and 113°35'36"W (UTM's 387600N 7449400E, NAD83) Work in 2003 to consist of ground geophysical surveys (up to 15 grids), till sampling (approximately 200 samples), ground evaluation of any geophysical targets, and diamond drilling (up to 3 holes for a total depth of 480 metres). Work in 2004 to likely consist of additional ground geophysical surveys (up to 10 grids), till sampling (approximately 200 samples), ground evaluation of any drill targets, and diamond drilling (up to 4 holes for a total depth of 640 metres). Once the ground geophysical survey grid plans have been finalized I will forward a map showing the grid locations to the Nunavut Water Board as soon as is possible. The same will occur once all results to date have been gone over and a final diamond drilling location map will be submitted.

7. **QUANTITY OF WATER INVOLVED** (litres per second, litres per day or cubic metres per year, including both quantity to be used and quality to be returned to source)

For camp: Approximately 360 litres/day – anticipate maximum of 12 people on site at any one time and water usage of 30 litres/day/person. Waste waters will not be returned to source

For drilling: Approximately between 700 and 10,000 litres/day will be used for a drilling program, depending on the water re-circulation efficiency. Waste water from the diamond drilling is re-circulated through a filter that removes particulates from the water and the filtered water is then re-circulated back down the drill holes.

8. **WASTE** (for each type of waste describe: composition, quantity, methods of treatment and disposal, etc.)

Refer to Supplementary Questionnaire for Details
